Scarfpin. C. S. Bichele. Des. 82,784–9; Dec. 16.
Screen: *See*—
Sand screen.
Screen for casement windows. H. Higgin. 1,785,584; Dec. 16.

Screw press, Continuous. W. McDonald. 1,785,041; Dec. 16.
Screw-thread cleaner. R. M. Cornett. 1,785,406; Dec. 16.
Semitrailers, Fifth-wheel construction for. H. W. Helms. 1,785,697; Dec. 16.
Separator. C. T. Hatch. 1,785,346; Dec. 16.
Separator for light liquids. I. V. Müller. 1,784,943; Dec. 16.
Separator plate. A. S. Behrman. 1,784,981; Dec. 16.
Sewing machine, Label-. P. W. Hatfield. 1,785,412; Dec. 16.
Sewing machines, Operating mechanism for. S. F. Stein. 1,785,462; Dec. 16.
Sheets and applying adhesive thereto, Assembling. C. C. Howard. 1,785,261; Dec. 16.
Shim-holder cap, Adjustable. S. Petersen. 1,785,596; Dec. 16.
Shingle and veneer Cutting machine. J. E. Eckersley. 1,785,439; Dec. 16.
Shipping metal, Method and apparatus for. R. T. Romine. 1,784,909; Dec. 16.
Shock absorber. G. W. Blackinton. 1,785,510; Dec. 16.
Shock absorber for landing gears of airplanes. E. Daland. 1,785,339; Dec. 16.
Shoe, Bathing. E. Gorjan. 1,785,623; Dec. 16.
Shoe, Cushioned. F. M. Gilkerson. 1,785,410; Dec. 16.
Shoe, Turned. F. Maccarone. 1,785,035; Dec. 16.
Shoe, Woman's. S. Troy. Des. 82,859–60; Dec. 16.
Shoes, Making. A. W. Matthews. 1,784,940; Dec. 16.
Shot, Making plated. E. Pugsley. 1,785,493; Dec. 16.
Show article. P. Kreslawsky. 1,784,937; Dec. 16.
Shutter, Automobile radiator. J. G. Giampaoli. 1,785,482; Dec. 16.
Shutter, Objective. B. Nerrlich. 1,785,142; Dec. 16.
Shuttle, Automatically-threading loom. C. D. Brown 1,785,218–22; Dec. 16.
Shuttle, Automatically-threading loom. H. A. Davis. 1,785,225; Dec. 16.
Shuttle, Automatically-threading loom. C. H. Draper. 1,785,223; Dec. 16.
Shuttle, Automatically-threading loom. V. Lindsjo. 1,785,224; Dec. 16.
Shuttle, Automatically-threading loom. H. White and G. M. F. Depfer. 1,785,226; Dec. 16.
Sign. E. B. Roll. 1,785,145; Dec. 16.
Sign, Changeable. O. J. Nelson and F. G. Baender. 1,785,204; Dec. 16.
Sign, Electric. F. E. J. Wilde. 1,784,861; Dec. 16.
Sign, Luminous. R. W. Fisher. 1,785,341; Dec. 16.
Signs for advertising purposes, Producing and displaying changeable. A. E. Tilburn. 1,785,429; Dec. 16.
Signal: *See*—
Color-light signal. Light signal.
Highway signal. Stop signal.
Signal device, Fuel. R. D. Schnoor. 1,785,329; Dec. 16.
Signals, Apparatus for the control of highway crossing. R. M. Gilson. 1,784,868; Dec. 16.
Signaling, Electric. L. Cohen. 1,785,297; Dec. 16.
Signaling system. J. F. Farrington. 1,784,867; Dec. 16.
Signaling system. M. H. Shoenberg and L. Schon. 1,785,366; Dec. 16.
Signaling system, Automobile. M. H. Shoenberg and L. Schon. 1,785,397; Dec. 16.
Signaling system, Privacy. S. W. Dean and C. N. Anderson. 1,784,891; Dec. 16.
Skimmer. C. C. Barnes. 1,785,689; Dec. 16.
Slag screen and wall-cooling means. H. J. Kerr. 1,785,350; Dec. 16.
Sled or sleigh, Pleasure. F. Wels. 1,785,467; Dec. 16.
Smoke, Apparatus for determining the density of. F. Sawford. 1,785,393; Dec. 16.
Smoke, Device for indicating and recording the quality of. F. and F. Sawford, jr. 1,785,392; Dec. 16.
Smoker's pipe. S. Pavloff. 1,785,208; Dec. 16.
Smoker's stand. H. Dalton. Des. 82,800; Dec. 16.
Soap, Apparatus for producing shredded. J. A. Schwantes. 1,785,532; Dec. 16.
Soap manufacture. J. A. Schwantes. 1,785,533; Dec. 16.
Soap powder from soap stock high in fatty acid, Producing. C. K. Stodder. 1,785,054; Dec. 16.
Soap press. R. A. Jones. 1,785,312; Dec. 16.
Socket sleeve. T. J. Scofield. 1,785,211; Dec. 16.
Socket, Slip. W. A. O'Bannon. 1,785,644; Dec. 16.
Soldering. H. S. McQuaid. 1,785,134; Dec. 16.
Sound-absorbing materials, Facing membrane for. H. F. Weiss. 1,785,507; Dec. 16.
Sound-amplifying means. F. C. Hinckley. 1,785,553; Dec. 16.
Sound recorder. C. F. Wiebusch. 1,784,860; Dec. 16.
Sound-recording system. E. C. Wente. 1,784,858; Dec. 16.
Sound-reproducing system. A. C. Keller. 1,784,839; Dec. 16.
Sound, System for electrically transmitting and reproducing. J. L. Reynolds. 1,785,048; Dec. 16.
Spear, Automatic resetting. W. J. Miller. 1,785,590; Dec. 16.
Speech transmission. H. W. Dudley. 1,784,825; Dec. 16.
Speed agitator drive, Differential-. S. Schiff. 1,785,562; Dec. 16.
Spinning and twisting machine. J. S. Rabert. 1,785,560; Dec. 16.
Spoke. M. J. and P. P. Adams. 1,785,171; Dec. 16.
Spoon and clip, Combined. F. Phillipson. 1,784,880; Dec. 16.
Spring: *See*—
Balancing spring.
Spring. R. E. McGee. 1,785,489; Dec. 16.
Spring catch and like device. A. W. Kimbell. 1,784,936; Dec. 16.
Spring connection, Antifriction. R. R. Searles. 1,785,654; Dec. 16.
Spring shackle. J. W. Smith. 1,785,685; Dec. 16.
Spring structure. F. O'Brien. 1,785,358; Dec. 16.
Spring structure. J. M. Oldham. 1,785,359; Dec. 16.
Springs, Connecting. A. Gerlowski. 1,785,188; Dec. 16.
Stairway guard. D. E. McAvoy. 1,785,487; Dec. 16.
Stanchion, Cattle. W. E. Currie and P. de Vries. 1,784,890; Dec. 16.
Starter, Engine. R. P. Lansing. 1,785,319; Dec. 16.
Steam engine. H. G. Mueller. 1,785,455; Dec. 16.
Steel, Manufacture of low-carbon chrome. F. O. Kichline. 1,785,199; Dec. 16.
Steel, Silicon. V. B. Browne. 1,784,811; Dec. 16.
Steel, Strain-hardening. F. A. Fahrenwald. 1,784,866; Dec. 16.
Steering apparatus, Aeroplane-. R. Guillemette. 1,785,306; Dec. 16.
Stencil sheet. S. Horli. 1,785,260; Dec. 16.
Stenciling. B. P. Scott. 1,784,912; Dec. 16.
Stereoscopic measuring instrument. R. Hugershoff. 1,785,448; Dec. 16.
Stereotype-plate-casting machine, Multiple-. H. A. W. Wood. 1,785,164; Dec. 16.
Stocking. W. D. Butz. Des. 82,792–6; Dec. 16.
Stocking protector. C. Lorenz and E. Boecher. 1,785,033; Dec. 16.
Stop signal, Vehicle. H. M. Smith. 1,784,884; Dec. 16.
Store front. A. I. Elias. Des. 82,804; Dec. 16.
Stove, Gas. A. J. Reedy. Des. 82,850; Dec. 16.
Stove, Gas. W. F. Rogers. Des. 82,851; Dec. 16.
Stove, Knockdown. H. Oonk. 1,785,143; Dec. 16.
Streamline arrow and string-engaging means therefor. E. G. Mead. 1,785,589; Dec. 16.
String for skeins, Tying. H. Hofmann. 1,785,414; Dec. 16.
Submarines, Escape tube for. H. A. Studwell. 1,784,915; Dec. 16.
Sun-heat motor. T. Romagnoli. 1,785,651; Dec. 16.
Support, Ceiling. W. E. White. 1,785,061; Dec. 16.
Support for railway rails. H. Etheridge. 1,785,251; Dec. 16.
Support for vacuum tubes. M. Alden. 1,785,239; Dec. 16.
Support, Lighting fixture. I. Wolarsky. 1,784,885; Dec. 16.
Support, Locomotive-boiler. H. K. Harwick. 1,785,626; Dec. 16.
Support or corset, Abdominal. V. A. White. 1,785,162; Dec. 16.
Support, Shoe. W. R. Barclay. 1,784,923; Dec. 16.
Surveying instrument. W. T. Rhodes. 1,785,284; Dec. 16.
Suspender end top link. L. W. Shields. Des. 82,854; Dec. 16.
Switch: *See*—
Circuit switch. Electrical switch.
Compensating switch. Multiple-break switch.
Double-throw switch. Ratio adjusting switch.
Electric switch.
Switch. H. A. George. 1,784,930; Dec. 16.
Switch and outlet box. J. E. Milcoff. 1,785,524; Dec. 16.
Switch-point lock. F. Isaacson and W. M. Caughlan. 1,785,630; Dec. 16.
Switch structure, Railway-. H. L. Miller. 1,785,454; Dec. 16.
Syringe attachment. J. W. Brunette. 1,785,293; Dec. 16.
Syringe, Hypodermic. A. E. Smith. Re17,906; Dec. 16.
Table: *See*—
Folding table. Ironing table.
Indexing table.
Tack-feeding device. K. Wolny. 1,785,570; Dec. 16.
Take-up device. W. P. Hunter. 1,785,629; Dec. 16.
Tank for chromium plating. C. R. Gleason. 1,784,987; Dec. 16.
Tank for stock cars, Water. I. V. Edgerton. 1,784,826; Dec. 16.
Telegraphic transmitting instrument. W. D. Cooper. 1,785,072; Dec. 16.
Telephone-exchange system. G. H. Morency. 1,784,905; Dec. 16.
Temperature-controlling means, Motor-. S. H. Page. 1,785,207; Dec. 16.
Temperature-indicating device. P. G. Waterloo. 1,785,662; Dec. 16.
Tension-holding member for concrete-reenforcement-tensioning devices. H. Sorensen. 1,785,214; Dec. 16.
Testing apparatus. H. S. Taylor. 1,784,978; Dec. 16.
Theatrical effects, Producing. W. Herrschaft. 1,785,347; Dec. 16.
Thermometer, Electrical. J. W. Allen. 1,784,922; Dec. 16.
Thermostats, Dirt trap for. C. H. Morrow. 1,785,387; Dec. 16.
Thiazoles, Preparing. L. B. Sebrell and J. Teppema. 1,785,656; Dec. 16.

Thiosemicarbazones of hydroxy arsenobensenes and preparing the same. K. Streitwolf and A. Fehrle. 1,785,660; Dec. 16.
Ticket for telephone service, Memorandum. G. D. Cox. 1,784,813; Dec. 16.
Tickets, Method of and apparatus for making. S. L. H. Eberhardt. 1,785,250; Dec. 16.
Tie: *See*—
Railroad tie. Railway tie.
Tile-forming machine. H. W. Reel. 1,784,847; Dec. 16.
Tin pot. J. T. McQuiston. 1,785,322; Dec. 16.
Tire boot. W. R. Pinneo. 1,785,390; Dec. 16.
Tire-building machine. W. C. State. 1,785,659; Dec. 16.
Tire flap. R. S. Burdette. 1,785,691; Dec. 16.
Tire or similar article. F. S. Young. Des. 82,867; Dec. 16.
Tire, Pneumatic. W. E. Shively. 1,785,657; Dec. 16.
Tobacco can. A. E. Calvird. 1,785,294; Dec. 16.
Toilet flusher. L. B. Nordlund. 1,784,944; Dec. 16.
Tool handle. H. L. Bassett. 1,785,608; Dec. 16.
Tool, Mortising. W. M. Knourek. 1,785,351; Dec. 16.
Tool-retaining device. M. J. Schlitters, jr., and S. Imerman. 1,784,911; Dec. 16.
Tool, Weeding. A. Roesch and J. Roettinger. 1,785,531; Dec. 16.
Tool, Well fishing. L. E. Davis. 1,785,299; Dec. 16.
Tools, Zeroizing scale for work-positioning mechanism for machine. J. C. and R. D. Shaw. 1,785,395; Dec. 16.
Toothbrush. S. Eisenberg. 1,784,986; Dec. 16.
Tooth clamp. L. Haller. 1,785,624; Dec. 16.
Torch, Cutting and welding. A. F. Jenkins. 1,784,964; Dec. 16.
Toroidal inductance device. E. C. Hagemann. 1,784,833; Dec. 16.
Torque-impulse multiplier. G. B. Coleman. 1,785,338; Dec. 16.
Tower, Cooling. R. O. Anderson, U. S. Rudy, and B. M. Gessel. 1,785,572; Dec. 16.
Toy. N. Deakides. Des. 82,801; Dec. 16.
Toy aeroplane. F. S. Rimer. 1,784,946; Dec. 16.
Toy and display device, Educational. C. and C. D. Fisher. 1,785,442; Dec. 16.
Toy or similar article. W. E. Disney. Des. 82,802; Dec. 16
Tracer, Dead-reckoning. M. F. Bates. 1,785,241; Dec. 16.
Track sander for motor vehicles. F. Florian. 1,784,832; Dec. 16.
Track-shifting apparatus. G. J. Holt and W. Longevin. 1,784,963; Dec. 16.
Tractors, Earth-working attachment for. A. S. Hughes. 1,785,122; Dec. 16.
Traffic-controlling apparatus, Railway-. H. G. Blosser and R. A. McCann. 1,784,816; Dec. 16.
Traffic-controlling apparatus, Railway-. H. A. Thompson. 1,784,851; Dec. 16.
Train control. W. D. Cloud. 1,785,693; Dec. 16.
Train control. H. B. Taylor. 1,785,706; Dec. 16.
Train-control system, Automatic. W. H. Reichard. 1,785,703; Dec. 16.
Transformer system. H. Whittle. 1,785,062; Dec. 16.
Transmission. E. Wildhaber. 1,784,919–20; Dec. 16.
Transmission system, Mechanical. H. C. Harrison. 1,784,871; Dec. 16.
Trap: *See*—
Animal trap. Rodent trap.
Crab trap.
Traveling case. S. Apter. Des. 82,782; Dec. 16.
Tray, Ash. A. Culin. Des. 82,799; Dec. 16.
Tray, Ash. E. M. Grilley. 1,785,305; Dec. 16.
Treatment for liners. P. Beebe. 1,785,667; Dec. 16.
Trimmer: *See*—
Lumber trimmer.
Truck. W. Stuebing, jr. 1,785,368; Dec. 16.
Truck. W. Zeindler. 1,785,064; Dec. 16.
Truck bolster. Railway-car-. T. H. Symington. 1,785,056; Dec. 16.
Truck, Lift. W. Stuebing, jr. 1,785,369; Dec. 16.
Truck, Snow-hauling. J. A. Ortiz. 1,785,423; ; Dec. 16.
Tube expanders and the like, Operating device for. G. Wiedeke. 1,785,103; Dec. 16.
Tube system, Pneumatic. W. V. McGuinness. 1,784,968; Dec. 16.
Tubing for newel posts, Square. H. Felsenthal. 1,785,025; Dec. 16.
Tubular members, Connecting. E. P. Lehmann. 1,785,129; Dec. 16.
Tunnel. R. V. Proctor. 1,785,096; Dec. 16.
Turpentine and pine-tar oils into heavier oils, Converting. E. B. Smith. 1,784,949; Dec. 16.
Twisting machine. W. K. Weston. 1,784,859; Dec. 16.
Two-cycle V-motor. E. H. Belden. 1,785,175; Dec. 16.
Typewriting machine. G. F. Handley. 1,785,445; Dec. 16.
Underwear garment. E. W. Robischon. 1,785,286; Dec. 16.
Universal joint. A. F. Pieper. 1,785,558; Dec. 16.
Unstacking machine. A. E. Bronson and A. M. Braden. 1,785,374; Dec. 16.
Upholstery, harness, and pack for aircraft chairs, Padded. J. F. Smith. 1,784,996; Dec. 16.
Urn, Flower. C. L. Agnell. 1,785,430; Dec. 16.
Utensil, Kitchen. C. H. Hale and H. J. Kleefisch. 1,785,191; Dec. 16.
Vaccine for hog cholera and manufacturing the same. M. Dorset. 1,784,928; Dec. 16.
Vacuum cleaner. K. K. Cundiff. 1,785,675; Dec. 16.
Valve. J. W. MacClatchie. 1,785,278; Dec. 16.
Valve and switch operating means. E. A. Larsson. 1,785,268; Dec. 16.
Valve, Balanced. J. W. Tucker. 1,785,289; Dec. 16.
Valve construction for slush pumps. H. P. Hickerson. 1,785,259; Dec. 16.
Valve, Distribution. C. W. Dake. 1,785,184; Dec. 16.
Valve for air gauges. H. and R. Stanley. 1,785,658; Dec. 16.
Valve for milking machines. M. Keener. 1,785,313; Dec. 16.
Valve lifter. J. P. McCready. 1,785,040; Dec. 16.
Valve push rod. B. R. Helmendinger. 1,785,308; Dec. 16.
Valve, Shut-off. C. H. Bliven. 1,785,475; Dec. 16.
Valve-silencing mechanism. C. J. McLeod. 1,785,523; Dec. 16.
Valve, Subterranean check. J. J. Mohler. 1,785,138; Dec. 16.
Vanity case. G. W. Dunnican. 1,785,303; Dec. 16.
Vanity case or analogous article. D. H. Zell. Des. 82,868–9; Dec. 16.
Vault, Burial. F. L. Temple. 1,785,156; Dec. 16.
Vault, Grave. R. E. Smith. Des. 82,855; Dec. 16.
Vehicle body. A. Rosman. 1,784,975; Dec. 16.
Vehicle with actuated doors, Dump. H. F. Flowers. 1,785,678; Dec. 16.
Vehicles in garages, Handling. G. Lowenstein. 1,785,034; Dec. 16.
Vehicles, Safety means for motor. G. Santangelo. 1,785,598; Dec. 16.
Ventilator: *See*—
Window ventilator.
Ventilator., G. E. Black. 1,785,540; Dec. 16.
Ventilator. J. L. Jensen. 1,785,263; Dec. 16.
Ventilator construction. B. Landau. 1,784,841; Dec. 16.
Vessel-capping machine. C. L. Turner. 1,785,235; Dec. 16.
Vise, Saw. J. Blumer. 1,785,613; Dec. 16.
Wagon. M. J. Adams. 1,785,717; Dec. 16.
Wall for reaction towers. F. J. Bowman. 1,785,178; Dec. 16.
Watch attachment, Wrist-. R. F. Campbell. 1,784,887; Dec. 16.
Water heater. L. Ganz. 1,785,304; Dec. 16.
Waterproof fibrous product. H. L. Levin. 1,785,357; Dec. 16.
Waterproofing of materials. W. A. Bridgeman. 1,785,434; Dec. 16.
Water-soluble product from fatty acids occurring in wool fat. G. Mauthe and A. Thauss. 1,784,941; Dec. 16.
Water-treating apparatus. E. G. Duden. 1,784,893; Dec. 16.
Wave source, Constant-frequency-. W. A. Marrison. 1,784,844; Dec. 16.
Wave transmission, Control of. F. A. Hubbard. 1,784,874; Dec. 16.
Weather strip. M. E. Bosley. 1,785,476; Dec. 16.
Weather strip for doors, Automatic. J. W. Carter. 1,785,672; Dec. 16.
Weather strip, Threshold. W. B. Bailey. 1,785,431; Dec. 16.
Weed cutter. I. W. Fisher. 1,785,443; Dec. 16.
Weighing device for dial balances. J. Dockl. 1,785,542; Dec. 16.
Well-casing perforator. R. Moss. 1,785,419; Dec. 16.
Well-drilling equipment. R. Wilkins. 1,785,163; Dec. 16.
Well packer. G. A. Humason. 1,785,123; Dec. 16.
Wells, Apparatus for drilling. L. E. Zerbe and M. T. Archer. 1,785,238; Dec. 16.
Wheel cleats or lugs, Quickly attaching and detaching tractor-. T. J. Calhoon. 1,784,958; Dec. 16.
Wheels, Attachment for traction. W. J. Lewin. 1,785,452; Dec. 16.
Window and screen, Combination. C. M. Wittmann. 1,785,663; Dec. 16.
Window ventilator. W. B. Hamilton. 1,785,682; Dec. 16.
Wing structure for airplanes. W. C. Lambert. 1,785,318; Dec. 16.
Wiper, Windshield. H. Dolan. 1,785,113; Dec. 16.
Wood, Process and apparatus for disintegrating. G. H. Ellis. 1,785,544; Dec. 16.
Wood, Treating. A. P. Allen. 1,785,571; Dec. 16.
Worktable. J. Brogden. Re17,901; Dec. 16.
Wrapping machine for sweetmeats and the like. R. A. Harris. 1,784,835; Dec. 16.
Wrench: *See*—
Multiple wrench.

CLASSIFICATION OF PATENTS

ISSUED DECEMBER 16, 1930

NOTE.—First number=class, second number=subclass, third number=patent number

CARNEGIE LIBRARY OF ATLANTA

ALPHABETICAL LIST OF PATENTEES

TO WHOM

PATENTS WERE ISSUED ON THE 23D DAY OF DECEMBER, 1930

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice). **Includes patents, reissues, and designs.**

Adams, Henry, Plainfield, N. J. Atomizing jet nozzle. 1,785,802; Dec. 23.
Adams, Henry, Plainfield, N. J. Atomizing mixing nozzle. 1,785,803; Dec. 23.
Adams, Henry, Plainfield, N. J. Oil burning. 1,785,804; Dec. 23.
Adams, Henry, Plainfield, N. J. Method of and apparatus for atomizing fuel oil. 1,785,805; Dec. 23.
Adams, Raleigh J., Chicago, Ill. Boiler. 1,785,758; Dec. 23.
Adartcraft, Inc. (See Mayer, August, assignor.)
Ajax Manufacturing Company, The. (See Criley, William W., assignor.)
Alexander, Vincent S., assignor to The Union Switch & Signal Company, Swissvale, Pa. Railway-traffic-controlling apparatus. 1,785,725; Dec. 23.
Allen, James B., et al. (See Walker, Jerry S., assignor.)
Allen, W. D., Manufacturing Company. (See Steininger, William, assignor.)
Aluminum Company of America. (See Williams, J. C., and Greeman, assignors.)
Amberg, Walter E. (See Hallam, R. M., and Amberg.)
Ambrose, Ernest R., assignor to U. S. Safety Flange Company, Topeka, Kans. Structure of auxiliary flanges for automobile wheels. 1,786,389; Dec. 23.
American Air Filter Company. (See Jordahl, Anders, assignor.)
American Laundry Machinery Company, The. (See Carroll, Emil J., assignor.)
American Metal Company, The. (See Eppensteiner, William F., assignor.)
American Pearl Button Company. (See Knott, Harry H., assignor.)
American Rolling Mill Company, The. (See Freeze, Jonathan R., assignor.)
American Telephone and Telegraph Company. (See Crisson, George, assignor.)
American Telephone and Telegraph Company. (See Peterson, G. H., and Rhodes, assignors.)
American Telephone and Telegraph Company. (See Silent, Harold C., assignor.)
American Type Founders Company. (See Kelly, William M., assignor.)
Amico Company, The. (See Koplin, Harry, assignor.)
Amstutz, Willis J., Latty, Ohio. Vacuum brush. 1,786,384; Dec. 23.
Anderau, Walter. (See Straub, F., and Anderau.)
Anderson, Arvid E., Lansdowne, and F. D. King, Brookline, Pa., assignors to General Electric Company. Automatic switching system. 1,786,326; Dec. 23.
Anderson, Ellis B., Memphis, Tenn. Automobile handling device. 1,786,282; Dec. 23.
Andrews, David E., assignor of sixty one-hundredths to W. L. Stone, Detroit, Mich. Apparatus for forming hollow articles of cementitious material. 1,786,385; Dec. 23.
Ardern, James L., East Kew, Melbourne, Victoria, Australia. Automatic air-inlet valve for internal-combustion engines. 1,786,283; Dec. 23.
Arey, Fred C., Oak Park, Ill., assignor to J. W. Gleason, Pittsburgh, Pa., F. W. Bora, New York, N. Y., W. F. Freudenreich, Kenilworth, Ill., F. H. Chetlain, Chicago, Ill., and himself, trustees. Rotary spiral slitting cutter. 1,786,050; Dec. 23.
Armstrong Cork Company. (See Busch, Herman F., assignor.)
Armstrong, Harry M., Chicago, Ill. Hairpin. 1,785,885; Dec. 23.
Arneson, Arne. (See Hönningstad, A., Arneson, and Norheim.)
Arrowood, Milton W., Greenwich, Conn., assignor to Universal Engineers, Inc., Worcester, Mass. Furnace and method of burning fuel. Re17,908; Dec. 23.
Ashcroft, Edgar A., Waye House, near Ashburton, England. Extraction of tin from ores or materials containing tin. 1,786,386; Dec. 23.
Asmussen, August J., Detroit, Mich., assignor to Diamond Tool & Engineering Company. Compressor. 1,785,853; Dec. 23.
Auer, George S., Cleveland, Ohio. Hot-air-register construction. 1,785,993; Dec. 23.
Auteri, Michele, Milan, Italy, assignor to Siemens & Halske Aktiengesellschaft, Wernerwerk, Siemenstadt, near Berlin, Germany. Coin-collecting apparatus. 1,785,994; Dec. 23.
Automatic Guns, Inc. (See Hudson, Robert F., assignor.)
Baird, Archie M., deceased, and F. J. Partridge, M. L. Baird, administratrix, assignors to Baird Pneumatic Register Company, Topeka, Kans. Air-service control and register for pneumatic tires. 1,786,103; Dec. 23.
Baird, Mary L., administratrix. (See Baird, A. M., and Partridge.)
Baird Pneumatic Register Company. (See Baird, A. M., and Partridge, assignors.)
Baker, Bert F. (See Knox, H. A., and Baker.)
Baker, Frederick W., Stourbridge, England, assignor to Trinity Wheel Corporation, New York, N. Y. Wheel felly. 1,785,995; Dec. 23.
Baker, James C., assignor of one-third to R. L. Davis, sr., and one-third to A. J. Ohler, Lincoln, Nebr. Wrench. 1,785,925; Dec. 23.
Baker, Paul W., assignor to Wagner Electric Corporation, St. Louis, Mo. Brush holder. 1,785,996; Dec. 23.
Balash, Alexander, Vaux Hall, N. J. Air-regulating device for internal-combustion engines. 1,785,726; Dec. 23.
Barker, Ward T., Kansas City, Mo. Fan. 1,786,051; Dec. 23.
Barnes, George L. (See Logan, Oren E., assignor.)
Barrett Company, The. (See Miller, Stuart P., assignor.)
Barrett, Edgar. (See Brown, J., and Barrett.)
Barrett, Geoffrey F., Springfield, England, assignor to Norma-Hoffmann Bearings Corporation. Mountings of calender rolls and the like. 1,785,886; Dec. 23.
Bartlett, Frank M., Reading, and B. F. Hartwell, Winchester, Mass. Hat making. 1,786,327; Dec. 23.
Bassett Metal Goods Company, The. (See Stuart, Henry J., assignor.)
Batchelor, Landon, Lawrenceburg, Ind. Seed planter. 1,785,926; Dec. 23.
Batsel, Max C., Yonkers, N. Y., assignor to Westinghouse Electric & Manufacturing Company. Radio receiving system. Re17,909; Dec. 23.
Battista, Donald A., Washington, D. C. Ice-cream cake and making same. 1,786,387; Dec. 23.
Bauer, Bruno, Vienna, Austria. Construction of the expansion joint of reenforced concrete structures. 1,786,284; Dec. 23.
Bauer, Max F., Geneva, Switzerland, assignor to Isothermos Corporation of America, New York, N. Y. Automatically lubricating journal box. 1,786,104; Dec. 23.
Bauermeister, Fred E., Columbus, Ohio. Steering-shaft lock. 1,786,186; Dec. 23.
Baumgartner, Fred, Muskegon, Mich. Pressure-control valve. 1,785,759; Dec. 23.
Bausch & Lomb Optical Company. (See Bouchard, Samuel E., assignor.)
Beasley, Albeon, Evansville, assignor of one-half to W. S. Jaco, deceased, Vanderburg County, Ind.; R. Coffman, administrator. Seal for shaft bearings. 1,785,806; Dec. 23.
Beaudry, Joseph, Somerset, Manitoba, Canada. Cultivator. 1,786,388; Dec. 23.
Becker, Aloysius W., assignor to Econoheet Company, Chicago, Ill. Space heater. Des. 82,870; Dec. 23.
Becker, Joseph, assignor to The Koppers Company, Pittsburg, Pa., Coke retort with quenching device and method for same. 1,785,760; Dec. 23.
Belknap, Frank L. (See Kirschbraun, Lester, assignor.)
Bell, John E., deceased, Brooklyn, N. Y. L. R. Bell, executrix. High-pressure boiler. 1,785,927; Dec. 23.
Bell, Lolar R., executrix. (See Bell, John E.)
Bendix Brake Company. (See Bendix, V., and Gallup, assignors.)
Bendix Brake Company. (See Norton, Raymond J., assignor.)
Bendix, Vincent, Chicago, Ill., and D. L. Gallup, South Bend, Ind., assignors to Bendix Brake Company, Chicago, Ill. Brake-operating mechanism. 1,785,854; Dec. 23.
Benjamin, John M., Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Nailing machine. 1,785,928; Dec. 23.
Benner, Raymond C., Bayside, and N. K. Chaney, Kew Gardens, assignors, by mesne assignments, to Presto-O-Lite Storage Battery Corporation. Composite separator and making the same. 1,786,328; Dec. 23.
Beregkoff, Anatol P., Schenectady, N. Y., assignor to General Electric Company. Switchboard plug. 1,786,329; Dec. 23.
Bergquist, Charles H., assignor of one-half to E. A. Locke, Okmulgee, Okla. Counterbalance. 1,786,143; Dec. 23.
Berkeley, Laurence J., Cleveland, Ohio, assignor to W. M. Jenkins, trustee, Pittsburgh, Pa. Valve device. 1,786,330; Dec. 23.
Besch, Charles A., La Crosse, Wis. Humidifier for wall registers. 1,786,331; Dec. 23.
Beutel, Werner, assignor of one-half to R. Bohm, Bridgeport, Conn. Safety device for boilers. 1,786,144; Dec. 23.

Birdsboro Steel Foundry & Machine Company. (See Martin, Mark H., assignor.)
Birmingham, Earl B., et al. (See Carr, C. W., and Tripp, assignors.)
Bissell, Genevieve, administratrix. (See Bissell, Richard E.)
Bissell, Richard E., deceased, Cleveland, Ohio, by G. Bissell, administratrix, Lansing, Mich., assignor to Thompson Products, Incorporated, Cleveland, Ohio. Cooling-capsule-filled valve. 1,786,285; Dec. 23.
Blaw-Knox Company. (See Bradshaw, Grant D., assignor.)
Blecher, Boris, Philadelphia, Pa. Collar holder. Des. 82,895; Dec. 23.
Blecher, Carl, Berlin-Dahlem, Germany. Securing accurate color values in color printing and color photography. 1,785,997; Dec. 23.
Blondin, Michel C., Meudon, France, assignor, by mesne assignments, to Old Colony Distributing Company, Boston, Mass. Shaving brush. 1,786,224; Dec. 23.
Bohm, Robert. (See Beutel, Werner, assignor.)
Bone, Herbert L., assignor to The Union Switch & Signal Company, Swissvale, Pa. Railway-car retarder. 1,786,286; Dec. 23.
Bonus Candy Corporation. (See Lanzi, Elmo G., assignor.)
Bora, Frank W., et al., trustees. (See Arey, Fred C., assignor.)
Bossbard, Arnold, Arbon, Switzerland, assignor to Sir James Farmer Norton & Company, Limited, Lancashire, England. Method and apparatus for stretching fabrics. 1,786,188; Dec. 23.
Bosworth, J. Graham. (See Gilbert, Charles B., assignor.)
Bouchard, Samuel E., assignor to Bausch & Lomb Optical Company, Rochester, N. Y. Spectacle frame. Des. 82,871; Dec. 23.
Bouchard, Samuel E., assignor to Bausch & Lomb Optical Company, Rochester, N. Y. Ophthalmic mounting. 1,785,929; Dec. 23.
Boudette, Cornelius G., Claremont, N. H., assignor to Sullivan Machinery Company. Mining machine. 1,786,225; Dec. 23.
Bowersock, Wilber H., assignor to Rochester Folding Box Company, Rochester, N. Y. Corner-cushion-pad packing device. 1,786,189; Dec. 23.
Boye, James H., assignor to James H. Boye Manufacturing Company, Chicago, Ill. Curtain fixture. 1,786,052; Dec. 23.
Boye, James H., Manufacturing Company. (See Boye, James H., assignor.)
Boykin, Burwell, jr., Beaumont, Tex. Support. 1,786,145; Dec. 23.
Bradley, Edgar R., Fargo, N. Dak. Quack-grass digger. 1,786,226; Dec. 23.
Bradley, Theodore F., Westfield, assignor to Ellis-Foster Company, Montclair, N. J. Resinous composition and making same. 1,785,930; Dec. 23.
Bradshaw, Aubrey O., Bluefield, W. Va. Tank-closure lock. 1,786,332; Dec. 23.
Bradshaw, Grant D., Pittsburgh, Pa., assignor to Blaw-Knox Company, Blawnox, Pa. Fluid separator. 1,785,931; Dec. 23.
Brainard Steel Corporation. (See Davis, Otis L., assignor.)
Branstad, Arthur J., Eau Claire, Wis. Razor-blade-vending machine casing. Des. 82,872; Dec. 23.
Brewer & Company. (See Roeg, Louis M., assignor.)
Briggs Manufacturing Company. (See Happone, Matt, assignor.)
Briggs Manufacturing Company. (See Marshall, William, assignor.)
Briggs Manufacturing Company. (See Marshall, W., and Camiener, assignors.)
Brigham, Charles W., Attleboro, Mass., assignor to C. G. King & Co., Inc., Providence, R. I. Shoe buckle. Des. 82,873; Dec. 23.
Brigham, Charles W., Attleboro, Mass., assignor to C. G. King & Co., Inc., Providence, R. I. Shoe buckle. Des. 82,874; Dec. 23.
Brigham, Charles W., Attleboro, Mass., assignor to C. G. King & Co., Inc., Providence, R. I. Shoe buckle. Des. 82,875; Dec. 23.
Brigham, Charles W., Attleboro, Mass., assignor to C. G. King & Co., Inc., Providence, R. I. Shoe buckle. Des. 82,876; Dec. 23.
Bright Star Battery Company. (See Koretzky, Harry M., assignor.)
Brogden, Ernest M., Pomona, assignor to Brogdex Company, Los Angeles, Calif. Apparatus for treating fruit and the like. 1,786,405; Dec. 23.
Brogdex Company. (See Brogden, Ernest M., assignor.)
Brokate, Clarence W. (See Heise, G. W., and Brokate.)
Brooke, Edward B., Birmingham, Ala. Jarring machine. 1,785,998; Dec. 23.
Brown, Arthur J. (See Ezdorf, R. R., and Brown.)
Brown, Arthur J., New York, N. Y., and R. R. Ezdorf, Washington, D. C. Dusting and spraying machine. 1,785,932; Dec. 23.
Brown, Arthur J., New York, N. Y., and R. R. Ezdorf, Washington, D. C. Dusting machine. 1,785,933; Dec. 23.
Brown Instrument Company, The. (See Brown, Richard P., assignor.)
Brown, James, and E. Barrett, St. Albans, Christchurch, New Zealand. Fuse cut-out for electric circuits. 1,786,333. Dec. 23.
Brown, Le Roy O., assignor to Justrite Manufacturing Company, Chicago, Ill. Lamp. Des. 82,877; Dec. 23.
Brown Lipe Gear Company. (See Peterson, Carl D., assignor.)
Brown, Richard P., assignor to The Brown Instrument Company, Philadelphia, Pa. Meter-controlled relay mechanism. 1,785,761; Dec. 23.
Bruggeman, Alphonse J., assignor to Fried-Osterman Company, Milwaukee, Wis. Glove. 1,786,227; Dec. 23.
Bryant Electric Company, The. (See Lofgren, Carl O. B., assignor.)
Bryce, James W., Bloomfield, N. J., assignor to The Tabulating Machine Company, Endicott, N. Y. Record-controlled printing mechanism. 1,785,999; Dec. 23.
Bucklein, Frank P., Los Angeles, Calif. Base to hold nozzles and supply pipes. 1,786,146; Dec. 23.
Buclon, Achille, Ales, France. Lubricating apparatus for the flanges of wheels of engines or vehicles traveling upon railway tracks. 1,786,334; Dec. 23.
Bullard Company, The. (See Bullard, Dudley B., assignor.)
Bullard Company, The. (See Bullard, Edward J., jr., assignor.)
Bullard, Dudley B., Southport, assignor to The Bullard Company, Bridgeport, Conn. Chuck. 1,786,147; Dec. 23.
Bullard, Edward P., jr., Stratford, assignor to The Bullard Company, Bridgeport, Conn. Station-type drilling and tapping machine. 1,786,148; Dec. 23.
Bulldog Electric Products Company. (See Frank, Harrison J. L., assignor.)
Bundy, Harry W., assignor, by mesne assignments, to Bundy Tubing Company, Detroit, Mich. Tinning apparatus. 1,785,762; Dec. 23.
Bundy, Harry W., assignor, by mesne assignments, to Bundy Tubing Company, Detroit, Mich. Condenser unit for mechanical refrigerators. 1,786,000; Dec. 23.
Bundy Tubing Company. (See Bundy, Harry W., assignor.)
Burger, Joseph, Brooklyn, N. Y. Shoe-heel cover. Des. 82,925; Dec. 23.
Burgess Battery Company. (See Schulte, Walter B., assignor.)
Burt, Romial, Montreal, Quebec, Canada. Oven. 1,785,763; Dec. 23.
Burtnett, Everett R., Santa Rosa, Calif. Internal-combustion engine. 1,786,287; Dec. 23.
Burton, Frank F., Mount Carmel, assignor to Winchester Repeating Arms Company, New Haven, Conn. Barrel stop for breakdown firearms. 1,785,764; Dec. 23.
Burton, Frank F., Mount Carmel, assignor to Winchester Repeating Arms Company, New Haven, Conn. Multiple-barrel firearm. 1,785,765; Dec. 23.
Busch, Herman F., Millvale, assignor to Armstrong Cork Company, Pittsburgh, Pa. Friction surface. 1,786,190; Dec. 23.
California Cedar Products Company. (See Sylva, John L., assignor.)
California Consolidated Water Co. (See Wolfe, Richard C., assignor.)
Callaghan, Martin A., Burlingame, Calif. Partition construction. 1,785,826; Dec. 23.
Callaway, Robert M., Waco Tex. Outlet construction. 1,785,766; Dec. 23.
Cameron, James A., assignor to Cameron Machine Company, Brooklyn, N. Y. Counterweighting device for winding machines. 1,786,934; Dec. 23.
Cameron Machine Company. (See Cameron, James, A., assignor.)
Camiener, Paul. (See Marshall, W., and Camiener.)
Campbell, Arthur B., Fort Wayne, Ind., assignor to General Electric Company. Electrically-wound clock. 1786,288; Dec. 23.
Campbell, Charles H., Pittsburgh, Pa., assignor, by mesne assignments, to Peter Cooper Corporations, Wilmington, Del. Reclaimed rubber. 1,786,149; Dec. 23.
Campus, Cesare C., Santa Monica, Calif. Valve and seat combination for bidet control. 1,785,935; Dec. 23.
Cancianich, Francis J., Newport News, Va. Safety appliance for gas burners. 1,786,395; Dec. 23.
Cancianich, Francis J., Newport News, Va. Gas burner. 1,786,396; Dec. 23.
Capeliuschnicoff, Matvey A., New York, N. Y., assignor of one-half to V. G. Shukhoff, Moscow, Union of Soviet Socialist Republics. End connector for tubes. 1,785,727; Dec. 23.
Carlisle, Rose A., administratrix. (See Carlisle, Roy.)
Carlisle, Roy, deceased, Indianapolis, Ind.; R. A. Carlisle, administratrix, assignor to Razor Blade Tile, Incorporated. Razor-blade-disposal tile. 1,785,855; Dec. 23.
Carpenter, Theodore H., Port Arthur, Tex., assignor to Gulf Refining Company, Pittsburgh, Pa. Apparatus for pressure control. 1,785,807; Dec. 23.
Carpenter, William C., San Francisco, Calif. Fuel-briquette forming and baking machine. 1,785,827; Dec. 23.
Carr, Charles W., and E. I. Tripp, Susanville, assignors of one-fourth to F. B. Hutchins, San Francisco, and one-fourth to E. B. Birmingham, Susanville, Calif. Splining machine. 1,785,728; Dec. 23.

Carr, Moses F., Lexington, Mass., assignor, by mesne assignments, to United-Carr Fastener Corporation, Cambridge, Mass. Fastening installation. 1,785,825; Dec. 23.
Carroll, Emil J., Cincinnati, assignor to The American Laundry Machinery Company, Norwood, Ohio. Controlling mechanism for drying tumblers. 1,786,191; Dec. 23.
Casto, Lloyd V., assignor to Oxford Varnish Corporation, Detroit, Mich. Plate mounting. 1,786,001; Dec. 23.
Casto, Lloyd V., Detroit, Mich., assignor to Oxford Varnish Corporation. Plate mounting. 1,786,002; Dec. 23.
Ceasar, Paul, New York, N. Y. Electric-lamp bracket. 1,785,767; Dec. 23.
Celotex Company, The. (See Munroe, Treadway B., assignor.)
Central Glass Works. (See Schaub, Edward J. assignor.)
Chambers, Charles, jr., Flora, Ind. Vehicle spring. 1,785,828; Dec. 23.
Chance, Albert B., Centralia, Mo. Earth anchor. 1,786,228; Dec. 23.
Chaney, Newcomb K. (See Benner, R. C., and Chaney.)
Chason, Daniel H., Elizabeth, N. J., assignor to The Singer Manufacturing Company, Elizabeth, N. J. Electrically-lighted sewing machine. 1,785,856; Dec. 23.
Chemical Treatment Company. (See Fink, C. G., and Eldridge, assignors.)
Chemische Fabrik auf Actien (vorm. E. Schering). (See Schotte, Herbert, assignor.)
Chetlain, Frederick H., et al., trustees. (See Arey, Fred C., assignor.)
Chilton, Ralph H., Dayton, Ohio, assignor, by mesne assignments, to Frigidaire Corporation. Refrigerating apparatus. 1,785,857; Dec. 23.
Christensen, Niels A., Cleveland, Ohio. Compressor drive. 1,786,003; Dec. 23.
Chryst, William A., assignor to Delco-Remy Corporation, Dayton, Ohio. Circuit interrupter. 1,785,887; Dec. 23.
Cipollina, Leonardi, Gulfport, Miss. Heel attaching device. 1,785,808; Dec. 23.
City Auto Stamping Company, The. (See Whitlock, George E., assignor.)
Clark, Adam, Willows, Saskatchewan, Canada. Earth-excavating machine. 1,786,335; Dec. 23.
Clark, Joseph H., Berkeley, Calif. Stay-down shirt. 1,786,105; Dec. 23.
Clayton, Martin M., Baden, Pa., assignor to National Electric Products Corporation, New York, N. Y. Clamp for crossbars. 1,786,004; Dec. 23.
Cleveland Clinic Foundation, The. (See Seitz, Valentine, assignor.)
Cleveland Graphite Bronze Company, The. (See Kerruish, Edward P., assignor.)
Coast, John W., jr., Tulsa, and G. T. Granger, Okmulgee, Okla. Method of and apparatus for treating hydrocarbon oils. 1,786,053; Dec. 23.
Coates, James H., R. S. Howe, and W. F. Costello, assignors to The New Britain Machine Company, New Britain, Conn. Stool. 1,785,768; Dec. 23.
Cobh Connector Company. (See Hermann, Edward O., assignor.)
Cody, Martin M., Chicago, Ill., assignor to Crane Packing Company. Gasket. 1,786,390; Dec. 23.
Coffman, Russell, administrator. (See Beasley, Albeon.)
Coggins, J. H., et al. (See Welsh, Ralph B., assignor.)
Cole, Harry A., New York, N. Y., assignor to Cole Service Plan, Inc. Variable-speed transmission. 1,785,936; Dec. 23.
Cole Service Plan, Inc. (See Cole, Harry A., assignor.)
Collins & Aikman Corporation. (See Curtis, Melville G., assignor.)
Columbus-McKinnon Chain Corporation, The. (See Stahl, Frank E., assignor.)
Conneaut Shovel Company, The. (See Welsh, Chester J., assignor.)
Conrow, Matthia W., Springfield, Mass. Nonskid tire chain which is permanently attached to the wheels. 1,786,229; Dec. 23.
Cooper, Peter, Corporation. (See Campbell, Charles H., assignor.)
Costello, William F. (See Coates, J. H., Howe, and Costello.)
Cox, George C. and H. K. McIntyre, deceased, by E. M. McIntyre, executrix, Raleigh, N. C.; J. G. McIntyre, New York, N. Y., and M. McIntyre, Cranford, N. J., executors. Glass purification. 1,785,888; Dec. 23.
Cox, John L. (See Givens, H. M., Foley, and Cox.)
Cox, Paul F., assignor to The Goss Printing Press Company, Chicago, Ill. Multicolor attachment for flat-bed web-printing presses. 1,786,336; Dec. 23.
Craddock, John E., Brooklyn, N. Y. Ball-vending machine. 1,786,289; Dec. 23.
Crane Packing Company. (See Cody, Martin M., assignor.)
Cretors, Charles, Chicago, Ill. Stirring mechanism for corn-popping apparatus. 1,786,005; Dec. 23.
Criley, William W., Cleveland, assignor to The Ajax Manufacturing Company, Euclid, Ohio. Safety device. 1,786,006; Dec. 23.
Crimmins, Murrell H., Los Angeles, Calif. Two-cycle internal-combustion engine and supercharging device. 1,786,106; Dec. 23.
Crisson, George, East Orange, N. J., assignor to American Telephone and Telegraph Company. Shielding arrangement. 1,786,412; Dec. 23.
Cronkhite, Charles M., Glendale, assignor to Pilot Ray Corporation, Los Angeles, Calif. Operating mechanism for dirigible headlights. 1,786,007; Dec. 23.
Crosby, Gorham. (See Gunn, Thomas M., assignor.)
Crowley, John F., Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Manufacturing shoes. 1,785,829; Dec. 23.
Crumpton, Kenneth R., assignor to Kaufmann Department Stores, Inc., Pittsburgh, Pa. Ceiling diffuser chandelier bowl. Des. 82,878; Dec. 23.
Cullman, Otto, Chicago, Ill. Support for electric motors. 1,786,192; Dec. 23.
Currie, John, Barrington, Huntingdon, Canada. Safety razor. 1,785,889; Dec. 23.
Curtis, Melville G., Cynwyd, assignor to Collins & Aikman Corporation, Philadelphia, Pa. Pile fabric and making the same. 1,785,937; Dec. 23.
Cutler, Samuel C., Murray Hill, N. J. Apparatus for purifying gases. 1,786,150; Dec. 23.
Dalton, Leo F., Terre Haute, Ind. Bottle closure. 1,785,890; Dec. 23.
Danat, Fred W., Buffalo, N. Y. Ventilator for automobiles. 1,785,891; Dec. 23.
Danielson, Charles, assignor to Hall Nelson Manufacturing Company, Minneapolis, Minn. Folding ironing table. 1,786,008; Dec. 23.
Dargent, Charles, Brooklyn, N. Y. Water heater. 1,786,337; Dec. 23.
Davidson, Glenn. (See Lancks, I. F., and Davidson.)
Davis, Alson H., Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Shoe-pressing machine. 1,785,938; Dec. 23.
Davis, Augustine jr., Cincinnati, Ohio. Safety device for tanks. 1,785,729; Dec. 23.
Davis, Harry R., Nashua, N. H. Combination sign and awning. 1,785,809; Dec. 23.
Davis, McClellan, Portland, Oreg. Aeroplane-control device. 1,786,193; Dec. 23.
Davis, Melvin H., Seattle, Wash. Calendar. 1,786,230; Dec. 23.
Davis, Otis L., assignor to Brainard Steel Corporation, Warren, Ohio. Box-strap seal. 1,786,151; Dec. 23.
Davis, R. L., sr., et al. (See Baker, James C., assignor.)
Davis, Tenney L., Norwell, Mass. Di-alkyl urea. 1,785,730; Dec. 23.
Davis, Warren H., Nashua, N. H. Chicken battery. 1,785,858; Dec. 23.
Davis, William C., Preston, Wash. Shingle and making same. 1,785,830; Dec. 23.
Dawe, Albert J. (See Wilms, G. O., and Dawe.)
Defour, André Peronne, France. Utilizing the tides for power purposes. 1,785,896; Dec. 23.
De Grace, Edmond, Detroit, Mich. Railroad-track joint. 1,785,810; Dec. 23.
Dejur-Amsco Corporation. (See Shaw, Louis E., assignor.)
Delco Products Corporation. (See Elsey, George W., assignor.)
Delco-Remy Corporation. (See Chryst, William A., assignor.)
Delco-Remy Corporation. (See Hardman, Frederick J., assignor.)
Delco-Remy Corporation. (See Koffer, Albert E., assignor.)
Delco-Remy Corporation. (See Norvie, Harry E., assignor.)
Denmire, Harold A., assignor to The General Tire & Rubber Company, Akron, Ohio. Vulcanizing hollow rubber articles. 1,786,290; Dec. 23.
Denmire, Harold A., assignor to The General Tire & Rubber Company, Akron, Ohio. Tire-vulcanizing mold. 1,786,291; Dec. 23.
Dennison Manufacturing Company. (See Maish, Ralph A., assignor.)
De Plandolit y Bordas, Dolores, Barcelona, Spain. Adjustable clasp. 1,786,187; Dec. 23.
De Reamer, Frank C., Bridgeport, Conn., assignor to General Electric Company. Electric socket. 1,786,292; Dec. 23.
Detex Watchclock Corporation. (See Haselton, P. H., and Jenckes, assignors.)
Detex Watchclock Corporation. (See Knight, Ira W., assignor.)
Detroit Harvester Company. (See Horste, Joseph E., assignor.)
Detroit Lubricator Company. (See Russel, Philip S., assignor.)
De Vilbiss Company, The. (See Tracy, Robert W., assignor.)
De Vultich, Vladimir A., Paris, France. Clamping collar. 1,786,107; Dec. 23.
Diamond Match Company, The. (See Haferkamp, C. C., and Elder, assignors.)
Diamond Power Specialty Corporation. (See Snow, Norman L., assignor.)
Diamond Tool & Engineering Company. (See Asmussen, August J., assignor.)
Dick, Burns, assignor to Wagner Electric Corporation, St. Louis, Mo. Hydraulic-brake apparatus. 1,786,231; Dec. 23.
Dickinson, Dean D., Ayr, N. Dak. Harrow. 1,786,194; Dec. 23.
Dieterle, Paul, Buffalo, assignor to National Aniline & Chemical Company Inc., New York, N. Y. Making amino-azo compound. 1,785,769; Dec. 23.

Dinzl, Richard W. (See Nowak, A. K., and Dinzl.)
Dixson, Harry, assignor to Rolscreen Company, Pella, Iowa. Roller-screen structure. 1,786,054; Dec. 23.
Dodge, Henry P., Toledo, Ohio, assignor to Luthy Battery Equipment Company, San Antonio, Tex. Battery-plate building. 1,785,939; Dec. 23.
Donohue, Frank, jr., New York, N. Y. Propeller mechanism for aircraft. 1,786,338; Dec. 23.
Dormoy, Jules M. J., Paris, France, assignor to The Westinghouse Air Brake Company, Wilmerding, Pa. Power braking apparatus. 1,786,195; Dec. 23.
Dornacher, Joseph F., Massillon, Ohio. Bailing tool and sample taker. 1,786,152; Dec. 23.
Dornier, Claude, assignor of one-half to the firm Dornier-Metallbauten G. m. b. H., Friedrichshafen-on-the-Bodensee, Germany. Stub wing of flying boats. 1,785,892; Dec. 23.
Dornier-Metallbauten G. m. b. H. (See Dornier, Claude, assignor.)
Dornier-Metallbauten, G. m. b. H. (See Presser, Albert, assignor.)
Downs, George F., and H. F. Miller, jr., Buffalo, N. Y. Port construction and gas burner for open-hearth furnaces. 1,786,293; Dec. 23.
Doyle, James E., Cleveland, Ohio. Appliance for operating upon sheets. 1,786,153; Dec. 23.
Driggs, Louis L., jr. (See Faber, H. B., and Driggs.)
Driscoll, Joseph J. (See Lymburner, Armand, assignor.)
Driver, Wilbur R., East Orange, N. J. Radiotube. 1,786,154; Dec. 23.
Dronsfield, James, Oldham, England. Differential motion for traversing car-grinding rollers. 1,785,731; Dec. 23.
Drury, Walter C., Fulton, Ill. Cluster enrobing machine. 1,786,108; Dec. 23.
Dryice Equipment Corporation. (See Jones, C. L., and Small, assignors.)
Dumor National Chemical Company. (See Waters, Charles H., assignor.)
Dura Company, The. (See Graff, George, assignor.)
Durand, Nelson C., East Orange, assignor to Thomas A. Edison, Incorporated, West Orange, N. J. Switch device. 1,786,294; Dec. 23.
Durdin, Augustus C., jr., Chicago, Ill. Vacuum condensation pump. 1,786,055; Dec. 23.
Durdin, Augustus C., jr., Chicago, Ill. Pumping apparatus. 1,786,056; Dec. 23.
Duwe, Friedrich, Mainz-Kastel, assignor to Maschinenfabrik Augsburg-Nurnberg A. G., Nuremberg, Bavaria, Germany. Apparatus for mixing liquids. 1,786,009; Dec. 23.
Eastman Kodak Company. (See Teague, Walter D., assignor.)
Eclipse Machine Company. (See Lansing, Raymond P., assignor.)
Econoheet Company. (See Becker, Aloysius W., assignor.)
Edison, Thomas A., Incorporated. (See Durand, Nelson, C., assignor.)
Edmundson, Marjorie C., San Pedro, Calif. Surgical bandage. 1,785,931; Dec. 23.
Edwards, Rubie, Fort Slocum, N. Y. Submarine rescuing device. 1,786,109; Dec. 23.
Efcolite Corporation. (See von Nessen, Walter, assignor.)
Eigenheer, Jakob, Vogelsang, near Turgi, Switzerland. Needle holder for the sound boxes of talking machines. 1,786,232; Dec. 23.
Elder, William J. (See Haferkamp, C. C., and Elder.)
Eldridge, Charles H. (See Fink, C. G., and Eldridge.)
Electric Sprayit Company. (See Weiss, Theobald C., assignor.)
Electric Steel Foundry Co. (See Nourse, Walter H., assignor.)
Ellis-Foster Company. (See Bradley, Theodore F., assignor.)
Elsey, George W., Anderson, Ind., assignor, by mesne assignments, to Delco Products Corporation, Dayton, Ohio. Rebound check. 1,785,893; Dec. 23.
Elsey, George W., Anderson, Ind., assignor, by mesne assignments, to Delco Products Corporation, Dayton, Ohio. Shock absorber. 1,785,984; Dec. 23.
Emsco Derrick & Equipment Company. (See Sawyer, Wilfred D., assignor.)
Enamel Products Company, The. (See Geiger, Frederick, assignor.)
England, William A., Davy, W. Va. Switch-operated frog. 1,785,895; Dec. 23.
Ennes, Stanton, Cleveland, Ohio. Railroad code-transmitting device. 1,785,940; Dec. 23.
Ennis, George H., Long Beach, assignor of one-half to R. V. Funk, Anaheim, Calif. Method and apparatus for determining the location of water strata in wells. 1,786,196; Dec. 23.
Entenman, Albert, Brooklyn, N. Y. Frame. 1,786,197; Dec. 23.
Eppensteiner, William F., Rahway, N. J., assignor, by mesne assignments, to The American Metal Company, New York, N. Y. Mold for casting metals. 1,785,941; Dec. 23.
Ericsson, Gunnar, Philadelphia, Pa. High-duty valve structure. 1,786,295; Dec. 23.
Escher, Edward, jr., Brooklyn, N. Y. Stopper for dilution bottles. 1,785,859; Dec. 23.
Etteldorf, Peter J., Quincy, Ill. Incubator. 1,785,942; Dec. 23
Ezdorf, Richard R. (See Brown, A. J., and Ezdorf.)
Ezdorf, Richard R., Washington, D. C., and A. J. Brown, New York, N. Y. Agricultural dusting machine. 1,785,943; Dec. 23.
Ezdorf, Richard R., Washington, D. C., and A. J. Brown, New York, N. Y. Broadcast duster. 1,785,944; Dec. 23.
Ezdorf, Richard R., Washington, D. C., and A. J. Brown, New York, N. Y. Dual fan-dusting machine. 1,785,945; Dec. 23.
Faber, Henry B., New York, and L. L. Driggs, jr., New Rochelle, N. Y. Aerial toy. 1,785,770; Dec. 23.
Falck, Fritz W., Los Angeles, Calif. Radiocabinet. Des. 82,879; Dec. 23.
Fales, Elisha N., Dayton, Ohio. Turbine. 1,786,057; Dec. 23.
Farmer, Cylde C., Pittsburgh, assignor to The Westinghouse Air Brake Company, Wilmerding, Pa. Angle-cock device. 1,786,198; Dec. 23.
Farmer Stone Picking Machine Company, The. (See Reiter, Otis, F., assignor.)
Farrell, Peter A., Brooklyn, N. Y. Sign. 1,786,155; Dec. 23.
Federal Steel Sash Company. (See McIntosh, Charles J., assignor.)
Fehr, John R., assignor to Fridgidaire Corporation, Dayton, Ohio. Refrigerating apparatus. 1,785,860; Dec. 23.
Feldman, Emil. (See Kanter, E., and Feldman.)
Ferguson, Alexander D., Michigan City, Ind., assignor to Sullivan Machinery Company. Valve mechanism. 1,786,199; Dec. 23.
Ferguson, Charles, Ellis Island, N. Y. Ventilating apparatus. 1,786,200; Dec. 23.
Ferrara, Gabriel, Tres Arroyos, Argentina. Heating apparatus for the carburated mixture. 1,786,233; Dec. 23.
Filer & Stowell Company, The. (See Pelton, George M., assignor.)
Fink, Colin G., New York, N. Y., and C. H. Eldridge, Metuchen, N. J., assignor to Chemical Treatment Company, Inc., New York, N. Y. Protective metal coating and process and apparatus for producing the same. 1,786,398; Dec. 23.
Fishback, Robert W., Los Angeles, Calif. Lockable bolt nut. 1,786,201; Dec. 23.
Fisher, Alexander, Chicago, Ill. Combination tail and stop light. Des. 82,880; Dec. 23.
Fisher, Frank C., Toledo, Ohio. Indicator for weighing scales. 1,786,058; Dec. 23.
Flockhart Company, The. (See Flockhart, James, assignor.)
Flockhart, James, assignor to The Flockhart Company, San Francisco, Calif. Fountain brush. 1,785,732; Dec. 23.
Flogaus, Howard A., assignor to R. L. Skinner, Detroit, Mich. Air-cooled internal-combustion engine. 1,785,861; Dec. 23.
Flour Construction Co. (See Martin, Guy T., assignor.)
Flower, Arthur H. (See Nellis, C. P., and Flower.)
Flowers, James A., Birmingham, Ala. Automatic feed for burring machines. 1,785,862; Dec. 23.
Foley, Francis B. (See Givens, H. M., Foley, and Cox.)
Ford, Edward J., Spokane, Wash. Gauge. 1,786,339; Dec. 23.
Ford Motor Company. (See Stout, William B., assignor.)
Forman, Paris R., Rahway, N. J., assignor to National Pneumatic Company, New York, N. Y. Magnet-valve construction. 1,786,234; Dec. 23.
Fostoria Glass Company. (See Sakier, George, assignor.)
Fourment, Marcel, Paris, France. Apparatus for high-temperature treatment of ores and other substances. 1,786,202; Dec. 23.
Fowler, Ralph S., San Francisco, Calif. Fastening means for belts. 1,785,947; Dec. 23.
Fox, Frank F., Fedora, South Dak. Chain pliers. 1,785,946; Dec. 23.
Fox Furnace Company, The. (See Suppes, Max M., assignor.)
Francis, Daniel R., assignor to The Waterbury Tool Company, Waterbury, Conn. Control means for variable-speed transmissions. 1,785,733; Dec. 23.
Frank, Harrison J. L., assignor to Bull Dog Electric Products Company, Detroit, Mich. Fused switching device. Re17,910; Dec. 23.
Frank, Harrison J. L., assignor to Bulldog Electric Products Company, Detroit, Mich. Control device. 1,786,010; Dec. 23.
Fraser, William, Arvida, Quebec, Canada. Aeronautical indicator. 1,786,059; Dec. 23.
Freeberg, George. (See Simons, G. A., and Freeberg.)
Freeze, Jonathan R., assignor to The American Rolling Mill Company, Middletown, Ohio. Crate for metallic sheets. 1,785,863; Dec. 23.
Freudenreich, William F., et al., trustees. (See Arey, Fred C., assignor.)
Fried. Krup Grusonwerk Aktiengesellschaft. (See Weighardt, P., and Schrott, assignors.)
Fried-Osterman Company. (Bruggeman, Alphonse J., assignor.)
Frigidaire Corporation. (See Chilton, Ralph H., assignor.)
Frigidaire Corporation. (See Fehr, John R., assignor.)
Fröhlich, Hans, assignor to Landis & Gyr, A.-G., Zug, Switzerland. Induction meter. 1,786,157; Dec. 23.
Fröhlich, Hans, and W. Zingg, assignors to Landis & Gyr, A.-G., Zug, Switzerland. Induction meter. 1,786,156; Dec. 23.

Frohman, Emanuel. (See Stewart, Walter C., assignor.)
Fromm, Willy, Frankfort-on-the-Main, Germany, assignor to United Shoe Machinery Corporation, Paterson, N. J. Fastening distributor. 1,785,832; Dec. 23.
Fuerst, Edwin W., assignor to Owens-Illinois Glass Company, Toledo, Ohio. Jar. Des. 82,881; Dec. 23.
Fugle, Charles H., C. H. Ostenberg, A. W. Maglein, J. M. Trudo, and A. Newton, Duluth, Minn. Cable-raising device. 1,785,811; Dec. 23.
Funk, Robert V. (See Ennis, George H., assignor.)
Gage, Charles S., Tarrytown, and C. T. Maeding, Elmhurst, assignors to Lentheric, Incorporated, New York, N. Y. Atomizer. Des. 82,882; Dec. 23.
Gallup, David L. (See Bendix, V., and Gallup.)
Ganzert, Albert E., assignor to The Pyle-National Company, Chicago, Ill. Connecter for electric train lights and the like. 1,785,734; Dec. 23.
Gardner, Henry A., Washington, D. C. Insulated carrier. 1,786,340; Dec. 23.
Gariepy, Leo, Woonsocket, R. I. Separator for ring-spinning machines. 1,786,235; Dec. 23.
Garrety, Frank J., Cincinnati, Ohio. Advertising device. 1,785,948; Dec. 23.
Gas Research Company, The. (See Smith, Harry F., assignor.)
Geiger, Frederick, assignor to The Enamel Products Company, Cleveland, Ohio. Drain board. 1,785,771; Dec. 23.
Gemmer Manufacturing Company. (See Marles, Henry, assignor.)
General Aniline Works, Inc. (See Herzberg, W., and Lange, assignors.)
General Aniline Works, Inc. (See Hoffa, E., and Müller, assignors.)
General Aniline Works, Inc. (See Stuesser, Richard, assignor.)
General Aniline Works, Inc. (See Tobler, Karl, assignor.)
General Aniline Works, Inc. (See Zerweck, Werner, assignor.)
General Electric Company. (See Anderson, A. E., and King, assignors.)
General Electric Company. (See Beregkoff, Anatol P., assignor.)
General Electric Company. (See Campbell, Arthur B., assignor.)
General Electric Company. (See De Reamer, Frank C., assignor.)
General Electric Company. (See Heisler, Charles L., assignor.)
General Electric Company. (See Hough, Eugene L., assignor.)
General Electric Company. (See Jones, Benjamin W., assignor.)
General Electric Company. (See McCullough, Robert Y., assignor.)
General Electric Company. (See McDonald, Gordon R., assignor.)
General Electric Company. (See Newkirk, Burt L., assignor.)
General Electric Company. (See Unger, Magnus, assignor.)
General Motors Corporation. (See Norviel, Harry E., assignor.)
General Motors Research Corporation. (See Hallett, George E. A., assignor.)
General Tire & Rubber Company, The. (See Denmire, Harold A., assignor.)
George, Jerome R., assignor to Morgan Construction Company, Worcester, Mass. Rolling-mill housing. 1,786,296; Dec. 23.
George, Willis C., Long Beach, Calif. Hydraulic expanding underreamer. 1,785,949; Dec. 23.
Gesellschaft für Drahtlose Telegraphie m. b. H. (See Moser, W., and Ted., assignors.)
Geyer, Harvey D., assignor to The Inland Manufacturing Company, Dayton, Ohio. One-piece rim and spider steering wheel. 1,785,897; Dec. 23.
Giannattasio, Ettore F., New York, N. Y. Searchlight. 1,785,950; Dec. 23.
Gibson, Wilfrid, C. R. Henshaw, and J. B. Payman, Blackley, Manchester, assignors to Imperial Chemical Industries Limited, London, England. Manufacture of triaryl phosphates. 1,785,951; Dec. 23.
Gilbert, A. C., Company, The. (See Gilbert, Alfred C., assignor.)
Gilbert, Alfred C., Hamden, assignor to The A. C. Gilbert Company, New Haven, Conn. Ventilating device. 1,786,203; Dec. 23.
Gilbert, Charles B., Burlington, N. J., assignor of one-half to J. G. Bosworth, New York, N. Y. Garment cover. 1,786,341; Dec. 23.
Givens, Howard M., Abington, F. B. Foley, Philadelphia, and J. L. Cox, Springfield Township, Montgomery County, Pa. Rolling alloy steel. 1,786,297; Dec. 23.
Glasby, Jonathan P., jr., Verona, N. J. Aircraft wing. 1,786,236; Dec. 23.
Gleason, John W., et al., trustees. (See Arey, Fred C., assignor.)
Globe Brick Company, The. (See Porter, Jacob N., assignor.)
Golding, Edward P. (See McElvaney, C. T., jr., and Golding.)
Good, John N. (See Thomas, T. H., and Good.)
Goss Printing Press Company, The. (See Cox, Paul F., assignor.)
Gosse, William K., Chicago, Ill. Valve mechanism. 1,786,307; Dec. 23.
Graff, George, assignor to The Dura Company, Toledo, Ohio. Motor-vehicle door handle or similar article. Des. 82,883; Dec. 23.
Graham-Paige Motors Corporation. (See Valpey, Frank R., assignor.)
Grand Central Wicker Shop, Inc. (See Oliva, Vincent, assignor.)
Granger, Gordon T. (See Coast, J. W., jr., and Granger.)
Gravitt, Guy, Lawrenceville, Ill. Auxiliary lens attachment for eyeglasses. 1,786,204; Dec. 23.
Greaves, Frederick G., and S. P. Watt, Seattle, Wash. Lumber carrier. 1,786,060; Dec. 23.
Greeman, Omer W. (See Williams, J. C., and Greeman.)
Green, Samuel S., et al. (See Walker, Jerry S., assignor.)
Greene, George W., Hamarville, Pa. Fish net. 1,786,342; Dec. 23.
Greider, Clarence E., Lakewood, Ohio, assignor to National Carbon Co., Inc. Transparent film. 1,786,205; Dec. 23.
Gribben, William, Detroit, Mich. Wheel for railway rolling stock. 1,785,812; Dec. 23.
Griffith, Francis, Passaic, N. J., assignor to The Western Union Telegraph Company, New York, N. Y. Universal drag conveyer. 1,786,343; Dec. 23.
Griggs, Harvey D., and J. B. Subira, assignors of one-half to C. A. Smith, San Antonio, Tex. Safety stop sign. 1,785,952; Dec. 23.
Groenenstein, Philip J., Cleveland, Ohio. Glare shield. 1,786,011; Dec. 23.
Grover, William H., W. S. Pooley, Toledo, Ohio, and C. E. Merritt, Adrian, Mich. Circuit closer. 1,786,391; Dec. 23.
Gruber, Oscar, St. Paul, Minn. Watchcase. 1,786,061; Dec. 23.
Gruenholz, Andrew A. (See Gruenholz, Fred P. and A. A.)
Gruenholz, Fred P. and A. A., Terre Haute, Ind. Flower basket. 1,786,062; Dec. 23.
Gruman, Horace F., Richmond Heights, Mo., assignor to Lewis Invisible Stitch Machine Company, Kittery, Me. Method of and apparatus for operating on tubular articles. 1,786,298; Dec. 23.
Guiberson Corporation, The. (See Guiberson, Samuel A., jr., assignor.)
Guiberson, Samuel A., jr., Los Angeles, Calif., assignor to The Guiberson Corporation, Dallas, Tex. Elastic reciprocating member. 1,786,012; Dec. 23.
Gulf Refining Company. (See Carpenter, Theodore H., assignor.)
Gumpper, Harold D., Detroit, Mich. Voltage regulator for internal-combustion-engine-driven electric generators. 1,786,063; Dec. 23.
Gunn, Thomas M., Brooklyn, N. Y., assignor of one-sixth to G. Crosby, Glen Ridge, N. J. Refrigerating apparatus. 1,786,110; Dec. 23.
Haferkamp, Carl C., and W. J. Elder, Oswego, N. Y., assignors to The Diamond Match Company, Chicago, Ill. Impregnating match splints. 1,785,864; Dec. 23.
Hale, Edward E., Buffalo, N. Y. Egg carton. 1,785,898; Dec. 23.
Hall Nelson Manufacturing Company. (See Danielson, Charles, assignor.)
Hallam, Ralph M., and W. E., Amberg, said Amberg assignor to said Hallam. Hasp. 1,785,772; Dec. 23.
Hallett, George E. A., assignor to General Motors Research Corporation, Detroit, Mich. Double-acting shock absorber. 1,785,899; Dec. 23.
Hamberger, Frank X., Buffalo, N. Y. Furnace burner. 1,785,900; Dec. 23.
Hamilton, Reginald H., Christchurch, New Zealand. Self-adjusting tappet. 1,786,237; Dec. 23.
Hammer, Willibald, assignor to the firm: Uster Factories for Apparatus and Machines, formerly Zellweger, Ltd., Uster, Switzerland. Separating device for intercrossing threads. 1,786,238; Dec. 23.
Hanan, George, Brooklyn, N. Y. Beach rest and sunshade. 1,785,953; Dec. 23.
Hancock, Milton L., East McKeesport, assignor to The Westinghouse Air Brake Company, Wilmerding, Pa. Slack adjuster. 1,786,299; Dec. 23.
Hansen's, Chr., Laboratory, Inc. (See Monrad, Karl J., assignor.)
Hanson, Ira C., Racine, Wis. Electric-circuit control. 1,785,773; Dec. 23.
Happone, Matt, assignor to Briggs Manufacturing Company, Detroit, Mich. Ventilator system. 1,786,064; Dec. 23.
Hardie, George, Condon, Oreg. Cultivator. 1,785,901; Dec. 23.
Hardigg, Jep C. (See Whiton, L. C., jr., and Hardigg.)
Hardman, Frederick J., assignor to Delco-Remy Corporation, Dayton, Ohio. Ignition timer. 1,785,902; Dec. 23.
Harris, Charles P., Oakland, Calif. Fishing tool. 1,786,111; Dec. 23.
Harrison, Monroe, Chicago, Ill. Machine or apparatus for treating foods or the like. 1,786,300; Dec. 23.
Hart, Leslie J., assignor of one-four to C. Johnson, Valdosta, Ga. Filing cabinet. 1,786,112; Dec. 23.
Harter, Harvey, Paterson, assignor, by mesne assignments, of forty-nine-hundredths to J. McGowan, Camden, N. J. Intermittent grip device for copyholders. 1,786,344; Dec. 23.
Hartwell, Benjamin F. (See Bartlett, F. M., and Hartwell.)

Haselton, Philip H., East Orange, N. J., and M. A. Jenckes, Providence, R. I., assignors to Detex Watchclock Corporation, New York, N. Y. Supervisory mechanism. 1,786,013; Dec. 23.
Hasler A. G., vormals Telegraphenwerk-statte von G. Hasler. (See Kohler, Ulrich, assignor.)
Haug, Herman, New York, N. Y., assignor to Rosemary Mfg. Co., Roanoke Rapids, N. C. Textile panel for a mattress covering. Des. 82,884; Dec. 23.
Haug, Herman, New York, N. Y., assignor to Rosemary Mfg. Co., Roanoke Rapids, N. C. Textile panel for a mattress covering. Des. 82,885; Dec. 23.
Haug, Herman, New York, N. Y., assignor to Rosemary Mfg. Co., Roanoke Rapids, N. C. Textile panel for a mattress covering. Des. 82,886; Dec. 23.
Haverhill Shoe Novelty Company. (See Pascucci, Attilio R., assignor.)
Hawes, Charlie L., Ashtabula, Ohio. Reduction gearing. 1,786,158; Dec. 23.
Hawthorne, John A., jr. (See Lea, L., and Hawthorne.)
Hayes, Frederick S., Meridian, Miss. Dispensing refrigerator. 1,785,954; Dec. 23.
Heather, George B., assignor to The Wire Novelty Manufacturing Company, West Haven, Conn. Button loop. 1,785,735; Dec. 23.
Heicke, Adolf. (See Thilo, Erich, assignor.)
Heimberger, Harry T., Riverside, and E. Pugh, Chicago, Ill., assignors to Western Electric Company, Incorporated, New York, N. Y. Holder for heated devices. 1,786,065; Dec. 23.
Heiner, Glen P., Salt Lake City, Utah. Piston. 1,785,903; Dec. 23.
Heise, George W., Bayside, N. Y., and C. W. Broknate, Danbury, Ohio, assignors to National Carbon Company, Inc. Galvanic cell. 1,786,406; Dec. 23.
Heisey, A. H., & Company. (See Heisey, Thomas C., assignor.)
Heisey, Thomas C., assignor to A. H. Heisey & Company, Newark, Ohio. Glass plate or article of similar nature. Des. 82,887; Dec. 23.
Heisey, Thomas C., assignor to A. H. Heisey & Company, Newark, Ohio. Flower bowl or article of similar nature. Des. 82,888; Dec. 23.
Heisler, Charles L., Schenectady, N. Y., assignor to General Electric Company. Sound recording and reproducing apparatus. 1,786,301; Dec. 23.
Henshaw, Charles R., et al. (See Gibson, W., Henshaw, and Payman.)
Henszey, Roy O., Oconomowoc, Wis. Purifying boiler water. 1,786,113; Dec. 23.
Herbst, Ernest, and H. Kohler, Hoboken, N. J. Automatic dispenser for liquids. 1,786,302; Dec. 23.
Hermann, Edward O., Mill Valley, assignor to Cobb Connecter Company, Los Angeles, Calif. Train-pipe coupler. 1,786,066; Dec. 23.
Herzberg, Wilhelm, Berlin-Wilmersdorf, and H. Lange, Dessau In Anhalt, Germany, assignors to General Aniline Works, Inc., New York, N. Y. 1-ω-aminomethylnaphthalene sulphonic acids. 1,785,935; Dec. 23.
Hess, John P., Milwaukee, Wis. Cam. 1,785,736; Dec. 23.
Hester, Frederick C., jr., Leesburg, Fla. Airplane swing. 1,786,239; Dec. 23.
Heylandt, Christian W. P., Berlin-Lankwitz, Germany. Transferring liquefied gases. 1,786,159; Dec. 23.
Hickok Manufacturing Company. (See Mix, Edwin S., assignor.)
Hightower, Arthur, Frost, Tex. Cotton packer. 1,786,240; Dec. 23.
Hightower, Arthur, Frost, Tex. Cross-row cotton chopper and cultivator. 1,786,241; Dec. 23.
Highway Trailer Company. (See Williams, Leroy E., assignor.)
Hill, Charles P., Los Angeles, Calif. Cable connection for batteries. 1,786,206; Dec. 23.
Hobart Bros. Company, The. (See Hobart, Edward A., assignor.)
Hobart, Edward A., assignor to The Hobart Bros. Company, Troy, Ohio. Car-washing pump. Des. 82,889; Dec. 23.
Hobart, Edward A., assignor to The Hobart Bros. Company, Troy, Ohio. Compressor. 1,786,242; Dec. 23.
Hochriem, Gustav F., Chicago, Ill. Coin-controlled mechanism. 1,786,014; Dec. 23.
Hoffa, Erwin, and F. Müller, Frankfort-on-the-Main, Hochst, Germany, assignors to General Aniline Works, Inc., New York N. Y. Preparing hydroxythionaphthenes. 1,785,813; Dec. 23.
Hoffman, Andrew, Manufacturing Co. (See Johnson, Alfred J., assignor.)
Holdsworth, Fred D., Claremont, N. H., assignor to Sullivan Machinery Company. Controlling mechanism. 1,785,956; Dec. 23.
Holmes, Morris P., Claremont, N. H., assignor to Sullivan Machinery Company. Mining machine. 1,785,957; Dec. 23.
Holmes, Morris P., Claremont, N. H., assignor to Sullivan Machinery Company. Mining machine. 1,785,958; Dec. 23.
Holmes, Morris P., Claremont, N. H., assignor to Sullivan Machinery Company. Mining apparatus. 1,785,959; Dec. 23.
Holmes, Morris P., Claremont, N. H., assignor to Sullivan Machinery Company. Mining machine. 1,785,960; Dec. 23.
Holmes, Morris P., Claremont, N. H., assignor to Sullivan Machinery Company. Mining machine. 1,785,961; Dec. 23.
Holmes, Morris P., Claremont, N. H., assignor to Sullivan Machinery Company. Mining machine. 1,786,243; Dec. 23.
Holmes, Morris P., Claremont, N. H., assignor to Sullivan Machinery Company. Mining apparatus. 1,786,244; Dec. 23.
Hompe, Robert W., Cleveland, Ohio. Candy molding. 1,785,904; Dec. 23;
Hönningstad, Amund, A. Arneson, Forus, near Stavanger, and A. Norheim, Hinna, near Stavanger, Norway. Manufacturing drain pipes from veneer. 1,786,245; Dec. 23.
Hookless Fastener Company. (See Sundback, Gideon, assignor.)
Horste, Joseph E., assignor, to Detroit Harvester Company, Detroit, Mich. Driving attachment for tractors. 1,786,067; Dec. 23.
Hough, Eugene L., Richmond Heights, Mo., assignor to General Electric Company. Automatic control equipment. 1,786,303; Dec. 23.
House, Charles H., Arkansas City, Kans. Folding bed or couch. 1,785,865; Dec. 23.
Howe, Ralph S. (See Coates, J. H., Howe, and Costello.)
Hudson, Robert F., Richmond, Va., assignor, by mesne assignments, to Automatic Guns, Inc. Machine gun. 1,786,207; Dec. 23.
Huene, Howard J., Brooklyn, N. Y. Chart for submitting advertising matter. 1,785,866; Dec. 23.
Hughes, William E., Chicago, Ill., assignor to Sullivan Machinery Company. Compressor system. 1,786,114; Dec. 23.
Hulshizer, Joseph I. (See Smith, W. A., sr., and Hulshizer.)
Humason, Granville A., Houston, assignor of one-half to J. A. Logan, Harris County, Tex. Casing head. 1,786,407; Dec. 23.
Hunn, Edward B., Roselle, N. J., assignor to Standard Oil Development Company. Purification of hydrocarbon oils. 1,786,246; Dec. 23.
Hunt, Leigh. (See Sturgis, Herbert M., assignor.)
Hupp Motor Car Corporation. (See MacPherson, Earle S., assignor.)
Hurd, Benjamin W., assignor to Turbine Fuel Oil Burner Co., San Francisco, Calif. Burner control. 1,786,068; Dec. 23.
Hutchins, Frank B., et al. (See Carr, C. W., and Tripp, assignors.)
Hybinette, Noak V., Wilmington, Del., assignor to Hybinette Patents Corporation, Jackson, Mich. Plastic heat-treated aluminum alloy. 1,785,774; Dec. 23.
Hybinette Patents Corporation. (See Hybinette, Noak V., assignor.)
I. G. Farbenindustrie Aktiengesellschaft. (See Jordan, O., and Kraemer, assignors.)
I. G. Farbenindustrie Aktiengesellschaft. (See Pungs, W., and Jahrstorfer, assignors.)
Imperial Chemical Industries Limited. (See Gibson, W., Henshaw, and Payman, assignors.)
Ingersoll-Rand Company. (See Smith, William A., sr., assignor.)
Ingersoll-Rand Company. (See Smith, W. A., sr., and Hulshizer, assignors.)
Ingoldby, Maurice K., Westminster, London, assignor to Internal Combustion Locomotives, Limited, Westminster, England. Locomotive. 1,786,304; Dec. 23.
Inland Manufacturing Company, The. (See Geyer, Harvey D., assignor.)
Inland Manufacturing Company, The. (See Nellis, C. P., and Flower, assignors.)
Internal Combustion Locomotives, Limited. (See Ingoldby, Maurice K., assignor.)
International Cigar Machinery Company. (See Snyder, George H., assignor.)
Isothermos Corporation of America. (See Baur, Max F., assignor.)
Itzi, Peter, Philadelphia, Pa. Electric cooker. 1,786,345; Dec. 23.
Iwanowitz, Carl H., Souderton, Pa. Aircraft. 1,785,775; Dec. 23.
Jaco, William S. (See Beasley, Albeon, assignor.)
Jacobs, Reed E., Berkeley, Calif. Electric-motor truck. 1,786,069; Dec. 23.
Jacques, Ora E., Plymouth, N. H. Cutting machine. 1,786,346; Dec. 23.
Jahrstorfer, Michael. (See Pungs, W., and Jahrstorfer.)
James, Charles T., Los Angeles, Calif. Money tray and safety receptacle therefor. 1,786,160; Dec. 23.
James, George H., assignor of one-half to F. H. Simpson, Oakland, Calif. Screw jack. 1,786,305; Dec. 23.
James Manufacturing Company. (See Markey, G. T., and Olson, assignors.)
James Manufacturing Company. (See Olson, John B., assignor.)
Jenckes, Malcolm A. (See Haselton, P. H., and Jenckes.)
Jenkins, W. M., trustee. (See Berkeley, Laurence J., assignor.)
Jensen, Ferdinand L., Kildare, N. Y. Fastener. 1,786,115; Dec. 23.
Johns-Manville Corporation. (See Mazza, Adolfo, assignor.)

Johnson, Alfred J., assignor to Andrew Hoffman Manufacturing Co., Chicago, Ill. Casement-window fastener. 1,786,247; Dec. 23.
Johnson, Claudia. (See Hart, Leslie J., assignor.)
Johnson, Stephen, jr. (See McCune, J. C., and Johnson.)
Jones, Benjamin W., Schenectady, N. Y., assignor to General Electric Company. Controlling device. 1,786,306; Dec. 23.
Jones Brothers Company. (See Jones, Robert B., assignor.)
Jones, Charles L., Pittsburgh, Pa., and J. D. Small Dougiaston, assignors to Dryice Equipment Corporation, New York, N. Y. Storage and transportation of solid carbon dioxide. 1,786,161; Dec. 23.
Jones, Harry C., New York, N. Y. Apparatus for making registered prints. 1,786,070; Dec. 23.
Jones, Robert B., Barre, Vt., assignor to Jones Brothers Company, Boston, Mass. Stone cutting and polishing machine. 1,785,737; Dec. 23.
Jordahl, Anders, New York, N. Y., assignor to American Air Filter Company, Inc., Louisville, Ky. Dust separator. 1,786,208; Dec. 23.
Jordan, Otto, Ludwigshafen-on-the-Rhine, and G. Kraemer, Heidelberg, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Production of neutral fats and oils. 1,786,248; Dec. 23.
Justrite Manufacturing Company. (See Brown, Le Roy O., assignor.)
Kanter, Edward, and E. Feldman, Cleveland Heights, Ohio. Article-dispensing-machine casing. Des. 82,890; Dec. 23.
Katz, Martin, Brooklyn, N. Y. Mail chute. 1,785,867; Dec. 23.
Kaufmann Department Stores, Inc. (See Crumpton, Kenneth R., assignor.)
Keck, Albert J., Newport, Minn. Printing device. 1,785,833; Dec. 23.
Kelley, Edward C., et al. (See Walker, Jerry S., assignor.)
Kelly, William M., Westfield, assignor to American Type Founders Company, Jersey City, N. J. Printing press. 1,786,116; Dec. 23.
Kemp, Edward F., Somerville, Mass. Holder for confectionery. 1,786,392; Dec. 23.
Kennedy, Charles F., assienor to H. E. Verran, Stamford, Conn. Method and apparatus for stenciling on cloth. 1,786,347; Dec. 23.
Kennedy, Julian, Pittsburgh, Pa. Apparatus for rolling sheets. 1,786,162; Dec. 23.
Kennedye, Charles B., University City, Mo., assignor to The Kennedye Corporation, Wilmington, Del. Well-drilling tool. 1,786,413; Dec. 23.
Kennedye, Charles B., University City, Mo., assignor to The Kennedye Corporation, Wilmington, Del. Rotary well-drilling tool. 1,786,414; Dec. 23.
Kennedye, Charles B., University City, Mo., assignor to The Kennedye Corporation, Wilmington, Del. Well-drilling tool. 1,786,415; Dec. 23.
Kennedye Corporation, The. (See Kennedye, Charles B., assignor.)
Kerkhoff, Frank A. (See Terrell, H. C., and Kerkhoff.)
Kernnish, Edward P., Cleveland Heights, assignor to The Cleveland Graphite Bronze Company, Cleveland, Ohio. Tool for scarifying the interior of tubing. 1,785,905; Dec. 23.
Kesling, Elmer G., Bloomfield, Mo. Speed-changing mechanism. 1,785,776; Dec. 23.
Keyser, Johann J., Aarau, Switzerland. Spinning and twisting machine. 1,786,348; Dec. 23.
Kielberg, Henry, Martins Ferry, Ohio, assignor to Wheeling Steel Corporation, Wheeling, W. Va. Gas heater. Des. 82,891; Dec. 23.
Kielberg, Henry, Martins Ferry, Ohio, assignor to Wheeling Steel Corporation, Wheeling, W. Va. Radiant gas heater. Des. 82,892; Dec. 23.
Kilgore, Martin H., Beaumont, Tex. Deep-well pump. 1,785,834; Dec. 23.
King, C. G. & Co. (See Brigham, Charles W., assignor.)
King, C. G., & Co. (See King, Clifford G., assignor.)
King, C. G., & Co. (See Recchia, Orlando R., assignor.)
King, Clifford G., Barrington, R. I., assignor to C. G. King & Co., Inc., Providence, R. I. Shoe buckle. Des. 82,893; Dec. 23.
King, Frederic D. (See Anderson, A. E., and King.)
Kinzie, Charles J., Niagara Falls, assignor to The Titanium Alloy Manufacturing Company, New York, N. Y. Producing vitreous enamels. 1,785,777; Dec. 23.
Kirschbraun, Lester, Leonia, N. J., assignor to F. L. Belknap, Chicago, Ill. Cleaning composition. 1,786,249; Dec. 23.
Klein, Albert, New York, N. Y. Ash tray or the like. Des. 82,894; Dec. 23.
Knight, Ira W., Providence, R. I., assignor to Detex Watchclock Corporation, New York, N. Y. Supervisory mechanism. 1,786,015; Dec. 23.
Knoth, Hilary G., Detroit, Mich. Paper holder. 1,786,250; Dec. 23.
Knott, Harry H., assignor to American Pearl Button Company, Washington, Iowa. Saw-setting device. 1,786,071; Dec. 23.
Knox, Harry A., and B. F. Baker, Davenport, Iowa. Steering-control system for vehicles. 1,785,738; Dec. 23.
Koffer, Albert E., assignor to Delco-Remy Corporation, Dayton, Ohio. Lock switch. 1,785,906; Dec. 23.
Kohler, Hans. (See Herbst, E., and Kohler.)
Kohler, Ulrich, assignor to Hasler A.-G., vormals Telegraphenwerk-Statte von G. Hasler, Bern, Switzerland. Control device of currency-stamping machines having counting mechanism. 1,786,251; Dec. 23.
Koplin, Harry, assignor to The Amico Company, Inc., Chicago, Ill. Drying machine. 1,786,349; Dec. 23.
Koppers Company, The. (See Becker, Joseph, assignor.)
Koppers Company, The. (See Myers, Albert J., assignor.)
Koppers Company, The. (See van Ackeren, Joseph, assignor.)
Korelin, Michail N., Moscow, Russia. Peat mining. 1,785,739; Dec. 23.
Koretzky, Harry M., assignor to Bright Star Battery Company, Hoboken, N. J. Flash-light switch. 1,785,868; Dec. 23.
Kothny, Gottdank L., Strafford, assignor to C. H. Wheeler Manufacturing Company, Philadelphia, Pa. Condenser for mixed vapors. 1,786,163; Dec. 23.
Kottman, August, assignor to Rheinische Metallwaaren und Maschinenfabrik Sömmerda Aktiengesellschaft, Sommerda, Germany. Drive for the stepped drums of calculating machines. 1,786,164; Dec. 23.
Kraemer, Georg. (See Jordan, O., and Kraemer.)
Kreider, Enos H., Lancaster, Pa. Vehicle shock absorber. 1,785,814; Dec. 23.
Krembs, Ottmar M., Glencoe, Ill. Pocketed welding, brazing, and hard-soldering rod. 1,785,778; Dec. 23.
Krider, George E., Duncansville, assignor to McLanahan-Stone Machine Company, Hollidaysburg, Pa. Paddle ore-washing machine. 1,786,399; Dec. 23.
Kriegh, Hobart R., Albany, Calif. Aeroplane. 1,786,307; Dec. 23.
Krollage, Rudolph, McGregor, Tex. Oil vaporizer. 1,786,117; Dec. 23.
Kurtz, Cyrus B., Lakewood, assignor to The National Appliance Company, Cleveland, Ohio. Vehicle light. 1,786,400; Dec. 23.
Kurtz, Daniel W. B., jr., Columbia, Mo. Equipment or attachment to expedite handling of cards in large lots for inspection of same. 1,785,815; Dec. 23.
Laclede Steel Company. (See Young, Lafayette, assignor.)
Lambert, Cecil R., Company, The. (See Preble, Norman H., assignor.)
Lambert, David N., Brooklyn, N. Y. Resuscitator. 1,786,350; Dec. 23.
Landis & Gyr, A.-G. (See Fröhlich, Hans, assignor.)
Landis & Gyr, A.-G. (See Fröhlich, H., and Zingg, assignors.)
Lange, Hans. (See Herzberg, W., and Lange.)
Lansing, Raymond P., Montclair, N. J., assignor to Eclipse Machine Company, Elmira, N. Y. Engine starter. 1,786,118; Dec. 23.
Lansing, Raymond P., Montclair, N. J., assignor to Eclipse Machine Company, Elmira, N. Y. Engine starter. 1,786,119; Dec. 23.
Lanzi, Elmo G., assignor to Bonus Candy Corporation, Chicago, Ill. Coating apparatus. 1,785,835; Dec. 23.
Latourelle, Joseph, and F. Stevermer, Centuria, Wis. Combined music rack and cane. 1,786,308; Dec. 23.
Laucks, I. F., Inc. (See Laucks, I. F., and Davidson, assignors.)
Laucks, Irving F., and G. Davidson, assignors to I. F. Laucks, Inc., Seattle, Wash. Vegetable adhesive and method of making. 1,786,209; Dec. 23.
Lauter, Philip, New York, N. Y. Variable resistance. 1,785,779; Dec. 23.
Lea, Langdon, Wynnewood, and J. A. Hawthorne, jr., Moores, Pa. Level. 1,786,309; Dec. 23.
Le Bus, John E., Electra, Tex. Drive or clutch mechanism for winches. 1,786,351; Dec. 23.
Legat, Robert C., assignor to G. E. Prentice Manufacturing Company, New Britain, Conn. Separable fastener. 1,785,740; Dec. 23.
Lehto, Vaino E., Evansville, Ind. Rasp or file. 1,785,836; Dec. 23.
Le Mire, Warren C., Ancon, Canal Zone, Panama. Overhead rabbit carrier for dog-racing tracks. 1,785,837; Dec. 23.
Lentheric, Incorporated. (See Gage, C. S., and Maeding, assignors.)
Lesperance, Dennis E., Oakland, Calif. Handle lock for vacuum sweepers. 1,786,210; Dec. 23.
Lewis, Carroll E., St. Paul, assignor to The Lewis Corporation, Inc., Minneapolis, Minn. Air-conditioning system. 1,785,741; Dec. 23.
Lewis Corporation, The. (See Lewis, Carroll E., assignor.)
Lewis, George K., assignor to Met-L-Wood Corporation, Chicago, Ill. Pressboard. 1,786,211; Dec. 23.
Lewis Invisible Stitch Machine Company. (See Gruman, Horace F., assignor.)
Line, Wallace O., Cleveland, Ohio. Handkerchief. 1,785,962; Dec. 23.
Linebarger, Charles E., Chicago, Ill. Electric storage battery. 1,785,963; Dec. 23.
Lincoln Drilling Company. (See Woodmansee, Clay G., assignor.)
Livingston, Fremont P., Denver, Colo, assignor to The Westinghouse Air Brake Company, Wilmerding, Pa. Angle cock. 1,786,212; Dec. 23.

Lobdell, Roy T., Newburgh, N. Y. Electric insulator. 1,785,816; Dec. 23.

Locke, Emery A. (See Bergquist, Charles H., assignor.)

Lofgren, Carl O. B., assignor to The Bryant Electric Company, Bridgeport, Conn. Locking device. 1,786,352; Dec. 23.

Logan, J. A. (See Humason, Granville A., assignor.)

Logan, Orren E., assignor of one-half to G. L. Barnes, Los Angeles, Calif. Device for securing outlet boxes to their hangers. 1,786,353; Dec. 23.

Lohman, Jefferson S., Scranton, Pa. Attachment for button-sewing machines. 1,786,354; Dec. 23.

Loomis, Crawford C., Ilion, N. Y., assignor to Remington Arms Company, Inc. Firearm. 1,786,213; Dec. 23.

Luthy Battery Equipment Company. (See Dodge, Henry P., assignor.)

Lymburner, Armand, Verdun, Quebec, Canada, assignor of one-half to J. J. Driscoll, Chicago, Ill. Locomotive exhaust-steam nozzle. 1,785,907; Dec. 23.

Lynam, Thornton L., Dartmouth, Mass. Cooking outfit. 1,786,120; Dec. 23.

MacPherson, Earl S., assignor to Hupp Motor Car Corporation, Detroit, Mich. Manifold. 1,785,869; Dec. 23.

Madden, William H., Mt. Pleasant, Tex. Plow. 1,785,964; Dec. 23.

Maeding, Charles T. (See Gage, C. S., and Maeding.)

Maglein, Albert W. (See Fugle, C. H., Ostenberg, Maglein, Trudo, and Newton.)

Magrath, George H., Whitinsville, Mass. Bearing support for spinning or twisting spindles. 1,786,252; Dec. 23.

Maish, Ralph A., assignor to Dennison Manufacturing Company, Framingham, Mass. Index tab and method. 1,785,780; Dec. 23.

Major, George D., Cumberland, Md. Motor generator. 1,785,965; Dec. 23.

Malcolm, Edward B., Montreal, Quebec, Canada. Panel roof for closed cars. 1,785,908; Dec. 23.

Malloy, Francis V. (See Schmidt, P., and Malloy.)

Management and Finance Corporation of California. (See Stewart, James A., assignor.)

Marcroft, William, Cranston, and G. N. Taylor, East Providence, R. I., assignors to Universal Winding Company, Boston, Mass. Yarn cleaner and slub detector. 1,785,817; Dec. 23.

Marcus, Charles L., New York, N. Y. Bottle rack or similar article. Des. 82,896; Dec. 23.

Marcus, Samuel, Brooklyn, assignor to Markon Manufacturing Co., Inc., New York, N. Y. Doll-head structure. 1,785,781; Dec. 23.

Markey, George T., and J. B. Olson, assignors to James Manufacturing Company, Fort Atkinson, Wis. Feeder. 1,785,782; Dec. 23.

Markon Manufacturing Co. (See Marcus, Samuel, assignor.)

Markstein, Robert P., Vienna, Austria. Device for timely opening and closing of the flap of fountain pens. 1,786,355; Dec. 23.

Marles, Henry, assignor to Gemmer Manufacturing Company, Detroit, Mich. Coupling. 1,785,870; Dec. 23.

Marshall, William, assignor to Briggs Manufacturing Company, Detroit, Mich. Sill construction. 1,786,072; Dec. 23.

Marshall, William, assignor to Briggs Manufacturing Company, Detroit, Mich. Trimming holder. 1,786,073; Dec. 23.

Marshall, William, and P. Camiener, assignor to Briggs Manufacturing Company, Detroit, Mich. Remote control mechanism for door latches. 1,786,074; Dec. 23.

Marshalltown Trowel Company. (See Trontner, Jesse B., assignor.)

Martell, Charles, Cicero, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y. Reclaiming or improving gum exudates. 1,786,075; Dec. 23.

Martin, Guy T., assignor to Fluor Construction Co., Los Angeles, Calif. Atmospheric cooling tower. 1,786,076; Dec. 23.

Martin, Mark H., Reading, assignor to Birdsboro Steel Foundry & Machine Company, Birdsboro, Pa. Side frame for car trucks. 1,785,871; Dec. 23.

Martindell, Frank, Western Springs, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y. Apparatus for treating materials. 1,786,416; Dec. 23.

Maschinenfabrik Augsburg-Nurnberg A. G. (See Duwe, Friedrich, assignor.)

Maschinenfabrik Augsburg-Nuernberg, Aktiengesellschaft. (See Wilhelm, Ottmar, assignor.)

Masin, Jacob S., and H. E. White, Anniston, assignors, by mesne assignments, to Swann Research, Inc., Birmingham, Ala. Production of high-purity abrasive materials. 1,786,016; Dec. 23.

Matta, George, Braddock, Pa. Helicopter. 1,786,017; Dec. 23.

Mayer, August, assignor to Adarteraft, Inc., New York, N. Y. Display device. 1,786,253; Dec. 23.

Mayes, Edd T., et al. (See Walker, Jerry S., assignor.)

Mazza, Adolfo, Genoa, Italy, assignor, by mesne assignments, to Johns-Manville Corporation, New York, N. Y. Method and apparatus for making seamless pipes. 1,786,215; Dec. 23.

McAllister, John W. (See Nicholson, J. P., and McAllister.)

McArthur, John O., Casper, Wyo. Crosshead. 1,786,121; Dec. 23.

McCabe, Ira E., Chicago, Ill. Delayed-action mercury-tube switch. 1,786,018; Dec. 23.

McCann, John H., Chicago, Ill. Protective cover for plumbing fixtures. 1,785,872; Dec. 23.

McClure, Rodney N., Inglewood, Calif. Drapery rod. 1,785,838; Dec. 23.

McCoy, Harry E., Pittsburgh, assignor to McDowell Manufacturing Company, Millvale, Pa. Mechanical exercising device. 1,786,165; Dec. 23.

McCullough, Robert Y., Schenectady, N. Y., assignor to General Electric Company. Control system. 1,86,310; Dec. 23.

McCullough, Walter A., Alliance, Ohio. Attachable wall for platform station trucks. 1,786,077; Dec. 23.

McCune, Joseph C., Edgewood, and S. Johnson, jr., Pittsburgh, assignors to The Westinghouse Air Brake Company, Wilmerding, Pa. Vacuum-operated horn. 1,786,214; Dec. 23.

McDonald, Gordon R., Erie, Pa., assignor to General Electric Company. Regulating system. 1,786,311; Dec. 23.

McDowell Manufacturing Company. (See McCoy, Harry E., assignor.)

McElvaney, Charles T., jr., and E. P. Golding, Dallas, Tex. Locomotive whistle. 1,786,122; Dec. 23.

McFarland, Thomas R., Sawtelle, Calif. Power transmission. 1,786,356; Dec. 23.

McGowan, John. (See Harter, Harvey, assignor.)

McIntosh, Charles J., Milwaukee, assignor to Federal Steel Sash Company, Waukesha, Wis. Window-sash fastener. 1,786,019; Dec. 23.

McIntyre, Edna M., et al., executrix. (See Cox, G. C., and McIntyre.)

McIntyre, Henry K. (See Cox, G. C., and McIntyre.)

McIntyre, John G., et al., executors. (See Cox, G. C., and McIntyre.)

McIntyre, Malcolm, et al., executors. (See Cox, G. C., and McIntyre.)

McKinney, Wendell R., assignor of one-half to B. E. Post, Kansas City, Mo. Explosive engine. 1,785,909; Dec. 23.

McLanahan-Stone Machine Company. (See Krider, George E., assignor.)

McWilliams, James B., Pittsburgh, assignor to Railway Maintenance Corporation, Aspinwall, Pa. Conveying apparatus. 1,786,020; Dec. 23.

Meehan, William H., Springfield, Mass. Fish-rod holder. 1,786,254; Dec. 23.

Meister, Conrad L., and C. R. Sugg, Wilmington, N. C. Speed-changing device. 1,785,839; Dec. 23.

Merchen, Glen G., Spokane, Wash. Counterbalance stabilizer. 1,786,216; Dec. 23.

Merritt, Clarence E. (See Grover, W. H., Pooley, and Merritt.)

Met-L-Wood Corporation. (See Lewis, George K., assignor.)

Mettetal, Raphael, Plymouth, Mich. Machine for laying paper mulch. 1,786,021; Dec. 23.

Meyercord, George R., Chicago, Ill., assignor to The Vitrolite Company, Parkersburg, W. Va. Refrigerator structure and making the same. 1,786,078; Dec. 23.

Mielke, Ferdinand, Cleveland, Ohio. Balancing apparatus. 1,786,079; Dec. 23.

Miller, Clarke C., assignor to Standard Oil Company, Whiting, Ind. Apparatus for distilling hydrocarbon oils. 1,786,357; Dec. 23.

Miller, George H., Decatur, Ill. Automatic clothesline fastener. 1,786,359; Dec. 23.

Miller, Harry G., Denver, Colo. Driving head for small lathes. 1,786,022; Dec. 23.

Miller, Harry G., Denver, Colo. Valve-centering device. 1,786,023; Dec. 23.

Miller, Herbert F., jr. (See Downs, G. F., and Miller.)

Miller, J. E. (See Ward, Joseph, assignor.)

Miller, Max C., Cumberland, R. I. Knitting machine. 1,786,255; Dec. 23.

Miller, Stuart P., Philadelphia, Pa., assignor to The Barrett Company. Flotation material and making same. 1,785,742; Dec. 23.

Milner, Henry K., Birmingham, Ala., assignor to M. K. Moore, Charleston, S. C. Grate. 1,786,358; Dec. 23.

Mirror Display Co., The. (See Smith, Le Roy W., assignor.)

Mix, Edwin S., assignor to Hickok Manufacturing Company, Inc., Rochester, N. Y. Leather and producing the same. 1,785,966; Dec. 23.

Mix, Edwin S., assignor to Hickok Manufacturing Company, Inc., Rochester, N. Y. Belt for personal wear. 1,785,967; Dec. 23.

Modern Auto Repair and Reconstructing Company. (See Solomon, Aaron R., assignor.)

Mohr, Julius, Milwaukee, Wis. Toy vehicle. 1,785,783; Dec. 23.

Monrad, Karl J., assignor to Chr. Hansen's Laboratory, Inc., Little Falls, N. Y. Butter coloring. 1,786,256; Dec. 23.

Moody, Lewis F., Philadelphia, Pa. Hydraulic turbine. 1,786,166; Dec. 23.

Moore, Morton K. (See Milner, Henry K., assignor.)

Moore, Robert A., assignor to Multiple Selling Corporation, New York, N. Y. Safety lamp lock. 1,786,409; Dec. 23.

Morányzky, Mátyás, New York, N. Y. Aeroplane. 1,786,217; Dec. 23.

Morgan Construction Company. (See George, Jerome R., assignor.)

Morgan Hurrycane Company, The. (See Morgan, William H., assignor.)

Morgan, Ted, et al. (See Walker, Jerry S., assignor.)

Morgan, William H., Alliance, Ohio, assignor, by mesne assignments, to The Morgan Hurrycane Company, New York, N. Y. Cane cutter. 1,785,743; Dec. 23.

Morrison, Louis, New York, N. Y. Fountain pen or similar article. Des. 82,897; Dec. 23.

Mosier, Wilhelm, and E. Tod, assignors to Gesellschaft für Drahtlose Telegraphie m. b. H., Berlin, Germany. Key-operating arrangement for short-wave tube transmitters. 1,786,257; Dec. 23.

Mowrey, Lester D., et al. (See Welsh, Ralph B., assignor.)

Moxley, Stephen D., Birmingham, Ala., assignor to Sand Spun Patents Corporation, New York, N. Y. Flask-handling device. 1,786,218; Dec. 23.

Moyer, Fredellia H. (See Speer, J. R., and Moyer.)

Muller, Edward J., Princeton, N. J. Vacuum cleaner. 1,785,873; Dec. 23.

Müller, Fritz. (See Hoffa, E., and Müller.)

Multiple Selling Corporation. (See Moore, Robert A., assignor.)

Mundt, Theodorus W., Biltboven, Netherlands. Turntable. 1,786,258; Dec. 23.

Monroe, Treadway B., assignor to The Celotex Company, Chicago, Ill. Production of fibers for wall board and similar structures. 1,785,840; Dec. 23.

Murphey, George P., Philadelphia, Pa. Recording instrument. 1,785,874; Dec. 23.

Murphy, William B., Crandall, Tex. Novelty chair. 1,786,123; Dec. 23.

Murphy, William B., Crandall, Tex. Detachable cultivator sweep. 1,786,124; Dec. 23.

Myers, Albert J., assignor to The Koppers Company, Pittsburgh, Pa. Rotary grizzly. 1,785,841; Dec. 23.

Myers, Hubert A., assignor to The Myers Regulator Company, Toledo, Ohio. Window regulator. 1,785,784; Dec. 23.

Myers Regulator Company, The. (See Myers, Hubert A., assignor.)

Naamlooze Vennootschap: Glasfabriek "Leerdam" voorheen Jeckel, Mijnssen & Co. (See van Dijck, Willem J. D., assignor.)

National Aniline & Chemical Company. (See Dieterle, Paul, assignor.)

National Aniline & Chemical Company. (See Spalding, William L., assignor.)

National Aniline & Chemical Company. (See West, Byron L., assignor.)

National Appliance Company, The. (See Kurtz, Cyrus B., assignor.)

National Carbon Co. (See Greider, Clarence E., assignor.)

National Carbon Company. (See Heise, G. W., and Brokate, assignors.)

National Company. (See Wilson, Clarence E., assignor.)

National Electric Products Corporation. (See Clayton, Martin M., assignor.)

National Pneumatic Company. (See Forman, Paris R., assignor.)

National Vision-Tone Corporation. (See von Madaler, Ferdinand, assignor.)

Nellis, Carl P., and A. H. Flower, assignors to The Inland Manufacturing Company, Dayton, Ohio. Mixing cotton fiber and bituminous materials. 1,785,910; Dec. 23.

Neuwirth, Herman, Brooklyn, N. Y. Barometer. 1,786,219; Dec. 23.

New Britain Machine Company, The. (See Contes, J. H., Howe, and Costello, assignors.)

Newhouse, Ray C., Wilmette, Ill. Cement manufacture. 1,786,080; Dec. 23.

New Jersey Seating Co. (See Schmidt, James R., assignor.)

Newkirk, Burt L., Schenectady, N. Y., assignor to General Electric Company. Process and apparatus for cleaning liquid mercury and the like. 1,786,312; Dec. 23.

Newton, Andy. (See Fugle, C. H., Ostenberg, Maglein, Trudo, and Newton.)

Nicholson, John P., and J. W. McAllister, Notre Dame, Ind.; said McAllister assignor to said Nicholson. Sprint-starting appliance. 1,785,968; Dec. 23.

Nobles, Edward, Pocatello, Idaho. Line-pole-setting device. 1,786,360; Dec. 23.

Nomanu Elektrische Apparate G. m. b. H. (See Thielmann, Sebastian, assignor.)

Norheim, Alfred. (See Hönningstad, A., Arneson, and Norheim).

Norma-Hoffmann Bearings Corporation. (See Barrett, Geoffrey F., assignor.)

Norton, Raymond J., Washington, D. C., assignor to Bendix Brake Company, South Bend, Ind. Brake-shoe structure. 1,785,969; Dec. 23.

Norton, Sir James Farmer, & Company. (See Bosshard, Arnold, assignor.)

Norviel, Harry E., Anderson, Ind., assignor, by mesne assignments, to Delco-Remy Corporation, Dayton, Ohio. Electric switch. 1,785,911; Dec. 23.

Norviel, Harry E., Anderson, Ind., assignor to General Motors Corporation. Electric switch. 1,785,912; Dec. 23.

Noser, Charles P., Rochester, assignor to The Symington Company, New York, N. Y. Railway truck. 1,785,970; Dec. 23.

Nourse, Walter H., assignor to Electric Steel Foundry Co., Portland, Oreg. Swivel butt hook. 1,786,081; Dec. 23.

Nowak, Alois K., et al. (See Nowak, A. K., and Dinzl, assignors.)

Nowak, Alois K., Chicago, Ill., and R. W. Dinzl, Philadelphia, Pa., assignors to A. K. Nowak, Chicago, Ill., and F. H. Smith, Akron, Ohio. Briquetting machine. 1,786,167; Dec. 23.

Nystrom, A. J., & Co. (See Swanson, Frank H., assignor.)

O'Connor, Christopher D., Santa Barbara, Mex. Man-power horse boat. 1,785,971; Dec. 23.

Oglesby, Nicholas E., Edgewood, Md. Process and apparatus for generating smoke screens. 1,785,744; Dec. 23.

Ohio Parts Company, The. (See Terrell, H. C., and Kerkhoff, assignors.)

Oh'er, A. J., et al. (See Baker, James C., assignor.)

O'Kane, Walter C., Durham, N. H. Fungicide and insecticide. 1,786,125; Dec. 23.

Old Colony Distributing Company. (See Blondin, Michel C., assignor.)

Oliva, Vincent, assignor to Grand Central Wicker Shop, Inc., New York, N. Y. Chair or the like. Des. 82,898; Dec. 23.

Olson, John B. (See Markey, G. T., and Olson.)

Olson, John B., assignor to James Manufacturing Company, Fort Atkinson, Wis. Poultry waterer. 1,786,024; Dec. 23.

Olson, John B., and G. T. Markey, assignors to James Manufacturing Company, Fort Atkinson, Wis. Feeding apparatus. 1,785,785; Dec. 23.

Olson, Olof. (See Palmer, Walter T., assignor.)

Opperman, August H., Indianapolis, Ind. Hair-waving apparatus. 1,786,313; Dec. 23.

Osborne, Ralph W., Toronto, Ontario, Canada. Communicating system. 1,785,972; Dec. 23.

Osgood, Charles F., Claremont, N. H., assignor to Sullivan Machinery Company. Mining machine. 1,785,973; Dec. 23.

Osgood, Charles F., Claremont, N. H., assignor to Sullivan Machinery Company. Mining apparatus. 1,785,974; Dec. 23.

Osgood, Charles F., Claremont, N. H., assignor to Sullivan Machinery Company. Mining apparatus. 1,786,259; Dec. 23.

Ostenberg, Charles H. (See Fugle, C. H., Ostenberg, Maglein, Trudo, and Newtno.)

Owens Development Corporation. (See Owens, Freeman H., assignor.)

Owens, Freeman H., New York, N. Y. Optical system for reproducing sound records. 1,786,025; Dec. 23.

Owens, Freeman H., New York, N. Y. Talking-picture apparatus. 1,786,026; Dec. 23.

Owens, Freemen H., New York, N. Y. Apparatus for reproducing photographic sound records. 1,786,027; Dec. 23.

Owens, Freeman H., assignor to Owens Development Corporation, New York, N. Y. Optical printer. 1,786,220; Dec. 23.

Owens-Illinois Glass Company. (See Fuerst, Edwin W., assignor.)

Owens, Robert H., assignor to The P. H. & F. M. Roots Company, Connersville, Ind. Fluid-handling apparatus. 1,785,842; Dec. 23.

Oxford Varnish Corporation. (See Casto, Lloyd V., assignor.)

Pahl, August, Berlin-Wilmersdorf, Germany. Production of filter sieves and sieves produced by such process. 1,786,361; Dec. 23.

Palatini, Thomas, Belmar, N. J. Plastering machine. 1,786,362; Dec. 23.

Palmer, Walter T., assignor of one-half to O. Olson, Des Moines, Iowa. High-thermal-efficiency furnace. 1,786,082; Dec. 23.

Pannier Bros. Stamp Company. (See Pannier, Oscar M., assignor.)

Pannier, Oscar M., assignor to Pannier Bros. Stamp Company, Inc., Pittsburgh, Pa. Stamping head. 1,786,028; Dec. 23.

Parkersburg Rig & Reel Company, The. (See Schwemlein, William, assignor.)

Partington, Charles H., Cincinnati, Ohio. Switch stand. 1,786,260; Dec. 23.

Partridge, Fred J. (See Baird, A. M., and Partridge.)

Pascucci, Attilio R., Providence, R. I., assignor to Haverhill Shoe Novelty Company, Haverhill, Mass. Shoe ornament. Des. 82,899; Dec. 23.

Pascucci, Attilio R., Providence, R. I., assignor to Haverhill Shoe Novelty Company, Haverhill, Mass. Shoe ornament. Des. 82,900; Dec. 23.

Pascucci, Attilio R., Providence, R. I., assignor to Haverhill Shoe Novelty Company, Haverhill, Mass. Shoe ornament. Des. 82,901; Dec. 23.

Passmel, Anthony J., Valley City, N. Dak. Trip-rope holder. 1,786,314; Dec. 23.

Pate, Thomas G., Liberal, Kans. Burglar-guard apparatus. 1,786,363; Dec. 23.

Paterson, Alexander, Buffalo, N. Y. Rolling and annealing sheet metal. 1,785,786; Dec. 23.

Patton, Frederick W., Victoria, British Columbia, Canada. Multiple-saw woodworking machine. 1,786,168; Dec. 23.

Payman, Joseph B., et al. (See Gibson, W., Henshaw, and Payman.)

Pellegrino, Vincenzo, Rye, N. Y. Safety parachute device for aeroplanes. 1,786,169; Dec. 23.

Pelton, George M., assignor to The Filer & Stowell Company, Milwaukee, Wis. Receding mechanism. 1,786,261; Dec. 23.

Pelz, Otto A., Brooklyn, N. Y. Automobile theft alarm. 1,785,875; Dec. 23.

Penn, Albert, assignor to Penn Electric Switch Co., Des Moines, Iowa. Automatic temperature-controlling device. 1,786,083; Dec. 23.

Penn Electric Switch Co. (See Penn, Albert, assignor.)

Perwatco Manufacturing Co. (See Watson, Hugh W., assignor.)

Peterson, Carl D., Syracuse, N. Y., assignor to Brown Pipe Gear Company. Transmission dampener. 1,786,408; Dec. 23.

Peterson, George H., Bloomfield, N. J., and W. A. Rhodes, New York, N. Y., assignors to American Telephone and Telegraph Company. Telephone system. 1,785,818; Dec. 23.

Pew, Arthur E., jr., Bryn Mawr, and H. Thomas, Ridley Park, assignors to Sun Oil Company, Philadelphia, Pa. Cracking mineral oil. 1,786,315; Dec. 23.

Phillips, Clayton L., Hamden, assignor to Sargent & Company, New Haven, Conn. Burglar-proof key bolt. 1,786,221; Dec. 23.

Phillips, John H., Chicago, Ill. Tool holder. 1,786,029; Dec. 23.

Phillips, Leland A., Rochester, N. Y. Humidor for inked ribbons. 1,785,975; Dec. 23.

Phinn, George A., Pasadena, Calif. Porch curtain. 1,786,084; Dec. 23.

Pilates, Joseph, New York, N. Y. Catapult. 1,785,876; Dec. 23.

Pillatzke, John M., Minneapolis, Minn. Method and apparatus for drying and burning molded ware. 1,786,364; Dec. 23.

Pilling, Charles J., Lansdowne, assignor to The George P. Pilling & Son Company, Philadelphia, Pa. Surgical suction and pressure apparatus. 1,785,745; Dec. 23.

Pilling, Charles J., Lansdowne, assignor to The George P. Pilling & Son Company, Philadelphia, Pa. Surgical suction and pressure apparatus. 1,785,746; Dec. 23.

Pilling, George P., & Son Company, The. (See Pilling, Charles J., assignor.)

Pilot Ray Corporation. (See Cronkhite, Charles M., assignor.)

Pitt, William A., Montreal, Quebec, Canada, assignor of forty-nine percent to F. Summer, New York, N. Y. Train-lighting apparatus. 1,786,401; Dec. 23.

Pittsburgh Screw and Bolt Corporation. (See Shrum, Peter J., assignor.)

Pooley, William S. (See Grover, W. H., Pooley, and Merritt.)

Pope, Elmer R., Hamilton, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Shoe machine. 1,785,843; Dec. 23.

Pope, Elmer R., Hamilton, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Shoemaking. 1,786,030; Dec. 23.

Poppelman, Carl, Racine, Wis. Grinder. 1,786,262; Dec. 23.

Porter, Jacob N., assignor to The Globe Brick Company, East Liverpool, Ohio. Vertical fiber grooved-lug paving brick. 1,785,976; Dec. 23.

Post, Berr E. (See McKinney, Wendell R., assignor.)

Potter, Thomas L., Portland, Oreg. Multiple refrigerator system. 1,786,222; Dec. 23.

Potvin, Ernest N., San Pedro, Salif. Hair drier. 1,786,223; Dec. 23.

Prager Co. (See Prager, James G., assignor.)

Prager, James G., Worcester, Mass., assignor to Prager Co., Inc. Wall paper or similar material. Des. 82,902; Dec. 23.

Prager, James G., Worcester, Mass., assignor to Prager Co., Inc. Wall paper or similar material. Des. 82,903; Dec. 23.

Prarat, Alfred E., Gridley, Calif. Chicken nest. 1,786,126; Dec. 23.

Prat-Daniel Corporation. (See Whiton, L. C., jr., and Hardigg, assignor.)

Preble, Normal H., assignor to The Cecil R. Lambert Company, Detroit, Mich. Control mechanism for conveyers. 1,786,085; Dec. 23.

Prentice G. E. Manufacturing Company. (See Legat, Robert C., assignor.)

Presser, Albert, assignor to the firm Dornier-Metallbauten, G. m. b. H., Friedrichshafen-on-the-Bodensee, Germany. Steering aircraft. 1,785,913; Dec. 23.

Prest-O-Lite Storage Battery Corporation. (See Benner, R. C., and Chaney, assignors.)

Prince & Company. (See Prince, Earl S., assignor.)

Prince, Earl S., assignor to Prince & Company, Sterling, Ill. Merchandise booth. Des. 82,904; Dec. 23.

Pritchard, Amos D., Chicago, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y. System for charging storage batteries. 1,786,086; Dec. 23.

Pruyn, Samuel R., Chicago, Ill. Shock absorber for guns. 1,785,977; Dec. 23.

Pucar, Theodore, assignor to Edwin B. Stimpson Company, Brooklyn, N. Y. Fastener-setting machine. 1,786,087; Dec. 23.

Pucar, Theodore, assignor to Edwin B. Stimpson Company, Brooklyn, N. Y. Feeding device for pronged fasteners. 1,786,088; Dec. 23.

Pugh, Emerson. (See Heimberger, H. T., and Pugh.)

Pungs, Wilhelm, Ludwigshafen-on-the-Rhine, and M. Jahrstorfer, Mannheim, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Hardening paraffin, waxes, and the like. 1,786,263; Dec. 23.

Pyle-National Company, The. (See Ganzert, Albert E., assignor.)

Quinn, Joseph, Brooklyn, N. Y. Cutter tool. 1,785,978; Dec. 23.

Quintard, Daniel S., New York, N. Y. Curtain or portière holder. 1,786,365; Dec. 23.

Radio Corporation of America. (See Wolff, Irving, assignor.)

Radó, Charlos, Budapest, Hungary. Crown-slitting pliers. 1,786,127; Dec. 23.

Railway Maintenance Corporation. (See McWilliams, James B., assignor.)

Rath, Julius, Lippstadt, assignor to the firm Vereinigte Stahlwerke Aktiengesellschaft, Dusseldorf, Germany. Cable-transport drum. 1,786,366; Dec. 23.

Rayfield, Charles L., assignor to Rayfield Manufacturing Co., Chicago, Ill. Thermostatically-operated device. 1,785,787; Dec. 23.

Rayfield Manufacturing Co. (See Rayfield, Charles L., assignor.)

Razor Blade Tile, Incorporated. (See Carlisle, Roy, assignor.)

Recchia, Orlando R., Cranston, R. I., assignor to C. G. King & Co., Inc., Providence, R. I. Shoe ornament. Des. 82,905; Dec. 23.

Recchia, Orlando R., Cranston, R. I., assignor to C. G. King & Co., Inc., Providence, R. I. Shoe buckle. Des. 82,906; Dec. 23.

Recchia, Orlando R., Cranston, R. I., assignor to C. G. King & Co., Inc., Providence, R. I. Shoe buckle. Des. 82,907; Dec. 23.

Recchia, Orlando R., Cranston, R. I., assignor to C. G. King & Co., Inc., Providence, R. I. Shoe buckle. Des. 82,908; Dec. 23.

Reed, Sylvanus A., New York, N. Y. Energy-transmission means. 1,786,264; Dec. 23.

Reiter, Otis F., Baltimore, Md., assignor to The Farmers Stone Picking Machine Company. Stone-gathering machine. 1,786,170; Dec. 23.

Reliance Company, The. (See Wilms, G. O., and Dowe, assignors.)

Remington Arms Company. (See Loomis, Crawford C., assignor.)

Reserve Holding Company. (See Sengebusch, Hans, assignor.)

Reserve Holding Company. (See Stehlik, Rudolph F., assignor.)

Reserve Holding Company. (See Tharp, V. S., and Wicks, assignors.)

Rexinger, Otto M., Beverly Hills, Calif. Window grating. Re17,911; Dec. 23.

Rheinische Metallwaaren und Maschinenfabrik Sömmerda Aktiengesellschaft. (See Kottmann, August, assignor.)

Rhodes, William A. (See Peterson, G. H., and Rhodes.)

Riel, Peter S., Buffalo, N. Y. Door latch. 1,785,914; Dec. 23.

Riley, James V., Simcoe, Ontario, Canada. Drying device. 1,786,316; Dec. 23.

Ringle, Robert F., Zellenople, Pa. Molding machine. 1,786,171; Dec. 23.

Robb, Frank M., Belleville, Ontario, Canada. Sound-reproducing instrument. 1,785,915; Dec. 23.

Roberts, William T. B., Leicester, England, assignor to United Shoe Machinery Corporation, Paterson, N. J. Fastening inserting machine. 1,785,844; Dec. 23.

Robinson, John R. (See Seffens, C., and Robinson.)

Robinson, Wilfred, Drawbridge, Calif. Decoy duck. 1,785,788; Dec. 23.

Rochester Folding Box Company. (See Bowersock, Wilber E., assignor.)

Roebling's, John A., Sons Company. (See Sunderland, Charles C., assignor.)

Roeg, Louis M., assignor to Brewer & Company, Incorporated, Worcester, Mass. Mercury derivative of tetraiodo-fluorescein. 1,786,172; Dec. 23.

Rogers, John F., Cleveland Heights, assignor to The Wellman Engineering Company, Cleveland, Ohio. Feed mechanism for gas producers. 1,785,789; Dec. 23.

Rolscreen Company. (See Dixon, Harry, assignor.)

Roots, P. H., & F. M., Company, The. (See Owens, Robert H., assignor.)

Ropp, Franklin N., Hollywood, Calif. Combination joist hanger and tie. 1,786,790; Dec. 23.

Ropp, Franklin N., Hollywood, Calif. Combination joist hanger and tie. 1,785,791; Dec. 23.

Rosch, George J., Marcus, Iowa. Gate bolt. 1,786,265; Dec. 23.

Rosemary Mfg. Co. (See Haug, Herman, assignor.)

Rubel, Chester D., et al. (See Welsh, Ralph B., assignor.)

Rubner, Norbert A., Milwaukee, Wis. Drip pan for toilet flush tanks. 1,785,877; Dec. 23.

Russel, Philip S., assignor to Detroit Lubricator Company, Detroit, Mich. Regulator. 1,786,402; Dec. 23.

Russell, Edelbert. (See Thompson, W. W., and Russell.)

Russell, Gordon W., Brookline, Mass., assignor to James Russell Boiler Works Co. Fire-tube steam boiler. 1,786,317; Dec. 23.

Russell, James, Boiler Works Co. (See Russell, Gordon W., assignor.)

Sakier, George, New York, N. Y., assignor to Fostoria Glass Company, Moundsville, W. Va. Goblet or similar article. Des. 82,909; Dec. 23.

Sand Spun Patents Corporation. (See Moxley, Stephen D., assignor.)

Sanford, John W., Claremont, N. H., assignor to Sullivan Machinery Company. Automatic compressor-control system. 1,785,979; Dec. 23.

Sanford, John W., Claremont, N. H., assignor to Sullivan Machinery Company. Automatic compressor-control system. 1,785,980; Dec. 23.

Sanford, John W., Claremont, N. H., assignor to Sullivan Machinery Company. Automatic compressor-control system. 1,786,267; Dec. 23.

Sanford, John W., Chicago, Ill., assignor to Sullivan Machinery Company. Compressor-controlling mechanism. 1,786,128; Dec. 23.

Sanford, William C., jr., Cerro de Pasco, Peru. Liquid mixing and cooling device. 1,786,129; Dec. 23.

Sargent & Company. (See Phillips, Clayton L., assignor.)

Sawyer, Wilfred D., Long Beach, assignor to Emsco Derrick & Equipment Company, Los Angeles, Calif. Interchangeable draw-works girt. 1,786,089; Dec. 23.

Schachter, Joseph W., Brooklyn, N. Y. Teapot. 1,785,878; Dec. 23.

Scharpenberg, Charles C., Bakersfield, assignor, by mesne assignments, to Standard Oil Company of California, San Francisco, Calif. Drilling apparatus. 1,786,173; Dec. 23.

Schaub, Edward J., assignor to Central Glass Works, Wheeling, W. Va. Glass goblet or similar article. Des. 82,910; Dec. 23.

Schleicher, Edward G., Mount Vernon, N. Y. Stabilizing device for aeroplanes. 1,786,266; Dec. 23.

Schmidt, James R., Trenton, N. J., assignor to New Jersey Seating Co., New York, N. Y. Combination chair seat and back. Des. 82,911; Dec. 23.

Schmidt, Paul, and F. V. Malloy, Chicago, Ill. Apparatus for blood transfusion. 1,786,090; Dec. 23.

Schoenfeld, Walter, St. Paul, Minn. Heater for automobile engines. 1,786,130; Dec. 23.

Schotte, Herbert, Berlin-Wilmerdorf, assignor to Chemische Fabrik auf Actien (vorm, E. Schering), Berlin, Germany. Sulphur containing guanidine derivatives and making same. 1,785,916; Dec. 23.

Schrott, Kasimir. (See Wieghardt, P., and Schrott.)

Schuler, Callista O. (See Wilson, R. O., and Schuler.)

Schulte, Walter B., Madison, Wis., assignor to Burgess Battery Company. Battery. 1,785,981; Dec. 23.

Schulz, Arthur P. (See Teller, J., and Schulz.)

Schulze, Wilhelm, Michigan City, Ind. Potato-harvesting machine. 1,786,131; Dec. 23.

Schuster, Jacob H., St. Louis, Mo. Reciprocating-action safety razor. 1,785,917; Dec. 23.

Schwarzkopf, Paul, Reutte, Austria. Producing ferromolybdenum and ferrotungsten. 1,786,393; Dec. 23.

Schweer, Hulda M., New York, N. Y. Textile fabric or similar article of manufacture. Des. 82,912; Dec. 23.

Schwemlein, William, assignor to The Parkersburg Rig & Reel Company, Parkersburg, W. Va. Brake drum. 1,786,132; Dec. 23.

Scott, John W., Bisbee, Ariz. Material carrier. 1,785,982; Dec. 23.

Scott, Lester C., Brooklyn, assignor, by mesne assignments, to Two-Tone Corporation, New York, N. Y. Apparatus for dyeing, coloring, and coating. 1,786,031; Dec. 23.

Sebald, Joseph H., Arlington, N. J., assignor to Worthington Pump and Machinery Corporation, New York, N. Y. Feed-water heater. 1,785,983; Dec. 23.

Seffens, Clarence, and J. R. Robinson, Parkersburg, W. Va. Changeable exhibitor. 1,786,133; Dec. 23.

Segal Automatic Tweezer Corporation. (See Segal, Samuel, assignor.)

Segal, Samuel, assignor to Segal Automatic Tweezer Corporation, New York, N. Y. Lighter. 1,786,267; Dec. 23.

Seitz, Valentine, Cleveland Heights, assignor to The Cleveland Clinic Foundation, Cleveland, Ohio. Safety device. 1,785,984; Dec. 23.

Selle, Oliver, St. Louis, Mo. Link chain. Des. 82,913; Dec. 23.

Sengebusch, Hans, Villa Park, assignor to Reserve Holding Company, Chicago, Ill. Casing for an impulse-sending machine. Des. 82,914; Dec. 23.

Shaw, Louis E., East Orange, N. J., assignor, by mesne assignments, to Dejur-Amsco Corporation, New York, N. Y. Electric condenser. 1,786,134; Dec. 23.

Shrum, Peter J., Monaca Heights, Pa., assignor to Pittsburgh Screw and Bolt Corporation. Protector. 1,785,985; Dec. 23.

Shukhoff, Vladimir G. (See Capeliuschnicoff, Matvey A., assignor.)

Siemens & Halske Aktiengesellschaft, Wernerwerk. (See Anteri, Michele, assignor.)

Silberman, David, New York, N. Y. Sewing-machine guide for hook tape. 1,786,174; Dec. 23.

Silent, Harold C., Larchmont, N. Y., assignor to American Telephone and Telegraph Company. Prevention of parasitic oscillations. 1,785,819; Dec. 23.

Simons, George A., and G. Freeberg, assignors to Simons Millwork, Inc., Minneapolis, Minn. Corner china closet. Des. 82,915; Dec. 23.

Simons, George A., and G. Freeberg, assignors to Simons Millwork, Inc., Minneapolis, Minn. Corner china closet. Des. 82,916; Dec. 23.

Simons Millwork, Inc. (See Simons, G. A., and Freeberg, assignors.)

Simplex Gold Stamping Press Co. Inc. (See Williams, Frank, assignor.)

Simpson, Frank H. (See James, George H., assignor.)

Sims, Thomas B., Cleburne, assignor to L. J. Wardlaur, Tarrant County, Tex. Sewage-disposal-plant pump. 1,786,032; Dec. 23.

Singer Manufacturing Company, The. (See Chason, Daniel H., assignor.)

Skinner, Ralph L. (See Flognus, Howard A., assignor.)

Small, John D. (See Jones, C. L., and Small.)

Smart Set Shops. (See Wolf, Jacob R., assignor.)

Smith, Charles A. (See Griggs, H. D., and Subira, assignors.)

Smith, Frank H., et al. (See Nowak, A. K., and Dinzl, assignors.)

Smith, Frederick W., Niagara Falls, Ontario, Canada. Indicator for internal-combustion engines. 1,786,034; Dec. 23.

Smith, Harry F., assignor to The Gas Research Company, Dayton, Ohio. Domestic gas-generating system. 1,785,820; Dec. 23.

Smith, Le Roy W., St. Louis County, assignor to The Mirror Display Co., Inc., St. Louis, Mo. Advertising device. 1,786,033; Dec. 23.

Smith, William A., sr., Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J. Feeding device for percussive motors. 1,786,135; Dec. 23.

Smith, William A., sr., Easton, Pa., and J. I. Hulshizer, Stewartsville, assignors to Ingersoll-Rand Company, Jersey City, N. J. Feeding device for percussive motors. 1,786,175; Dec. 23.

Snavely, Carl G., Lewisburg, Pa. Body-protecting shield. 1,786,268; Dec. 23.

Snow, Norman L., assignor to Diamond Power Specialty Corporation, Detroit, Mich. Boiler cleaner. 1,785,821; Dec. 23.

Snyder, George H., Brooklyn, assignor to International Cigar Machinery Company, New York, N. Y. Cigar machine. 1,785,822; Dec. 23.

Society of Chemical Industry in Basle. (See Straub, F., and Anderau, assignors.)

Solomon, Aaron R., assignor to Modern Auto Repair and Reconstructing Company, St. Louis, Mo. Overhead gasoline-engine oiler. 1,786,269; Dec. 23.

Spalding, William L., Buffalo, assignor to National Aniline & Chemical Company, Inc., New York, N. Y. Gas-treating apparatus. 1,785,792; Dec. 23.

Speer, James R., Trappe, Md., and F. H. Moyer, Pittsburgh, Pa. Method of and apparatus for rolling sheet metal. 1,785,986; Dec. 23.

Spencer, Hugh M., assignor to The Upson Company, Lockport, N. Y. Water-resistant and fire-resistant fibrous product and making same. 1,786,270; Dec. 23.

Spooner, Albert E., Renfrew, Ontario, Canada. Railroad-crossing gate. 1,785,747; Dec. 23.

Stahl, Frank E., assignor to The Columbus-McKinnon Chain Corporation, Tonawanda, N. Y. Cross chain for antiskid devices. 1,786,318; Dec. 23.

Standard Oil Company. (See Miller, Clarke C., assignor.)

Standard Oil Company of California. (See Scharpenberg, Charles C., assignor.)

Standard Oil Development Company. (See Hunn, Edward B., assignor.)

Starrett, Wendelin D., Alameda, Calif. Transmission gearing. 1,786,319; Dec. 23.

Starriett, Jack C., Gallup, N. Mex. Door and window casing. 1,785,793; Dec. 23.

Stearman Aircraft Company, The. (See Stearman, Lloyd, assignor.)

Stearman, Lloyd, assignor to The Stearman Aircraft Company, Inc., Wichita, Kans. Airplane. 1,786,136; Dec. 23.

Stebbins, Albert H., Los Angeles, Calif. Combined fan and classifier. 1,785,918; Dec. 23.

Stehlik, Rudolph F., Chicago, Ill., assignor to Reserve Holding Company, Kansas City, Mo. Telephone system. 1,786,410; Dec. 23.

Steinemann, Violet D., Los Angeles, Calif. Doll. Des. 82,917; Dec. 23.

Steininger, William, Berwyn, assignor to W. D. Allen Manufacturing Company, Chicago, Ill. Sprinkler. 1,786,035; Dec. 23.

Steinnon, Louis, assignor to Winchester Repeating Arms Co., New Haven, Conn. Double-barreled firearm. 1,785,794; Dec. 23.

Stevermer, Frank. (See Latourelle, J., and Stevermer.)

Stewart, James A., Oakland, assignor to Management and Finance Corporation of California, San Francisco, Calif. Sash mounting. 1,786,036; Dec. 23.

Stewart, Walter C., assignor to E. Frohman, Gastonia, N. C. Yarn-tensioning device. 1,785,987; Dec. 23.

Stickel, Charles W., and W. R. Tuttle, Rochester, N. Y. Tweezers. 1,785,919; Dec. 23.

Stiles, Frank I., Miami, Fla. Boat for submarine inspection. 1,786,091; Dec. 23.

Stimpson, Edwin B., Company. (See Pucar, Theodore, assignor.)

Stock, Johann J. F., Munich, Germany. Method and device of synchronizing cinematographic performance and sound production. 1,786,368; Dec. 23.

Stone, Walter L. (See Andrews, David E., assignor.)
Stonebraker, Harold E., Rochester, N. Y. Case for clinical thermometers. 1,786,271; Dec. 23.
Stoppel, Louis D., Isleton, Calif. Asparagus-cutting machine. 1,785,795; Dec. 23.
Stout, William B., Detroit, assignor to Ford Motor Company, Highland Park, Mich. Airplane control. 1,785,879; Dec. 23.
Stratford, Herbert R., assignor to The Stratmore Company, Cleveland, Ohio. Surfacing apparatus. 1,786,320; Dec. 23.
Stratmore Company, The. (See Stratford, Herbert R., assignor.)
Straub, Fritz, and W. Anderau, assignors to Society of Chemical Industry in Basle, Basel, Switzerland. Azo dyestuffs containing metals and making same. 1,786,272; Dec. 23.
Strong, John E., Grand Rapids, Mich. Cabinet for telephones and the like. 1,785,880; Dec. 23.
Stuart, Henry J., New Haven, assignor to The Bassett Metal Goods Company, Inc., Derby, Conn. Hose supporter. 1,786,137; Dec. 23.
Stuesser, Richard, Cologne-on-the-Rhine, Germany, assignor to General Aniline Works, Inc., New York, N. Y. Production of azo dyestuffs and azo dyestuffs obtainable thereby. 1,785,845; Dec. 23.
Sturgis, Herbert M., assignor, by mesne assignments, to L. Hunt, Kansas City, Mo. Mop head. 1,786,037; Dec. 23.
Stutika, John, West Pullman, Ill. Valve-testing gauge. 1,786,092; Dec. 23.
Subira, John B. (See Griggs, H. D., and Subira.)
Sugg, Charles R. (See Meister, C. L., and Sugg.)
Sullivan Machinery Company. (See Boudette, Cornelius G., assignor.)
Sullivan Machinery Company. (See Ferguson, Alexander D, assignor.)
Sullivan Machinery Company. (See Holdsworth, Fred D., assignor.)
Sullivan Machinery Company. (See Holmes, Morris P., assignor.)
Sullivan Machinery Company. (See Hughes, William E., assignor.)
Sullivan Machinery Company. (See Osgood, Charles F., assignor.)
Sullivan Machinery Company. (See Sanford, John W., assignor.)
Sullivan Machinery Company. (See Wilson, Leonard, assignor.)
Summer, Frank. (See Pitt, William A., assignor.)
Sundback, Gideon, Meadville, assignor to Hookless Fastener Company, Meadville, Pa. Separable fastener. 1,785,920; Dec. 23.
Sunderland, Charles C., assignor to John A. Roebling's Sons Company, Trenton, N. J. Wire-testing machine. 1,786,138; Dec. 23.
Sun Oil Company. (See Pew, A. E., jr., and Thomas, assignors.)
Suppes, Max M., assignor to The Fox Furnace Company, Elyria, Ohio. Heating apparatus. 1,786,403; Dec. 23.
Sutcliffe, Edwin A., Oak Park, Ill., assignor to Victor Manufacturing & Gasket Co. Display and index rack. 1,785,988; Dec. 23.
Swann Research, Inc. (See Masin, J. S., and White, assignors.)
Swanson, Frank H., Chicago, Ill., assignor to A. J. Nystrom & Co. Apparatus for map display. 1,786,038; Dec. 23.
Swick, Elda, Clinton, Nebr. Towing hitch. 1,786,093; Dec. 23.
Sylva, John J., assignor to California Cedar Products Company, Stockton, Calif. Slat-edging machine. 1,786,039; Dec. 23.
Symington Company, The. (See Noser, Charles P., assignor.)
Tabulating Machine Company, The. (See Bryce, James W., assignor.)
Taggart, Charles, Detroit, Mich. Railway journal-wedge-grinding device. 1,786,139; Dec. 23.
Takahashi, Katsumi, Aza, Shibuya-Machi, Toyotama-Gori, Japan, assignor to Zaidan Hojin Rikagaku Kenkyujo, Tokyo, Japan. Extracting vitamin A from fish oils and the like. 1,786,095; Dec. 23.
Taube, Carl, Leverkusen-on-the-Rhine, Germany, assignor to Winthrop Chemical Company, Inc., New York, N. Y. Manufacture of phenylemercuric acetate. 1,786,094; Dec. 23.
Tavenner, Richard B., Pasadena, Calif. Mechanical pencil. 1,785,881; Dec. 23.
Taylor, George N. (See Marcroft, W., and Taylor.)
Taylor, James E., Cleveland, Ohio. Device for locking screen doors and the like. 1,785,882; Dec. 23.
Taylor, William H., Des Moines, Iowa. Screen mounting. 1,786,040; Dec. 23.
Teague, Walter D., New York, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y. Camera casing or the like. Des. 82,918; Dec. 23.
Teissère, Albert and J., St.-Julien, Aube, France. Apparatus for engraving printing rollers. 1,785,883; Dec. 23.
Teissère, Jean. (See Teissère, A. and J.)
Teller Corporation. (See Teller, J., and Schulz, assignors.)
Teller, Jacob, Chicago, and A. P. Schulz, Berwyn, Ill., assignors to Teller Corporation, Chattanooga, Tenn. Cabinet gas or electric range. Des. 82,919; Dec. 23.
Terrell, Harold C., and F. A. Kerkhoff, assignors to The Ohio Parts Company, Cincinnati, Ohio. Battery-charging connecter. 1,786,369; Dec. 23.
Terry, Matson C., Philadelphia, Pa., assignor to Westinghouse Electric & Manufacturing Company. Refrigerator. 1,786,370; Dec. 23.
Tharp, Victor S., Elmhurst, and J. Wicks, Oak Park, Ill., assignors to Reserve Holding Company, Kansas City, Mo. Automatic toll-service trunking system. 1,786,041; Dec. 23.
Thielmann, Sebastian, Berlin, assignor to Nomanu Elektrische Apparate G. m. b. H., Berlin-Halensee, Germany. Scraping off wooden surfaces. 1,786,096; Dec. 23.
Thiess, Karl, Frankfort-on-the-Main-Hochst, Germany, assignor to General Aniline Works, Inc., New York, N. Y. Azo dyestuffs and material dyed therewith. 1,785,846; Dec. 23.
Thilo, Erich, assignor to A. Heiche, Berlin, Germany. Producing bicalcium phosphate from sulphurous solutions. 1,786,097; Dec. 23.
Thoma, Meinard F., Fitchburg, Mass. Opening and preparing artificial staple fiber for spinning. 1,785,823; Dec. 23.
Thomas, Henry. (See Pew, A. E., jr., and Thomas.)
Thomas, Thomas H., Edgewood, assignor to The Westinghouse Air Brake Company, Wilmerding, Pa. Electric-switch device. 1,786,176; Dec. 23.
Thomas, Thomas H., Edgewood, assignor to The Westinghouse Air Brake Company, Wilmerding, Pa. Brake-pipe cut-off valve. 1,786,177; Dec. 23.
Thomas, Thomas H., Edgewood, and J. N. Good, assignors to The Westinghouse Air Brake Company, Wilmerding, Pa. Electropneumatic brake. 1,786,178; Dec. 23.
Thompson Products, Incorporated. (See Bissell, Richard E., assignor.)
Thompson, Walter W., and E. Russell, Macomb, Ill. Poultry fount. 1,785,921; Dec. 23.
Thompson, William H., Berkeley, Calif. Gas-compressor unit. 1,786,321; Dec. 23.
Thomson, Volney W., Portsmouth, Ohio. Ash receiver. Des. 82,920; Dec. 23.
Thon, George, Philadelphia, Pa. Tread switch. 1,786,098; Dec. 23.
Titanium Alloy Manufacturing Company, The. (See Kinzie, Charles J., assignor.)
Tod, Erich. (See Moser, W., and Tod.)
Toledo Pipe Threading Machine Company, The. (See Vosper, William W., assignor.)
Toman, E. & Co. (See Toman, Edward, assignor.)
Toman, Edward, assignor to E. Toman & Co., Chicago, Ill. Electric pick up device. 1,786,042; Dec. 23.
Towy, Lillian, Inglewood, Calif. Milk-bottle cap. 1,786,140; Dec. 23.
Tracy, Robert W., assignor to The De Vilbiss Company, Toledo, Ohio. Air brush. 1,786,394; Dec. 23.
Traver, Harry G., Beaver Falls, Pa. Car for amusement rides. 1,785,989; Dec. 23.
Trenkamp, Herman J., Cleveland Heights, Ohio. Smoking pipe. 1,786,179; Dec. 23.
Trinity Wheel Corporation. (See Baker, Frederick W., assignor.)
Tripp, Elwood I. (See Carr, C. W., and Tripp.)
Tripp, John B., jr., Trenton, N. J. Brake-lining stretcher. 1,786,099; Dec. 23.
Troutner, Jesse B., assignor to Marshalltown Trowel Company, Marshalltown, Iowa. Handle for trowels. 1,786,043; Dec. 23.
Trudo, Joseph M. (See Fugle, C. H., Ostenberg, Maglein, Trudo, and Newton.)
Tull, Roger, assignor to Western Lithograph Company, Los Angeles, Calif. Making cloth stencils for multicolor work. 1,785,922; Dec. 23.
Turbine Fuel Oil Burner Co. (See Hurd, Benjamin W., assignor.)
Turner, Andrew L., Depew, Okla. Burglar alarm. 1,786,273; Dec. 23.
Tuttle, William R. (See Stickel, C. W., and Tuttle.)
Two-Tone Corporation. (See Scott, Lester C., assignor.)
Unger, Magnus, Pittsfield, Mass., assignor to General Electric Company. Electric furnace. 1,786,322; Dec. 23.
Union Switch & Signal Company, The. (See Alexander, Vincent S., assignor.)
Union Switch & Signal Company, The. (See Bone, Herbert L., assignor.)
United-Carr Fastener Corporation. (See Carr, Moses F., assignor.)
United Shoe Machinery Corporation. (See Benjamin, John M., assignor.)
United Shoe Machinery Corporation. (See Crowley, John F., assignor.)
United Shoe Machinery Corporation. (See Davis, Alson H., assignor.)
United Shoe Machinery Corporation. (See Fromm, Willy, assignor.)
United Shoe Machinery Corporation. (See Pope, Elmer R., assignor.)
United Shoe Machinery Corporation. (See Roberts, William T. B., assignor.)
U. S. Safety Flange Company. (See Ambrose, Ernest R., assignor.)
Universal Engineers, Inc. (See Arrowood, Milton W., assignor.)
Universal Winding Company. (See Marcroft, W., and Taylor, assignors.)

Upson Company, The. (See Spencer, Hugh M., assignor.)
Usthr Factories for Apparatus and Machines, formerly Zellweger Ltd. (See Hammer, Willibald, assignor.)
Valdés y Valdés, César L., Habana, Cuba. Packing machine. 1,785,824; Dec. 23.
Valentine, Mary C., Cleveland, Ohio. Screw-moving means. 1,785,847; Dec. 23.
Valpey, Frank R., Royal Oak, assignor to Graham-Paige Motors Corporation, Detroit, Mich. Vehicle front-end assembly. 1,786,044; Dec. 23.
Van Ackeren, Joseph, assignor to The Koppers Company, Pittsburgh, Pa. Removal of smoke from coke ovens. 1,785,748; Dec. 23.
Van Ackeren, Joseph, assignor to The Koppers Company, Pittsburgh, Pa. Charging vertical retorts. 1,785,749; Dec. 23;
Van Ackeren, Joseph, assignor to The Koppers Company, Pittsburgh, Pa. Charging coke ovens. 1,785,750; Dec. 23.
Van Ackeren, Joseph, assignor to The Koppers Company, Pittsburgh, Pa. Apparatus and method of charging a retort. 1,785,751; Dec. 23.
Van Dijck, William J. D., The Hague, assignor to Naamlooze Vennootschazp; Glasfabriek "Leerdam" voorheen Jeekel, Mynssen & Co., Leerdam, Netherlands. Lighting fixture. 1,786,371; Dec. 23.
Vereinigte Stahlwerke Aktiengesellschaft. (See Rath, Julius, assignor.)
Verran, Harry E. (See Kennedy, Charles F., assignor.)
Victor Manufacturing & Gasket Co. (See Sutcliffe, Edwin A., assignor.)
Vilas, Royal C., Golf, Ill. Combined air-circulating fan and heater. 1,785,752; Dec. 23.
Vitrolite Company, The. (See Meyercord, George R., assignor.)
Vogt, Charles H., Philadelphia, Pa. Food product and marketing the same. 1,786,372; Dec. 23.
Vogt, Fritz, Portland, Oreg. Drawer guide. 1,786,045; Dec. 23.
Von Madaler, Ferdinand, Hampton Bays, assignor, by mesne assignments, to National Vision-Tone Corporation, New York, N. Y. Synchronous motion picture and sound reproduction. 1,786,274; Dec. 23.
Von Nessen, Walter, New York, N. Y., assignor to Efcolite Corporation, Trenton, N. J. Lighting fixture or article of similar nature. Des. 82,921; Dec. 23.
Von Nessen, Walter, New York, N. Y., assignor to Efcolite Corporation, Trenton, N. J. Lighting-fixture shade or article of similar nature. Des. 82,922; Dec. 23.
Von Trümbach, Johannes, Dusseldorf-Oberkassel, Germany. Drawing frame with passages for use on spinning machines. 1,786,180; Dec. 23.
Von Trümbach, Johannes, Dusseldorf-Oberkassel, Germany. Device for stopping delivery in spinning and twisting machines on the breaking of the thread. 1,786,275; Dec. 23.
Vosper, William W., assignor to The Toledo Pipe Threading Machine Company, Toledo, Ohio. Pipe vise. 1,785,884; Dec. 23.
Wade, Percy, assignor to The Weldit Company, Washington, D. C. Strain-applying device for metallic material. 1,785,923; Dec. 23.
Wagner Electric Corporation. (See Baker, Paul W., assignor.)
Wagner Electric Corporation. (See Dick, Burns, assignor.)
Walker, Jerry S., assignor of five forty-eighths to J. B. Allen, one-twelfth to C. A. Wilson, one-twelfth to E. C. Wilson, one-twelfth to E. T. Mayes, one-twelfth to E. C. Kelley, one twenty-fourth to S. S. Green, and one forty-eighth to T. Morgan, Seminole, Okla. Aeroplane. 1,786,181; Dec. 23.
Walker, Ralph C., Portland, Oreg. Electrically-heated therapeutical appliance. 1,786,373; Dec. 23.
Wallace, Cyrus H., San Gabriel, Calif. Signal window for automobile doors. 1,785,796; Dec. 23.
Walton, Christian, Chicago, Ill. Boot and shoe construction. 1,786,374; Dec. 23.
Ward, Joseph, assignor of one-tenth to J. E. Miller, Huntington, W. Va. Seed planter. 1,786,100; Dec. 23.
Wardlaur, L. J. (See Sims, Thomas B., assignor.)
Waterbury Tool Company, The. (See Francis, Daniel R., assignor.)
Waters, Charles H., Olympia, assignor to Dumas National Chemical Company, Lacey, Wash. Explosive. 1,786,046; Dec. 23.
Watling, John B., assignor to T. W. B. Watling, Chicago, Ill. Amusement device. 1,785,848; Dec. 23.
Watling, Thomas W. B. (See Watling, John B., assignor.)
Watling, Thomas W. B., Chicago, Ill. Weighing scale. 1,785,849; Dec. 23.
Watson, Harvey L., Mount Pleasant, Iowa. Animal hopple. 1,786,375; Dec. 23.
Watson, Hugh W., Seattle, Wash., assignor to Perwatco Manufacturing Co., Crete, Nebr. Mold. 1,785,797; Dec. 23.
Watt, Sern P. (See Greaves, F. G., and Watt.)
Wayne, Carl D., St. Paul, Minn. Drop cord. 1,786,276; Dec. 23.
Webster, Lewis E., Wilkes-Barre, Pa. Shovel handle. 1,786,376; Dec. 23.
Weisner, Harry, Philadelphia, Pa. Device for holding combs. 1,785,753; Dec. 23.
Weiss, Theobald C., assignor to Electric Sprayit Company, South Bend, Ind. Motor-driven tool. 1,785,798; Dec. 23.
Welch, Charles K., deceased, Coventry, England; A. G. Welch and R. Welch, administrators. Pneumatic tire and wheel. 1,786,101; Dec. 23.
Welch, Gertrude, et al, administrators. (See Welch, Charles K.)
Welch, Roland, et al, administrators. (See Welch, Charles K.)
Weldit Company, The. (See Wade, Percy, assignor.)
Wellman Engineering Company, The. (See Rogers, John F., assignor.)
Welsh, Chester J., assignor to The Conneaut Shovel Company, Conneaut, Ohio. Scraper for cleaning streets and the like. 1,786,328; Dec. 23.
Welsh, Ralph B., Burkburnett, assignor of ten per cent to C. D. Rubel, twenty-four per cent to L. D. Mowrey, and one-fourth to J. H. Coggins, Wichita Falls, Tex. Sand bottom for pumps and ballers. 1,785,990; Dec. 23.
Wensley, Roy J., Edgewood, Pa., assignor to Westinghouse Electric & Manufacturing Company. Periodic-reclosing circuit-breaker system. 1,786,324; Dec. 23.
Werner, Ervin, Brooklyn, N. Y. Hand scraper. 1,785,754; Dec. 23.
West, Byron L., Hamburg, assignor to National Aniline Chemical Company, Inc., New York, N. Y. Azo coloring matter. 1,785,799; Dec. 23.
West, Ross R., San Mateo, Calif. Vault ventilator. 1,786,277; Dec. 23.
West, Ross R., San Francisco, Calif. Record tray. 1,786,411; Dec. 23.
Western Electric Company. (See Heimberger, H. T., and Pugh, assignors.)
Western Electric Company. (See Martell, Charles, assignor.)
Western Electric Company. (See Martindell, Frank, assignor.)
Western Electric Company. (See Pritchard, Amos D., assignor.)
Western Lithograph Company. (See Tull, Roger, assignor.)
Western Union Telegraph Company, The. (See Griffith, Francis, assignor.)
Westinghouse Air Brake Company, The. (See Dormoy, Jules M. J., assignor.)
Westinghouse Air Brake Company, The. (See Farmer, Clyde C., assignor.)
Westinghouse Air Brake Company, The. (See Hancock, Milton L., assignor.)
Westinghouse Air Brake Company, The. (See Livingston, Fremont P., assignor.)
Westinghouse Air Brake Company, The. (See McCune, J. C., and Johnson, assignors.)
Westinghouse Air Brake Company, The. (See Thomas, Thomas H., assignor.)
Westinghouse Air Brake Company, The. (See Thomas, T. H., and Good, assignors.)
Westinghouse Electric & Manufacturing Company. (See Batsel, Max C., assignor.)
Westinghouse Electric & Manufacturing Company. (See Terry, Matson C., assignor.)
Westinghouse Electric & Manufacturing Company. (See Wensley, Roy J., assignor.)
Wheeler, C. H., Manufacturing Company. (See Kothny, Gottdank L., assignor.)
Wheeling Steel Corporation. (See Kielberg, Henry, assignor.)
Whipple, Nelson E., Windsor, N. Y. Road-sanding device for automobiles. 1,786,377; Dec. 23.
White, Harold E. (See Masin, J. S., and White.)
Whitlock, George E., assignor to The City Auto Stamping Company, Toledo, Ohio. Cushion step tread for automobiles. 1,785,755; Dec. 23.
Whiton, Louis C., jr., and J. C. Hardigg, assignors to Prat-Daniel Corporation, New York, N. Y. Soot blower. 1,786,182; Dec. 23.
Wicks, John. (See Tharp, V. S., and Wicks.)
Wieghardt, Paul, and K. Schrott, Magdeburg, assignors to the firm Fried. Krupp Grusonwerk Aktiengesellschaft, Magdeburg-Buckau, Germany. Machine for winding or covering cables or the like with tape or strip material. 1,786,102; Dec. 23.
Wilbur, Lawrence S., Evanston, Ill. Splice bar or fish-plate. 1,785,850; Dec. 23.
Wilcox, Albert R., Dodge City, Kans. Mechanical hair gland and nerve agitator. 1,786,047; Dec. 23.
Wilhelm, Ottmar, assignor to the firm Maschinenfabrik Augsburg-Nuernberg, Aktiengesellschaft, Augsburg, Germany. Rotary printing machine for combined intaglio and relief printing. 1,785,991; Dec. 23.
Williams, Frank, assignor to Simplex Gold Stamping Press Co. Inc., New York, N. Y. Clamp to be used in connection with embossing machines. 1,785,851; Dec. 23.
Williams, John C., Westport, Conn., and O. W. Greeman, Marion, Ky., assignors to Aluminum Company of America, Pittsburgh, Pa. Recovery of fluorspar from ores thereof. 1,785,992; Dec. 23.
Williams, Leroy E., assignor to Highway Trailer Company, Edgerton, Wis. Flexible cover for dumping bodies. 1,786,048; Dec. 23.
Wilms, Gustav O., and A. J. Dawe, assignors to The Reliance Company, Milwaukee, Wis. Thermostatically-actuated device. 1,785,852; Dec. 23.

Wilson, Clarence E., Concord, assignor to National Company, Inc., Malden, Mass. Gauge-glass illuminator. 1,786,183; Dec. 23.
Wilson, Claud A., et al. (See Walker, Jerry S., assignor.)
Wilson, Emmett C., et al. (See Walker, Jerry S., assignor.)
Wilson, George L., Alhambra, Calif. Flower basket. 1,786,141; Dec. 23.
Wilson, Leonard, Salt Lake City, Utah, assignor to Sullivan Machinery Company. Compressor system. 1,786,278; Dec. 23.
Wilson Rings Company. (See Wilson, Wylie G., assignor.)
Wilson, Rose O., and C. O. Schuler, Saugatuck, Conn. Doll. 1,785,800; Dec. 23.
Wilson, Wylie G., Elizabeth, assignor to Wilson Rings Company, Jersey City, N. J. Mechanical lock and locking method. 1,785,924; Dec. 23.
Winchester Repeating Arms Company. (See Burton, Frank F., assignor.)
Winchester Repeating Arms Co. (See Stiennon, Louis, assignor.)
Wine, William E., Toledo, Ohio. Side bearing. 1,786,378; Dec. 23.
Wine, William E., Toledo, Ohio. Car ladder. 1,786,379; Dec. 23.
Wine, William E., Toledo, Ohio. Corner construction for freight cars. 1,786,380; Dec. 23.
Wine, William E., Toledo, Ohio. Car ladder. 1,786,381; Dec. 23.
Wine, William E., Toledo, Ohio. Corner construction for freight cars. 1,786,382; Dec. 23.
Winthrop Chemical Company. (See Taube, Carl, assignor.)
Wire Novelty Manufacturing Company, The. (See Heather, George B., assignor.)
Wolf, Jacob R., assignor to Smart Set Shops, Pittsburgh, Pa. Store front. Des. 82,923; Dec. 23.
Wolfe, Richard C., assignor to California Consolidated Water Co., Los Angeles, Calif. Water cooler. Des. 82,924; Dec. 23.
Wolff, Irving, New York, N. Y., assignor to Radio Corporation of America. Reflector. 1,786,279; Dec. 23.
Woodbridge, Joseph L., Philadelphia, Pa. Controlling the charge of a storage battery. 1,796,280; Dec. 23.
Woodmansee, Clay G., assignor of one-half to Lincoln Drilling Company, Los Angeles, Calif. Inclinometer. 1,786,184; Dec. 23.
Worthington Pump and Machinery Corporation. (See Sebalt, Joseph H., assignor.)
Wratten, Henry L., Racine, Wis. Boiler. 1,785,756; Dec. 23.
Wright, Virgil, Dallas, Tex. Air cooler. 1,786,185; Dec. 23.
Wyman, Charles A., Auburn, Wash. Baking oven. 1,786,142; Dec. 23.
Young, Cecil R. B., Hamburg, Germany. Purifying natural and artificial matter. 1,786,383; Dec. 23.
Young, Hoylande D., Chicago, Ill. Derivative of glycol. 1,786,404; Dec. 23.
Young, Jacob J., Buffalo, N. Y. Calipers. 1,786,325; Dec. 23.
Young, Lafayette, Alton, Ill., assignor to Laclede Steel Company, St. Louis, Mo. Apparatus for jarring ingot molds. 1,785,757; Dec. 23.
Zaidan Hojin Rikagaku Kenkyujo. (See Takahashi, Katsumi, assignor.)
Zerweck, Werner, Frankfort-on-the-Main-Fechenheim, Germany, assignor to General Aniline Works Inc., New York, N. Y. New brown vat dyestuffs of the anthraquinone series. 1,785,801; Dec. 23.
Zingg, Werner. (See Fröhlich, H., and Zingg.)
Zobel, Frederick C., Brooklyn, N. Y. Rubberlike composition and making same. 1,786,281; Dec. 23.
Zoeller, Milton G., Falls City, Nebr. Stock waterer. 1,786,049; Dec. 23.

ALPHABETICAL LIST OF INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 23D DAY OF DECEMBER, 1930

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice). Includes patents, reissues, and designs.

Abrasive materials, Production of high-purity. J. S. Masin and H. E. White. 1,786,016; Dec. 23.
Adhesive and method of making, Vegetable. I. F. Laucks and G. Davidson. 1,786,209; Dec. 23.
Adjustable clasp. D. de Plandolit y Bordas. 1,786,187; Dec. 23.
Advertising device. F. J. Garrety. 1,785,948; Dec. 23.
Advertising device. L. W. Smith. 1,786,033; Dec. 23.
Aeronautical indicator. W. Fraser. 1,786,059; Dec. 23.
Aeroplane. H. R. Kriegh. 1,786,307; Dec. 23.
Aeroplane. M. Moránszky. 1,786,217; Dec. 23.
Aeroplane. J. S. Walker. 1,786,181; Dec. 23.
Aeroplane control device. M. Davis. 1,786,193; Dec. 23.
Aeroplanes, Stabilizing device for. E. G. Schleicher. 1,786,266; Dec. 23.
Agricultural dusting machine. R. R. Ezdorf. 1,785,943; Dec. 23.
Air-conditioning system. C. E. Lewis. 1,785,741; Dec. 23.
Air cooler. V. Wright. 1,786,185; Dec. 23.
Aircraft. C. H. Iwanowitz. 1,785,775; Dec. 23.
Aircraft, Steering. A. Presser. 1,785,913; Dec. 23.
Aircraft wing. J. P. Glasby. 1,786,236; Dec. 23.
Airplane. L. Stearman. 1,786,136; Dec. 23.
Airplane control. W. B. Stout. 1,785,879; Dec. 23.
Alarm: *See*—
Burglar alarm.
Alloy, Plastic heat-treated aluminum. N. V. Hybinette. 1,785,774; Dec. 23.
Amino-azo compounds, Making. P. Dieterle. 1,785,769; Dec. 23.
Amusement device. J. B. Watling. 1,785,848; Dec. 23.
Anchor, Earth. A. B. Chance. 1,786,228; Dec. 23.
Animal hopple. H. L. Watson. 1,786,375; Dec. 23.
Appliance for operating upon sheets. J. E. Doyle. 1,786,153; Dec. 23.
Ash receiver. V. W. Thomson. Des. 82,920; Dec. 23.
Asparagus-cutting machine. L. D. Stoppel. 1,785,795; Dec. 23.
Atomizer. C. S. Gage and C. T. Maeding. Des. 82,882; Dec. 23.
Automobile handling device. E. B. Anderson 1,786,282; Dec. 23.
Automobile theft alarm. O. A. Pelz. 1,785,875; Dec. 23.
Azo coloring matter. B. L. West. 1,785,799; Dec. 23.
Balancing apparatus. F. Mielke. 1,786,079; Dec. 23.
Bandage, Surgical. M. C. Edmundson. 1,785,831; Dec. 23.
Barometer. H. Neuwirth. 1,786,219; Dec. 23.
Base to hold nozzles and supply pipes. F. P. Bucklein. 1,786,146; Dec. 23.
Basket, Flower. F. P. and A. A. Gruenholz. 1,786,062; Dec. 23.
Basket, Flower. G. L. Wilson. 1,786,141; Dec. 23.
Batteries, System for charging storage. A. D. Pritchard. 1,786,086. Dec. 23.
Battery: *See*—
Chicken battery.
Battery. W. B. Schulte. 1,785,981; Dec. 23.
Battery-charging connector. H. C. Terrell and F. A. Kerkhoff. 1,786,369; Dec. 23.
Battery, Controlling the charge of a storage. J. L. Woodbridge. 1,796,280; Dec. 23.
Battery-plate building. H. P. Dodge. 1,785,939; Dec. 23.
Beach rest and sunshade. G. Hanan. 1,785,953; Dec. 23.
Bearing, Side. W. E. Wine. 1,786,378; Dec. 23.
Bed or couch, Folding. C. H. House. 1,785,865; Dec. 23.
Belt for personal wear. E. S. Mix. 1,785,967; Dec. 23.
Bicalcium phosphate from submarine solutions, Producing. E. Thilo. 1,786,097; Dec. 23.
Blood transfusion, Apparatus for. P. Schmidt and F. V. Malloy. 1,786,090; Dec. 23.
Board: *See*—
Drain board.
Boat for submarine inspection. F. I. Stiles. 1,786,091; Dec. 23.
Boat, Man-power horse. C. D. O'Connor. 1,785,971; Dec. 23.
Boiler: *See*—
High-pressure boiler.
Boiler. R. J. Adams. 1,785,758; Dec. 23.
Boiler. H. L. Wratten. 1,785,756; Dec. 23.
Boiler cleaner. N. L. Snow. 1,785,821; Dec. 23.
Bolt: *See*—
Gate bolt. Key bolt.
Boot and shoe construction. C. Walton. 1,786,374; Dec. 23.
Booth, Merchandise. E. S. Prince. Des. 82,904; Dec. 23.
Bottle cap, Milk-. L. Towy. 1,786,140; Dec. 23.
Bowl or article of similar nature, Flower. T. C. Helsey. Dec. 82,888; Dec. 23.
Box: *See*—
Journal box.
Boxes to their hangers, Device for securing outlet. O. E. Logan. 1,786,353; Dec. 23.
Bracket: *See*—
Lamp bracket.
Brake: *See*—
Electropneumatic brake.
Brake apparatus, Hydraulic. B. Dick. 1,786,231; Dec. 23.
Brake drum. W. Schwemlein. 1,786,132; Dec. 23.
Brake-lining stretcher. J. B. Tripp, jr. 1,786,099; Dec. 23.
Brake-operating mechanism. V. Bendix and D. L. Gallup. 1,785,854; Dec. 23.
Brake-shoe structure. R. J. Norton. 1,785,969; Dec. 23.
Brick, Vertical fiber grooved-lub paving. J. N. Porter. 1,785,976; Dec. 23.
Briquetting machine. A. K. Nowak and R. W. Dinzl. 1,786,167; Dec. 23.
Brush, Air. R. W. Tracy. 1,786,394; Dec. 23.
Brush, Fountain. J. Flockhart. 1,785,732; Dec. 23.
Brush, Shaving. M. C. Blondin. 1,786,224; Dec. 23.
Brush, Vacuum. W. J. Amstutz. 1,786,384; Dec. 23.
Buckle, Shoe. C. W. Brigham. Des. 82,873–6; Dec. 23.
Buckle, Shoe. C. G. King. Des. 82,893; Dec. 23.
Buckle, Shoe. O. R. Recchia. Des. 82,906–8; Dec. 23.
Burglar alarm. A. L. Turner. 1,786,273; Dec. 23.
Burner: *See*—
Furnace burner. Gas burner.
Burner control. B. W. Hurd. 1,786,068; Dec. 23.
Burring machines, Automatic feed for. J. A. Flowers. 1,785,862; Dec. 23.
Button loop. G. B. Heather. 1,785,735; Dec. 23.
Cabinet, Filing. L. J. Hart. 1,786,112; Dec. 23.
Cabinet for telephones and the like. J. E. Strong. 1,785,880; Dec. 23.
Cable connection for batteries. C. P. Hill. 1,786,206; Dec. 23.
Cable-raising device. C. H. Fugle, C. H. Ostenberg, A. W. Maglein, J. M. Trudo, and A. Newton. 1,785,811; Dec. 23.
Cable-transport drum. J. Rath. 1,786,366; Dec. 23.
Cake and making same, Ice-cream. D. A. Battista. 1,786,387; Dec. 23.
Calendar. M. H. Davis. 1,786,280; Dec. 23.
Calender rolls and the like, Mounting of. G. F. Barrett. 1,785,886; Dec. 23.
Calipers. J. J. Young. 1,786,325; Dec. 23.
Cam. J. P. Hess. 1,785,736; Dec. 23.
Camera casing or the like. W. D. Teague. Des. 82,918; Dec. 23.
Candy molding. R. W. Hompe. 1,785,904; Dec. 23.
Cane cutter. W. H. Morgan. 1,785,743; Dec. 23.
Car for amusement rides. H. G. Traver. 1,785,989; Dec. 23.
Car retarder, Railway-. H. L. Bone. 1,786,286; Dec. 23.
Carbon dioxide, Storage and transportation of solid. C. L. Jones and J. D. Small. 1,786,161; Dec. 23.
Cards in large lots for inspection of same, Equipment or attachment to expedite handling of. D. W. B. Kurtz, jr. 1,785,815; Dec. 23.
Carrier: *See*—
Insulated carrier. Material carrier.
Lumber carrier.
Carton, Egg. E. E. Hale. 1,785,898; Dec. 23.
Case for clinical thermometers. H. E. Stonebraker. 1,786,271; Dec. 23.
Casing, Door and window. J. C. Starriett. 1,785,793; Dec. 23.
Casing for an impulse-sending machine. H. Sengebusch. Des. 82,914; Dec. 23.
Casing head. G. A. Humason. 1,786,407; Dec. 23.
Catapult. J. Pilates. 1,785,876; Dec. 23.
Cement manufacture. B. C. Newhouse. 1,786,080; Dec. 23.
Chain for antiskid devices, Cross. F. E. Stahl. 1,786,318; Dec. 23.
Chain, Link. O. Selle. Des. 82,913; Dec. 23.
Chain pliers. F. F. Fox. 1,785,946; Dec. 23.
Chair: *See*—
Novelty chair.
Chair or the like. V. Oliva. Des. 82,898; Dec. 23.
Chair seat and back, Combination. J. R. Schmidt. Des. 82,911; Dec. 23.
Chandelier bowl, Ceiling diffuser. K. R. Crumpton. Des. 82,878; Dec. 23.

Chart for submitting advertising matter. H. J. Huene. 1,785,866; Dec. 23.
Check, Rebound. G. W. Elsey. 1,785,893; Dec. 23.
Chicken battery. W. H. Davis. 1,785,858; Dec. 23.
China closet, Corner. G. A. Simons and G. Freeberg. Des. 82,915–16; Dec. 23.
Chuck. D. B. Bullard. 1,786,147; Dec. 23.
Chute, Mail. M. Katz. 1,785,867; Dec. 23.
Cigar machine. G. H. Snyder. 1,785,822; Dec. 23.
Cinematographic performance and sound production, Method and device of synchronizing. J. J. F. Stock. 1,786,368; Dec. 23.
Circuit-breaker system, Periodic-reclosing. R. J. Wensley. 1,786,324; Dec. 23.
Circuit closer. W. H. Grover, W. S. Pooley, and C. E. Merritt. 1,786,391; Dec. 23.
Circuit control, Electric. I. C. Hanson. 1,785,773; Dec. 23.
Circuit interrupter. W. A. Chryst. 1,785,887; Dec. 23.
Clamp for crossbars. M. M. Clayton. 1,786,004; Dec. 23.
Clamp to be used in connection with embossing machines. F. Williams. 1,785,851; Dec. 23.
Clamping collar. V. A. de Vulitch. 1,786,107; Dec. 23.
Clasp: *See*—
Adjustable clasp.
Cleaner: *See*—
Boiler cleaner. Vacuum cleaner.
Cleaning composition. L. Kirschbraun. 1,786,249; Dec. 23.
Clock, Electrically-wound. A. B. Campbell. 1,786,288; Dec. 23.
Closure, Bottle. L. F. Dalton. 1,785,890; Dec. 23.
Cluster enrobing machine. W. C. Drury. 1,786,108; Dec. 23.
Coating apparatus. E. G. Lanzi. 1,785,835; Dec. 23.
Cock, Angle. F. P. Livingston. 1,786,212; Dec. 23.
Cock device, Angle. C. C. Farmer. 1,786,198; Dec. 23.
Coin-collecting apparatus. M. Auteri. 1,785,994; Dec. 23.
Coin-controlled mechanism. G. F. Hochriem. 1,786,014; Dec. 23.
Color printing and color photography, Securing accurate color values in. C. Blecher. 1,785,997; Dec. 23.
Coloring, Butter. K. J. Monrad. 1,786,256; Dec. 23.
Combs, Device for holding. H. Weisner. 1,785,753; Dec. 23.
Communication system. R. W. Osborne. 1,785,972; Dec. 23.
Compressor. A. J. Asmussen. 1,785,853; Dec. 23.
Compressor. E. A. Hobart. 1,786,242; Dec. 23.
Compressor-control system, Automatic. J. W. Sanford. 1,785,979–80; Dec. 23.
Compressor-control system, Automatic. J. W. Sanford. 1,786,367; Dec. 23.
Compressor-controlling mechanism. J. W. Sanford. 1,786,128; Dec. 23.
Compressor drive. N. A. Christensen. 1,786,003; Dec. 23.
Compressor system. W. E. Hughes. 1,786,114; Dec. 23.
Compressor system. L. Wilson. 1,786,278; Dec. 23.
Compressor unit, Gas-. W. H. Thompson. 1,786,321; Dec. 23.
Concrete structures, Construction of the expansion joint of reenforced. B. Bauer. 1,786,284; Dec. 23.
Condenser, Electric. L. E. Shaw. 1,786,134; Dec. 23.
Condenser for mixed vapors. G. L. Kothny. 1,786,163; Dec. 23.
Condenser unit for mechanical refrigerators. H. W. Bundy. 1,786,000; Dec. 23.
Connecter for electric train lights and the like. A. E. Ganzert. 1,785,734; Dec. 23.
Control device. H. J. L. Frank. 1,786,010; Dec. 23.
Control equipment, Automatic. E. L. Hough. 1,786,303; Dec. 23.
Control means for variable-speed transmissions. D. R. Francis. 1,785,733; Dec. 23.
Control mechanism for conveyers. N. H. Preble. 1,786,085; Dec. 23.
Control system. R. Y. McCullough. 1,786,310; Dec. 23.
Controlling device. B. W. Jones. 1,786,306; Dec. 23.
Controlling mechanism. F. D. Holdsworth. 1,785,956; Dec. 23.
Controlling mechanism for drying tumblers. E. J. Carroll. 1,786,191; Dec. 23.
Conveying apparatus. J. B. McWilliams. 1,786,020; Dec. 23.
Cooker, Electric. P. Itzi. 1,786,345; Dec. 23.
Cooking outfit. T. L. Lynam. 1,786,120; Dec. 23.
Cooler: *See*—
Air cooler.
Cooling tower, Atmospheric. G. T. Martin. 1,786,076; Dec. 23.
Copyholders, Intermittent grip device for. H. Harter. 1,786,344; Dec. 23.
Corn-popping apparatus, Stirring mechanism for. C. Cretors. 1,786,005; Dec. 23.
Corner construction for freight cars. W. E. Wine. 1,786,380; Dec. 23.
Corner construction for freight cars. W. E. Wine. 1,786,382; Dec. 23.
Cotton chopper and cultivator, Cross-row. A. Hightower. 1,786,241; Dec. 23.
Cotton fiber and bituminous materials, Mixing. C. P. Nellis and A. H. Flower. 1,785,910; Dec. 23.
Counterbalance. C. H. Bergquist. 1,786,143; Dec. 23.
Counterbalance stabilizer. G. G. Merchen. 1,786,216; Dec. 23.
Coupler, Train-pipe. E. O. Hermann. 1,786,066; Dec. 23.
Coupling. H. Maries. 1,785,870; Dec. 23.
Cover for dumping bodies, Flexible. L. E. Williams. 1,786,048; Dec. 23.
Cover for plumbing fixtures, Protective. J. H. McCann. 1,785,872; Dec. 23.
Cover, Garment. C. B. Gilbert. 1,786,341; Dec. 23.
Crosshead. J. O. McArthur. 1,786,121; Dec. 23.
Cultivator. J. Beaudry. 1,786,388; Dec. 23.
Cultivator. G. Hardie. 1,785,901; Dec. 23.
Cultivator sweep, Detachable. W. B. Murphy. 1,786,124; Dec. 23.
Currency-stamping machines having counting mechanism, Control device of. U. Kohler. 1,786,251; Dec. 23.
Curtain fixture. J. H. Boye. 1,786,052; Dec. 23.
Curtain, Porch. G. A. Phinn. 1,786,084; Dec. 23.
Cushion step tread for automobiles. G. E. Whitlock. 1,785,755; Dec. 23.
Cutter: *See*—
Cane cutter. Slitting cutter.
Cutting machine. O. E. Jacques. 1,786,346; Dec. 23.
Decoy duck. W. Robinson. 1,785,788; Dec. 23.
Di-alkyl urea. T. L. Davis. 1,785,730; Dec. 23.
Differential motion for traversing card grinding rollers. J. Dronsfield. 1,785,731; Dec. 23.
Display and index rack. E. A. Sutcliffe. 1,785,988; Dec. 23.
Display device. A. Mayer. 1,786,258; Dec. 23.
Doll. V. D. Steineman. Des. 82,917; Dec. 23.
Doll. R. O. Wilson and C. O. Schuler. 1,785,800; Dec. 23.
Doll-head structure. S. Marcus. 1,785,781; Dec. 23.
Drag conveyer, Universal. F. Griffith. 1,786,343; Dec. 23.
Drain board. F. Geiger. 1,785,771; Dec. 23.
Drapery rod. R. N. McClure. 1,785,838; Dec. 23.
Draw-works girt, Interchangeable. W. D. Sawyer. 1,786,089; Dec. 23.
Drawer guide. F. Vogt. 1,786,045; Dec. 23.
Drier: *See*—
Hair drier.
Drilling apparatus. C. C. Scharpenberg. 1,786,173; Dec. 23.
Drive for the stepped drums of calculating machines. A. Kottmann. 1,786,164; Dec. 23.
Drive or clutch mechanism for winches. J. E. Le Bus. 1,786,351; Dec. 23.
Drop cord. C. D. Wayne. 1,786,276; Dec. 23.
Drying device. J. V. Riley. 1,786,316; Dec. 23.
Drying machine. H. Koplin. 1,786,349; Dec. 23.
Dual fan-dusting machine. R. R. Ezdorf and A. J. Brown. 1,785,945; Dec. 23.
Dust separator. A. Jordahl. 1,786,208; Dec. 23.
Duster, Broadcast. R. R. Ezdorf and A. J. Brown. 1,785,944; Dec. 23.
Dusting and spraying machine. A. J. Brown and R. R. Ezdorf. 1,785,932; Dec. 23.
Dusting machine. A. J. Brown and R. R. Ezdorf. 1,785,933; Dec. 23.
Dyeing, coloring, and coating, Apparatus for. L. C. Scott. 1,786,031; Dec. 23.
Dyestuffs and azo dyestuffs obtainable thereby, Production of azo. R. Stuesser. 1,785,845; Dec. 23.
Dyestuffs and material dyed therewith, Azo. K. Thiess. 1,785,846; Dec. 23.
Dyestuffs containing metals and making same, Azo. F. Straub and W. Anderau. 1,786,272; Dec. 23.
Dyestuffs of the anthraquinone series, New brown vat. W. Zerweck. 1,785,801; Dec. 23.
Elastic reciprocating member. S. A. Guiberson, jr. 1,786,012; Dec. 23.
Electric furnace. M. Unger. 1,786,322; Dec. 23.
Electric pick-up device. E. Toman. 1,786,042; Dec. 23.
Electric switch. H. E. Norviel. 1,785,911–2; Dec. 23.
Electropneumatic brake. T. H. Thomas and J. N. Good. 1,786,178; Dec. 23.
Enamels, Producing vitreous. C. J. Kinzie. 1,785,777; Dec. 23.
Energy-transmission means. S. A. Reed. 1,786,264; Dec. 23.
Engine: *See*—
Explosive engine. Starter engine.
Internal-combustion engine.
Engine and supercharging device, Two-cycle internal-combustion. M. H. Crimmins. 1,786,106; Dec. 23.
Engines, Air-regulating device for internal-combustion. A. Balash. 1,785,726; Dec. 23.
Engines, Automatic air-inlet valve for internal-combustion. J. L. Ardern. 1,786,283; Dec. 23.
Excavating machine, Earth-. A. Clark. 1,786,335; Dec. 23.
Exercising device, Mechanical. H. E. McCoy. 1,786,165; Dec. 23.
Exhibitor, Changeable. C. Seffens and J. R. Robinson. 1,786,133; Dec. 23.
Explosive. C. H. Waters. 1,786,046; Dec. 23.
Explosive engine. W. R. McKinney. 1,785,909; Dec. 23.
Fabrics, Method and apparatus for stretching. A. Bosshard. 1,786,188; Dec. 23.
Fan. W. T. Barker. 1,786,051; Dec. 23.
Fan and classifier, Combined. A. H. Stebbins. 1,785,918; Dec. 23.
Fan and heater, Combined air-circulating. R. C. Vilas. 1,785,752; Dec. 23.

Fastener. F. L. Jensen. 1,786,115; Dec. 23.
Fastener Automatic clothesline. G. H. Miller. 1,786,359; Dec. 23.
Fastener, Casement-window. A. J. Johnson. 1,786,247; Dec. 23.
Fastener, Separable. R. C. Legat. 1,785,740; Dec. 23.
Fastener, Separable. G. Sundback. 1,785,920; Dec. 23.
Fastener-setting machine. T. Pucar. 1,786,087; Dec. 23.
Fastener, Window-sash. C. J. McIntosh. 1,786,019; Dec. 23.
Fasteners, Feeding device for pronged. T. Pucar. 1,786,088; Dec. 23.
Fastening distributor. W. Fromm. 1,785,832; Dec. 23.
Fastening-inserting machine. W. T. B. Roberts. 1,785,844; Dec. 23.
Fastening installation. M. F. Carr. 1,785,825; Dec. 23.
Fastening means for belts. R. S. Fowler. 1,785,947; Dec. 23.
Fats and oils, Production of neutral. O. Jordan and G. Kraemer. 1,786,248; Dec. 23.
Feeder. G. T. Markey and J. B. Olson. 1,785,782; Dec. 23.
Feeding apparatus. J. B. Olson and G. T. Markey. 1,785,785; Dec. 23.
Ferromolybdenum and ferrotungsten, Producing. P. Schwarzkopf. 1,786,393; Dec. 23.
Fibers for wall board and similar structures, Production of. T. B. Munroe. 1,785,840; Dec. 23.
Fibrous product and making, Water-resistant and fire-resistant. H. M. Spencer. 1,786,270; Dec. 23.
Film, Transparent. C. E. Greider. 1,786,205; Dec. 23.
Firearm. C. C. Loomis. 1,786,213; Dec. 23.
Firearm, Double-barreled. L. Stiennon. 1,785,794; Dec. 23.
Firearm, Multiple-barrel. F. F. Burton. 1,785,765; Dec. 23.
Firearms, Barrel stop for breakdown. F. F. Burton. 1,785,764; Dec. 23.
Flanges for automobile wheels, Structure of auxiliary. E. R. Ambrose. 1,786,389; Dec. 23.
Flash-light switch. H. M. Koretzky. 1,785,868; Dec. 23.
Flask-handling device. S. D. Moxley. 1,786,218; Dec. 23.
Flotation material and making same. S. P. Miller. 1,785,742; Dec. 23.
Fluid-handling apparatus. R. H. Owens. 1,785,842; Dec. 23.
Fluid separator. G. D. Bradshaw. 1,785,931; Dec. 23.
Fluorspar from ores thereof, Recovery of. J. C. Williams and O. W. Greeman. 1,785,992; Dec. 23.
Flying boats, Stub wing of. C. Dornier. 1,785,892; Dec. 23.
Folding ironing table. C. Danielson. 1,786,008; Dec. 23.
Food products and marketing the same. C. H. Vogt. 1,786,372; Dec. 23.
Fount, Poultry. W. W. Thompson and E. Russell. 1,785,921; Dec. 23.
Frame. A. Entenman. 1,786,197; Dec. 23.
Frame for car trucks, Side. M. H. Martin. 1,785,871; Dec. 23.
Frame with passages for use on spinning machines, Drawing. J. Von Trümbach. 1,786,180; Dec. 23.
Friction surface. H. F. Busch. 1,786,190; Dec. 23.
Fruit and the like, Apparatus for treating. E. M. Brogden. 1,786,405; Dec. 23.
Fuel-briquette forming and baking machine. W. C. Carpenter. 1,785,827; Dec. 23.
Fungicide and insecticide. W. C. O'Kane. 1,786,125; Dec. 23.
Furnace and method of burning fuel. M. W. Arrowood. Re17,908; Dec. 23.
Furnace burner. F. X. Hamberger. 1,785,900; Dec. 23.
Fuse cut-out for electric circuits. J. Brown and E. Barrett. 1,786,333; Dec. 23.
Galvanic cell. G. W. Heise and C. W. Brokate. 1,786,406; Dec. 23.
Gas burner. F. J. Cancianich. 1,786,396; Dec. 23.
Gas-generating system, Domestic. H. F. Smith. 1,785,820; Dec. 23.
Gas heater. H. Kielberg. Des. 82,891; Dec. 23.
Gas heater, Radiant. H. Kielberg. Des. 82,892; Dec. 23.
Gas producers, Feed mechanism for. J. F. Rogers. 1,785,789; Dec. 23.
Gas-treating apparatus. W. L. Spalding. 1,785,792; Dec. 23.
Gases, Apparatus for purifying. S. C. Cutler. 1,786,150; Dec. 23.
Gases, Transferring liquefied. C. W. P. Heylandt. 1,786,159; Dec. 23.
Gasket. M. M. Cody. 1,786,390; Dec. 23.
Gate: *See*—
Railroad-crossing gate.
Gate bolt. G. J. Rosch. 1,786,265; Dec. 23.
Gauge: *See*—
Valve-testing gauge.
Gauge. E. J. Ford. 1,786,339; Dec. 23.
Gauge-glass illuminator. C. E. Wilson. 1,786,183; Dec. 23.
Gearing, Reduction. C. L. Hawes. 1,786,158; Dec. 23.
Gearing, Transmission. W. D. Starrett. 1,786,319; Dec. 23.
Generator: *See*—
Motor generator.
Glare shield. P. J. Groenenstein. 1,786,011; Dec. 23.
Glass plate or article of similar nature. T. C. Heisey. Des. 82,887; Dec. 23.
Glass purification. G. C. Cox and H. K. McIntyre. 1,785,888; Dec. 23.
Glove. A. J. Bruggeman. 1,786,227; Dec. 23.
Glycol, Derivative of. H. D. Young. 1,786,404; Dec. 23.
Goblet or similar article. G. Sakier. Des. 82,909; Dec. 23.
Goblet or similar article, Glass. E. J. Schaub. Des. 82,910; Dec. 23.
Grass digger, Quack E. R. Bradley 1,786,226; Dec. 23.
Grate. H. K. Milner. 1,786,358; Dec. 23.
Grate for metallic sheets. J. R. Freeze. 1,785,863; Dec. 23.
Grating, Window. O. M. Rexinger. Re17,911; Dec. 23.
Grinder. C. Poppelman. 1,786,262; Dec. 23.
Grinding device, Railway journal-wedge-. C. Taggart. 1,786,139; Dec. 23.
Grizzly, Rotary. A. J. Myers. 1,785,841; Dec. 23.
Guard apparatus, Burglar. T. G. Pate. 1,786,363; Dec. 23.
Gum exudates, Reclaiming or improving. C. Martell. 1,786,075; Dec. 23.
Gun, Machine. R. F. Hudson. 1,786,207; Dec. 23.
Hair drier. E. N. Potvin. 1,786,223; Dec. 23.
Hair gland and nerve agitator, Mechanical. A. R. Wilcox. 1,786,047; Dec. 23.
Hairpin. H. M. Armstrong. 1,785,885; Dec. 23.
Hair-waving apparatus. A. H. Opperman. 1,786,318; Dec. 23.
Handkerchief. W. O. Line. 1,785,962; Dec. 23.
Handle: *See*—
Shovel handle.
Handle for trowels. J. R. Troutner. 1,786,043; Dec. 23.
Handle or similar article, Motor vehicle door. G. Graff. Des. 82,883; Dec. 23.
Harrow. D. D. Dickinson. 1,786,194; Dec. 23.
Hasp. R. M. Hallam and W. E. Amberg. 1,785,772; Dec. 23.
Hat making. F. M. Bartlett and B. F. Hartwell. 1,786,327; Dec. 23.
Headlights, Operating mechanism for dirigible. C. M. Cronkhite. 1,786,007; Dec. 23.
Heater: *See*—
Water heater.
Heater for automobile engines. W. Schoenfeld. 1,786,130; Dec. 23.
Heating apparatus. M. M. Suppes. 1,786,403; Dec. 23.
Heating apparatus for the carburated mixture. G. Ferrara. 1,786,233; Dec. 23.
Heel-attaching device. L. Cipollina. 1,785,808; Dec. 23.
Helicopter. G. Matta. 1,786,017; Dec. 23.
High-pressure boiler. J. E. Bell. 1,785,927; Dec. 23.
Holder, Brush. P. W. Baker. 1,785,996; Dec. 23.
Holder, Collar. B. Blecher. Des. 82,895; Dec. 23.
Holder, Curtain or portiere. D. S. Quintard. 1,786,365; Dec. 23.
Holder, Fish-rod. W. H. Meehan. 1,786,254; Dec. 23.
Holder for confectionery. E. F. Kemp. 1,786,392; Dec. 23.
Holder for heated devices. H. T. Heimberger and E. Pugh. 1,786,065; Dec. 23.
Holder for the sound boxes of talking machines, Needle. J. Eigenheer. 1,786,232; Dec. 23.
Holder, Paper. H. G. Knoth. 1,786,250; Dec. 23.
Holder, Tool. J. H. Phillips. 1,786,029; Dec. 23.
Holder, Trimming. W. Marshall. 1,786,073; Dec. 23.
Holder, Trip-rope. A. J. Passmel. 1,786,314; Dec. 23.
Hollow articles of cementitious material, Apparatus for forming. D. E. Andrews. 1,786,385; Dec. 23.
Hook: *See*—
Swivel butt hook.
Horn, Vacuum-operated. J. C. McCune and S. Johnson, jr. 1,786,214; Dec. 23.
Hot-air-register construction. G. S. Auer. 1,785,993; Dec. 23.
Humidifier for wall registers. C. A. Besch. 1,786,331; Dec. 23.
Humidor for inked ribbons. L. A. Phillips. 1,785,975; Dec. 23.
Hydroxythinaphthenes, Preparing. E. Hoffa and F. Müller. 1,785,813; Dec. 23.
Ignition timer. F. J. Hardman. 1,785,902; Dec. 23.
Inclinometer. C. G. Woodmansee. 1,786,184; Dec. 23.
Incubator P. J. Etteldorf. 1,785,942; Dec. 23.
Index tab and method. R. A. Maish. 1,785,780; Dec. 23.
Indicator for internal-combustion engines. F. W. Smith. 1,786,034; Dec. 23.
Indicator for weighing scales. F. C. Fisher. 1,786,058; Dec. 23.
Induction meter. H. Fröhlich. 1,786,157; Dec. 23.
Induction meter. H. Fröhlich and W. Zingg. 1,786,156; Dec. 23.
Ingot molds, Apparatus for jarring. L. Young. 1,785,757; Dec. 23.
Insulated carrier. H. A. Gardner. 1,786,340; Dec. 23.

Lamp lock, Safety. R. A. Moore. 1,786,409; Dec. 23.
Latch, Door. P. S. Riel. 1,785,914; Dec. 23
Latches, Remote control mechanism for door. W. Marshall and P. Camiener. 1,786,074; Dec. 23.
Lathes, Driving head for small. H. G. Miller. 1,786,022; Dec. 23.
Leather and producing the same. E. S. Mix. 1,785,966; Dec. 23.
Lens attachment for eyeglasses, Auxiliary. G. Gravitt. 1,786,204; Dec. 23.
Level. L. Lea and J. A. Hawthorne, jr. 1,786,309; Dec. 23.
Light: *See*—
Vehicle light.
Lighter. S. Segal. 1,786,267; Dec. 23.
Lighting apparatus, Train-. W. A. Pitt. 1,786,401; Dec. 23.
Lighting fixture. W. J. D. van Dijck. 1,786,371; Dec. 23.
Lighting fixture or article of similar nature. W. von Nessen. Des. 82,821; Dec. 23.
Liquid mixing and cooling device. W. C. Sanford, jr. 1,786,129; Dec. 23.
Liquids, Apparatus for mixing. F. Duwe. 1,786,009; Dec. 23.
Liquids, Automatic dispenser for. E. Herbst and H. Kobler. 1,786,302; Dec. 23.
Lock: *See*—
Lamp lock. Tank-closure lock.
Steering-shaft lock.
Lock and locking method, Mechanical. W. G. Wilson. 1,785,924; Dec. 23.
Lock and vacuum sweepers, Handle. D. E. Lesperance. 1,786,210; Dec. 23.
Lock switch. A. E. Koffer. 1,785,906; Dec. 23.
Locking device. C. O. B. Lofgren. 1,786,352; Dec. 23.
Locking screen doors and the like, Device for. J. E. Taylor. 1,785,882; Dec. 23.
Locomotive. M. K. Ingoldby. 1,786,304; Dec. 23.
Lubricating apparatus for the flanges of wheels of engines or vehicles traveling upon railway tracks. C. Buclon. 1,786,334; Dec. 23.
Lumber carrier. F. G. Greaves and S. P. Watt. 1,786,060; Dec. 23.
Machine casing, Article-dispensing-. E. Kanter and E. Feldman. Des. 82,890; Dec. 23.
Machine for laying paper mulch. R. Mettetal. 1,786,021; Dec. 23.
Machine for winding or covering cables or the like with tape or strip material. P. Wieghardt and K. Schrott. 1,786,102; Dec. 23.
Machine or apparatus for treating foods or the like. M. Harrison. 1,786,800; Dec. 23.
Manifold. E. S. MacPherson. 1,785,869; Dec. 23.
Map display, Apparatus for. F. H. Swanson. 1,786,038; Dec. 23.
Match splints, Impregnating. C. C. Haferkamp and W. J. Elder. 1,785,864; Dec. 23.
Material carrier. J. W. Scott. 1,785,982; Dec. 23.
Materials, Apparatus for treating. F. Martindell. 1,786,416; Dec. 23.
Mercury and the like, Process and apparatus for cleaning liquid. B. L. Newkirk. 1,786,312; Dec. 23.
Mercury derivative of tetra-iodo-fluo-rescein. L. M. Roeg. 1,786,172; Dec. 23.
Mercury-tube switch, Delayed-action. I. E. McCabe. 1,786,018; Dec. 23.
Metal coating and process and apparatus for producing the same, Protective. C. G. Fink and C. H. Eldridge. 1,786,398; Dec. 23.
Metal, Rolling and annealing sheet. A. Paterson. 1,785,786; Dec. 23.
Metallic material, Strain-applying device for. P. Wade. 1,785,923; Dec. 23.
Meter: *See*—
Induction meter.
Mill housing, Rolling-. J. R. George. 1,786,296; Dec. 23.
Mining apparatus. M. P. Holmes. 1,785,959; Dec. 23.
Mining apparatus. M. P. Holmes. 1,786,244; Dec. 23.
Mining apparatus. C. F. Osgood. 1,785,974; Dec. 23.
Mining apparatus. C. F. Osgood. 1,786,259; Dec. 23.
Mining machine. C. G. Boudette. 1,786,225; Dec. 23.
Mining machine. M. P. Holmes. 1,785,957–8; Dec. 23.
Mining machine. M. P. Holmes. 1,785,960–1; Dec. 23.
Mining machine. M. P. Holmes. 1,786,243; Dec. 23.
Mining machine. C. F. Osgood. 1,785,973; Dec. 23.
Mold: *See*—
Vulcanizing mold.
Mold. H. W. Watson. 1,785,797; Dec. 23.
Mold for casting metals. W. F. Eppensteiner. 1,785,941; Dec. 23.
Molded ware, Method and apparatus for drying and burning. J. M. Pillatzke. 1,786,364; Dec. 23.
Molding machine. R. F. Ringle. 1,786,171; Dec. 23.
Mop head. H. M. Sturgis. 1,786,037; Dec. 23.
Motor generator. G. D. Major. 1,785,965; Dec. 23.
Motors, Feeding device for percussive. W. A. Smith, sr. 1,786,135; Dec. 23.
Motors, Feeding device for percussive. W. A. Smith, sr., and J. I. Hulshizer. 1,786,175; Dec. 23.
Music rack and cane, Combined. J. Latourelle and F. Stevermer. 1,786,308; Dec. 23.
Nailing machine. J. M. Benjamin. 1,785,928; Dec. 23.
Nest, Chicken. A. E. Prarat. 1,786,126; Dec. 23.
Net, Fish. G. W. Greene. 1,786,342; Dec. 23.
Novelty chair. W. B. Murphy. 1,786,123; Dec. 23.
Nozzle, Atomizing jet. H. Adams. 1,785,802; Dec. 23.
Nozzle, Atomizing mixing. H. Adams. 1,785,803; Dec. 23.
Nozzle, Locomotive exhaust-steam. A. Lymburner. 1,785,907; Dec. 23.
Nut, Lockable bolt. R. W. Fishback. 1,786,201; Dec. 23.
Oil burning, Process for. H. Adams. 1,785,804; Dec. 23.
Oil, Cracking mineral. A. E. Pew, jr., and H. Thomas. 1,786,315; Dec. 23.
Oil, Method of and apparatus for atomizing fuel. H. Adams. 1,785,805; Dec. 23.
Oiler, Overhead gasoline-engine. A. R. Solomon. 1,786,269; Dec. 23.
Oils, Apparatus for distilling hydrocarbon. C. C. Miller. 1,786,357; Dec. 23.
Oils, Method of and apparatus for treating hydrocarbon. J. W. Const, jr., and G. T. Granger. 1,786,053; Dec. 23.
Oils, Purification of hydrocarbon. E. B. Hunn. 1,786,246; Dec. 23.
1-ω-aminomethyl-naphthalene sulphonic acids. W. Herzberg and H. Lange. 1,785,955; Dec. 23.
Opening and preparing artificial staple fiber for spinning. M. F. Thoma. 1,785,823; Dec. 23.
Ophthalmic mounting. S. E. Bouchard. 1,785,929; Dec. 23.
Optical printer. F. H. Owens. 1,786,220; Dec. 23.
Optical system for reproducing sound records. F. H. Owens. 1,786,025; Dec. 23.
Ores and other substances, Apparatus for high-temperature treatment of. M. Fourment. 1,786,202; Dec. 23.
Ornament, Shoe. A. R. Pascucci. Des. 82,899–901; Dec. 23.
Ornament, Shoe. O. R. Recchia. Des. 82,905; Dec. 23.
Outlet construction. R. M. Callaway. 1,785,766; Dec. 23.
Oven. R. Burt. 1,785,763; Dec. 23.
Oven, Baking. C. A. Wyman. 1,786,142; Dec. 23.
Ovens, Charging coke. J. van Ackeren. 1,785,750; Dec. 23.
Packer, Cotton. A. Hightower. 1,786,240; Dec. 23.
Packing device, Corner-cushion-pad. W. E. Bowersock. 1,786,189; Dec. 23.
Packing machine. C. L. Valdés y Valdés. 1,785,824; Dec. 23.
Pan for toilet flush tanks, Drip. N. A. Rubner. 1,785,877; Dec. 23.
Parachute device for aeroplanes, Safety. V. Pellegrino. 1,786,169; Dec. 23.
Paraffin, waxes, and the like, Hardening. W. Pungs and M. Jahrstorfer. 1,786,263; Dec. 23.
Parasitic oscillations, Prevention of. H. C. Silent. 1,785,819; Dec. 23.
Partition construction. M. A. Callaghan. 1,785,826; Dec. 23.
Peat mining. M. N. Korelin. 1,785,739; Dec. 23.
Pen or similar article, Fountain. L. Morrison. Des. 82,897; Dec. 23.
Pens, Device for timely opening and closing of the flap of fountain. R. P. Markstein. 1,786,355; Dec. 23.
Pencil, Mechanical. R. B. Tavenner. 1,785,881; Dec. 23.
Phenylmercuric acetate, Manufacturing of. C. Taube. 1,786,094; Dec. 23.
Phosphates, Manufacture of triaryl. W. Gibson, C. R. Henshaw and J. P. Payman. 1,785,951; Dec. 23.
Picture and sound reproduction, Synchronous motion. F. Von Madaler. 1,786,274; Dec. 23.
Picture apparatus, Talking. F. H. Owens. 1,786,026; Dec. 23.
Pile fabric and making the same. M. G. Curtis. 1,785,937; Dec. 23.
Pipe: *See*—
Smoking pipe.
Pipe vise. W. W. Vosper. 1,785,884; Dec. 23.
Pipes from veneer, Manufacturing drain. A. Hönningstad, A. Arneson, and A. Norheim. 1,786,245; Dec. 23.
Pipes, Method and apparatus for making seamless. A. Mazza. 1,786,215; Dec. 23.
Piston. G. P. Heiner. 1,785,903; Dec. 23.
Planter, Seed. L. Batchelor. 1,785,926; Dec. 23.
Planter, Seed. J. Ward. 1,786,100; Dec. 23.
Plastering machine. T. Palatini. 1,786,362; Dec. 23.
Plate mounting. L. V. Casto. 1,786,001–2; Dec. 23.
Pliers, Crown-splitting. C. Rádo, Budapest, Hungary, 1,786,127; Dec. 23.
Plow. W. H. Madden. 1,785,964; Dec. 23.
Pole-setting device, Line-. E. Nobles. 1,786,360; Dec. 23.
Port construction and gas burner for open-hearth furnaces. G. F. Downs, and H. F. Miller, jr. 1,786,293; Dec. 23.
Potato-harvesting machine. W. Schulze. 1,786,131; Dec. 23.
Power braking apparatus. J. M. J. Dormoy. 1,786,195; Dec. 23.
Power transmission. T. R. McFarland. 1,786,356; Dec. 23.
Press: *See*—
Printing press.
Pressboard. G. K. Lewis. 1,786,211; Dec. 23.

Pressure control, Apparatus for. T. H. Carpenter. 1,785,807; Dec. 23.
Printing device. A. J. Keck. 1,785,833; Dec. 23.
Printing machine for combined intaglio and relief printing, Rotary. O. Wilhelm. 1,785,991; Dec. 23.
Printing mechanism, Record-controlled. J. W. Bryce. 1,785,999; Dec. 23.
Printing press. W. M. Kelly. 1,786,116; Dec. 23.
Printing presses, Multicolor attachment for flat-bed web-. P. F. Cox. 1,786,336; Dec. 23.
Printing rollers, Apparatus for engraving. A. Teissère and J. Teissère. 1,785,883; Dec. 23.
Prints, Apparatus for making registered. H. C. Jones. 1,786,070; Dec. 23.
Propeller mechanism for aircraft. F. Donohue, jr. 1,786,338; Dec. 23.
Protector. P. J. Shrum. 1,785,985; Dec. 23.
Pump, Car-washing. E. A. Hobart. Des. 82,889; Dec. 23.
Pump, Deep-well. M. H. Kilgore. 1,785,834; Dec. 23.
Pump, Sewage-disposal plant. T. B. Sims. 1,786,032; Dec. 23.
Pump, Vacuum condensation. A. C. Durdin, jr. 1,786,055; Dec. 23.
Pumping apparatus. A. C. Durdin, jr. 1,786,056; Dec. 23.
Pumps and bailers, Sand bottom for. R. B. Welsh. 1,785,990; Dec. 23.
Purifying natural and artificial matter. C. R. B. Young. 1,786,383; Dec. 23.
Rabbit carrier for dog-racing tracks, Overhead. W. C. Le Mire. 1,785,837; Dec. 23.
Rack or similar article, Bottle. C. L. Marcus. Des. 82,896; Dec. 23.
Radiocabinet. F. W. Falck. Des. 82,879; Dec. 23.
Radio receiving system. M. C. Batsel. Re17,909; Dec. 23.
Radiotube. W. B. Driver. 1,786,154; Dec. 23.

Store front. J. R. Wolf. Des. 82,923; Dec. 23.
Submarine rescuing device. R. Edwards. 1,786,109; Dec. 23.
Sulphur containing guanidine derivatives and making same. H. Schotte. 1,785,916; Dec. 23.
Supervisory mechanism. P. H. Haselton and M. A. Jenckes. 1,786,013; Dec. 23.
Supervisory mechanism. I. W. Knight. 1,786,015; Dec. 23.
Support. B. Boykin, jr. 1,786,145; Dec. 23.
Support for electric motors. O. Cullman. 1,786,192; Dec. 23.
Support for spinning or twisting spindles, Bearing. G. H. Magrath. 1,786,252; Dec. 23.
Supporter, Hose. H. J. Stuart. 1,786,137; Dec. 23.
Surfacing apparatus. H. R. Stratford. 1,786,320; Dec. 23.
Surgical suction and pressure apparatus. C. J. Pilling. 1,785,745–6; Dec. 23.
Swing, Airplane. F. C. Hester, jr. 1,786,239; Dec. 23.
Switch: *See*—
Electric switch.
Flash-light switch.
Lock switch.
Tread switch.
Switch device. N. C. Durand. 1,786,294; Dec. 23.
Switch device, Electric-. T. H. Thomas. 1,786,176; Dec. 23.
Switch-operated frog. W. A. England. 1,785,895; Dec. 23.
Switch stand. C. H. Partington. 1,786,260; Dec. 23.
Switchboard plug. A. P. Beregkoff. 1,786,329; Dec. 23.
Switching device, Fused. H. J. L. Frank. Re17,910; Dec. 23.
Switching system, Automatic. A. E. Anderson and F. D. King. 1,786,326; Dec. 23.
Swivel butt hook. W. H. Nourse. 1,786,081; Dec. 23.
Tail and stop light, Combination. A. Fisher. Des. 82,880; Dec. 23.
Tank-closure lock. A. O. Bradshaw. 1,786,332; Dec. 23.
Tappet, Self-adjusting. R. H. Hamilton. 1,786,237; Dec. 23.
Teapot. J. W. Schachter. 1,785,787; Dec. 23.
Telephone system. G. H. Peterson and W. A. Rhodes. 1,785,818; Dec. 23.
Telephone system. R. F. Stehlik. 1,786,410; Dec. 23.
Temperature-controlling decive, Automatic. A. Penn. 1,786,083; Dec. 23.
Textile fabric or similar article of manufacture. H. M. Schweer. Des. 82,912; Dec. 23.
Textile panel for a mattress covering. H. Haug. Des. 82,884–6; Dec. 23.
Therapeutical appliance, Electrically-heated. R. C. Walker. 1,786,373; Dec. 23.
Thermal-efficiency furnace, High-. W. T. Palmer. 1,786,082; Dec. 23.
Thermostatically-actuated device. G. O. Wilms and A. J. Dawe. 1,785,852; Dec. 23.
Thermostatically-operated device. C. L. Rayfield. 1,785,787; Dec. 23.
Threads, Separating device for intercrossing. W. Ramser. 1,786,238; Dec. 23.
Tides for power purposes, Utilizing the. A. Defour. 1,785,896; Dec. 23.
Tin from ores or materials containing tin, Extraction of. E. A. Ashcroft. 1,786,386; Dec. 23.
Tinning apparatus. H. W. Bundy. 1,785,762; Dec. 23.
Tire and wheel, Pneumatic. C. K. Welch. 1,786,101; Dec. 23.
Tire chain which is permanently attached to the wheels, Nonskid. M. W. Conrow. 1,786,229; Dec. 23.
Tires, Air-service control and register for pneumatic. A. M. Baird and F. J. Partridge. 1,786,103; Dec. 23.
Tool and sample taker, Bailing. J. F. Dornacher. 1,786,152; Dec. 23.
Tool, Cutter. J. Quinn. 1,785,978; Dec. 23.
Tool, Fishing. C. P. Harris. 1,786,111; Dec. 23.
Tool for scarifying the interior of tubing. E. P. Kerruish. 1,785,905; Dec. 23.
Tool, Motor-driven. T. C. Weiss. 1,785,798; Dec. 23.
Tool, Rotary well-drilling. C. B. Kennedye. 1,786,414; Dec. 23.
Tool, Well-drilling. C. B. Kennedye. 1,786,413; Dec. 23.
Tool, Well-drilling. C. B. Kennedye. 1,786,415; Dec. 23.
Towing hitch. E. Swick. 1,786,093; Dec. 23.
Toy, Aerial. H. B. Baber and L. L. Driggs, jr. 1,785,770; Dec. 23.
Toy vehicle. J. Mohr. 1,785,783; Dec. 23.
Tractors, Driving attachment for. J. E. Horste. 1,786,067; Dec. 23.
Traffic-controlling apparatus, Railway-. V. S. Alexander. 1,785,725; Dec. 23.
Transmission dampener. C. D. Peterson. 1,786,408; Dec. 23.
Tray and safety receptacle therefor, Money. C. T. James. 1,786,160; Dec. 23.
Tray or the like, Ash. A. Klein. Des. 82,894; Dec. 23.
Tray, Record. R. R. West. 1,786,411; Dec. 23.
Tread switch. G. Thom. 1,786,098; Dec. 23.
Truck, Electric motor. R. E. Jacobs. 1,786,069; Dec. 23.
Truck, Railway. C. P. Noser. 1,785,970; Dec. 23.
Trunking system, Automatic toll-serve. V. S. Tharp and J. Wicks. 1,786,041; Dec. 23.
Tubes, End connecter for. M. A. Capeliuschnicoff. 1,785,727; Dec. 23.
Tubular articles, Method of and apparatus for operating on. H. F. Gruman. 1,786,298; Dec. 23.
Turbine. E. N. Fales. 1,786,057; Dec. 23.
Turbine, Hydraulic. L. F. Moody. 1,786,166; Dec. 23.
Turntable. T. W. Mundt. 1,786,258; Dec. 23.
Tweezers. C. W. Stickel and W. R. Tuttle. 1,785,919; Dec. 23.
Underreamer, Hydraulic expanding. W. C. George. 1,785,949; Dec. 23.
Vacuum cleaner. E. J. Muller. 1,785,873; Dec. 23.
Valve and seat combination for bidet control. C. C. Campus. 1,785,935; Dec. 23.
Valve, Brake-pipe cut-off. T. H. Thomas. 1,786,177; Dec. 23.
Valve-centering device. H. G. Miller. 1,786,023; Dec. 23.
Valve construction, Magnet-. P. R. Forman. 1,786,284; Dec. 23.
Valve, Cooling capsule filled. R. E. Bissell. 1,786,285; Dec. 23.
Valve device. L. J. Berkeley. 1,786,330; Dec. 23.
Valve mechanism. A. D. Ferguson. 1,786,199; Dec. 23.
Valve mechanism. W. K. Gosse. 1,786,397; Dec. 23.
Valve, Pressure-control. F. Baumgartner. 1,785,759; Dec. 23.
Valve structure, High-duty-. G. Ericsson. 1,786,295; Dec. 23.
Valve-testing gauge. J. Stutlka. 1,786,092; Dec. 23.
Vaporizer, Oil. R. Krollage. 1,786,117; Dec. 23.
Variable resistance. P. Lauter. 1,785,779; Dec. 23.
Vault ventilator. R. R. West. 1,786,277; Dec. 23.
Vehicle front end assembly. F. F. Valpey. 1,786,044; Dec. 23.
Vehicle light. C. B. Kurtz. 1,786,400; Dec. 23.
Vehicle spring. C. Chambers, jr. 1,785,828; Dec. 23.
Vending machine, Ball-. J. E. Craddock. 1,786,289; Dec. 23.
Vending-machine casing, Razor-blade-. A. J. Branstad. Des. 82,872; Dec. 23.
Ventilating apparatus. C. Ferguson. 1,786,200; Dec. 23.
Ventilating device. A. C. Gilbert. 1,786,203; Dec. 23.
Ventilator: *See*—
Vault ventilator.
Ventilator for automobiles. F. W. Danat. 1,785,891; Dec. 23.
Ventilator system. M. Happone. 1,786,064; Dec. 23.
Vitamin A from fish oils and the like, Extracting. K. Takahashi. 1,786,095; Dec. 23.
Voltage regulator for internal-combustion-engine-driven electric generators. H. D. Gumpper. 1,786,063; Dec. 23.
Vulcanizing mold, Tire-. H. A. Denmire. 1,786,291; Dec. 23.
Wall for platform station trucks, Attachable. W. A. McCullough. 1,786,077; Dec. 23.
Wallpaper or similar material. J. G. Prager. Des. 82,902–3; Dec. 23.
Washing machine, Paddle ore-. G. E. Krider. 1,786,399; Dec. 23.
Watchcase. O. Gruber. 1,786,061; Dec. 23.
Water cooler. R. C. Wolfe. Des. 82,924; Dec. 23.
Water heater. C. Dargent. 1,786,337; Dec. 23.
Water heater, Feed-. J. H. Sebald. 1,785,983; Dec. 23.
Water, Purifying boiler. R. O. Henszey. 1,786,113; Dec. 23.
Water strata in wells, Method and apparatus for determining the location of. G. H. Ennis. 1,786,196; Dec. 23.
Waterer, Poultry. J. B. Olson. 1,786,024; Dec. 23.
Waterer, Stock. M. G. Zoeller. 1,786,049; Dec. 23.
Welding, brazing, and hard-soldering rod, Pocketed. O. M. Krembs. 1,785,778; Dec. 23.
Wheel: *See*—
Steering wheel.
Wheel felly. F. W. Baker. 1,785,995; Dec. 23.
Wheel for railway rolling stock. W. Gribben. 1,785,812; Dec. 23.
Whistle, Locomotive. C. T. McElvaney, jr., and E. P. Golding. 1,786,122; Dec. 23.
Winding machines, Counterweighting device for. J. A. Cameron. 1,785,934; Dec. 23.
Window for automobile doors, Signal. C. H. Wallace. 1,785,796; Dec. 23.
Window regulator. H. A. Myers. 1,785,784; Dec. 23.
Wire-testing machine. C. C. Sunderland. 1,786,138; Dec. 23.
Wooden surfaces, Scraping off. S. Thielmann. 1,786,096; Dec. 23.
Woodworking machine, Multiple-saw. F. W. Patton. 1,786,168; Dec. 23.
Wrench. J. C. Baker. 1,785,925; Dec. 23.
Yarn cleaner and slub detector. W. Marcroft and G. N. Taylor. 1,785,817; Dec. 23.
Yarn-tensioning device. W. C. Stewart. 1,785,987; Dec. 23.

CLASSIFICATION OF PATENTS

ISSUED DECEMBER 23, 1930

NOTE.—First number=class, second number=subclass, third number=patent number

1— 3.1: 1,786,088
1,786,087
18: 1,785,844
19: 1,785,843
32: 1,785,928
39: 1,785,832
2— 2: 1,786,268
115: 1,786,105
159: 1,786,227
184: 1,786,327
278: 1,785,962
4— 7: 1,785,935
68: 1,785,872
252: 1,785,877
5— 147: 1,785,865
344: 1,785,953
8— 18: 1,786,031
9— 18: 1,785,971
10— 162: 1,785,862
11— 1: 1,786,211
12— 36: 1,785,938
142: 1,785,829
1,786,030
15— 7: 1,786,384
139: 1,785,732
203: 1,786,224
229: 1,786,037
246: 1,785,873
16— 171: 1,786,265
179: 1,786,036
197: 1,786,079
17— 26: 1,786,346
18— 38: 1,786,291
49: 1,786,075
52: 1,786,149
53: 1,786,290
19— 66: 1,785,823
130: 1,786,180
20— 1.01: 1,786,363
56.4: 1,786,197
71: R. 17,911
22— 45: 1,786,171
67: 1,785,757
177: 1,785,941
23— 109: 1,786,097
143: 1,786,016
24— 19: 1,786,107
23: 1,786,151
66: 1,786,250
116: 1,786,187
123: 1,786,081
134: 1,786,359
201: 1,786,115
205: 1,785,740
1,785,920
219: 1,785,825
224: 1,785,735
245: 1,786,137
25— 12: 1,785,827
30: 1,786,385
56: 1,786,167
134: 1,786,364
26— 63: 1,786,188
28— 1: 1,785,937
43: 1,786,238
64: 1,785,817
29— 17: 1,786,162
18: 1,785,966
38: 1,786,148
79: 1,785,836
84: 1,786,099
86.2: 1,785,946
30— 12: 1,785,889
1,785,917
32— 10: 1,746,127
33— 18: 1,785,883
46.5: 1,786,059
163: 1,786,325
180: 1,786,092
205: 1,786,184
211: 1,786,309
34— 5: 1,786,191
26: 1,786,223
1,786,316
36— 15: 1,786,374
76: 1,785,808
37— 9: 1,786,335
37— 53: 1,786,323
39— 62: 1,785,747
40— 7: 1,786,253
20: 1,785,948
23: 1,785,780
28: 1,785,848
63: 1,786,123
65: 1,785,866
86: 1,786,133
119: 1,786,230
125: 1,785,952
130: 1,786,044
132: 1,786,033
133: 1,786,155
145.1: 1,786,038
42— 16: 1,786,213
40: 1,785,764
1,785,765
41: 1,785,794
55: 1,785,770
74: 1,785,977
43— 3: 1,785,788
8: 1,786,342
148: 1,785,932
1,785,933
1,785,943
1,785,944
1,785,945
44— 29: 1,785,739
45— 2: 1,786,112
77: 1,786,045
138: 1,786,073
46— 40: 1,785,781
1,785,800
47— 9: 1,786,021
41: 1,786,062
1,786,141
48— 63: 1,785,820
102: 1,786,117
51— 10.5: 1,786,023
112: 1,785,737
105: 1,786,320
231: 1,786,139
52— 13: 1,786,046
53— 3: 1,785,878
4: 1,786,005
55— 17: 1,786,170
30: 1,785,901
32: 1,786,194
58: 1,786,131
58— 105: 1,786,061
60— 19: 1,786,304
54.6: 1,786,231
61— 20: 1,785,896
69: 1,786,109
62— 1: 1,786,159
91.5: 1,786,161
115: 1,786,222
1,786,110
116: 1,786,370
117: 1,785,860
120: 1,786,129
141: 1,785,857
66— 102: 1,786,255
67— 7.1: 1,786,267
31: 1,785,950
116: 1,786,395
68— 10: 1,786,008
70— 14: 1,785,934
16: 1,786,221
90: 1,786,332
122: 1,786,201
127: 1,786,186
72— 18: 1,785,855
98: 1,785,793
106: 1,786,284
108: 1,785,790
1,785,791
130: 1,786,362
73— 4: 1,786,219
37: 1,785,842
82: 1,786,339
74— 1: 1,785,736
6: 1,786,408
7: 1,785,731
1,786,067
1,785,798
74— 14: 1,786,007
1,785,733
33: 1,785,897
34: 1,785,936
1,785,839
1,786,158
39: 1,785,776
48: 1,786,006
54: 1,786,344
58: 1,786,319
71: 1,786,143
108: 1,785,903
109: 1,786,012
75— 17: 1,786,386
45: 1,786,393
76— 58: 1,786,071
80— 1: 1,785,905

Wilhelm Bros., Kansas City, Mo. Liquid cleaning composition for glass. 307,517; Dec. 30. Class 4.
Wilkening Manufacturing Company, Philadelphia, Pa. Piston rings and other machinery. 307,750; Dec. 30. Class 35.
Wittnauer, A., Co., New York, N. Y. Watches, watchcases, watch movements, and parts of the same. 306,913; Dec. 30. Class 42.
Woodward & Lothrop, Washington, D. C. Outer clothing. 307,294; Dec. 30. Class 39.
Wouters, Charles J., Oakland, Calif. Cigars and cigarettes. 306,080; Dec. 30. Class 17.
Württembergische Metallwarenfabrik, Geislingen–Steige, Wurttemburg, Germany. Electric lamps, grills, percolators, etc. 297,461; Dec. 30. Class 21.
Young, J. S., Company, The., Baltimore, Md. Logwood extract. 304,677; Dec. 30. Class 6.

CLASSIFIED LIST OF TRADE-MARKS REGISTERED

CLASS 1

Facings for use in casting metals. Kelly Graphite Mills, Inc. 278,901–3; Dec. 30.
Ice. E. M. Holmes. 278,891; Dec. 30.

CLASS 2

Bags, Wardrobe. Al-Lon Manufacturing Company, Inc. 278,809; Dec. 30; Serial No. 305,472; published Oct. 21, 1930.
Case for shipping laundry, Vulcanized fibre. M. Braunstein. 278,738; Dec. 30; Serial No. 304,990; published Oct. 21, 1930.
Containers. Northern Maine Plywood Company. 278,739; Dec. 30; Serial No. 304,570; published Oct. 21, 1930.
Cups made of synthetic plastic material. T. N. Benedict Mfg. Co. 278,743; Dec. 30; Serial No. 304,092; published Oct. 21, 1930.
Vaults, Burial. Royal Vault Manufacturing Co. 278,735; Dec. 30; Serial No. 305,089; published Oct. 21, 1930.

CLASS 6

Antiseptic, healing, invigorating liquid. Hance Brothers & White, Inc. 278,706; Dec. 30; Serial No. 302,822; published Sept. 30, 1930.
Antiseptics, disinfectants, and odorless deodorants. G. R. Powell Chemical Company. 278,775; Dec. 30; Serial No. 304,426; published Oct. 7, 1930.
Astringents, astringent cerates, bleach and beauty creams, etc. Jean Stuart Cosmetics, Inc. 278,771–2; Dec. 30; Serial Nos. 304,617–18; published Oct. 7, 1930.
Bath salts, perfumes, rouges, etc. Robert Enterprises, Inc. 278,854; Dec. 30; Serial No. 284,873; published Sept. 16, 1930.
Castor oil, Sulphonated. Bick and Company. 278,774; Dec. 30; Serial No. 304,484; published Oct. 7, 1930.
Chemical dye aids. H. Th. Böhme A. G. 278,701; Dec. 30; Serial No. 303,624; published Sept. 30, 1930.
Chemical preparation, Cakes, slabs, bars, or bars of a. H. Margolis. 278,712; Dec. 30; Serial No. 297,535; published Sept. 30, 1930.
Chemicals used as antioxidants for rubber. E. I. du Pont de Nemours and Company. 278,783; Dec. 30; Serial No. 303,955; published Oct. 7, 1930.
Chemicals used as antioxidants of rubber. E. I. du Pont de Nemours and Company. 278,781; Dec. 30; Serial No. 303,957; published Oct. 7, 1930.
Chemicals used for preventive of the sun checking of rubber. E. I. du Pont de Nemours and Company. 278,782; Dec. 30; Serial No. 303,956; published Oct. 7, 1930.
Chemicals used in the manufacture of rubber. E. I. du Pont de Nemours and Company. 278,698–9; Dec. 30; Serial Nos. 303,953–4; published Oct. 7, 1930.
Cod-liver oil, Prepared. Physicians Laboratories, Inc. 278,852; Dec. 30; Serial No. 285,790; published Sept. 30, 1930.
Compound used as a boiler-feed-water disincrustant and acid reagent. Milwaukee Lubricants Co. 278,779; Dec. 30; Serial No. 304,207; published Sept. 23, 1930.
Eyewash. S. M. Sager. 278,723; Dec. 30; Serial No. 293,899; published Sept. 16, 1930.
Fertilizers. Central Iron & Coal Company. 278,722; Dec. 30; Serial No. 294,500; published Oct. 21, 1930.
Fluid, Hair-straightening. Marshallene Cosmetic Co. 278,694; Dec. 30; Serial No. 304,730; published Oct. 7, 1930.
Hair restorer. A. A. Hibler. 278,702; Dec. 30; Serial No. 303,288; published Oct. 7, 1930.
Laxative tablets, Chocolate. Tru-Lax Products Company. 278,773; Dec. 30; Serial No. 304,523; published Oct. 7, 1930.
Liquid preparation. J. St. George. 278,776; Dec. 30; Serial No. 304,391; published Sept. 30, 1930.
Medicinal preparations. B. E. Braden. 278,700; Dec. 30; Serial No. 303,944; published Sept. 30, 1930.
Medicine. Alpha Chemical Products Co. 278,873; Dec. 30; Serial No. 299,480; published Sept. 30, 1930.
Medicines and pharmaceutical preparations. Waterbury Chemical Company. 278,721; Dec. 30; Serial No. 294,699; published June 17, 1930.
Perfume. Soc. An. Gius. Visconti di Modrone & C. 278,860; Dec. 30; Serial No. 272,438; published Sept. 30, 1930.
Pharmaceutical preparation. S. Hirsch. 278,855; Dec. 30; Serial No. 283,978; published Sept. 30, 1930.
Pills, having laxative effect. Allcock Manufacturing Co. 278,851; Dec. 30; Serial No. 286,010; published Sept. 30, 1930.
Plasters, Porous. Allcock Manufacturing Co. 278,850; Dec. 30; Serial No. 286,011; published Oct. 7, 1930.
Powder, creams, toilet water, etc., Talcum and face. Ferguson Beauty Shoppe. 278,719; Dec. 30; Serial No. 295,475; published Oct. 7, 1930.
Powder for internal use, Neutralizing, corrective, and laxative. B. E. Price. 278,780; Dec. 30; Serial No. 303,988; published Oct. 7, 1930.
Preparation composed of aromatics, antacids, and digestives. Sanozym, Incorporated. 278,705; Dec. 30; Serial No. 302,834; published Oct. 7, 1930.
Preparation for treating corns, callouses, bunions, etc. J. Waldman. 278,704; Dec. 30; Serial No. 302,844; published Sept. 30, 1930.
Preparation for treating leucorrhea, for eliminating offensive odors, and for cleaning the human organs. R. Bergin. 278,707; Dec. 30; Serial No. 302,176; published Oct. 7, 1930.
Product for demulsifying emulsions of mineral oils. Curo Process Company. 278,703; Dec. 30; Serial No. 302,854; published Sept. 30, 1930.
Sulphur, cold cream, perfume, etc. J. W. Spencer. 278,868; Dec. 30; Serial No. 300,303; published Sept. 16, 1930.
Water-softening material. Arizona Minerals Corporation. 278,708; Dec. 30; Serial No. 301,778; published Sept. 30, 1930.

CLASS 7

Rope, Manilla. Upson-Walton Company. 278,741; Dec. 30; Serial No. 304,439; published Oct. 21, 1930.

CLASS 8

Tobacco pouches and containers. Burtis Company. 278,849; Dec. 30; Serial No. 286,866; published Oct. 21, 1930.

CLASS 9

Matches. F. E. Kreuger. 78,886–7; renewed July 19, 1930.
Matches. F. E. Kreuger. 79,428; renewed Sept. 6, 1930.
Matches. F. E. Kreuger. 79,498–500; renewed Sept. 13, 1930.
Matches. F. E. Kreuger. 79,588; renewed Sept. 20, 1930.
Matches. F. E. Kreuger. 79,764; renewed Oct. 4, 1930.
Matches. F. E. Kreuger. 79,985–6; renewed Oct. 25, 1930.
Matches. F. E. Kreuger. 80,130; renewed Nov. 8, 1930.
Matches. F. E. Kreuger. 80,364; renewed Dec. 13, 1930.

CLASS 10

Fertilizers. Old Leaf Mold Humus Corporation. 278,767; Dec. 30; Serial No. 303,574; published Oct. 14, 1930.
Fertilizers. Southern Fertilizer & Chemical Company. 278,821; Dec. 30; Serial No. 303,014; published Oct. 21, 1930.
Fertilizers, castor pomace, calcium nitrate, etc., Mixed. Davison Chemical Co. 278,757; Dec. 30; Serial No. 303,951; published Oct. 14, 1930.
Manure and peat moss, Cow. Atkins & Durbrow, Inc. 278,756; Dec. 30; Serial No. 303,987; published Oct. 14, 1930.

CLASS 11

Carbon paper, printing inks, and typewriter ribbons. I. A. Losey. 278,716; Dec. 30; Serial No. 295,979; published Oct. 14, 1930.
Ink, Writing. Independent Druggists' Alliance Distributing Co. 278,760; Dec. 30; Serial No. 303,895; published Oct. 14, 1930.
Ink, Writing. L. E. Waterman Company. 278,763–5; Dec. 30; Serial Nos. 303,668–70; published Oct. 14, 1930.
Inks, Stencil. D. Gestetner, Limited. 278,894; Dec. 30.

CLASS 12

Moldings, Drip and roof. Allied Metal Products Corporation. 278,890; Dec. 30.
Plaster, Wall. Plastic Stone Products Corp. 278,886; Dec. 30.
Plaster, Wall. Plastic Stone Products Corp. 278,904; Dec. 30.
Plastic refractory material. E. J. Lavino and Company. 278,819; Dec. 30; Serial No. 304,563; published Oct. 7, 1930.
Stone, Dimension. D. Collins. 278,879; Dec. 30.
Tiles, Wall. Standard Wall Covering Company. 278,753; Dec. 30; Serial No. 303,403; published Oct. 7, 1930.

CLASS 13

Doorplates. Consolidated Factories, Ltd. 278,718; Dec. 30; Serial No. 295,836; published Oct. 14, 1930.
Fencing, Wire. Hudson Wire and Iron Company. 278,740; Dec. 30; Serial No. 304,463; published Oct. 14, 1930.
Metal pipe and tubing. Youngstown Sheet & Tube Company. 278,736; Dec. 30; Serial No. 305,022; published Oct. 14, 1930.
Piping, couplings, and nipples, Steam and water. Air-Way Electric Appliance Corporation. 278,732; Dec. 30; Serial No. 305,470; published Oct. 21, 1930.
Plumbing fixtures. Crane Co. 278,888; Dec. 30.
Valve stems, dust and valve caps, rim nuts, etc., Pneumatic. Dill Manufacturing Company. 278,737; Dec. 30; Serial No. 304,541; published Oct. 14, 1930.
Valves. B. F. Perkins & Son, Inc. 278,864; Dec. 30; Serial No. 300,806; published Oct. 14, 1930.

CLASS 14

Castings, Steel and malleable-iron. Jewell Steel & Malleable Co. 278,713; Dec. 30; Serial No. 296,649; published Oct. 14, 1930.
Metals and alloys. Fansteel Products Company. 278,762; Dec. 30; Serial No. 303,764; published Oct. 14, 1930.
Steels. Crucible Electric Steel Company. 278,846; Dec. 30; Serial No. 283,309; published Oct. 14, 1930.

CLASS 17

Cigars, cigarettes, smoking tobacco. Independent Druggists' Alliance Distributing Co. 278,759; Dec. 30; Serial No. 303,896; published Oct. 14, 1930.
Tobacco, Chewing. American Tobacco Company. 278,807; Dec. 30; Serial No. 301,548; published Oct. 14, 1930.

CLASS 19

Boats, cruisers, etc., Motor and speed. Horace E. Dodge Boat & Plane Corporation. 278,745; Dec. 30; Serial No. 303,023; published Oct. 14, 1930.
Trucks, Dump. Winsor Company. 278,742; Dec. 30; Serial No. 304,227; published Oct. 21, 1930.
Bicycles. Anker-Werke A. G. 278,733; Dec. 30; Serial No. 305,129; published Oct. 14, 1930.
Flying machines. Consolidated Aircraft Corporation. 278,734; Dec. 30; Serial No. 305,099; published Oct. 14, 1930.

CLASS 23

Axes, hatchets, machetes, etc. Collins Company. 278,816; Dec. 30; Serial No. 304,752; published Oct. 14, 1930.
Compressors, Air. Bury Compressor Co. 278,856; Dec. 30; Serial No. 283,173; published Oct. 14, 1930.
Cutters, Weed and grass. J. F. Hannah. 278,869; Dec. 30; Serial No. 300,191; published Oct. 14, 1930.
Labeling machines. Liquid Carbonic Corporation. 278,813; Dec. 30; Serial No. 305,313; published Oct. 21, 1930.
Lathes and automatic metal-turning machines and machines for grinding surfaces. Seneca Falls Machine Company. 278,752; Dec. 30; Serial No. 304,217; published Oct. 14, 1930.
Razors and shears. E. Morris Mfg. Co. 278,885; Dec. 30.
Shafts and worm gears, Drive, pinion and worm. Lempco Products, Inc. 278,728; Dec. 30; Serial No. 291,342; published Oct. 14, 1930.
Spray guns. Sinclair Refining Company. 278,875; Dec. 30; Serial No. 299,466; published June 10, 1930.
Tables, auto pits, auto washers, etc., Assembly. Manley Manufacturing Company. 278,895; Dec. 30.
Tools, clay spades, asphaltcutters, etc., Wrecking. Greenlee Bros. & Co. 278,817; Dec. 30; Serial No. 304,721; published Oct. 14, 1930.
Tools or utensils, Kitchen and household. R. Wallace & Sons Manufacturing Company. 278,818; Dec. 30; Serial No. 304,645; published Oct. 14, 1930.
Winches, variable speed drives, pipe benders, etc. Allsteel Products Manufacturing Company. 278,754; Dec. 30; Serial No. 303,242; published Oct. 14, 1930.

CLASS 24

Washing machines, Electric. Hirschy Company. 278,715; Dec. 30; Serial No. 296,058; published Oct. 14, 1930.

CLASS 26

Apparatus and instruments for underground surveys of borings and parts of such. A. Anderson. 278,815; Dec. 30; Serial No. 304,853; published Oct. 14, 1930.
Pumps, Self-measuring gasoline. C. E. Marion. 278,820; Dec. 30; Serial No. 304,377; published Oct. 14, 1930.
Testing instruments. Motor X-Ray Co., Inc. 278,858; Dec. 30; Serial No. 278,845; published Oct. 14, 1930.

CLASS 27

Clocks. W. L. Gilbert Clock Company. 278,731; Dec. 30; Serial No. 289,892; published Oct. 14, 1930.
Clocks. New Haven Clock Company. 278,884; Dec. 30.
Time-indicating device. A. E. Freel. 278,761; Dec. 30; Serial No. 303,766; published Oct. 14, 1930.

CLASS 29

Brushes and tooth brushes, Hand scrubbing. Independent Druggists' Alliance Distributing Co. 278,758; Dec. 30; Serial No. 303,898; published Oct. 14, 1930.
Brushes, dish mops, hairbrushes, etc., Glassware. Albert Pick-Barth Company, Inc. 278,859; Dec. 30; Serial No. 300,967; published Oct. 14, 1930.
Brushes, Hair, etc. The Wilcox Novelty Company. 278,874; Dec. 30; Serial No. 299,478; published Oct. 14, 1930.
Brushes, Tooth. Société Anonyme Dentclair. 278,871; Dec. 30; Serial No. 299,933; published Oct. 14, 1930.
Mittens, Dusting. J. V. Harpham. 278,808; Dec. 30; Serial No. 301,170; published Oct. 14, 1930.
Sweepers, Carpet. Bloomingdale Bros., Inc. 278,766; Dec. 30; Serial No. 303,595; published Oct. 14, 1930.

CLASS 31

Filters, parts therefor, and water filtering masses. Aktiebolaget Elektrolux. 278,853; Dec. 30; Serial No. 285,434; published Oct. 14, 1930.
Refrigerators and refrigerating dispensers, Electrical. Tavernette Corporation. 278,862–3; Dec. 30; Serial Nos. 300,829–30; published Oct. 14, 1930.

CLASS 32

Costumers. Utilatree Products Inc. 278,812; Dec. 30; Serial No. 305,549; published Oct. 21, 1930.

CLASS 34

Burners, Coal. Motorstoker Corporation. 278,889; Dec. 30.
Burners, Underfeed-stoker coal. W. F. Miller. 278,744; Dec. 30; Serial No. 303,723; Oct. 14.
Stokers, Underfeed. Marion Machine, Foundry & Supply Co. 278,746; Dec. 30; Serial No. 302,735; published Oct. 14, 1930.
Stoves and ranges. Eureka Steel Range Company. 278,747–8; Dec. 30; Serial No. 302,377–8; Oct. 21, 1930.

CLASS 35

Brake lining. Raybestos-Manhattan, Incorporated. 278,811; Dec. 30; Serial No. 305,587; published Oct. 21, 1930.

Gaskets. Victor Manufacturing & Gasket Company, 278,814; Dec. 30; Serial No. 305,459; published Oct. 21, 1930.
Hose, Fire. Fenwick Reddaway Mfg. Co. 278,867; Dec. 30; Serial No. 300,343; published Oct. 14, 1930.
Tires, tire shoes and inner tubes therefor, outside tire protectors, etc. Goodyear Tire & Rubber Company. 278,729; Dec. 30; Serial No. 291,215; published Oct. 14, 1930.

CLASS 37

Calendars, Radio program memo. J. P. Kennedy. 278,799; Dec. 30; Serial No. 303,188; published Oct. 21, 1930.
Cards and guides, filing folders, paper clips, etc., Index. Oxford Filing Supply Co. 278,892–3; Dec. 30.
Cards, Contract. M. I. Zofness. 278,797; Dec. 30; Serial No. 303,730; published Oct. 14, 1930.
Envelopes, and printing, cover, and envelope paper, Correspondence. Port Huron Sulphite & Paper Company. 278,796; Dec. 30; Serial No. 303,860; published Oct. 21, 1930.
Paper. American Writing Paper Company. 278,882; Dec. 30.
Paper. Nekoosa-Edwards Paper Company. 278,724; Dec. 30; Serial No. 292,819; published Oct. 14, 1930.
Paper and envelopes, Combination note. W. Harriman. 278,857; Dec. 30; Serial No. 283,040; published Oct. 21, 1930.
Paper and envelopes, Writing. Montag Bros. Inc. 278,842; Dec. 30; Serial No. 304,966; published Oct. 14, 1930.
Paper, bristol board, rope jute, etc., Wrapping. Riegel Paper Corporation. 278,802; Dec. 30; Serial No. 302,334; published Oct. 14, 1930.
Paper labels. Smith & Porter Press, Incorporated. 278,887; Dec. 30.
Paper, paper towels, and napkins, Toilet. Hoberg Paper & Fibre Company. 278,791; Dec. 30; Serial No. 304,660; published Oct. 21, 1930.
Papers, Mimeograph and ledger. Munising Paper Company. 278,905; Dec. 30.

TO WHOM

PATENTS WERE ISSUED ON THE 30TH DAY OF DECEMBER, 1930

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice). **Includes patents, reissues, and designs.**

Aanonson, Henry, Eland Junction, Wis. Vehicle. 1,787,029; Dec. 30.
Abbe, George C., Kennett Square, assignor to American Road Machinery Company, Inc., Kennett Square, Pa. Snowplow. 1,786,974; Dec. 30.
Abel, August, Leipzig, Germany. Light-advertising device. 1,787,333; Dec. 30.
Abel, August, Leipzig, Germany. Device for the production of apparently-moving display matter. 1,787,334; Dec. 30.
Abendroth Brothers. (See Seeley, Frank E., assignor.)
Absmeier, Carl, Maywood, assignor to United States Gypsum Company, Chicago, Ill. Board-cutting machine. 1,786,726; Dec. 30.
Acoustic Products Company. (See Dunning, Orville M., assignor.)
Acoustic Products Company. (See Hutchison, Miller R., assignor.)
Adam, Frederick B., St. Louis, Mo. Electric switch. 1,786,727; Dec. 30.
Addicks, Albert, Boitwarden, near Brake, Germany. Safety device for vehicles, particularly power-driven vehicles. 1,786,690; Dec. 30.
Adlake Company, The. (See Larson, Carl H., assignor.)
Adley, Lloyd C. (See Crew, Charles R., assignor.)
Advance Machine Company. (See Antoine, Alfred D., assignor.)
Air Reduction Company. (See Grow, Harold J., assignor.)
Akron Standard Mold Company, The. (See Humphrey, Walter E., assignor.)
Aktiengesellschaft Mix and Genest. (See Lohaus, Otto, assignor.)
Alemite Corporation. (See Moore, George L., assignor.)
Alemite Corporation. (See Pierce, E. F., and Sweet, assignors.)
Alexander, Walter, White Plains, N. Y. Adhesive compound and making same. 1,786,417; Dec. 30.
Alexanderson, Ernst F. W., Schenectady, N. Y., assignor to General Electric Company. Control system. 1,787,299; Dec. 30.
Alexanderson, Ernst F. W., Schenectady, N. Y., assignor to General Electric Company. Electric discharge device. 1,787,300; Dec. 30.
Allan, James R., Oak Park, Ill. Material-handling apparatus. 1,786,884; Dec. 30.
Allmanna Svenska Elektriska Aktiebolaget. (See Ytterberg, A., and Herlitz, assignors.)
Althausen, Robert, Ranger, Tex., assignor to The Eureka Tool Company, Augusta, Kans. Casing ripper. 1,786,590; Dec. 30.
Altheimer, Ben, assignor to M. Altheimer, University City, Mo. Radiator shield. 1,787,184; Dec. 30.
Altheimer, Myrtle. (See Altheimer, Ben, assignor.)
Alvord, Clinton, assignor to Worcester Loom Works, Worcester, Mass. Tuft-frame-threading device. 1,786,813; Dec. 30.
American Blower Corporation. (See Anderson, Edward L., assignor.)
American Cyanamid Company. (See Thomas, George G., assignor.)
American Enameled Brick & Tile Company. (See Sutphen, Robert M., assignor.)
American Engineering Company. (See Mellon, James A., assignor.)
American Gassaccumulator Company. (See Oestnaes, Victor L., assignor.)
American Gypsum Company. (See New, Gustave A., assignor.)
American Machine & Foundry Company. (See Chandler, Robert J. A., assignor.)
American Machine & Foundry Company. (See Kehling, Charles, assignor.)
American Nuplex Corporation. (See Homberg, Felix, assignor.)
American Optical Company. (See Schumacher, Elmer L., assignor.)
American Potash & Chemical Corporation. (See Burke, William E., assignor.)
American Road Machinery Company. (See Abbe, George C., assignor.)
American Rolling Mill Company, The. (See Byrum, J. R., Russell, and Meeks, assignors.)
American Rolling Mill Company, The. (See Eppelsheimer, Daniel, assignor.)
American Rolling Mill Company, The. (See Spaulding, Arch W., assignor.)
American Rolling Mill Company, The. (See Tytus, John B., assignor.)
American Telephone and Telegraph Company. (See Freeman, Albert E., assignor.)
American Telephone and Telegraph Company. (See Nyquist, Harry, assignor.)
American Telephone and Telegraph Company. (See Reed, T. C., and Odell, assignors.)
American Voith Contact Company. (See Thaler, Wilhelm, assignor.)
Anderson, Daniel G. (See Krick, G. W., and Anderson.)
Anderson, Edward L., Grosse Ile, assignor to American Blower Corporation, Detroit, Mich. Blower. 1,787,062; Dec. 30.
Anderson, H Miller, Chicago, Ill., assignor, by mesne assignments, to The Lake Erie Chemical Company, Cleveland, Ohio. Vault release. 1,786,975; Dec. 30.
Anderson, H Miller, Chicago, Ill., assignor, by mesne assignments, to The Lake Erie Chemical Company, Cleveland, Ohio. Gas-discharging device for safes. 1,786,976; Dec. 30.
Anderson, Lawrence, Fullerton, Nebr. Bill holder and protector. 1,787,335; Dec. 30.
Anderson, William M., assignor of one-half to Arch Hasterman, Brownville, Nebr. Lister attachment for tractors. 1,786,591; Dec. 30.
Andrews, Champe S., North Chattanooga, Tenn., assignor to Box Blank Corporation, New York, N. Y. One-piece box. 1,787,030; Dec. 30.
Anostchenko, Nikolai D., Moscow, Union of Socialist Soviet Republics. Motion-picture apparatus. 1,786,977; Dec. 30.
Antoine, Alfred D., assignor to Advance Machine Company, Chicago, Ill. Check-controlled mechanism. 1,787,099; Dec. 30.
Arbuckle, Samuel F., Highland Park, Mich., assignor to Monogram Lens Corporation, New York, N. Y. Lamp-focusing mechanism. 1,786,814; Dec. 30.
Arlette, Inc. (See Watts, Warren S., assignor.)
Arnold, Carl, Nuremberg, Germany. Spark toy. 1,787,349; Dec. 30.
Arnold, Robert V., E. E. Flickinger, and S. E. Wantz, Taneytown, Md. Feeder and disintegrator or mixer. 1,786,556; Dec. 30.
Aronson, Peter A., Devon, Conn., assignor to Hookless Fastener Company, Meadville, Pa. Separable fastener. 1,786,978; Dec. 30.
Ashley, Gamb J., Goodloes, Va. Automatic draft regulator. 1,786,931; Dec. 30.
Aspinwall, Louis M., Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company. Train-control system. 1,786,815; Dec. 30.
Atkins, Edward G., assignor to Wolverine Carburetor Company, Jackson, Mich. Carburetor. 1,787,230; Dec. 30.
Atlas Bolt & Screw Company, The. (See Schellentrager, Eugene W., assignor.)
Attwood, Charles W. (See Nicholay, Paul, assignor.)
Austin, Arthur O., Barberton, assignor, by mesne assignments, to The Ohio Brass Company, Mansfield, Ohio. Pot head for conductors. 1,786,728; Dec. 30.
Austin, Arthur O., Barberton, assignor, by mesne assignments, to The Ohio Brass Company, Mansfield, Ohio. Pot head for insulated conductors. 1,786,729; Dec. 30.
Austin, Arthur O., Barberton, assignor, by mesne assignments, to The Ohio Brass Company, Mansfield, Ohio. Fitting for insulators. 1,786,730; Dec. 30.
Austin, Arthur O., Barberton, assignor, by mesne assignments, to The Ohio Brass Company, Mansfield, Ohio. Terminal housing for cables. 1,786,731; Dec. 30.
Automatic Merchandizer Inc., The. (See Lea, Charles, assignor.)
Automatic Molding Machine Corporation. (See Morris, T. O., and Lawlor, assignors.)
Babson Manufacturing Corporation. (See Stampen, Jacob J., assignor.)
Bacheldor, William H., Wood River, Ill., assignor to Standard Oil Company, Whiting, Ind. Filter-leaf construction. 1,787,100; Dec. 30.
Back, Robert. (See Mungen, D. D., and Back.)
Bacon, Gilbert C., Tamaqua, Pa., assignor to Darco Corporation, Wilmington, Del. Sanitation of refrigerators. 1,787,231; Dec. 30.
Badger, E. B., & Sons Company. (See Boyden, Davis S., assignor.)
Bagley, Francis H., Savannah, Ga. Railway switch. 1,787,336; Dec. 30.
Bailey, Banks & Biddle Company, The. (See Constabel, Arthur A., assignor.)
Bailey, Charles F., assignor to Keystone Steel & Wire Company, Peoria, Ill. Method and apparatus for continuous wire feeding. 1,787,301; Dec. 30.
Bailey, William M. (See Proctor, J. A., and Bailey.)
Baird, Lynne D., Tulsa, Okla. Wrench. 1,787,185; Dec. 30.
Bakehouse, Dietrich C., North Hollywood, Calif. Door. 1,787,302; Dec. 30.

Baker, David B. (See Johnston, E. A., Benjamin, Baker, and Hagen.)
Baker, George R. (See Kirman, H., and Baker.)
Baker Perkins Company. (See Kirman, H., and Baker, assignor.)
Balduf, Bruno E., assignor to United States Gypsum Company, Chicago, Ill. Building insulation. 1,786,732; Dec. 30.
Bancroft, Nathaniel W., Buenos Aires, Argentina. Cock or faucet for fluids. 1,786,885; Dec. 30.
Baquey, Gaston. (See Baquey, Pierre.)
Baquey, Pierre, otherwise known as Gaston Baquey, Colombes, France. Face paint or fard distributor with stump. 1,786,418; Dec. 30.
Baranowski, Kazimierz, Paris, France, assignor to W. J. Einstein, London, England. Electroplating apparatus. 1,786,592; Dec. 30.
Barbagelata, Angelo, Milan, Italy, assignor to General Electric Company. Automatic electric regulator or overload limiting apparatus. 1,787,803; Dec. 30.
Barber Asphalt Company, The. (See Gronemeyer, Fred G., assignor.)
Barber, Franklin L., and E. W. Webb, assignors to Standard Car Truck Company, Chicago, Ill. Car truck. 1,787,081; Dec. 30.
Barkelj, Jean A. H., Los Angeles, Calif. Inlet manifold for straight-eight internal-combustion engines. 1,787,186; Dec. 30.
Barker, George W., et al. (See Lewis, Samuel A., assignor.)
Barker, James, Kalamazoo, Mich. Loose-leaf binder. 1,786,816; Dec. 30.
Barker, Ralph H., et al. (See Lewis, Samuel A., assignor.)
Barnes, Eugene L., Buffalo, N. Y. Air filter. 1,787,135; Dec. 30.
Barnes, Paul R. (See Brown, Milton V., assignor.)
Barrows, Donald S., Rochester, assignor to The Symington Company, New York, N. Y. Draft rigging. 1,786,419; Dec. 30.
Barton, William MacK., Florence, Ala. Prison bar and alarm-system circuit closer. 1,787,350; Dec. 30.
Bataille, Gerald S., Somerville, Mass. Refrigerator. 1,786,817; Dec. 30.
Bauer, William J., assignor to Project Holding Corporation, New York, N. Y. Collapsible chair. 1,786,473; Dec. 30.
Baughman, George W., Edgewood Borough, assignor to The Union Switch & Signal Company, Swissvale, Pa. Trackway apparatus for automatic train control systems. 1,786,818; Dec. 30.
Beall, William L., Chattanooga, Tenn., assignor to International Harvester Company. Fertilizer distributor. 1,786,886; Dec. 30.
Beauchamp, George D., Los Angeles, Calif. Pick for stringed musical instruments. 1,787,136; Dec. 30.
Becker, Albert W., Hartford, Conn. Windshield-clearing device. 1,786,932; Dec. 30.
Becker, Harold R., assignor to Becker Valve and Specialty Corporation, Newburgh, N. Y. Mixing valve. 1,787,304; Dec. 30.
Becker, Logan A., and J. M. Munson, Lakewood, assignors to The Dobeckmun Company, Cleveland, Ohio. Tube forming and reeling machine. 1,787,232; Dec. 30.
Becker Valve and Special Corporation. (See Becker, Harold R., assignor.)
Becker Valve and Special Corporation. (See Sinclair, Leonard, assignor.)
Bek, Ernst G. (See Kindl, assignor.)
Belding, William D., Denver, Colo. Building construction. 1,786,691; Dec. 30.
Bell, Godfrey. (See Shehan, W. E., and Bell.)
Bell & Howell Company, The. (See Howell, Albert S., assignor.)
Bell, John E., Brooklyn, N. Y., assignor to Combustion Engineering Corporation. Method and apparatus for burning pulverized fuel. 1,786,887; Dec. 30.
Bell Telephone Laboratories, Incorporated. (See Hartley, Ralph V. L., assignor.)
Bendix Brake Company. (See Michael, Gus F., assignor.)
Benjamin, Bert R. (See Johnston, E. A., Benjamin, Baker, and Hagen.)
Benjamin Electric Manufacturing Company. (See Benjamin, Reuben B., assignor.)
Benjamin, Reuben B., assignor to Benjamin Electric Manufacturing Company, Chicago, Ill. Fixture construction. 1,787,032; Dec. 30.
Benner, Raymond C., assignor to The Carborundum Company, Niagara Falls, N. Y. Furnace. 1,786,593; Dec. 30.
Bennett, Eddie F., Eastland, Tex. Grounding device. 1,787,351; Dec. 30.
Bennett, Incorporated. (See Clapp, Albert L., assignor.)
Benoit, Leon, Chicago, Ill. Lid or closure. 1,786,733; Dec. 30.
Bensinger, James M., assignor of one-half to A. Howell, Gadsden, Ala. Scoop scale. 1,787,352; Dec. 30.
Bensmann, Hermann, Bremen, Germany. Regeneration of lubricating oils. 1,787,353; Dec. 30.
Berg, Knute, Spokane, Wash. Chain saw. 1,786,641; Dec. 30.
Bergstrom, Carl P., Millbury, assignor to Crompton & Knowles Loom Works, Worcester, Mass. Yieldable support for bobbin tips. 1,786,692; Dec. 30.
Betzer, Cecil C., Bronson, Iowa. Sterilizing container for barbers. 1,786,594; Dec. 30.
Bickel, Henry F., Plainfield, N. J., assignor to The New York Air Brake Company. Pump-regulating valve. 1,786,474; Dec. 30.
Bickell, William A., Vancouver, British Columbia, Canada. Scow. 1,786,514; Dec. 30.
Bindschedler, Theodore S., and W. A. Wood, assignors to The Steel Penetrometer Company, Detroit, Mich. Alternating-current generator. 1,786,888; Dec. 30.
Bischof, Bernhard, Winterthur, assignor of one-half to C. Haccius, Cologny-Geneva, Switzerland. Air compressor. 1,786,595; Dec. 30.
Bissell Carpet Sweeper Company. (See Pullen, Fred W., assignor.)
Bissell, Richard E., Cleveland, Ohio, assignor to Thompson Products, Inc. Valve with removable ring-seating surface. 1,786,596; Dec. 30.
Bivins, Chalfant E., Brooklyn, N. Y. Ink. 1,787,233; Dec. 30.
Blass, Wilhelm, Hamburg, Germany. Transformation of a motor car with closed carriage body into a platform lorry. 1,786,693; Dec. 30.
Bledsoe, Carl F., assignor to Ogle Construction Company, Chicago, Ill. Material-handling plant. 1,786,734; Dec. 30.
Bliss, E. W., Company. (See Kruse, Peter, assignor.)
Blomstrom, Lowell C., assignor to Federal Mogul Corporation, Detroit, Mich. Mounting bearings on arbors in multiple. 1,786,557; Dec. 30.
Bochnak, Andy, Bobtown, Pa. Repeating rifle. 1,787,354; Dec. 30.
Boesel, Otto A., Ansonia, assignor to The H. A. Matthews Manufacturing Company, Seymour, Conn. Luggage lock. Des. 82,026; Dec. 30.
Bohrer, Raymond E. (See Payne, W. B., Bohrer, and Fuhlborn.)
Bohrer, Raymond E., W. B. Payne and C. G. Tiefel, deceased, by E. M. Tiefel, executrix, assignors to The Todd Company, Incorporated, Rochester, N. Y. Check writer. 1,787,234; Dec. 30.
Boileau, Arthur H., Cedar Rapids, Iowa, assignor, by mesne assignments, to Cherry-Burrell Corporation, Wilmington, Del. Pasteurizing apparatus. 1,786,819; Dec. 30.
Boosey, Edward W. N., Detroit, Mich. Floor drain. 1,786,558; Dec. 30.
Boosey, Edward W. N., Detroit, Mich. Drainage fitting. 1,786,597; Dec. 30.
Booth, Clement, assignor to Cincinnati Grinders Incorporated, Cincinnati, Ohio. Grinding machine. 1,787,337; Dec. 30.
Borden Company, The. (See McClatchie, John M., assignor.)
Borden, Stephen W. (See Roe, Ralph C., assignor.)
Born, Philipp, Bad Homburg, Germany, assignor, by mesne assignments, to the firm of Naamlooze Vennootschap Nederlandsche Gruyère-Blokmelk Fabriek, Zwolle, Netherlands. Production of solid milk and cream preparations. 1,786,559; Dec. 30.
Borton, George W., New Lisbon, N. J., assignor to Pennsylvania Crusher Company, New York, N. Y. Hammer crusher. 1,786,694; Dec. 30.
Borton, George W., New Lisbon, N. J., assignor to Pennsylvania Crusher Company, New York, N. Y. Hammer crusher. 1,786,695; Dec. 30.
Bosch, Robert, Aktiengesellschaft. (See Zeininger, Gustav A., assignor.)
Bowman, Frederick A., assignor to The Pusey & Jones Corporation, Wilmington, Del. Shake mechanism. 1,786,933; Dec. 30.
Box Blank Corporation. (See Andrews, Champe S., assignor.)
Boyden, Davis S., Allston, assignor to E. B. Badger & Sons Company, Boston, Mass. Expansion joint. 1,786,642; Dec. 30.
Braly, Norman B., Redwood City, Calif. Illuminated mirror. 1,786,420; Dec. 30.
Bramwell, Francis H., assignor to Imperial Chemical Industries Limited, London, England. Lining vessels for carrying out operations with liquids and the like. 1,787,101; Dec. 30.
Brandt, Henry E., St. Paul, assignor to The Dobbins Manufacturing Company, North St. Paul, Minn. Sprayer. 1,786,889; Dec. 30.
Braun, Carl A., Munich, Germany. Manufacturing cellulose and textile fibers from vegetable matter. 1,786,890; Dec. 30.
Brickman, Allen E., assignor to Crompton & Knowles Loom Works, Worcester, Mass. Harness sheave stand for looms. 1,786,696; Dec. 30.
Briggs, Burdett B., Chicago, Ill. Connecting rod. 1,786,934; Dec. 30.
Briggs and Stratton Corporation. (See Mack, Perry E., assignor.)
Brill, J. G., Company, The. (See Durning, Edward G., assignor.)
Bristol, Wm. H., Talking Picture Corporation. (See Thompson, Lincoln, assignor.)
Broer, William H., Yankton, S. Dak. Electrical connecter. 1,786,598; Dec. 30.
Brown, Charles A., Lorain, Ohio. Fluid controller. 1,786,894; Dec. 30.
Brown Company. (See Webber, Robert A., assignor.)

Brown, Derrick C. (See Lelean, W. A., and Brown.)
Brown, Henry P., and P. F. Truscinski, South St. Paul, Minn. Violin. 1,786,891; Dec. 30.
Brown Instrument Company, The. (See Van Orsdale, Allen A., assignor.)
Brown, Milton V., assignor of one-half to P. R. Barnes, Guthrie, Okla. Sign. 1,787,355; Dec. 30.
Brown, Theophilus, assignor to Deere & Company, Moline, Ill. Plow. 1,787,137; Dec. 30.
Brown, Vernon. (See Pengilly, J. H., and Brown.)
Brownell, James L., Kalamazoo, Mich. Flood light. 1,786,515; Dec. 30.
Bruesbaber, Martin W., River Forest, Ill., assignor to Goss Printing Press Company. Printing-press cylinder. 1,787,187; Dec. 30.
Bryan, Russell R., Pachuca, Hidalgo, Mex., assignor, by mesne assignments, to The Merrill Company, San Francisco, Calif. Recovering cyanides. 1,787,033; Dec. 30.
Bryce, James W., Bloomfield, N. J., assignor to International Time Recording Company of New York, Endicott, N. Y. Time recorder. 1,786,979; Dec. 30.
Bryson, Tandy A., assignor, by mesne assignments, to Tolhurst Machine Works, Inc., Troy, N. Y. Centrifugal drying machine. 1,786,475; Dec. 30.
Buckeye Jack Manufacturing Company, The. (See Clark, Harold W., assignor.)
Budd Wheel Company. (See Hughes, James W., assignor.)
Budd Wheel Company. (See Hunt, J. Harold, assignor.)
Budd Wheel Company. (See Smith, John W., assignor.)
Burlmann, Adolph W., Monut Vernon, N. Y. Treating textiles of cellulose fiber. 1,786,421; Dec. 30.
Builders' Patent Scaffolding Company. (See Kingston, Thomas H., assignor.)
Bullock, Edward S., Lansdowne, Pa. Beetle trap. 1,786,599; Dec. 30.
Bullock, Edward W., A. P. Schausell, A. W. Draeseke, C. T. Galloway, and M. H. Hill, assignors to Gleason Works, Rochester, N. Y. Machine for producing gears. 1,786,697; Dec. 30.
Burdick Corporation, The. (See Maxson, Rolland H., assignor.)
Burger, Augustus T., Delano, Calif. Rotary fluid compressor. 1,786,893; Dec. 30.
Burgess, Andrew O., Brooklyn, assignor to J. R. Wood & Sons, Inc., New York, N. Y. Ring. Des. 82,927; Dec. 30.
Burgess, Andrew O., Brooklyn, assignor to J. R. Wood & Sons, Inc., New York, N. Y. Ring. Des. 82,928; Dec. 30.
Burgess, C. F., Laboratories, Inc. (See Shoemaker, Milton J., assignor.)
Burgess, Galusha A., Long Beach, Calif. Electric switch. 1,786,935; Dec. 30.
Bürgin, Ernest, and W. Schmid, Rheinfelden, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Continuous production of fused caustic alkalies. 1,786,516; Dec. 30.
Burke, William E., Trona, Calif., assignor to American Potash & Chemical Corporation, New York, N. Y. Crystallization process. 1,787,356; Dec. 30.
Burkhardt, Conrad C. C. (See Glaenzer, H., and Burkhardt.)
Burns, Onslow R., Chicago, Ill. Toy vehicle frame. 1,787,034; Dec. 30.
Burnside, Harlow D. (See Burrows, R. J., and Burnside.)
Burrell, Edward P., assignor, by mesne assignments, to The Guardian Trust Company, Cleveland, Ohio. Apparatus for cutting materials. 1,786,698; Dec. 30.
Burrell, Edward P., assignor, by mesne assignments, to The Guardian Trust Company, Cleveland, Ohio. Apparatus for cutting materials. 1,786,699; Dec. 30.
Burrows, Robert J., Buchanan, and H. D. Burnside, Battle Creek, assignors to Clark Tructractor Company, Buchanan, Mich. Dumping truck. 1,786,560; Dec. 30.
Burton, Charles S., Oak Park, Ill. Vacuum-operated fuel-feeding apparatus. 1,786,700; Dec. 30.
Butler, Leland K., Manchester, N. H., assignor, by mesne assignments, to Excel Taping Machine Co., Lynn, Mass. Tape-applying apparatus. 1,787,138; Dec. 30.
Butlin, Hilton B., Lapeer, Mich. Wrench. 1,786,701; Dec. 30.
Button, George W., Corporation. (See Sierad, Albert E., assignor.)
Byrd, Britton E., assignor to Mill Devices Company, Inc., Gastonia, N. C. Knotter. 1,787,102; Dec. 30.
Byrnes, Clarence P., Sewickley, assignor to Window Glass Machine Company, Pittsburgh, Pa. Method and apparatus for the manufacture of sheet glass. 1,786,892; Dec. 30.
Byrum, James R., R. V. Russell, and A. Meeks, assignors to The American Rolling Mill Company, Middletown, Ohio. Roll-polishing device. 1,786,820; Dec. 30.
C-S Engineering Company. (See Schellens, Christopher A. and E. L., assignors.)
Cadolle, Marcel, Paris, France. Bust bodice. 1,786,895; Dec. 30.
Cady, Charles P., Canastota, N. Y. Internal-combustion engine. 1,786,423; Dec. 30.
Caillaud, René F. H., St. Maurice, assignor to Societe Anonyme Des Etablissements Luteraan, Paris, France. Knife-edge bearing. 1,786,424; Dec. 30.
Cain, John R., Washington, D. C., assignor to The Richardson Company, Lockland, Ohio. Forming iron foils. 1,787,139; Dec. 30.
Calcott, William S., and W. A. Douglass, Penns Grove, N. J., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. Retarding the deterioration of rubber. 1,787,064; Dec. 30.
Calcott, William S., and W. A. Douglass, Penns Grove, N. J., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. Retarding the deterioration of rubber. 1,787,065; Dec. 30.
Caldwell, William R., Keyser, W. Va. Fluid-power wheel. 1,787,103; Dec. 30.
California Canning Machinery Co. (See Wilcox, George, assignor.)
California Concrete Products Co. (See Sorensen, Claude S., assignor.)
Callsen, Albert, Nuremberg, Germany, assignor to Westinghouse Electric & Manufacturing Company. Induction meter. 1,786,821; Dec. 30.
Cameron, James A., assignor to Cameron Machine Company, Brooklyn, N. Y. Variable-brake-resistance device for winding machines. 1,787,104; Dec. 30.
Cameron Machine Company. (See Cameron, James A., assignor.)
Cammarata, Angelo. (See Capocci, Pompeo, assignor.)
Campbell, James, Detroit, Mich., assignor, by mesne assignments, to Chrysler Corporation. Shipping container or box for motor vehicles and the like. 1,787,305; Dec. 30.
Campbell, John B., Salem, N. J., assignor, by mesne assignments, to Carthage Mills Incorporated, Cincinnati, Ohio. Process and apparatus for the production of felt-base floor covering. 1,787,140; Dec. 30.
Cannon, Alfred C. (See Gerow, J. A., and Cannon.)
Cano, Vernon, Elizabeth, N. J., assignor, by mesne assignments, to Maryland Air Conditioning Corporation. Conditioning machine. 1,787,063; Dec. 30.
Cape Body Limited, The. (See Gowan, William, assignor.)
Capocci, Pompeo, Hollandale, assignor of one-half to A. Cammarata, Hollywood, Fla. Ornamental lamp shade. 1,787,357; Dec. 30.
Carborundum Company, The. (See Benner, Raymond C., assignor.)
Carle, Harold, Buffalo, N. Y., assignor, by mesne assignments, to Vortex Cup Company, Chicago, Ill. Blank feeding and gluing device. 1,786,476; Dec. 30.
Carle, Harold, Buffalo, N. Y., assignor, by mesne assignments, to Vortex Cup Company, Chicago, Ill. Blank-separating mechanism. 1,786,477; Dec. 30.
Carling, William T., Guildford, England. Change-gear mechanism. 1,786,980; Dec. 30.
Carmichael, Andrew J., New Haven, Conn., assignor to The Greist Manufacturing Company. Sewing-machine ruffler. 1,786,517; Dec. 30.
Carpenter, E. W., Manufacturing Company, The. (See Carpenter, Edward W., assignor.)
Carpenter, Edward W., Fairfield, assignor to The E. W. Carpenter Manufacturing Company, Bridgeport, Conn. Knife sharpener. Des. 82,929; Dec. 30.
Carpenter, Paul. (See Dellenbarger, Charles E., assignor.)
Carr, Maurice L., New York, N. Y. Metallic structure. 1,786,822; Dec. 30.
Carrington, Malcolm, and J. H. Klinck, Pittsburgh, Pa., assignors to Westinghouse Electric and Manufacturing Company. Desk. 1,786,823; Dec. 30.
Carroll, John, Wheeling, W. Va., assignor to The Reeves Manufacturing Company, Dover, Ohio. Galvanizing machine. 1,787,141; Dec. 30.
Carter, Leslie F., Leonia, and F. S. Hodgman, Glen Rock, N. J., assignors, by mesne assignments, to Sperry Gyroscope Company, Inc., Brooklyn, N. Y. Ship's telegraph and recorder system. 1,787,066; Dec. 30.
Carthage Mills Incorporated. (See Campbell, John B., assignor.)
Casto, Lloyd V., assignor to Oxford Varnish Corporation, Detroit, Mich. Simulating Natural Patterns. Re17,912; Dec. 30.
Caterpillar Tractor Co. (See Turnbull, William, assignor.)
Ceskoslovenska zbrojovka akciova spolecnost v Brne. (See Holek, Emanuel, assignor.)
Ceskoslovenska zbrojovka akciova spolecnost v Brne. (See Holek, Václav, assignor.)
Chambers, Bering, Quinlan Company. (See Cooper, Earl, assignor.)
Chambers, Karl D., Montgomery, Ala. Lighting motor vehicles. 1,786,518; Dec. 30.
Chandler, Robert J. A., London, England, assignor to American Machine & Foundry Company. Cut-off for cigarette machines. 1,786,519; Dec. 30.
Chantrell Lock Corp. (See Goldberg, Samuel P., assignor.)
Chapman Electric Neutralizer Company. (See Chapman, William H., assignor.)
Chapman, William H., assignor to Chapman Electric Neutralizer Company, Portland, Me. Neutralizing apparatus. 1,787,188; Dec. 30.
Cheatham Electric Switching Device Company. (See Rabun, George D., assignor.)
Chemische Fabrik auf Actien (vorm. E. Schering). (See Schoeller, W., and Jordan, assignors.)
Chemische Fabrik auf Actien (vorm. E. Schering). (See Starkenstein, Emil, assignor.)
Chemische Fabrik Pott & Co. (See Pospiech, Friedrich, assignor.)

Cherry-Burrell Corporation. (See Boileau, Arthur H., assignor.)
Chicago Pneumatic Tool Company. (See Stevens, Edward W., assignor.)
Chicago Pneumatic Tool Company. (See Wasson, Harry C., assignor.)
Chicago Pump Company. (See Weil, Maurice I., assignor.)
Chipman, Fred W., Framingham, Mass. Steam boiler. 1,786,981; Dec. 30.
Christie, Llewellyn M., assignor, by mesne assignments, to National Fireproofing Corporation, Pittsburgh, Pa. Conduit and making same. 1,786,425; Dec. 30.
Christman, John M., assignor to Packard Motor Car Company, Detroit, Mich. Crimping machine. 1,787,142; Dec. 30.
Chrysler Corporation. (See Campbell, James, assignor.)
Cincinnati Grinders Incorporated. (See Booth, Clement, assignor.)
Cincinnati Time Recorder Company, The. (See Streckfuss, Elmer G., assignor.)
Clapp, Albert L., Danvers, assignor to Bennett, Incorporated, Boston, Mass. Producing aqueous dispersions. 1,787,338; Dec. 30.
Clapp, Albert L., Danvers, assignor to Bennett, Incorporated, Boston, Mass. Apparatus for producing aqueous dispersions. 1,787,339; Dec. 30.
Clark, Cecil F., and M. V. Clark, Los Angeles, Calif. Snap fastener. 1,787,143; Dec. 30.
Clark, Harold W., assignor to The Buckeye Jack Manufacturing Company, Alliance, Ohio. Lifting jack. 1,786,643; Dec. 30.
Clark, J. R., Company. (See Kalgren, John E., assignor.)
Clark, Mabel V. (See Clark, Cecil F., and M. V.)
Clark Tructractor Company. (See Burrows, R. J., and Burnside, assignors.)
Clay, Walter F., Texarkana, Tex. Tool. 1,787,358; Dec. 30.
Clayton, William F., Huntsville, assignor of one-sixth to W. E. James, Cullman, one-sixth to N. E. James, Birmingham, and one-third to R. E. Smith, Huntsville, Ala. Automatic thin-place preventer. 1,787,359; Dec. 30.
Cleveland Folding Machine Company, The. (See Hitchcock, Reuben, assignor.)
Cleveland Folding Machine Company, The. (See Palmer, Ernest E., assignor.)
Cleveland Graphite Bronze Company, The. (See Klocke, William H., assignor.)
Cleveland Shock Absorber Company, The. (See Mallory, Bonnie L., assignor.)
Cleveland Welding Company, The. (See Mueller, Homer L., assignor.)
Coates, Frank, Cleadon, assignor to A. Reyrolle & Company Limited, Hebburn-on-Tyne, England. Electric coupling. 1,786,600; Dec. 30.
Coburn, James M., Kansas City, Mo., assignor to Plane-Speaker Corporation, New York, N. Y. Aeroplane-phonograph reproducer. 1,786,982; Dec. 30.
Cochran, Paul B., Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company. Drying varnish films. 1,786,824; Dec. 30.
Cole, Clarence W., Los Angeles, Calif. Display light for show cases. 1,786,601; Dec. 30.
Colgan, James F., Providence, R. I., assignor to Crompton & Knowles Loom Works, Worcester, Mass. Shuttle-box construction for looms. 1,786,702; Dec. 30.
Colgan, James F., Providence, R. I., assignor to Crompton & Knowles Loom Works, Worcester, Mass. Lay and shuttle box for looms. 1,786,703; Dec. 30.
Collenburg, Edward, Corona, N. Y. Device for soaping flowing water. 1,786,561; Dec. 30.
Collier, Charles S., et al., executors. (See Collier, Guy B.)
Collier, Elvira B., et al., executors. (See Collier, Guy B.)
Collier, Guy B., deceased, Kinderhook, N. Y.; C. S. Collier, Chevy Chase, Md.; and E. B. Collier, New York, N. Y., executors of said G. B. Collier. Time-switch apparatus for gas burners. 1,787,422; Dec. 30.
Collins, Raymond R., Newton, Mass. Condenser. 1,787,144; Dec. 30.
Colonial Iron Works Company, The. (See Nagel, Henry W., assignor.)
Combustion Engineering Corporation. (See Bell, John E., assignor.)
Combustion Utilities Corporation. (See Doherty, Henry L., assignor.)
Comer, Floyd E., Bristol, Ind. Pipe coupling. 1,786,825; Dec. 30.
Condit Electrical Manufacturing Corporation. (See O'Keeffe, George W., assignor.)
Condit Electrical Manufacturing Corporation. (See Wood, Joseph D., assignor.)
Conger, Clarence G., Syracuse, N. Y. Pocketbook. 1,786,896; Dec. 30.
Connant, Leon B., Cambridge, Mass., assignor, by mesne assignments, to Standard Patent Process Corporation, Vulcanizing rubber to leather. 1,787,145; Dec. 30.
Connell, Martin F., Holliston, Mass. Attachment for violins. 1,786,478; Dec. 30.
Conover, Richard, assignor to The Crosley Radio Corporation, Cincinnati, Ohio. Loud-speaker motor. 1,786,479; Dec. 30.
Constabel, Arthur A., Norristown, assignor to The Bailey Banks & Biddle Company, Philadelphia, Pa. Ring. Des. 82,930; Dec. 30.
Container Corporation of America. (See Walter, Harrison B., assignor.)
Continental Can Company. (See Renshaw, Joseph H., assignor.)
Continental-Diamond Fibre Company. (See Taylor, J. M., Jacobs, and Titus, assignors.)
Continental Optical Frame Company. (See Grom, Henry W., assignor.)
Cook, Horace F. (See Robinson, J. T., and Cook.)
Cooper, Earl, assignor to Chambers, Bering, Quinlan Company, Decatur, Ill. Bushing. 1,786,826; Dec. 30.
Cooper, William L., and L. D. Fortier, Kankakee, Ill., assignors to Sears, Roebuck and Co., Chicago, Ill. Liquid-fuel stove. 1,787,189; Dec. 30.
Copeland Products Inc. (See Muffly, Glenn, assignor.)
Copeman Laboratories Company. (See Copeman, Lloyd G., assignor.)
Copeman, Lloyd G., assignor to Copeman Laboratories Company, Flint, Mich. Method and apparatus for positioning and sealing ice-cream cans in ice-cream cabinets. 1,786,827; Dec. 30.
Copony, Alfred, Mount Clemens, assignor to Copony Auto Loading Company, Detroit, Mich. Decking device for freight cars. 1,786,735; Dec. 30.
Copony, Alfred, Mount Clemens, assignor to Copony Auto Loading Company, Detroit, Mich. Decking device for freight cars. 1,786,736; Dec. 30.
Copony Auto Loading Company. (See Copony, Alfred, assignor.)
Costellow, Earle H. (See Dempsey, E. J., and Costellow.)
Courtney, R. A. (See Laird, James A., assignor.)
Cowherd, Frank F., Chicago, Ill. Internal-combustion-engine-cleaning device. 1,787,360; Dec. 30.
Cox, Ernest H., Duncan, Okla. Oil-well-testing device. 1,786,897; Dec. 30.
Craig, George, Los Angeles, Calif. Temperature regulator. 1,787,146; Dec. 30.
Craig, William E., assignor to John A. Roebling's Sons Company, Trenton, N. J. Tapered wire rope and making the same. 1,786,936; Dec. 30.
Craig, William P., Shelby, N. C. Thread guide for shuttles. 1,786,802; Dec. 30.
Crane Co. (See Dopp, Carl A., assignor.)
Crane, Joseph B., New York, N. Y., and L. J. Marshall, Westwood, N. J., assignors to International Combustion Engineering Corporation, New York, N. Y. High-pressure-boiler installation. 1,786,828; Dec. 30.
Crew, Charles R., Edgewood, Md., assignor to Lloyd C. Adley, Llanerch, Pa. Motion toy. 1,786,737; Dec. 30.
Crocker, Thomas F., Chicago, Ill., assignor to Reserve Holding Company, Kansas City, Mo. Toll-service trunking system. 1,786,480; Dec. 30.
Crompton & Knowles Loom Works. (See Bergstrom, Carl P., assignor.)
Crompton & Knowles Loom Works. (See Brickman, Allen E., assignor.)
Crompton & Knowles Loom Works. (See Colgan, James F., assignor.)
Crompton & Knowles Loom Works. (See Doherty, Philip D., assignor.)
Crompton & Knowles Loom Works. (See Gargolinski, Anthony D., assignor.)
Crompton & Knowles Loom Works. (See Gordon, Albert A., assignor.)
Crompton & Knowles Loom Works. (See Holmes, Elbridge R., assignor.)
Crompton & Knowles Loom Works. (See Jennings, Victor H., assignor.)
Crompton & Knowles Loom Works. (See Lyle, John, assignor.)
Crompton & Knowles Loom Works. (See Morrell, Alfred F., assignor.)
Crompton & Knowles Loom Works. (See Payne, Oscar V., assignor.)
Crompton & Knowles Loom Works. (See Regan, John, assignor.)
Crompton & Knowles Loom Works. (See Tinsley, John F., assignor.)
Crompton & Knowles Loom Works. (See Turner, Richard G., assignor.)
Crompton & Knowles Loom Works. (See Unwin, Kenneth J., assignor.)
Crompton & Knowles Loom Works. (See Wakefield, Walter H., assignor.)
Crompton & Knowles Loom Works. (See Wattie, William M., assignor.)
Crosley Radio Corporation, The. (See Conover, Richard, assignor.)
Culin, Alice, New York, N. Y. Statuette or similar article. Des. 82,931; Dec. 30.
Curioni, Aldo, Larchmont, N. Y. Machine for stitching patterns on fabric bases. 1,786,481; Dec. 30.
Curtis, Thomas S., assignor to Vitrefrax Corporation, Huntington Park, Calif. Recrystallized refractory composition. 1,786,482; Dec. 30.
Cutler-Hammer, Inc. (See Meuer, George J., assignor.)
Cutter-Crossette Company. (See Wolf, Harry, assignor.)
Cyclone Manufacturing Company, The. (See Speicher, Daniel E., assignor.)
D. & S. Jewelry Co. (See Dansereau, Charles E., assignor.)
Daley, James C., and E. G. Goddard, assignors to Jefferson Electric Manufacturing Company, Chicago, Ill. Transformer. 1,786,422; Dec. 30.
Daly Manufacturing Company, The. (See Snow, Arthur E., assignor.)
Damon, Francisque. (See Mouthe, Auguste, assignor.)

Dansereau, Charles E., Warwick Downs, assignor to D. & S. Jewelry Co., Providence, R. I. Chain. 1,787,405; Dec. 30.
Danver, Andrew C. (See Kirk, G., and Danver.)
Darco Corporation. (See Bacon, Gilbert C., assignor.)
Darling, Louis H., Vallejo, Calif. Gun cleaner. 1,786,520; Dec. 30.
Daum, Harry, Pittsburgh, Pa. Furnace construction. 1,786,829; Dec. 30.
Davis, Clarence R., assignor to Davis Tool & Engineering Company, Detroit, Mich. Shield for automobile radiators. 1,787,035; Dec. 30.
Davis, David R., Los Angeles, Calif. Screw propeller. 1,786,644; Dec. 30.
Davis, David R., Didsbury, England, assignor to Westinghouse Electric & Manufacturing Company. Sectional electrical bus bar. 1,786,830; Dec. 30.
Davis, John W. (See De Baufre, W. L., and Davis.)
Davis, Kenneth, St. Benedict, Pa., assignor, by mesne assignments, to Peale-Davis Company, Wilmington, Del. Process and mechanism for dividing inter-mixed materials. 1,786,738; Dec. 30.
Davis, Kenneth, St. Benedict, Pa., assignor, by mesne assignment, to Peale-Davis Company, Wilmington, Del. Mechanism and process for separating intermixed divided materials. 1,787,340.; Dec. 30.
Davis, Kenneth, Ebensburg, Pa., assignor, by mesne assignments, to Peale-Davis Company, Wilmington, Del. Method and mechanism for separating divided materials. 1,786,739; Dec. 30.
Davis, Kenneth, Ebensburg, Pa., assignor, by mesne assignments, to Peale-Davis Company, Wilmington, Del. Method and mechanism for separating inter-mixed materials. 1,786,740; Dec. 30.
Davis Tool & Engineering Company. (See Davis, Clarence R., assignor.)
Davis, Windsor. (See Kauffman, L. A., and Davis.)
Dawson, Albert S., Glenville, Conn., assignor to Read Machinery Company, York, Pa. Whisk whip. 1,786,603; Dec. 30.
Day, Howard D., assignor to Roterkleen Manufacturing Company, Providence, R. I. Device for washing golf balls. 1,787,306; Dec. 30.
De Bataafsche Petroleum Maatschappij. (See Meijer, Reinier, assignor.)
De Baufre, William L., Lincoln, Nebr., and J. W. Davis, Washington, D. C. Liquefaction. 1,786,898; Dec. 30.
Deca-Disc Phonograph Company. (See Moore, William R., jr., assignor.)
Deere & Company. (See Brown, Theophilus, assignor.)
Deere & Company. (See Neighbour, L. B., and Thomann, assignors.)
Deere & Company. (See Strandlund, Carl G., assignor.)
De Ferranti, Sebastian Z., assignor to Ferranti, Limited, Hollinwood, England. Electric transformer. 1,786,899; Dec. 30.
Deibele, Stanaeslaus, Woodburn, Oreg. Insect trap. 1,786,704; Dec. 30.
Delany, Edward L., Brooklyn, N. Y. Apparatus for making composition-rubber float valves. 1,786,483; Dec. 30.
Delany, Edward L., Brooklyn, N. Y. Handle. 1,787,105; Dec. 30.
De Laval Separator Company, The. (See Hapgood, Cyrus H., assignor.)
Delco Light Company. (See Warner, Clarence, assignor.)
Dallenbarger, Charles E., Chicago, assignor to P. Carpenter, Glenview, Ill. Modified gum and its manufacture. 1,786,831; Dec. 30.
Dempsey, Edmund J., and E. H. Costellow, assignors to Phillips-Baker Rubber Company, Providence, R. I. Manufacture of footwear. 1,786,984; Dec. 30.
Dempsey, Edmund J., and E. H. Costellow, assignors to Phillips-Baker Rubber Company, Providence, R. I. Manufacture of footwear. 1,78_,984; Dec. 30.
Dermody, Michael, New York, N. Y. Latch. 1,786,521; Dec. 30.
Derwish, Emen, Fertile, Minn. Combination cigarette and match box. 1,787,361; Dec. 30.
Detroit Vapor Stove Company, The. (See Sherman, A. G., and Meadows, assignors.)
Dettwyler, William. (See Gubelmann, I., Goodrich, and Dettwyler.)
Detwiler, William F., Tarentum, Pa. Furnace. 1,787,307; Dec. 30.
Diamond Electrical Manufacturing Company, Ltd. (See Pengilly, J. H., and Brown, assignors.)
Diamond, James K., Grand Rapids, Mich. Bag closure. 1,786,426; Dec. 30.
Dibner, Abraham, Peekskill, N. Y. Choke coil. 1,786,604; Dec. 30.
Dickman, Frank G., Chicago, Ill. Form support. 1,786,522; Dec. 30.
Dietz, William C. F., Cincinnati, Ohio. Feeding table for clothes wringers. 1,786,705; Dec. 30.
Dilts Machine Works, Inc., et al. (See Johnson, Frank A., assignor.)
Dippman, Fred R. (See Moore, E. D., and Dippman.)
Dippman, Fred R., and E. D. Moore, assignors to The Ohio Brass Company, Mansfield, Ohio. Current-collector support. 1,786,719; Dec. 30.
Dobbins Manufacturing Company, The. (See Brandt, Henry E., assignor.)
Dobeckmun Company, The. (See Becker, L. A., and Munson, assignors.)
Dodge, Merton L., Seattle, Wash. Doorcheck. 1,787,147; Dec. 30.
Doering, George J., Evanston, Ill. Trip hook. 1,786,523; Dec. 30.
Doherty, Henry L., New York, N. Y. House-heating system. 1,786,900; Dec. 30.
Doherty, Henry L., assignor to Combustion Utilities Corporation, New York, N. Y. Fluid-fuel heating system. 1,786,901; Dec. 30.
Doherty, Philip D., assignor to Crompton & Knowles Loom Works, Worcester, Mass. Resetting mechanism for weft-replenishing looms. 1,786,706; Dec. 30.
Donaldson, Frank A., Minneapolis, Minn. Air cleaner and coupling. 1,787,235; Dec. 30.
Donley, Harold B., A. J. Frame, and J. G. Gilmore, assignors to Franklin Oil Heating, Incorporated, Columbus, Ohio. Oil-burning apparatus. 1,786,832; Dec. 30.
Dopp, Carl A., assignor to Crane Co., Chicago, Ill. Valve. 1,787,236; Dec. 30.
Doughty, James P., jr., Augusta, Ga. Smoker's article. 1,786,902; Dec. 30.
Douglass, William A. (See Calcott, W. S., and Douglass.)
Dover, George W., assignor to Dovercraft Company, Inc., Providence, R. I. Curtain-rod structure. 1,786,645; Dec. 30.
Dovercraft Company. (See Dover, George W., assignor.)
Doyle, William F. (See Graham, W. A., and Doyle.)
Draeseke, Alfred W. (See Bullock, E. W., Schausell, Draeseke, Galloway and Hill.)
Duda, Oswald, assignor to Reed Roller Bit Company, Houston, Tex. Reamer. 1,786,484; Dec. 30.
Dull, Raymond W., assignor to Link-Belt Company, Chicago, Ill. Apparatus for chain manufacture. 1,786,707; Dec. 30.
Duncan, William M., Alton, Ill. Chain or traveling grate stoker. 1,786,646; Dec. 30.
Dunning, Orville M., Stamford, Conn., assignor to Acoustic Products Company. Magnetic pickup. 1,786,895; Dec. 30.
Dunning, William E., assignor to The McCaskey Register Company, Alliance, Ohio. Filing appliance. 1,787,237; Dec. 30.
Dunzweiler, Carl J., assignor to Willard Storage Battery Company, Cleveland, Ohio. Storage battery. 1,786,742; Dec. 30.
Du Pont, E. I., de Nemours & Company. (See Calcott, W. S., and Douglass, assignors.)
Du Pont, E. I., de Nemours & Company. (See Dykstra, H. B., and Sly, assignors.)
Dupuis, Charles, Ladysmith, Wis. White-water system for reclaiming white water or any fiber. 1,787,341; Dec. 30.
Durbin, Vernon, Newton, assignor to The Holtzer-Cabot Electric Company, Roxbury, Mass. Fire-alarm system. 1,786,524; Dec. 30.
Durning, Edward G., assignor to The J. G. Brill Company, Philadelphia, Pa. Axle-box lid. 1,786,605; Dec. 30.
Dykstra, Harry B., and C. Sly, assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. Preparing vinyl esters of organic acids. 1,786,647; Dec. 30.
Dytch, Harry, Daytona Beach, Fla. Musical wind instrument. 1,786,833; Dec. 30.
Eagle Knitting Mills, Inc. (See Goldberg, Morris B., assignor.)
Earle, Francis. (See Spilsbury, Hugh G., assignor.)
Eastern Laboratories, Inc. (See Jancke, B. F., and Kelley, assignors.)
Eaton Axle & Spring Company, The. (See Reid, James S., assignor.)
Eaton Axle & Spring Company, The. (See Wamelink, Eugene C., assignor.)
Ebeling, Charles W., assignor to General Talking Pictures Corporation, New York, N. Y. Combined motion-picture projector and photographic sound-reproducing machine. 1,786,903; Dec. 30.
Economic Machinery Company. (See Ekvall, Arvid J., assignor.)
Ecremeuses Melotte, Societe Anonyme. (See Henrard, Fernand, assignor.)
Edgerton, Israel V., assignor to Palace Poultry Car Company, Chicago, Ill. Poultry car. 1,786,427; Dec. 30.
Edson, William R., New York, N. Y., assignor, by mesne assignments, to The Rubber Shock Insulator Corporation, Wilmington, Del. Mounting for electric conductors. 1,786,937; Dec. 30.
Edwards, James H., Passaic, F. T. Llewellyn, Montclair, N. J., and R. A. Marble, Ben Avon, Pa. Series and groups of I-beams. 1,786,938; Dec. 30.
Ehrhart, William, Lancaster, Pa. Baking apparatus. 1,786,485; Dec. 30.
Ehrlich, Jacob, Belleville, assignor to Verona Chemical Co., Newark, N. J. Production of propenyl derivatives of aromatic hydrocarbons. 1,787,036; Dec. 30.
Einstein, Wladimir J. (See Baranowski, Kazimierz, assignor.)
Eisler, Henry G., Wilmette, Ill. Floor construction. 1,787,067; Dec. 30.
Ekvall, Arvid P., assignor to Economic Machinery Company, Worcester, Mass. Bottle-straightening device. 1,786,939; Dec. 30.
Ekvall, Arvid P., assignor to Economic Machinery Company, Worcester, Mass. Label wiper. 1,786,940; Dec. 30.
Electric Service Supplies Company. (See Mageoch, Harry Y., assignor.)

Electrical Engineers Equipment Co. (See Steerup, Godfrey, assignor.)
Electro Automatic Drainage Company, The. (See Van Keuren, Herbert, assignor.)
Elevator Supplies Company. (See Shonnard, Harold W., assignor.)
Eller, Wilhelm, and T. Maillung, Dessau in Anhalt, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Desulphurizing articles consisting of regenerated cellulose. 1,786,941; Dec. 30.
Ellis, John R., Houston, Tex. Telephone attachment. 1,786,986; Dec. 30.
Elsner, Heinrich, Dresden, Germany. Riveting machine. 1,787,190; Dec. 30.
Endorf, Charles, Chicago, Ill. Heat-insulating device for cooking utensils. 1,786,562; Dec. 30.
Ensign Carburetor Company. (See Ensign, Orville H., assignor.)
Ensign, Orville H., Pasadena, Calif., assignor to Ensign Carburetor Company, Los Angeles, Calif. Carburetor. 1,787,148; Dec. 30.
Eppelsheimer, Daniel, assignor to The American Rolling Mill Company, Middletown, Ohio. Rolling metal. 1,786,834; Dec. 30.
Ericksin, Oscar, Alexandria, Minn. Line follower. 1,787,362; Dec. 30.
Estate Stove Company, The. (See Kahn, Bertrand B., assignor.)
Eureka Tool Company, The. (See Althausen, Robert, assignor.)
Evans, George E., near Waco, Tex. Cotton-boll extracting and cleaning device. 1,786,904; Dec. 30.
Evich, Jerie, Santa Barbara, Calif. Exhaust whistle. 1,786,905; Dec. 30.
Evinrude, Ole, Milwaukee, Wis., assignor, by mesne assignments, to Outboard Motors Corporation. Water-cooling system for outboard motors. 1,786,835; Dec. 30.
Excel Taping Machine Co. (See Butler, Leland K., assignor.)
Fahnestock, William B., Wyoming, Ohio. Filing desk. 1,787,363; Dec. 30.
Farmer, Patterson, Detroit, Mich. Refrigerating apparatus. 1,786,836; Dec. 30.
Farnham, Merton W., Batavia, N. Y., assignor to United States Gypsum Company, Chicago, Ill. Molding machine. 1,786,837; Dec. 30.
Federal Mogul Corporation. (See Blomstrom, Lowell C., assignor.)
Fenton, Paul E., Thomaston, assignor to Scovill Manufacturing Company, Waterbury, Conn. Mounting rubber containers in boxes. 1,787,364; Dec. 30.
Ferranti, Limited. (See de Ferranti, Sebastian Z., assignor.)
Ferris, William D., assignor to Frants Manufacturing Co., Sterling, Ill. Garage-door construction. 1,787,238; Dec. 30.
Feybusch, Martin, New York, N. Y., assignor to New Jersey Machine Corporation, Hoboken, N. J. Box. 1,786,143; Dec. 30.
Filer & Stowell Company, The. (See Pelton, George M., assignor.)
Filter Fabrics, Inc. (See Manning, Fred W., assignor.)
Firestone Steel Products Company, The. (See Swain, Joseph G., assignor.)
Firestone Tire & Rubber Company, The. (See Putt, Edward D., assignor.)
Firestone Tire and Rubber Company, The. (See Stevens, Horace D., assignor.)
Firestone Tire and Rubber Co., The. (See Stevens, William C., assignor.)
Fisher, Charles, San Francisco, Calif. Parachute. 1,786,838; Dec. 30.
Fisher, Harry L., Leonia, N. J., assignor to The B. F. Goodrich Company, New York, N. Y. Cellular composition and making same. 1,786,563; Dec. 30.
Fisher, Thomas, Minatare, Nebr. Combined tail light and license plate. 1,786,564; Dec. 30.
Fisk Rubber Company, The. (See Lehman, Paul W. assignor.)
Fisk Rubber Company, The. (See Maynard, Charles E., assignor.)
Fisk, William T., assignor to Master Woodworker Mfg. Co., Detroit, Mich. Woodworking machine. 1,787,191; Dec. 30.
Fiske, Augustus H., assignor to Rumford Chemical Works, Providence, R. I. Purifying phosphoric acid and the like. 1,787,192; Dec. 30.
Fiske, Augustus H., Warren, assignor to Rumford Chemical Works, Providence, R. I. Leavening preparation. 1,787,193; Dec. 30.
Flanders, Warren B., Philadelphia, Pa., assignor to Westinghouse Electric & Manufacturing Company. Governor. 1,786,987; Dec. 30.
Fleischmann, Hanns, Ludwigshafen-on-the-Rhine, and O. Jordan, Mannheim, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the Main, Germany. Production of intaglio printing colors. 1,787,239; Dec. 30.
Fletcher, Lindsey C., Moores, Pa., assignor to Westinghouse Electric & Manufacturing Company. Elastic fluid turbine. 1,786,942; Dec. 30.
Flickinger, Emory E. (See Arnold, R. V., Flickinger, and Wantz.)
Flowers, Henry F., Findlay, Ohio. Raising mechanism. 1,787,342; Dec. 30.
Floyd, Earl T., near Temple, assignor to The Nolde and Horst Company, Reading, Pa. Striped stocking. 1,787,365; Dec. 30.
Flynn, John P., Medford, Mass. Line-up gauge for proving type forms. 1,787,037; Dec. 30.
Ford, Ira D., Roseland, Ontario, Canada, assignor to Universal Button Fastening & Button Company, Detroit, Mich. Button. 1,786,839; Dec. 30.
Ford, Ira D., Roseland, Ontario, Canada, assignor to Universal Button Fastening & Button Company, Detroit, Mich. Button. 1,786,840; Dec. 30.
Foresman, Clarance A., deceased, Cicero, Ill., D. A. Lund, administratrix. Finger-nail file. Des. 82932; Dec. 30.
Fortier, Leon D. (See Cooper, W. L., and Fortier.)
Foster Machine Company. (See McKean, John O., assignor.)
Foster Wheeler Corporation. (See Lonsdale, William, assignor.)
Fountain, Lee C., Kingsburg, assignor of one-third to F. E. Weaver, Hyman, S. C. Plow point. 1,787,366; Dec. 30.
Frame, Augustus J. (See Donley, H. B., Frame, and Gilmore.)
Frank, Alfred, Stuttgart, Germany. Iron frame wall for buildings and the like. 1,787,367; Dec. 30.
Franklin Oil Heating, Incorporated. (See Donley, H. B., Frame, and Gilmore, assignors.)
Frantz Manufacturing Co. (See Ferris, William D., assignor.)
Fraser, James, Edge Moor, assignor to Speakman Company, Wilmington, Del. Shower head. 1,786,988; Dec. 30.
Frederickson, Clayton E., Moline, Ill., assignor, by mesne assignments, to Thompson Motor Corporation, Muscatine, Iowa. Frame and spring suspension for motor vehicles. 1,786,906; Dec. 30.
Freeman, Albert E., East Orange, N. J., assignor to American Telephone and Telegraph Company. Thrust bearing. 1,786,565; Dec. 30.
Freeth, Richard T., Hempstead, N. Y. Stationary hose reel. 1,787,194; Dec. 30.
French, Harold R. (See Perry, Fred D., assignor.)
Fried, Krupp Aktiengesellschaft. (See Strauss, Benno, assignor.)
Friede, Samuel M., and F. J. McGuire, Sarasota, Fla. Match machine. 1,786,486; Dec. 30.
Fuerst, Edwin W., assignor to Owens-Illinois Glass Company, Toledo, Ohio. Jar. Des. 82,933; Dec. 30.
Fuhlborn, William. (See Payne, W. B., Bohrer, and Fuhlborn.)
Furlong, Roland A., assignor to The Yawman & Erbe Manufacturing Company, Rochester, N. Y. Holder for display strips. 1,787,308; Dec. 30.
Gabeler, William H. (See Miller, E. B., and Gabeler.)
Gaisman, Henry J., New York, N. Y., assignor, by mesne assignments, to Gillette Safety Razor Company, Boston, Mass. Safety razor. 1,787,240; Dec. 30.
Gaisman, Henry J., New York, N. Y., assignor, by mesne assignments, to Gillette Safety Razor Company, Boston, Mass. Safety razor. 1,787,241; Dec. 30.
Galloway, Clarence T. (See Bullock, E. W., Schausell, Draesecke, Galloway, and Hill.)
Galloway Engineering Company. (See Greening, H. B., and Galloway, assignors.)
Galloway, James W. (See Greening, H. B., and Galloway.)
Gammell, Ove L., assignor to Smith & Crosby, Attleboro, Mass. Bracelet construction. 1,786,943; Dec. 30.
Gardner, Henry A., and C. A. Knauss, assignors to Henry A. Gardner Laboratory, Inc., Washington, D. C. Acetylation of nitrocellulose. 1,786,989; Dec. 30.
Gardner, Henry A., Laboratory, Inc. (See Gardner, H. A., and Knauss, assignors.)
Garey, Edward M., Brooklyn, N. Y. Illuminating device. 1,786,744; Dec. 30.
Gargolinski, Anthony D., assignor to Crompton & Knowles Loom Works, Worcester, Mass. Clutch. 1,786,708; Dec. 30.
Gargolinski, Anthony D., assignor to Crompton & Knowles Loom Works, Worcester, Mass. Picker-stick retriever for looms. 1,786,709; Dec. 30.
Gargolinski, Anthony D., assignor to Crompton & Knowles Loom Works, Worcester, Mass. Harness-sheave stand for looms. 1,786,710; Dec. 30.
Gas Machinery Company, The. (See Hayes, Fred B., assignor.)
Gebler, Karl, Villingen, assignor to Kienzle Uhrenfabriken Aktiengesellschaft, Schwenningen A. N., Germany. Fare indicator. 1,786,745; Dec. 30.
Geisler, Charles R., Pittsburgh, Pa. Concrete structure and making same. 1,787,149; Dec. 30.
Geldhof, Peter E., assignor to Syracuse Washing Machine Corporation, Syracuse, N. Y. Centrifugal clothes drying and rinsing apparatus. 1,787,242; Dec. 30.
Geldhof, Peter E., assignor to Syracuse Washing Machine Corporation, Syracuse, N. Y. Mechanical clothes washer and drier. 1,787,243; Dec. 30.
Geldhof, Peter E., assignor to Syracuse Washing Machine Corporation, Syracuse, N. Y. Mechanical clothes washer. 1,787,244; Dec. 30.
General Electric Company. (See Alexanderson, Ernst F. W., assignor.)

General Electric Company. (See Barbagelata, Angelo, assignor.)
General Electric Company. (See Hoxie, Charles A., assignor.)
General Electric Company. (See Kennedy, Luke F., assignor.)
General Electric Company. (See Lum, Walter O., assignor.)
General Electric Company. (See Thumim, Carl, assignor.)
General Electric Company. (See Townsend, George R., assignor.)
General Electric Company. (See Traver, Oliver C., assignor.)
General Motors Corporation. (See Midgley, Thomas, jr., assignor.)
General Motors Corporation. (See Wells, Reginald E., assignor.)
General Motors Research Corporation. (See Midgley, T., jr., and Hochwalt, assignors.)
General Motors Research Corporation. (See Short, C. R., and Lee, assignors.)
General Talking Pictures Corporation. (See Ebeling, Charles W., assignor.)
Geoffray, Henry G., Cleveland, Ohio. Wall structure and attachment. 1,787,038; Dec. 30.
George, Richard W., Kelso, Tenn. Mower attachment. 1,786,487; Dec. 30.
Geppert, Clark H., Des Moines, Iowa. Repairing apparel shoes. 1,786,907; Dec. 30.
Gerow, John A., and A. C. Cannon, El Segundo, Calif. Flag-pole holder. 1,787,150; Dec. 30.
Gibb, William H., Bay City, Mich., assignor, by mesne assignments, to Thomson-Gibb Electric Welding Company. Seam-welding machine. 1,787,039; Dec. 30.
Gibbs, Jesse B., Sharon, Pa., assignor to Westinghouse Electric & Manufacturing Company. Terminal block for current transformers. 1,786,746; Dec. 30.
Gilbert, Walton, Pasadena, Calif. Air-speed indicator. 1,786,841; Dec. 30.
Gilbert, William L., Clock Company, The. (See Thompson, Norman F., jr., assignor.)
Gillet, Alexis F., assignor to Jubilee Manufacturing Company, Omaha, Nebr. Blade-attaching means for windshield wipers. 1,787,068; Dec. 30.
Gillette Safety Razor Company. (See Gaisman, Henry J., assignor.)
Gillindre, Edgar A., Philadelphia, Pa. Lighting fixture. 1,786,748; Dec. 30.
Gilmore, Jackson G. (See Donley, H. B., Frame, and Gilmore.)
Gilpin, Garth G., Riverside, assignor to Union Metal Products Company, Chicago, Ill. Door for railway hopper cars. 1,786,747; Dec. 30.
Glaenzer, Harry, and C. C. C. Burkhardt, Philadelphia, Pa. Self-propelled railway vehicle. 1,787,368; Dec. 30.
Glazener, Carolyn M., Hendersonville, N. C. Cord hanger. 1,787,106; Dec. 30.
Gleason Works. (See Bullock, E. W., Schausell, Draesecke, Galloway and Hill, assignors.)
Gleason Works. (See White, Herbert J., assignor.)
Globe-Wernicke Company, The. (See Smiley, Samuel, jr., assignor.)
Goddard, Edwin G. (See Daley, J. C., and Goddard.)
Goldbeck, Eugene O., San Antonio, Tex. Photographic apparatus. 1,787,309; Dec. 30.
Goldberg, Maximilian M., assignor to The National Cash Register Company, Dayton, Ohio. Computing machine. 1,786,525; Dec. 30.
Goldberg, Morris B., assignor to Eagle Knitting Mills, Inc., Philadelphia, Pa. Knitted fabric. 1,787,264; Dec. 30.
Goldberg, Samuel P., Brooklyn, N. Y., assignor to Chantrell Lock Corp. Lock. 1,786,648; Dec. 30.
Gonzalez, Augusto C., Reno, Nev. Airplane landing device. 1,786,649; Dec. 30.
Goodrich, B. F. Company, The. (See Fisher, Harry L., assignor.)
Goodrich, Robert J. (See Gubelmann, I., Goodrich, and Dettwyler.)
Goodwin, John M., Port Arthur, Tex., assignor to The Texas Company, New York, N. Y. Treating hydrocarbon oil. 1,786,650; Dec. 30.
Gopold, Hubert, Zubak, Czechoslovakia. Circular-saw machine. 1,787,195; Dec. 30.
Gordon, Albert A., assignor to Crompton & Knowles Loom Works, Worcester, Mass. Color-slide control for multicolor magazines. 1,786,711; Dec. 30.
Gordon, Albert A., assignor to Crompton & Knowles Loom Works, Worcester, Mass. Loom dobby. 1,786,712; Dec. 30.
Gordon, Edward L., Pittsburgh, Pa. Frozen confection. 1,786,606; Dec. 30.
Goss Printing Press Company. (See Brueshaber, Martin W., assignor.)
Goudard, Maurice, assignor to "Societe Anonyme Solex", Neuilly, France. Temperature-control device. 1,787,310; Dec. 30.
Gould Coupler Company. (See Sauvage, William H., assignor.)
Gowan, William, Folkestone, assignor to The Cape Body Limited, London, England. Motor-vehicle body. 1,786,990; Dec. 30.
Graham, William A., Chicago, Ill., and W. F. Doyle, Washington, D. C. Combined chair, table, and bed. 1,787,245; Dec. 30.

Grahame, Dallas F., Montreal, Quebec, Canada, assignor to Sanford-Riley Stoker Corporation, Worcester, Mass. Intermittent driving mechanism. 1,787,265; Dec. 30.
Granat, Joseph, San Francisco, Calif. Finger ring. Des. 82,934; Dec. 30.
Granular Iron Company. (See Hornsey, John W., assignor.)
Greenawalt, John E., New York, N. Y. Manufacturing artificial aggregate for mortars and concretes. 1,786,713; Dec. 30.
Greenawalt, John E., New York, N. Y. Sintering clay. 1,786,714; Dec. 30.
Greening, Herald B., Hamilton, Ontario, Canada, and J. W. Galloway, Detroit, Mich., assignors to Galloway Engineering Company, Limited, Hamilton, Ontario, Canada. Variable-speed transmission. 1,787,246; Dec. 30.
Greening, Herald B., Hamilton, Ontario, Canada, and J. W. Galloway, Detroit, Mich., assignors to Galloway Engineering Company, Limited, Hamilton, Ontario, Canada. Variable-speed transmission. 1,787,267; Dec. 30.
Greim, Walther, Berlin, assignor to Siemens Bauunion Gesellschaft mit beschränkter Haftung, Kommanditgesellschaft, Berlin-Siemensstadt, Germany. Wooden construction. 1,786,991; Dec. 30.
Greist Manufacturing Company, The. (See Carmichael, Andrew J., assignor.)
Groehn, Otto J., Grosse Pointe Park, assignor to Hudson Motor Car Company, Detroit, Mich. Flanging body panels. 1,787,151; Dec. 30.
Groggins, Philip H., Washington, D. C. Preparation of 4-halogen - para - phenyl - ortho - benzoyl - benzoic acid. 1,786,526; Dec. 30.
Groggins, Philip H., Washington, D. C. Preparation of 2 - halogen - para - phenyl - ortho - benzoyl - benzoic acid. 1,786,527; Dec. 30.
Groggins, Philip H., Washington, D. C. Preparing 4-amino - para - phenyl - ortho - benzoyl - benzoic acid. 1,786,528; Dec. 30.
Groggins, Philip H., Washington, D. C. Preparation of 2 - amino - para - phenyl - ortho - benzoyl - benzoic acid. 1,786,529; Dec. 30.
Griffiths, Warren P. (See Lee, Charles F., assignor.)
Griner, Harry B., Merchantville, N. J. Clothes prop. 1,786,533; Dec. 30.
Groggins, Philip H., Washington, D. C. Preparation of 4 - amino - beta - phenyl - anthraquinone by amination. 1,786,530; Dec. 30.
Groggins, Philip H., Washington, D. C. Preparation of 2 - amino - beta - phenyl - anthraquinone by amination. 1,786,531; Dec. 30.
Groggins, Philip H., Washington, D. C. Preparation of para-phenoxy-ortho-benzoyl-benzoic acid. 1,786,532; Dec. 30.
Grom, Henry W., assignor to Continental Optical Frame Company, Newark, N. J. Making lens mountings. 1,787,266; Dec. 30.
Gronemeyer, Fred G., St. Louis, Mo., assignor to The Barber Asphalt Company, Philadelphia, Pa. Measuring and cutting device. 1,786,992; Dec. 30.
Groom, Bryan, Galeshiels, Scotland. Radio loud-speaker. 1,787,268; Dec. 30.
Gross, Edward J., New Rochelle, N. Y. Finger ring or article of similar nature. Des. 82,935; Dec. 30.
Grow, Harold J., East Orange, N. J., assignor to Air Reduction Company, Incorporated, New York, N. Y. Shaping edges for fusion welding. 1,787,247; Dec. 30.
Guardian Trust Company, The. (See Burrell, Edward P., assignor.)
Gubelmann, Ivan, and R. J. Goodrich, South Milwaukee, and W. Dettwyler, Milwaukee, assignors to The Newport Company, Carrollville, Wis. Coloring matter of the anthracene series. 1,787,069; Dec. 30.
Guenther, Henry L., Los Angeles, Calif. Double-seaming machine. 1,787,369; Dec. 30.
Gullett Gin Company. (See Wallace, Jeffrey J., assignor.)
Gunchick, Frank, Walthill, Nebr. Combination suitcase and card table. 1,786,607; Dec. 30.
Gunderson, Harley J. (See Parkin, Henry W., assignor.)
Guy, Henry L., Hale, England, assignor to Westinghouse Electric & Manufacturing Company. Elastic-fluid turbine. 1,786,993; Dec. 30.
Haccius, Charles. (See Bischof, Bernhard, assignor.)
Hagen, Clarence R. (See Johnston, E. A., Benjamin, Baker, and Hagen.)
Haims, Phillip L., Cleveland, Ohio. Sound-prdoucing instrument. 1,787,196; Dec. 30.
Hainsworth, Robert B., Maywood, Ill. Gear puller. 1,787,070; Dec. 30.
Halberstadter, Juda, Elizabeth, N. J. Flowerpot stand. 1,786,994; Dec. 30.
Halberstadter, Juda, Elizabeth, N. J. Flowerpot holder and bracket therefor. 1,786,995; Dec. 30.
Hale, Ashley G., West Groton, Mass. Safety signal light for street cars. 1,786,534; Dec. 30.
Hall, William S., San Antonio, Tex. Aeroplane wing. 1,787,370; Dec. 30.
Halstead, John F., Brooklyn, N. Y., assignor to International Cigar Machinery Company. Bunch transfer for cigar machines. 1,786,608; Dec. 30.
Halstead, John F., Brooklyn, N. Y., assignor to International Cigar Machinery Company. Bunch transfer for cigar machines. 1,786,609; Dec. 30.
Hammel, Ernst, assignor to M. Rauch, Berlin, Germany. Manufacturing a phosphate for fertilizing. 1,786,651; Dec. 30.

Hammond, John H., jr., Gloucester, Mass. Wireless train control. 1,786,610; Dec. 30.
Hanak, Albert, Philadelphia, Pa. Separation and purification of metals and metallic alloys. 1,786,908; Dec. 30.
Hannach, Oscar, assignor to W. Kash, Wilmersdorf, near Berlin, Germany. Refrigerating composition. 1,786,842; Dec. 30.
Hansen, Gerhard, assignor to the firm: Carl Zless, Jena, Germany. Device for partial deflection of a conical pencil of imaging rays. 1,787,269; Dec. 30.
Hapgood, Cyrus H., Nutley, N. J., assignor to The De Laval Separator Company, New York, N. Y. Cow-milking apparatus. 1,787,152; Dec. 30.
Harbison, Clarence B., assignor to The Ohio Steel Foundry Company, Lima, Ohio. Oil-refinery fitting. 1,787,040; Dec. 30.
Harden, Wilton C., assignor, by mesne assignments, to Hynson, Westcott & Dunning, Inc., Baltimore, Md. Halogenated sulphone phthaleins. 1,786,611; Dec. 30.
Harmor & Co. Inc. (See Harty, W. A., and Moore, assignors.)
Harnischfeger Corporation. (See Harry G. M., and Sternberger, assignors.)
Harper, Edward F., Philadelphia, Pa. Form for molding concrete and cement. 1,787,107; Dec. 30.
Harrison, Arthur W., Los Angeles, Calif., assignor, by mesne assignments, of one-half to Kay Brunner Steel Products, Inc. Torque brake. 1,786,996; Dec. 30.
Harry, Geoffrey M., Milwaukee, and C. Sternberger, West Allis, assignors to Harnischfeger Corporation, Milwaukee, Wis. Operating mechanism for clutch and brake bands. 1,786,749; Dec. 30.
Harter, Evan C., Sturgis, Mich. Securing means for lapped elements. 1,787,108; Dec. 30.
Hartley, Ralph V. L., South Orange, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Electrooptical system. 1,786,652; Dec. 30.
Harty, William A., Buffalo, N. Y., and F. W. Moore, Thorold, Ontario, Canada, assignors to Harmor & Co. Inc., Buffalo, N. Y. Rotary drier. 1,787,197; Dec. 30.
Harvey, James W., Falmouth Foreside, Me. Marine propulsion. 1,786,997; Dec. 30.
Haskell, John D., et al. (See Johnson, Frank A., assignor.)
Hasselquist, Albert A., and I. H. M. Rognlie, Elgin, Ill. Valve. 1,786,750; Dec. 30.
Hasterman, Arch. (See Anderson, William M., assignor.)
Hastings, Herbert, Brighton, N. Y. Combined liquid level and pressure gauge. 1,786,566; Dec. 30.
Hatfield, Schuyler C., Baltimore, Md. Resilient wheel. 1,787,071; Dec. 30.
Hathorne, George A., Gloversville, N. Y. Nonskid device. 1,786,653; Dec. 30.
Haug, Herman, New York, N. Y., assignor to Rosemary Mfg. Co., Roanoke Rapids, N. C. Textile panel for a mattress covering. Des. 82,936; Dec. 30.
Hauser, Emil, New York, N. Y., assignor to Marcy Foundry Co., Perth Amboy, N. J. Chair or similar article. Des. 82,937; Dec. 30.
Hauser, Emil, New York, N. Y., assignor to Marcy Foundry Co., Perth Amboy, N. J. Chair or similar article. Des. 82,938; Dec. 30.
Hawkins, Ernest V., Mitchell, Ind. Basket. 1,786,998; Dec. 30.
Hawley, Edgar L., Atlanta, Ga. Secondary contact spring for plug cut-outs. 1,787,109; Dec. 30.
Hayden, Arthur C., Brockton, Mass. Stand for motion-picture-projector apparatus. 1,787,270; Dec. 30.
Hayden, Arthur C., Brockton, Mass. Audible footage meter and exposed-film indicator for motion-picture cameras. 1,787,271; Dec. 30.
Hayes, Fred B., Fort Wayne, Ind., assignor to The Gas Machinery Company, Cleveland, Ohio. Fuel charger for gas generators. 1,787,248; Dec. 30.
Heaton, Maurice C., West Nyack, N. Y. Laminated glass article. 1,787,371; Dec. 30.
Hedeby, Hans N., Youngstown, Ohio. Leak detector. 1,786,843; Dec. 30.
Hedeman, Walter R. (See Whitsitt, W. B., and Hedeman.)
Heeren, Arthur A., assignor to United States Gypsum Company, Chicago, Ill. Roof construction. 1,786,751; Dec. 30.
Hehnly, Frank K., St. Petersburg, Fla. Razor strop. 1,787,372; Dec. 30.
Heldorn, Edward M., Hillside, Ill. Antitheft lock for automobiles. 1,787,110; Dec. 30.
Heinz, John L. C., Chicago, Ill. Casement-window hinge. 1,787,249; Dec. 30.
Hemleb, Martin, assignor to The Singer Manufacturing Company, Elizabeth, N. J. Lock-stitch sewing machine. 1,786,944; Dec. 30.
Henderson, Elden O., McAllen, Tex. Display tray for use on store counters. 1,787,373; Dec. 30.
Henderson, John, Picher, Okla. Windmill. 1,787,072; Dec. 30.
Henderson, Roe P., assignor to The Springfield Metallic Casket Company, Springfield, Ohio. Ear for burial-casket handles. Des. 82,939; Dec. 30.
Henderson, Roe P., assignor to The Springfield Metallic Casket Company, Springfield, Ohio. Ear for burial-casket handles. Des. 82,940; Dec. 30.
Henderson, Roe P., assignor to The Springfield Metallic Casket Company, Springfield, Ohio. Corner for burial caskets. Des. 82,941; Dec. 30.
Henderson, Roe P., assignor to The Springfield Metallic Casket Company, Springfield, Ohio. Corner for burial caskets. Des. 82,942; Dec. 30.
Hendry, William F., Ossining, assignor, by mesne assignments, to National Carbon Company, Inc., New York, N. Y. Making dry cells. 1,786,945; Dec. 30.
Henrard, Fernand, Brussels, assignor to Ecremeuses Melotte, Societe Anonyme, Remicourt, Belgium. Separating machine for milk. 1,787,311; Dec. 30.
Herlitz, Ivar. (See Ytterberg, A., and Herlitz.)
Heslop, Arthur P., Bridger, Mont. Garden-hose clamp. 1,786,612; Dec. 30.
Hess Iman, Knut J. E., Saltsjo-Storangen, Sweden. Fuel-injecting device for internal-combustion engines. 1,786,844; Dec. 30.
Hewitt, Edmund T., St. Louis, Mo. Steam trap. 1,787,374; Dec. 30.
Hiatt, Enos B. (See Kendall, Oliver O., assignor.)
Higbie, Murvale L., New York, N. Y. Paper cutter. 1,787,375; Dec. 30.
Hilkey, Charles Joseph, Emory, Ga. Bookholder. 1,786,567; Dec. 30.
Hill, Maxwell H. (See Bullock, E. W., Schausell, Draeseke, Galloway and Hill.)
Hill, Reuben, Detroit, Mich., assignor to Sargent & Greenleaf, Inc., Rochester, N. Y. Door-control apparatus. 1,787,073; Dec. 30.
Hill, William H. (See Huff, W. J., Jacobson, and Hill.)
Hillman, Joseph, New York, N. Y. Soft collar. 1,786,535; Dec. 30.
Hillmann, Hans. Gross-Raschen, Germany. Bottle-blowing machine. 1,787,312; Dec. 30.
Hipple, George R., Pottstown, Pa. Tape measure. 1,786,845; Dec. 30.
Hitchcock, Reuben, assignor to The Cleveland Folding Machine Company, Cleveland, Ohio. Stacker. 1,786,752; Dec. 30.
Hochwalt, Carroll A. (See Midgley, T., jr., and Hochwalt.)
Hodgman, Frederick S. (See Carter, L. F., and Hodgman.)
Hodsdon, Floyd G., Chicago, Ill., assignor to International Harvester Company. Milking machine. 1,786,846; Dec. 30.
Hoffman, Glenn R., Springfield, Ill., assignor, by mesne assignments, to Hoffman-Paulding Company. Transmission band. 1,787,376; Dec. 30.
Hoffman, Glenn R., East St. Louis, Ill., assignor to Hoffman-Paulding Company, Detroit, Mich. Braking mechanism for automobiles and other motor or power driven vehicles. 1,787,377; Dec. 30.
Hoffman-Paulding Company. (See Hoffman, Glenn R., assignor.)
Hofmann, Friedrich, Mulheim-on-the-Ruhr, Germany, assignor to Holzwarth Gas Turbine Co., San Francisco, Calif. Fuel-injection device for explosion engines. 1,786,946; Dec. 30.
Holek, Emanuel, assignor to the Firm Ceskoslovenska Zbrojovka Akciova Spolecnost V Brne, Brunn, Czechoslovakia. Firing mechanism for automatic firearms. 1,786,536; Dec. 30.
Holek, Václav, assignor to the Firm Ceskoslovenska Zbrojovka Akciova Spolecnost V Brne, Brunn, Czechoslovakia. Apparatus for filling magazines for self-loading firearms. 1,786,537; Dec. 30.
Hollenbeck, Caroline D., Sheridan, Wyo. Cap. 1,787,378; Dec. 30.
Holmes, Elbridge R., assignor to Crompton & Knowles Loom Works, Worcester, Mass. Bobbin for electrical feelers. 1,786,654; Dec. 30.
Holmes, Elbridge R., assignor to Crompton & Knowles Loom Works, Worcester, Mass. Bobbin support for weft-replenishing looms. 1,786,655; Dec. 30.
Holmes, Elbridge R., assignor to Crompton & Knowles Loom Works, Worcester, Mass. Connecting mechanism for jacquard levers. 1,786,656; Dec. 30.
Holmes, Elbridge R., assignor to Crompton & Knowles Loom Works, Worcester, Mass. Let-off for narrow ware looms. 1,786,657; Dec. 30.
Holmes, Ralph C., New York, N. Y., and F. T. Manley, Houston, Tex., assignors, by mesne assignments, to The Texas Company, New York, N. Y. Cracking oils. 1,786,947; Dec. 30.
Holtzer-Cabot Electric Company. (See Durbin, Vernon, assignor.)
Holtzman, John, New York, N. Y. Door lock. 1,787,272; Dec. 30.
Holzwarth Gas Turbine Co. (See Hofmann, Friedrich, assignor.)
Homberg, Felix, Barmen, Germany, assignor to American Nuplax Corporation, New York, N. Y. Manufacture from blood of a mass capable of being colored. 1,786,488; Dec. 30.
Hood Rubber Company. (See MacDonald, Frank J., assignor.)
Hookless Fastener Company. (See Aronson, Peter A., assignor.)
Hooper, James P., Ruxton, assignor to Wm. B. Hooper & Sons Company, Baltimore, Md. Swimming pool. 1,786,613; Dec. 30.
Hooper, Wm. E. & Sons Company. (See Hooper, James P., assignor.)
Hoover Company, The. (See White, Harry B., assignor.)

Hopkins, Arthur T., Detroit, Mich., assignor of one-half to R. C. Hupp, Birmingham, Mich. Hose coupling. 1,786,489; Dec. 30.
Hopwood, John M. (See Peebles, Thomas A., assignor.)
Hornsey, John W., New York, N. Y., assignor to Granular Iron Company. Reduction of metals from ores. 1,786,999; Dec. 30.
Hotchkiss, E. H., Company, The. (See Polzer, Fridolin, assignor.)
Hott, Ion V. K., assignor to The Joyce Cridland Company, Dayton, Ohio. Lifting device. 1,786,754; Dec. 30.
Hottinger, Adolph F., assignor to Northwestern Terra Cotta Company, Chicago, Ill. Terra cotta article. 1,786,753; Dec. 30.
Houts, John R., McLean, Va. Hinge-seat gauge. 1,787,313; Dec. 30.
Howard, Dudley B., Washington, D. C. Marksmanship-training device for firearms. 1,786,614; Dec. 30.
Howard, Forrest K., East Falls Church, Va. Combination mount for machine guns. 1,786,615; Dec. 30.
Howard, Reginald L., Roxbury, assignor to How-Mac, Inc., Dorchester, Mass. Window-pulley shield. 1,786,428; Dec. 30.
Howel, Clayton J. (See Repenning, A. E., and Howel.)
Howell, Albert S., assignor to The Bell & Howell Company, Chicago, Ill. Photographic device. 1,787,198; Dec. 30.
Howell, Alexander. (See Bensinger, James M., assignor.)
How-Mac, Inc. (See Howard, Reginald L., assignor.)
Hoxie, Charles A., Schenectady, N. Y., assignor to General Electric Company. Electrical transmission of pictures. 1,787,273; Dec. 30.
Hoyt, Robert C., Oakland, Calif. Automatic water-heater control valve. 1,786,948; Dec. 30.
Hudson Manufacturing Co. (See Kegler, Anton W., assignor.)
Hudson Motor Car Company. (See Groehn, Otto J., assignor.)
Huff, Wilbert J., D. L. Jacobson, and W. H. Hill, assignors to The Koppers Company, Pittsburgh, Pa. Stable alkaline ferric solution. 1,786,490; Dec. 30.
Huffman, William E., Dayton, Ohio. Inflation device. 1,787,153; Dec. 30.
Hughes, James W., assignor to Budd Wheel Company, Philadelphia, Pa. Cap nut. 1,787,154; Dec. 30.
Hughes, Thomas W., Rawlins, Wyo. Theft-preventing attachment for tanks. 1,787,250; Dec. 30.
Hughes, Walter J., Chicago, Ill. Thermostat-controlled fan. 1,787,041; Dec. 30.
Hull, Robert W., assignor to Rex Manufacturing Company, Connersville, Ind. Refrigerator cabinet. 1,787,379; Dec. 30.
Humphrey, Walter E., Kent, assignor, by mesne assignments, to The Akron Standard Mold Company, Akron, Ohio. Band-stretching machine. 1,787,423; Dec. 30.
Hunt, Alfred E., New Haven, Conn., assignor, by mesne assignments, to Remington Rand Inc., New York, N. Y. Index or file. 1,786,616; Dec. 30.
Hunt, Francis H., Leonia, N. J., assignor to Raymond Concrete Pile Company, New York, N. Y. Apparatus for driving hollow cylinders. 1,787,000; Dec. 30.
Hunt, Francis H., Los Angeles, Calif., and F. A. Schroeder, Rochelle Park, N. J., assignors to Raymond Concrete Pile Company, New York, N. Y. Excavating apparatus. 1,787,001; Dec. 30.
Hunt, Geo. L., Automotive Equipment Co. (See Hunt, George L., assignor.)
Hunt, George L., assignor to Geo. L. Hunt Automotive Equipment Co., Davenport, Iowa. Mechanism for operating upon metal parts of automobiles and the like. 1,786,847; Dec. 30.
Hunt, J. Harold, Detroit, Mich., assignor to Budd Wheel Company, Philadelphia, Pa. Disk-wheel mounting. 1,787,074; Dec. 30.
Hunt, J. Harold, Detroit, Mich., assignor to Budd Wheel Company, Philadelphia, Pa. Spoke-end-cap construction. 1,787,075; Dec. 30.
Hunter, Percy E., Pittsburgh, Pa. Pipe-thread protectors. 1,786,491; Dec. 30.
Huntoon, John S., Detroit, Mich., assignor to Massey Concrete Products Corporation, Chicago, Ill. Cribbing. 1,787,199; Dec. 30.
Huntoon, John S., Detroit, Mich., assignor to Massey Concrete Products Corporation, Chicago, Ill. Cribbing 1,787,200; Dec. 30.
Hupp, R. C. (See Hopkins, Arthur T., assignor.)
Hustvet, Jacob T., Lampson, Wis. Differential clutch. 1,786,492; Dec. 30.
Hutchings, Le Roi E., Buffalo, assignor, by mesne assignments, to Remington Rand Inc., New York, N. Y. Loose-leaf book. 1,786,617; Dec. 30.
Hutchison, Miller R., Llewelyn Park, West Orange, N. J., assignor to Premier Laboratory Company. Sound-propagating diaphragm. 1,786,949; Dec. 30.
Hutchison, Miller R., Llewelyn Park, West Orange, N. J., assignor, by mesne assignments, to Acoustic Products Company, New York, N. Y. Reenforced sounding board. 1,787,002; Dec. 30.
Hutchison, Miller R., Llewelyn Park, West Orange, N. J., assignor to Premier Laboratory Company. Sound-propagating diaphragm. 1,787,003; Dec. 30.
Huttinger, William R., Philadelphia, Pa. Actuating and controlling mechanism for electric switches. 1,787,314; Dec. 30.
Hynson, Westcott & Dunning, Inc. (See Harden, Wilton C., assignor.)
I. G. Farbenindustrie Aktiengesellschaft. (See Bürgin, E., and Schmid, assignors.)
I. G. Farbenindustrie Aktiengesellschaft. (See Eller, W., and Madlung, assignors.)
I. G. Farbenindustrie Aktiengesellschaft. (See Fleischmann, H., and Jordan, assignors.)
I. G. Farbenindustrie Aktiengesellschaft. (See Kaufmann, H. P., and Schubert, assignors.)
I. G. Farbenindustrie Aktiengesellschaft. (See Loehr, Oskar, assignor.)
I. G. Farbenindustrie Aktiengesellschaft. (See Wohl, Alfred, assignor.)
Iden, Max, Altona, Germany. Pleasure buoy for seaside resorts. 1,786,658; Dec. 30.
Ilg Electric Ventilating Co. (See Wilson, John, assignor.)
Illinois Watch Case Company. (See Lyons, Daniel P., assignor.)
Imperial Chemical Industries Limited. (See Bramwell, Francis H., assignor.)
Ingersoll-Rand Company. (See Zimmermann, William F., assignor.)
Ingwer, Carl H., Elyria, Ohio. Motor vehicle. 1,787,155; Dec. 30.
International Cigar Machinery Company. (See Halstead, John F., assignor.)
International Combustion Engineering Corporation. (See Crane, J. B., and Marshall, assignors.)
International Combustion Engineering Corporation. (See Jackson, G. P., Toensfeldt, and Steele, assignors.)
International Combustion Engineering Corporation. (See Marshall, Leonard J., assignor.)
International Harvester Company. (See Beall, William L., assignor.)
International Harvester Company. (See Hodsdon, Floyd G., assignor.)
International Harvester Company. (See Johnston, E. A., Benjamin, Baker, and Hagen, assignors.)
International Harvester Company. (See Johnston, E. A., Merwin, and Watchek, assignors.)
International Harvester Company. (See London, Earl, assignor.)
International Harvester Company. (See Peterson, Walter R., assignor.)
International Harvester Company. (See Schoenrock, Otto R., assignor.)
International Time Recording Company of New York. (See Bryce, James W., assignor.)
Ipilcjian, Aram, Athens, Greece. Invalid bed. 1,787,380; Dec. 30.
Irizarry, Plinio, Santurce, P. R. Safety switch for motor-operated vehicles. 1,787,381; Dec. 30.
Ison, Edward W., Scarsdale, N. Y., and B. Phillips, East Chicago, Ind., assignors to Sinclair Refining Company, New York, N. Y. Refining hydrocarbons. 1,786,493; Dec. 30.
Jackson, George P., K. Toenafeldt, Flushing, N. Y., and H. Steele, Newark, N. J., assignors to International Combustion Engineering Corporation, New York, N. Y. Economizer. 1,786,909; Dec. 30.
Jacobs, Clifton N. (See Taylor, J. M., Jacobs, and Titus.)
Jacobson, David L. (See Huff, W. J., Jacobson, and Hill.)
Jaeger, Alphons O., Crafton, assignor to The Selden Company, Pittsburgh, Pa. Catalytic oxidation of anthracene. 1,786,950; Dec. 30.
James, Henry D., Edgewood Park, Pa., assignor to Westinghouse Electric & Manufacturing Company, Rotary earth-drilling system. 1,786,755; Dec. 30.
James, Nephanus E., et al. (See Clayton, William F., assignor.)
James, William E., et al. (See Clayton, William F., assignor.)
Jancke, Benno F., Brooklyn, and J. E. Kelley, assignors to Eastern Laboratories, Inc., New York, N. Y. Hair drying and treating apparatus. 1,787,251; Dec. 30.
Jaroslaws Erste Glimmerwarenfabrik. (See Weiss, Valentin, assignor.)
Jefferson, Charles J., Springfield, Mass., assignor to J. Stevens Arms Company. Firearms. 1,787,004; Dec. 30.
Jefferson Electric Manufacturing Company. (See Daley, J. C., and Goddard, assignors.)
Jeffrey Manufacturing Company, The. (See Liggett, William K., assignor.)
Jennings, O. D., & Company. (See Jennings, Ode D., assignor.)
Jennings, Ode D., assignor to O. D. Jennings & Company, Chicago, Ill. Casing for a weighing and vending machine. Des. 82,943; Dec. 30.
Jennings, Victor H., assignor to Crompton & Knowles Loom Works, Worcester, Mass. Weft-replenishing loom. 1,786,659; Dec. 30.
Joaquin, Nathan E., assignor of one-half to J. E. Stewart, Los Angeles, Calif. Steering stabilizer. 1,787,042; Dec. 30.
Johnson, Frank A., Felts Mills, N. Y., assignor of one-fourth to J. H. O'Connell, Springfield, Mass., one-fourth to J. D. Haskell, and one-fourth to Dilts Machine Works, Inc., Fulton, N. Y. Chemical-pulp paper-making process. 1,786,538; Dec. 30.
Johnson, Henry G., assignor to Summit Thread Company, East Hampton, Conn. Sewing machine shuttle bobbin. 1,786,618; Dec. 30.

Johnson, Joseph O., Coalinga, Calif. Well-capping device. 1,786,848; Dec. 30.
Johnson, Otis O., Moline, Ill. Trimmer. 1,786,849; Dec. 30.
Dec. 30.
Johnson, William A., Manchester, N. H., assignor to Woodbury Shoe Mfg. Co., Derry, N. H. Device for use in the manufacture of boots or shoes. 1,786,619; Dec. 30.
Johnston, Edward A., Chicago, B. R. Benjamin, Oak Park, D. B. Baker, and C. R. Hagen, Chicago, Ill., assignors to International Harvester Company. Cotton picker. 1,786,851; Dec. 30.
Johnston, Edward A., G. M. Merwin, and H. A. Watchek, Chicago, Ill., assignors to International Harvester Company. Ensilage harvester. 1,786,850; Dec. 30.
Johnston, Jordie J., Abilene, Tex. Apparatus for cleaning swimming pools. 1,787,274; Dec. 30.
Jones, Charles C., Phoenix, Ariz. Testing instrument for electrical condensers. 1,786,910; Dec. 30.
Jones, Everett, Lebanon, Ind. Vehicle signal. 1,787,382; Dec. 30.
Jones, Horatio D., Brooklyn, N. Y. Extension support for flexible electrical conductors. 1,787,252; Dec. 30.
Jones, Lester L., Oradell, N. J. Radio frequency amplifying System. Re17,915; Dec. 30.
Jones, Lester L., Oradell, N. J. Unicontrol apparatus for radio receiving sets. 1,787,275; Dec. 30.
Jones, Walter H., Hasbrouck Heights, N. J. Printed folder. 1,787,276; Dec. 30.
Jordan, Hans. (See Schoeller, W., and Jordan.)
Jordan, Otto. (See Fleischmann, H., and Jordan.)
Joyce-Cridland Company, The. (See Hott, Ion V. K., assignor.)
Jubilee Manufacturing Company. (See Gillet, Alexis F., assignor.)
Juelson, Edwin, Chicago, Ill. Vacuum cleaner. 1,786,756; Dec. 30.
Kahlisch, Gustav. (See Reiners, W., and Kahlisch.)
Kahn, Bertrand B., Cincinnati, assignor to The Estate Stove Company, Hamilton, Ohio. Door. 1,786,429; Dec. 30.
Kaier, Richard, Cranford, assignor to The Singer Manufacturing Company, Elizabeth, N. J. Operating carburizing apparatus. 1,786,951; Dec. 30.
Kalgren, John E., assignor to J. R. Clark Company, Minneapolis, Minn. Riveted structure. 1,787,076; Dec. 30.
Karageorge, James, Chicago, Ill. Fan. Des. 82,944; Dec. 30.
Karagheusian, A. & M., Inc. (See Miller, Walter F., assignor.)
Karger, David, Milwaukee, Wis. Knitted cap and making the same. 1,787,043; Dec. 30.
Karmazin, John, Detroit, Mich. Radiator. 1,786,952; Dec. 30.
Kash, Wilhelm. (See Haanach, Oscar, assignor.)
Katow, Kitaro, Tokyo, Japan. Sash balance. 1,787,111; Dec. 30.
Kauffman, Leroy A., and W. Davis, Washington, D. C., assignors to W. Noble, Detroit, Mich. Hydraulic valve gear. 1,786,716; Dec. 30.
Kaufman, Adolph, Fairfield, Conn. Valve-lifting tool. 1,786,715; Dec. 30.
Kaufman, Phillip H., Cleveland Heights, Ohio. Book with page-ruling attachment therefor. 1,787,005; Dec. 30.
Kaufmann, Hans P., Jena, and M. Schubert, Fechenheim, near Frankfort-on-the-Main, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft. New compounds of the thiazolic series and making same. 1,787,315; Dec. 30.
Kaufmann, Hans P., Jena, and M. Schubert, Frankfort-on-the-Main-Fechendeim, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. New compounds of the thiazolic series. 1,787,316; Dec. 30.
Kay Brunner Steel Products, Inc. (See Harrison, Arthur W., assignor.)
Kegler, Anton W., assignor to Hudson Manufacturing Co., Minneapolis, Minn. Sprayer. 1,786,431; Dec. 30.
Kégresse, Adolphe, Suresnes, France. Endless-track vehicle. 1,786,430; Dec. 30.
Kégresse, Adolphe, Courbevoie, France. Metal and rubber track belt. 1,786,539; Dec. 30.
Kehl, Eugene H. (See Olson, G., and Kehl.)
Kehling, Charles, Brooklyn, N. Y., assignor to American Machine & Foundry Company. Article feed for wrapping machines. 1,786,494; Dec. 30.
Kellett, William P., New York, N. Y. Adjustable spring jack for container railway cars. 1,786,495; Dec. 30.
Kellett, William P., New York, N. Y. Center jack for container cars. 1,786,620; Dec. 30.
Kelley Color Films, Inc. (See Kelley, William V. D., assignor.)
Kelley, John E. (See Jancke, B. F., and Kelley.)
Kelley, William V. D., Jersey City, N. J., assignor to Kelley Color Films, Inc. Combined black and white and colored image photography. 1,787,201; Dec. 30.
Kellogg Switchboard and Supply Company. (See Weiss, Alfred H., assignor.)
Kemlein, Richard, Berlin, assignor to C. Lorenz Aktiengesellschaft, Berlin-Tempelhof, Germany. Coupling device. 1,787,203; Dec. 30.
Kendall, Oliver O., assignor to E. B. Hiatt, Denver, Colo. Adjustable fastener for fruit baskets. 1,787,202; Dec. 30.
Kennedy, Luke F., Philadelphia, Pa., assignor to General Electric Company. Protective arrangement. 1,787,277; Dec. 30.
Kenney, John J., Pittsburgh, Pa. Thermostat. 1,786,852; Dec. 30.
Keystone Steel & Wire Company. (See Bailey, Charles F., assignor.)
Kienzle Uhrenfabriken Aktiengesellschaft. (See Gehlen, Karl, assignor.)
Kimble Electric Company. (See Nies, John D., assignor.)
Kindel Furniture Company. (See Kindel, Thomas G., assignor.)
Kindel, Thomas G., Grand Rapids, Mich., assignor to Kindel Furniture Company. Bedpost or similar article. Des. 82,945; Dec. 30.
Kindl, Karl, Grafenhausen, near Neuenburg, assignor to E. G. Bek, Pforzheim, Germany. Machine for the production of mesh fabric and chains. 1,786,953; Dec. 30.
King, George A., assignor to Scovill Manufacturing Company, Waterbury, Conn. Double-pointed-pin fastener. 1,787,253; Dec. 30.
King, Randall A., Pueblo, Colo. Closet auger and stoppage grip. 1,787,112; Dec. 30.
Kingston, Thomas H., assignor to Builders' Patent Scaffolding Company, West Somerville, Mass. Putlog. 1,787,006; Dec. 30.
Kinnear, Eugene C., Evanston, Ill., assignor, by mesne assignments, to The Lake Erie Chemical Company, Cleveland, Ohio. Vault-wall-protecting device. 1,787,007; Dec. 30.
Kirk, George, North Providence, and A. C. Danver, Providence, R. I., said Kirk assignor to said Danver. Lubricating device. 1,786,432; Dec. 30.
Kirman, Herbert and G. R. Baker, Willesden, England, assignors to Baker Perkins Company, Inc., Saginaw, Mich. Conveying or delivering biscuits or like articles. 1,787,254; Dec. 30.
Klemm, Hans, assignor to the firm Koch & Sterzel Aktiengesellschaft, Dresden, Germany. Current transformer. 1,786,853; Dec. 30.
Klimek, Gustav A., East Rutherford, N. J., assignor to Turbine Patents Corporation, New York, N. Y. Power transmitter. 1,786,433; Dec. 30.
Klinck, John H. (See Carrington, M., and Klinck.)
Klocke, William H., Woodhaven, N. Y., assignor to The Cleveland Graphite Bronze Company, Cleveland, Ohio. Making sheet-metal bearings. 1,787,255; Dec. 30.
Klotz, Otto, Goppingen, Germany. Manufacture of transparent papers, particularly those used for the packing of edible articles. 1,786,911. Dec. 30.
Knauss, Calvin A. (See Gardner, H. A., and Knauss.)
Knowlton, Cutler D., Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Forming material. 1,786,496; Dec. 30.
Koch & Sterzel Aktiengesellschaft. (See Klemm, Hans, assignor.)
Kohler, Paul, Pforzheim, Germany. Multicolor pencil. 1,786,434; Dec. 30.
Kokatnur, Vaman R. (See Stoddard, W. B., and Kokatnur.)
Kolstad, August M., Detroit, Mich. Hot-water and steam generator. 1,786,660; Dec. 30.
Komfala, Steve, Denver, Colo. Centrifugal pump. 1,786,435; Dec. 30.
Konoff, Alexander. (See Marcus, S., and Konoff.)
Koppers Company, The. (See Huff, W. J. Jacobson, and Hill, assignors.)
Koppers Company, The. (See Seil, Gilbert E., assignor.)
Kramer, Arthur E., and J. W. Platt, Waterville, Conn. Gas-valve lock. 1,786,954; Dec. 30.
Krantz, Hubert K., Rockville Center, N. Y., assignor to Westinghouse Electric & Manufacturing Company. Switch mechanism. 1,786,757; Dec. 30.
Krentler-Arnold Hinge Last Company. (See Krentler, Walter A., assignor.)
Krentler, Walter A., assignor to Krentler-Arnold Hinge Last Company, Detroit, Mich. Last. 1,786,540; Dec. 30.
Krick, George W. and D. G. Anderson, Los Angeles, Calif. Table construction. 1,786,497; Dec. 30.
Krueger, Robert B., Lima, Ohio. Locomotive frame and engine supporting structure. 1,786,854; Dec. 30.
Kruse, Peter, assignor to E. W. Bliss Company, Brooklyn, N. Y. Apparatus for separating sheets. 1,787,077; Dec. 30.
Kutz, Walter G., Toledo, Ohio. Artificial bait. 1,786,568; Dec. 30.
Labus, Otto A., assignor, by mesne assignments, to National Carbonic Machinery Company, Wisconsin Rapids, Wis. Stuffing box. 1,787,317; Dec. 30.
Lacy, Jesse C., Richmond, Va. Portable signature conveyer. 1,787,383; Dec. 30.
Laird, James A., Huntington, assignor of ten per cent to R. A. Courtney, Lufkin, Tex. Cotton chopper. 1,786,661; Dec. 30.
Lake Erie Chemical Company, The. (See Anderson, H Miller, assignor.)
Lake Erie Chemical Company, The. (See Kinnear, Eugene C., assignor.)
Lamson Company, The. (See MacMartin, Frank W., assignor.)
Larson, Carl H., Elkhart, Ind., assignor to The Adlake Company. Signal lamp. 1,786,758; Dec. 30.
Larson, Elsie C., Nevada, Iowa. Collar and cuff. 1,787,113; Dec. 30.

Last, Erwin, Vienna, Austria. Device for the diathermic treatment of the human body. 1,786,541; Dec. 30.
Lantrup, George W., Yonkers, assignor to Otis Elevator Company, New York, N. Y. Motor-operated brake. 1,787,044; Dec. 30.
Lawlor, John J. (See Morris, T. O., and Lawlor.)
Lawson, John F., Brooklyn, N. Y. Electric welding. 1,786,759; Dec. 30.
Lawson, Oscar L., Lynn, Mass., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J. Thead-measuring mechanism for shoe-sewing machines. 1,786,621; Dec. 30.
Lawson, Thomas M., Indianapolis, Ind. Used journal-box-waste cleaning machine. 1,787,156; Dec. 30.
Layer, Frank C., Algonquin, Ill. Brick-laying machine. 1,786,622; Dec. 30.
Lea, Charles, assignor to The Automatic Merchandizer Inc., Boston, Mass. Vending machine. 1,787,204; Dec. 30.
Leather, Felix J., London, England. Hood for automobiles and other vehicles. 1,786,662; Dec. 30.
Lee, Charles F., assignor of one-half to W. P. Griffiths, Philadelphia, Pa. Fabric. 1,786,569; Dec. 30.
Lee, Charles L. (See Short, C. B., and Lee.)
Leek, John W., Sale, England. Baby car or carriage. 1,786,663; Dec. 30.
Leffler, Ralph H., Batavia, Ill. Electrostatic reproducer. 1,786,436; Dec. 30.
Lehman, Paul W., Milwaukee, Wis., assignor to The Fisk Rubber Company, Chicopee Falls, Mass. Automatic tube-dusting device. 1,786,437; Dec. 30.
Lehrecke, Hans, Frankfort-on-the-Main, Germany, assignor to The Roessler & Hasslacher Chemical Company, New York, N. Y. Warning means for poison gases. 1,786,623; Dec. 30.
Leighton, Eugene R., assignor to J. E. Leighton, North Andover, Mass. Bottle capper. 1,786,760; Dec. 30.
Leighton, Jennie E. (See Leighton, Eugene R., assignor.)
Lelean, William A., Eltham, London, and D. C. Brown, Kenton, England. Nut-locking device. 1,787,114; Dec. 30.
Leonard, Joseph E., Berkeley, Calif. Gas heater. Des. 82,946; Dec. 30.
Leveque, Bernard T., Wenham, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Horn for shoe-sewing machines. 1,786,624; Dec. 30.
Leveque, Bernard T., Wenham, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Feed mechanism for sewing machines. 1,787,157; Dec. 30.
Lewis, Fred J., assignor to McLoughlin Manufacturing Company, Indianapolis, Ind. Undergarment. 1,787,045; Dec. 30.
Lewis, George S., Oak Park, Ill. Welding machine. 1,787,115; Dec. 30.
Lewis, Richard W., Montclair, N. J. Dispersion and making the same. 1,787,418; Dec. 30.
Lewis, Samuel A., assignor of forty-seven one-hundredths to R. H. Barker, Derry, N. H., and G. W. Barker, Rochester, N. Y. Shoe-sole skiver. 1,787,384; Dec. 30.
Libbey-Owens-Ford Glass Company. (See Miller, Otto C., assignor.)
Liebergeld, Paul, Bad Thal, Germany. Mechanical time fuse with clockwork. 1,786,664; Dec. 30.
Liebknecht, Otto, Berlin-Grunewald, Germany, assignor to The Permutit Company, New York, N. Y. Increasing base-exchanging properties. 1,787,008; Dec. 30.
Liggett, William K., assignor to The Jeffrey Manufacturing Company, Columbus, Ohio. Portable unloading machine. 1,786,665; Dec. 30.
Lilly, Eli, and Company. (See Stuart, Elmer H., assignor.)
Lima, David O., Oklahoma City, Okla. Specific-gravity balance. 1,787,256; Dec. 30.
Lindemann-Hoverson, A. J., Company. (See Rutenber, Edwin A., assignor.)
Linderman, Bert A., New York, N. Y., assignor to Linderman & Company, Wilmington, Del. Fluid-pressure brake. 1,786,438; Dec. 30.
Linderman & Company. (See Linderman, Bert A., assignor.)
Lindstrom, Linn O. B., and D. G. Sala, San Francisco, Calif. Electric pruning device. 1,786,625; Dec. 30.
Link-Belt Company. (See Dull, Raymond W., assignor.)
Linnemans, William J., Big Rapids, Mich. Stand lamp or analogous article. Des. 82,947; Dec. 30.
Linzell, Leslie, London, and T. Ewart Phythian, Leeds, England, assignors, by mesne assignments, to Lithoprintex Corporation. Machine for transferring designs on to cylindrical surfaces. 1,786,570; Dec. 30.
Liquori, Celeste A., assignor of one-half to E. F. Liquori, New York, N. Y. Can opener. 1,787,046; Dec. 30.
Liquori, Ernest F. (See Liquori, Celeste A., assignor.)
Lister, R. A., & Company. (See Sanders, Arthur F., assignor.)
Lithoprintex Corporation. (See Linzell, L., and Phythian, assignors.)
Little, John Q., Whittier, Calif. Casing shoe and valve. 1,786,761; Dec. 30.
Little, William T., Westfield, N. J. Producing sodium stannate. 1,787,078; Dec. 30.
Livingston, Sam E., Bloomington, Ill. Combination hanger. Des. 82,948; Dec. 30.
Llewellyn, Frederick T. (See Edwards, J. H., Llewellyn, and Marble.)
Lochr, Oskar, Uerdingen, Nierderrhein, assignor to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Production of alcohols. 1,787,205; Dec. 30.
Loetscher, Emil C., Dubuque, Iowa. Pulp-filtering machine. 1,787,047; Dec. 30.
Lohaus, Otto, assignor to Aktiengesellschaft Mix and Genest, Berlin-Schoneberg, Germany. Indicating current impulses. 1,786,666; Dec. 30.
Lohman, Ralph W., Los Angeles, Calif. Method and apparatus for feeding gases or vapors. 1,786,626; Dec. 30.
London, Earl, Chapman Ranch, Tex., assignor to International Harvester Company. Traction wheel. 1,786,855; Dec. 30.
Lonsdale, William, Roselle Park, N. J., assignor to Foster Wheeler Corporation, New York, N. Y. Making heat-exchanger tubes. 1,786,571; Dec. 30.
Lorenz, C., Aktiengesellschaft. (See Kemlein, Richard, assignor.)
Lum, Walter O., Schenectady, N. Y., assignor to General Electric Company. Electric-motor-control system. 1,787,278; Dec. 30.
Lund, Dagne A., administratrix. (See Foresman, Clarence A.)
Lurie, Michail J., and A. P. Woroshilow, Moscow, Union of Socialist Soviet Republics. Salt drier. 1,787,009; Dec. 30.
Lykken, Henry G., Minneapolis, Minn. Pulverized-material segregator. 1,787,079; Dec. 30.
Lyle, John, Philadelphia, Pa., assignor to Crompton & Knowles Loom Works, Worcester, Mass. Clutch for Axminster-loom tube frames. 1,786,667; Dec. 30.
Lyons, Daniel P., assignor to Illinois Watch Case Company, Elgin, Ill. Watchcase. 1,786,762; Dec. 30.
Lyons, George W., Hayden, Colo. Controlling means for airplanes. 1,786,668; Dec. 30.
MacDonald, Frank J., Newton, Mass., assignor, by mesne assignments, to Hood Rubber Company, Inc., Wilmington, Del. Machine for cutting articles from sheet material. 1,786,542; Dec. 30.
Mack, Perry E., assignor to Briggs and Stratton Corporation, Milwaukee, Wis. Engine starter. 1,786,763; Dec. 30.
MacMartin, Frank W., assignor to The Lamson Company, Syracuse, N. Y. Carrier for dispatch systems. 1,787,206; Dec. 30.
MacMullin, Robert B., and M. C. Taylor, Niagara Falls, assignors to The Mathieson Alkali Works, Inc., New York, N. Y. Hypochloride composition. 1,787,048; Dec. 30.
MacMullin, Robert B., and M. C. Taylor, Niagara Falls, assignors to The Mathieson Alkali Works, Inc., New York, N. Y. Producing new hypochlorite composition. 1,787,080; Dec. 30.
Madden, Edward J., Detroit, Mich. Vehicle brake. 1,786,856; Dec. 30.
Madden, Edward J., Detroit, Mich. Vehicle brake. 1,786,912; Dec. 30.
Madlung, Totila. (See Eller, W., and Madlung.)
Mageoch, Harry Y., assignor to Electric Service Supplies Company, Philadelphia, Pa. Lighting unit. 1,787,279; Dec. 30.
Magnet-Werk G. m. b. H. Eisenach Spezialfabrik fur Elektromagnet-Apparate. (See Wittkuhns, Bruno, assignor.)
Mahr, Julius A., Minneapolis, Minn. Wheel and wheel journal. 1,786,764; Dec. 30.
Maier, firm of Gustav. (See März, Cuno, assignor.)
Maier, Karl, assignor to Union Special Machinenfabrik G. m. b. H., Stuttgart, Germany. Friction-clutch driving mechanism. 1,786,955; Dec. 30.
Mallory, Bonnie L., Cleveland Heights, assignor to The Cleveland Shock Absorber Company, Cleveland, Ohio. Shock absorber. 1,786,956; Dec. 30.
Maly, Hermann, Guben, Germany. Treating dry webs of woven material. 1,787,385; Dec. 30.
Manley, Frederick T. (See Holmes, R. C., and Manley.)
Manning, Fred W., Berkeley, Calif., assignor, by mesne assignments, to Filter Fabrics, Inc., Boston, Mass. Process of and apparatus for the dry disintegration and deposition of fibers. 1,786,669; Dec. 30.
Mantle Lamp Company of America, The. (See Rohl, Erich H., assignor.)
Marasso, Fred, Joliet, Ill. Semiautomatic wrapping-machine. 1,787,116; Dec. 30.
Marble, Robert A. (See Edwards, J. H., Llewellyn, and Marble.)
Marbury, Ralph E., Edgewood, Pa., assignor to Westinghouse Electric & Manufacturing Company. Terminal structure. 1,786,765; Dec. 30.
Marcus, Samuel, Riverdale, assignor to Markon Manufacturing Co., Inc., New York, N. Y. Doll eyes. 1,786,572; Dec. 30.
Marcus, Samuel, New York, and A. Konoff, Brooklyn, assignors to Markon Manufacturing Co., Inc., New York, N. Y. Mouth equipment for dolls' heads. 1,787,207; Dec. 30.
Marcy Foundry Co. (See Hauser, Emil, assignor.)
Markon Manufacturing Co. (See Marcus, Samuel, assignor.)
Markon Manufacturing Co. (See Marcus, S., and Konoff, assignors.)
Markon Manufacturing Co. (See Wilhelm, John H., assignor.)

Marks, Herbert E., Glen Osborne, Sewickley, Pa., assignor to United States Gypsum Company, Chicago, Ill. Floor construction. 1,787,049; Dec. 30.
Maroney, Frank V., Orange, Calif. Drapery support. 1,786,498; Dec. 30.
Marshall, John F., Hayling Island, England. Apparatus for use in making graphic reproductions of images projected from a microscope. 1,786,543; Dec. 30.
Marshall, Leonard J. (See Crane, J. B., and Marshall.)
Marshall, Leonard J., Westwood, N. J., assignor to International Combustion Engineering Corporation, New York, N. Y. Bent-tube boiler. 1,786,913; Dec. 30.
Martin, Mark H., Baltimore, Md., assignor to The Symington Company, New York, N. Y. Draft member. 1,786,914; Dec. 30.
Marty, Albert H., Cleveland, Ohio. Mounting for glass windows or the like. 1,787,386; Dec. 30.
Maryland Air Conditioning Corporation. (See Cano, Vernon, assignor.)
März, Cuno, assignor to the firm of Gustav Maier, Schramberg, Germany. Paper-sorting device. 1,787,387; Dec. 30.
Maserang, John B., Belleville, Ill. Fence-post connection. 1,786,573; Dec. 30.
Massey Concrete Products Corporation. (See Huntoon, John S., assignor.)
Master Woodworker Mfg. Co. (See Fisk, William T., assignor.)
Matthews, Clyde L., Haynesville, La. Hoisting hook. 1,787,318; Dec. 30.
Matthews, H. A., Manufacturing Company, The. (See Boesel, Otto A., assignor.)
Matthews, H. A., Manufacturing Company, The. (See Naylor, Henry R., assignor.)
Mathieson Alkali Works, Inc., The. (See MacMullin, R. B., and Taylor, assignors.)
Maxson, Rolland H., assignor to The Burdick Corporation, Milton, Wis. Radiant-energy-generating unit. 1,786,439; Dec. 30.
Maynard, Charles E., Northampton, assignor to The Fisk Rubber Company, Chicopee Falls, Mass. Tube-splicing press. 1,786,440; Dec. 30.
Maynard, Charles E., Northampton, assignor to The Fisk Rubber Company, Chicopee Falls, Mass. Press for tread splices. 1,786,499; Dec. 30.
McAdams, Harry, Philadelphia, Pa. Yarn-sinking apparatus for knitting machines. 1,787,010; Dec. 30.
McBride, James A., assignor to Thomas McBride Glass Works, Inc., Salem, W. Va. Drawer pull. Des. 82,949; Dec. 30.
McBride, Thomas, Glass Works, Inc. (See McBride, James A., assignor.)
McCaskey Register Company, The. (See Dunning, William E., assignor.)
McClatchie, John M., assignor to The Borden Company, New York, N. Y. Machine for closing and sealing cans. 1,787,050; Dec. 30.
McCullough, Frederick S., Wilkinsburg, Pa., Vacuum-tube making. 1,787,082; Dec. 30.
McDonald, William L., Pensacola, Fla. Power steering mechanism. 1,787,319; Dec. 30.
McGee, Rupert E., Tampa, Fla., assignor of one-half to I. M. Tracy. Direction signal light. Des. 82,950; Dec. 30.
McGonigal, Mary M., Gannett, Idaho. Sanitary milk strainer. 1,786,500; Dec. 30.
McGuire, Frank J. (See Friede, S. M., and McGuire.)
McKean, John O., assignor to Foster Machine Company, Westfield, Mass. Yarn-tension device. 1,787,083; Dec. 30.
McLean, Clarence G., Boston, Mass. Light-reflecting device. 1,787,388; Dec. 30.
McLean, David W., Los Angeles, Calif. Dental apparatus. 1,786,915; Dec. 30.
McLellan, Joseph R., Wichita, Kans. Incinerator. 1,787,081; Dec. 30.
McLoughlin Manufacturing Company. (See Lewis, Fred J., assignor.)
McMillan Book Company. (See McMillan, John L., assignor.)
McMillan, John L., assignor to McMillan Book Company, Syracuse, N. Y. Visible-index binder. 1,786,857; Dec. 30.
McNulty, Thomas E., Alameda, Calif. Guide for venetian blinds. 1,787,158; Dec. 30.
Mead Pulp & Paper Company, The. (See Traquair, John, assignor.)
Meadows, Albert. (See Sherman, A. G., and Meadows.)
Meeks, Asa. (See Byrum, J. R., Russell, and Meeks.)
Meijer, Reinier, Voorschoten, assignor to De Bataafsche Petroleum Maatschappij, The Hague, Netherlands. Liquid-delivering apparatus. 1,787,389; Dec. 30.
Meister, Georges, New York, N. Y. Submarine life-saving device. 1,786,627; Dec. 30.
Mellon, James A., assignor to American Engineering Company, Philadelphia, Pa. Electric steering device. 1,787,320; Dec. 30.
Merrell, Irving S., and H. Schibsted, Syracuse, assignors, my mesne assignments, to Merrell-Soule Company, Inc., New York, N. Y. Treatment of milk powder. 1,786,858; Dec. 30.
Merrell-Soule Company. (See Merrell, I. S., and Schibsted, assignors.)
Merrillee, Floy C., Chicago, Ill. Wearing apparel. 1,787,117; Dec. 30.
Merrill Company, The. (See Bryan, Russell R., assignor.)
Merrill, Hamilton, South Orange, N. J., assignor to Tower Manufacturing Co.,Inc. Manufacture of para-nitraniline. 1,786,766; Dec. 30.
Merrill, Leland F., Oakland, Calif. Sound-source-locating means. 1,786,859; Dec. 30.
Merritt, Benjamin C., Shrewsbury, Mass. Balloon spinner. 1,787,159; Dec. 30.
Merté, Willy, assignor to the firm of Carl Zeiss, Jena, Germany. Objective corrected spherically, chromatically, astigmatically, and for coma. 1,786,916; Dec. 30.
Merwin, George M. (See Johnston, E. A., Merwin, and Watchek.)
Messinger, Ralph M., Toledo, Ohio. Combined display and vending case. Des. 82,951; Dec. 30.
Meuer, George J., assignor to Cutler-Hammer, Inc., Milwaukee, Wis. Electrical-plug receptacle. 1,787,084; Dec. 30.
Michael, Gus F., assignor to Bendix Brake Company, South Bend, Ind. Brake control. 1,786,670; Dec. 30.
Michell, Anthony G. M., Melbourne, Australia. Viscometer. 1,786,574; Dec. 30.
Midgley, Thomas, Jr., and C. A. Hochwalt, Dayton, Ohio, assignors to General Motors Research Corporation, Detroit, Mich. Removing carbon deposits from cylinders. 1,786,860; Dec. 30.
Midgley, Thomas, jr., Dayton, Ohio, assignor, by mesne assignors to General Motors Research Corporation, Mich. Using motor fuels. 1,787,419; Dec. 30.
Mikaelson, Erik W., assignor to Treadwell Engineering Company, Easton, Pa. Conveyer table. 1,786,575; Dec. 30.
Mill Device Company. (See Byrd, Britton E., assignor.)
Miller, Ernest B., and W. H. Gabeler, Baltimore, Md. Combination refrigerating and water-heating unit. 1,786,861; Dec. 30.
Miller, Frederic H., Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company. Insulator. 1,786,767; Dec. 30.
Miller, George W., Sapulpa, Okla. Latch. 1,787,390; Dec. 30.
Miller, Harry G., Denver, Colo. Commutator turning lathe. 1,786,442; Dec. 30.
Miller, Otto C., Charleston, W. Va., assignor to Libbey-Owens-Ford Glass Company, Toledo, Ohio. Process and apparatus for producing sheet glass. 1,787,391; Dec. 30.
Miller, Walter F., Freehold, N. J., assignor to A. & M. Karagheusian, Inc., New York, N. Y. Pile fabric. 1,787,051; Dec. 30.
Mills, Bert E., Oak Park, assignor to Mills Novelty Company, Chicago, Ill. Change-key switch for music-reproducing machines. 1,786,441; Dec. 30.
Mills Novelty Company. (See Mills, Bert E., assignor.)
Mills Novelty Company. (See Walker, Harry, assignor.)
Moberg, Arthur R., Minneapolis, Minn., assignor to F. O. Paige, jr., Hammond, Ind. Water softening and purification. 1,786,501; Dec. 30.
Monogram Lens Corporation. (See Arbuckle, Samuel F., assignor.)
Montoya, Benito, Los Angeles, Calif. Lubricator filler. 1,787,011; Dec. 30.
Moomaw, Curtis H., Springfield, Mo. Poultry roost. 1,786,443; Dec. 30.
Moore, Edgar D. (See Dippman, F. R., and Moore.)
Moore, Edgar D., assignor to The Ohio Brass Company, Mansfield, Ohio. Trolley-pole base. 1,787,012; Dec. 30.
Moore, Edgar D., assignor to The Ohio Brass Company, Mansfield, Ohio. Trolley pole. 1,787,013; Dec. 30.
Moore, Edgar D., and F. R. Dippman, assignors to The Ohio Brass Company, Mansfield, Ohio. Current-collec- 1,786,717; Dec. 30.
Moore, Edgar D., and F. R. Dippman, assignors to The Ohio Brass Company, Mansfield, Ohio. Current-collector support. 1,786,718; Dec. 30.
Moore, Edgar D., and F. R. Dippman, assignors to The Ohio Brass Company, Mansfield, Ohio, Current-collector support. 1,786,720; Dec. 30.
Moore, Frank W. (See Harty, W. A., and Moore.)
Moore, George L., assignor to Alemite Corporation, Chicago, Ill. Making lubricant-receiving fittings. 1,787,257; Dec. 30.
Moore, William R., jr., Hagerstown, Md., assignor to Deca-Disc Phonograph Company, Waynesboro, Pa. Remote control for talking machines. 1,787,392; Dec. 30.
Moorhouse, Alfred, assignor to Packard Motor Car Company, Detroit, Mich. Instrument board light. 1,786,768; Dec. 30.
Moorhouse, Alfred, assignor to Packard Motor Car Company, Detroit, Mich. Clutch brake for motor vehicles. 1,787,160; Dec. 30.
Moorman Manufacturing Company. (See Pfeiffer, Grover F., assignor.)
Morel, Emile, Domene, France. Magneto-electric machine for the generation of monophase current. 1,787,014; Dec. 30.
Morgan, Sarah F., Poughkeepsie, N. Y. Maternity supporter. 1,786,544; Dec. 30.
Morrell, Alfred F., assignor to Crampton & Knowles Loom Works, Worcester, Mass. Thread holder for weft-replenishing looms. 1,786,671; Dec. 30.

Morris, Evan B., deceased, Cedar Bluffs, Nebr., M. L. Morris, administratrix. Farrowing house. 1,786,769; Dec. 30.
Morris, Joseph P., Bridgeport, Conn. Machine for cutting bias fabrics. 1,787,208; Dec. 30.
Morris, Mary L., administratrix. (See Morris, Evan B.)
Morris, Thomas O., Easton, Pa., and J. J. Lawlor, Plainfield, N. J., assignors to Automatic Molding Machine Corporation, Dover, Del. Molding machine. 1,786,672; Dec. 30.
Morrison, Simon, New York, N. Y. Vanity case. Des. 82,964; Dec. 30.
Motor Wheel Corporation. (See Van Halteren, Andrew S., assignor.)
Mouthe, Auguste, assignor to F. Damon, Lyon, France. Varicose stocking. 1,786,862; Dec. 30.
Muehlen, Otto, Denver, Colo. Treating mill-band saws. 1,786,444; Dec. 30.
Mueller, Elmer J. J., Jefferson Barracks, Mo. Poultry-drinking fountain. 1,787,015; Dec. 30.
Mueller, Homer L., Lakewood, assignor, by mesne assignments, to The Cleveland Welding Company, Cleveland, Ohio. Bridging ring for cushion-tire bases. 1,786,957; Dec. 30.
Muffly, Glenn, Detroit, Mich., assignor to Copeland Products Inc. Refrigerator control. 1,787,209; Dec. 30.
Mungen, Donald D., and R. Back, assignor to The Wahl Company, Chicago, Ill. Fountain pen. 1,787,406; Dec. 30.
Munsingwear Corporation, The. (See Rutledge, George E., assignor.)
Munson, John M. (See Becker, L. A., and Munson.)
Murray, Pendleton W., Omaha, Nebr. Radiator. 1,787,118; Dec. 30.
Myers, William L., St. Louis, Mo. Self-cleaning rake. 1,786,770; Dec. 30.
Naamlooze Vennootschap Nederlandsche Gruyère-Blokmelk Fabriek. (See Born, Philipp, assignor.)
Nagel, Henry W., Alliance, assignor to The Colonial Iron Works Company, Cleveland, Ohio. Drier for sand and the like. 1,787,280; Dec. 30.
Nash, Benjamin S., Short Hills, N. J., assignor to The Stearns & Foster Company, Lockland, Ohio. Textile fabric. Des. 82,952; Dec. 30.
National Aniline & Chemical Co. (See Wait, Justin F., assignor.)
National Carbon Company. (See Hendry, William F., assignor.)
National Carbonic Machinery Company. (See Labus, Otto A., assignor.)
National Cash Register Company. (See Goldberg, Maximilian M., assignor.)
National Cash Register Company, The. (See Robertson, William H., assignor.)
National Cash Register Company, The. (See Shipley, Bernis M., assignor.)
National Fireproofing Corporation. (See Christie, Llewellyn M., assignor.)
National Pneumatic Company. (See Paul, Abram F., assignor.)
National Sales and Manufacturing Company. (See Thompson, Elmer B., assignor.)
Natkiel, Harry, assignor to The Rieser Company, Inc., New York, N. Y. Bob holder. 1,787,393; Dec. 30.
Naylor, Henry R., assignor to The H. A. Matthews Manufacturing Company, Seymour, Conn. Phonograph bezel. 1,786,445; Dec. 30.
Neighbour, Leonard B., and F. A. Thomann, East Moline, assignors to Deere & Company, Moline, Ill. Method of and apparatus for handling beets. 1,787,161; Dec. 30.
Nelson, Arthur F., Harrisburg, Pa. Change maker. 1,787,085; Dec. 30.
Nelson, Harry T., Dallas, Tex. Helicopter. 1,786,576; Dec. 30.
New, Gustave A., assignor to American Gypsum Company, Port Clinton, Ohio. Stucco mix and making the same. 1,787,162; Dec. 30.
New, Gustave A., assignor to American Gypsum Company, Port Clinton, Ohio. Gypsum wall board. 1,787,163; Dec. 30.
New Jersey Machine Corporation. (See Feybusch, Martin, signor.)
Newport Company, The. (See Gubelmann, I. Goodrich, and Dettwyler, assignors.)
Newport Company, The. (See Palmer, Robert C., assignor.)
New York Air Brake Company, The. (See Bickel, Henry F., assignor.)
Nicholay, Paul, assignor of one-half to C. W. Attwood, Wayne, Mich. Securing electric barriers and the like. 1,786,446; Dec. 30.
Niedecken, Edward F., Milwaukee, Wis. Drain connection. 1,786,771; Dec. 30.
Nies, John D., assignor to Kimble Electric Company, Chicago, Ill. Motor-control means. 1,786,772; Dec. 30.
Noble, Warren. (See Kauffman, L. A., and Davis, assignor.)
Noble, Warren, Detroit, Mich. Piston. 1,787,119; Dec. 30.
Noble, Warren, Detroit, Mich. Hydraulic valve-operating mechanism. 1,787,120; Dec. 30.
Noeggerath, Jacob E., Berlin, Germany. Aeroplane for horizontal and vertical flight. 1,786,545; Dec. 30.
Nolde and Horst Company, The. (See Floyd, Earl T., assignor.)
North, Clayton O., Nitro, W. Va., assignor to The Rubber Service Laboratories Co., Akron, Ohio. Composition for use in the manufacture of rubber and the like. 1,787,258; Dec. 30.
Northwestern Terra Cotta Company. (See Hottinger, Adolph F., assignor.)
Norwood, Harry G., Baltimore, Md., assignor to Positive Lock Washer Company, Newark, N. J. Spring nut-lock washer. 1,786,502; Dec. 30.
Norwood, Harry G., Baltimore, Md., assignor to Positive Lock Washer Company, Newark, N. J. Spring nut-lock washer. 1,786,503; Dec. 30.
Nyquist, Harry, Millburn, N. J., assignor to American Telephone and Telegraph Company. Power-standard device. 1,786,546; Dec. 30.
Nyrose, Gust J., Claresholm, Alberta, Canada. Keyless catch and combination lock. 1,786,447; Dec. 30.
O'Connell, John H., et al. (See Johnson, Frank A., assignor.)
Odell, Aubrey D. (See Reed, T. C., and Odell.)
Odom, Nicholas A. B., San Antonio, Tex. Internal-combustion engine. 1,787,121; Dec. 30.
Oehmichen, Etienne, Valentigney, France. Device for the automatic adjustment of the tensions of films. 1,786,917; Dec. 30.
Oestnaes, Victor L., Westfield, assignor to American Gas-accumulator Company, Elizabeth, N. J. Traffic-signal reflector. 1,786,958; Dec. 30.
Ogle Construction Company. (See Bledsoe, Carl F., assignor.)
Ohio Brass Company, The. (See Austin, Arthur O., assignor.)
Ohio Brass Company, The. (See Dippman, F. R., and Moore, assignors.)
Ohio Brass Company, The. (See Moore, Edgar D., assignor.)
Ohio Brass Company, The. (See Moore, E. D., and Dippman, assignors.)
Ohio Steel Foundry Company, The. (See Harbison, Clarence B., assignor.)
Ohnstrand, Enoch, Mohawk, assignor, by mesne assignments to Remington Rand Inc., New York, N. Y. Card-record desk. 1,786,628; Dec. 30.
O'Keeffe, George W., Milton, assignor to Condit Electrical Manufacturing Corporation, South Boston, Mass.. Push-button electric switch and cover plate therefor. 1,787,210; Dec. 30.
Olson, Gunner, and E. H. Kehl, Chicago, Ill. Secondary water heater. 1,786,547; Dec. 30.
Opel, William G., McKeesport, Pa. Gear-wheel puller. 1,787,016; Dec. 30.
Orange-Crush Company. (See Repenning, A. E., and Howel, assignors.)
Orr, Elijah C., assignor to Orr Saw Tooth Grinder Co., Seattle, Wash. Inserted tooth for saws. 1,786,959; Dec. 30.
Orr, Matthew, Dillon, Mont. Airplane wing. 1,787,321; Dec. 30.
Orr Saw Tooth Grinder Co. (See Orr, Elijah C., assignor.)
Oswego Falls Corporation. (See Wright, Wilbur L., assignor.)
Otis Elevator Company. (See Lautrup, George W., assignor.)
Outboard Motors Corporation. (See Evinrude, Ole, assignor.)
Owens-Illinois Glass Company. (See Fuerst, Edwin W., signor.)
Oxford Varnish Corporation. (See Casto, Lloyd V., assignor.)
Packard Motor Car Company. (See Christman, John M., assignor.)
Packard Motor Car Company. (See Moorhouse, Alfred, assignor.)
Packard Motor Car Company. (See Roberts, Edward F., assignor.)
Paige, Fred O., Jr. (See Moberg, Arthur R., assignor.)
Palace Poultry Car Company. (See Edgerton, Israel V., assignor.)
Palmer, Ernest E., Toronto, Ontario, Canada, assignor to The Cleveland Folding Machine Company, Cleveland, Ohio. Paper or like sheet-folding machine. 1,786,773; Dec. 30.
Palmer, Robert C., Pensacola, Fla., assignor to The Newport Company, Carrollville, Wis. Treating rosin and product therefrom. 1,787,281; Dec. 30.
Paradise, Mable B., Atchison, Kans. All-weather double-service wrap. 1,786,960; Dec. 30.
Parkin, Henry W., assignor of one-half to H. J. Gunderson, Los Angeles, Calif. Pumping jack. 1,787,164; Dec. 30.
Parrish, Donald E., Buffalo, N. Y. Booklet label. 1,786,504; Dec. 30.
Parsons, Carl B., assignor to The Parsons Company, Detroit, Mich. Loading block. 1,786,774; Dec. 30.
Parsons Company, The. (See Parsons, Carl B., assignor.)
Parsons, Sylvanus H. H., Coscob, Conn., assignor to Jacob Ruppert Schalk, Poughkeepsie, N. Y. Demountable sheave bearing. 1,786,741; Dec. 30.
Paterson, Alexander, Buffalo, N. Y. Reduction of metal by rolling mills. 1,786,775; Dec. 30.

Paul, Abram F., Upper Darby Branch, Philadelphia, Pa., assignor to National Pneumatic Company, New York, N. Y. Door-strap clamp. 1,787,017; Dec. 30.
Pavlik, Mike, jr., et al. (See Simmons, William J., sr., assignor.)
Payne, James M., jr., Dunbar, W. Va., assignor to F. W. Woolworth Company. Tumbler. Des. 82,953; Dec. 30.
Payne, James M., jr., Dunbar, W. Va., assignor to F. W. Woolworth Company. Tumbler. Des. 82,954; Dec. 30.
Payne, Oscar V., assignor to Crompton & Knowles Loom Works, Worcester, Mass. Withdrawing feeler. 1,786,673; Dec. 30.
Payne, Walter B. (See Bohrer, R. E., Payne, and Tiefel.)
Payne, Walter B., R. E. Bohrer, and W. Fuhlborn, assignors to The Todd Company Inc., Rochester, N. Y. Calculating machine. 1,787,259; Dec. 30.
Peale-Davis Company. (See Davis, Kenneth, assignor.)
Pebbles, Louise W., Hawthorne, N. J. Garment stretcher. 1,787,165; Dec. 30.
Peebles, Thomas A., Mount Lebanon, assignor to J. M. Hopwood, Dormont, Pa. Combustion-control apparatus. 1,787,407; Dec. 30.
Pelizman, Clarence F., Dallas County, Iowa. Valve for maintaining constant liquid height in tanks. 1,787,420; Dec. 30.
Pelton, George M., assignor to The Filer & Stowell Company, Milwaukee, Wis. Setwork. 1,786,776; Dec. 30.
Penberthy Injector Company. (See Yoder, Howard D., assignor.)
Pengilly, Joseph H., and V. Brown, assignors to Diamond Electrical Manufacturing Company, Ltd., Los Angeles, Calif. Plugging device. 1,787,260; Dec. 30.
Pennsylvania Crusher Company. (See Borton, George W., assignor.)
Penrod Walnut and Veneer Company. (See Stone, John S., assignor.)
Pentler, Sigmund J., and O. R. Short, Wausau, Wis. Skiving machine. 1,787,052; Dec. 30.
Pepper, David, Philadelphia, Pa. Casting machine for battery grids. 1,786,629; Dec. 30.
Permutit Company, The. (See Liebknecht, Otto, assignor.)
Perry, Fred D., assignor to H. R. French, East Bakersfield, Calif. Pocket-comb clip. 1,786,674; Dec. 30.
Peters, Peter N., Brooklyn, N. Y. Snubber. 1,787,282; Dec. 30.
Peterson, Walter R., Park Ridge, Ill., assignor to International Harvester Company. Disk harrow. 1,786,863; Dec. 30.
Petrosky, George E., Philadelphia, Pa. Vent for storage batteries. 1,786,961; Dec. 30.
Pew, Arthur E., jr., Bryn Mawr, assignor to Sun Oil Company, Philadelphia, Pa. Heat interchanger. 1,787,086; Dec. 30.
Pfeiffer, Grover F., assignor to Moorman Manufacturing Company, Quincy, Ill. Feeder. 1,786,777; Dec. 30.
Pfeiffer, Gustavus A., New York, N. Y. Multiple-compartment container. 1,787,283; Dec. 30.
Phillips-Baker Rubber Company. (See Dempsey, E. J., and Costellow, assignors.)
Phillips, Ellis J. G., assignor to Richards-Wilcox Manufacturing Company, Aurora, Ill. Folding partition. 1,786,505; Dec. 30.
Phillips, Ernest B. (See Ison, E. W., and Phillips.)
Phythian, Thomas E. (See Linzell, L., and Phythian.)
Pickup, George E., assignor to The Wehrle Company, Newark, Ohio. Heating stove. Des. 82,955; Dec. 30.
Pierce, Earl F., Winnetka, and D. H. Sweet, Evanston, assignors to Alemite Corporation, Chicago, Ill. Pressure-lubricating system. 1,786,548; Dec. 30.
Pierce, Raymond T., Milburn, N. J., assignor to Westinghouse Electric & Manufacturing Company. Switch mechanism. 1,786,778; Dec. 30.
Pietronigro, Alfonso, Ozone Park, N. Y. Sash window. 1,787,284; Dec. 30.
Pilot Laboratory, Inc. (See Stoddard, W. B., and Kokatnur, assignors.)
Plane-Speaker Corporation. (See Coburn, James M., assignor.)
Platt, John W. (See Kramer, A. E., and Platt.)
Polzer, Fridolin, South Norwalk, assignor to The E. H. Hotchkiss Company, Norwalk, Conn. Clinching means for stapling machines. 1,787,285; Dec. 30.
Pomerantz, Samuel L., Brooklyn, N. Y. Advertising powder-puff display stand. Des. 82,956; Dec. 30.
Porz, George V. (See Porz, Norman P., assignor.)
Porz, Norman P., assignor of one-half to G. V. Porz, Cleveland, Ohio. Removing bottle caps. 1,787,018; Dec. 30.
Positive Lock Washer Company. (See Norwood, Harry G., assignor.)
Pospiech, Friedrich, assignor to Chemische Fabrik Pott & Co., Dresden, Germany. Condensation product of aromatic sulphonic acids. 1,787,408; Dec. 30.
Powers, John H., Kansas City, Kans., M. A. Powers, owner by decree of court. Building slab. 1,787,166; Dec. 30.
Powers, Mary A., owner by decree of court. (See Powers, John H.)
Prantner, Karl, Berlin, Germany, assignor to Riley Stoker Corporation, Worcester, Mass. Water-cooled wall. 1,787,019; Dec. 30.
Premier Laboratory Company. (See Hutchison, Miller R., assignor.)
Priest, Charles A., assignor to The Scholl Mfg. Co. Inc., Chicago, Ill. Vibrator and using the same. 1,787,211; Dec. 30.
Proctor, John A., Lexington, and W. M. Bailey, Lynn, assignors to Wireless Specialty Apparatus Company, Boston, Mass. Electric condenser. Re17,916; Dec. 30.
Project Holding Corporation. (See Bauer, William J., assignor.)
Pugh, William J., Oakland, Calif. Occupant-propelled vehicle. 1,787,322; Dec. 30.
Pullen, Fred W., assignor to Bissell Carpet Sweeper Company, Grand Rapids, Mich. Carpet-sweeper-brush drive mechanism. 1,786,864; Dec. 30.
Purcell, Reuben, East Finchley, London, England. Press for tennis and like rackets. 1,786,577; Dec. 30.
Purdy, Frederick L., Columbus, Ohio. Connecting means for rafters. 1,787,167; Dec. 30.
Pursel, Harold M., assignor to Sharrock and Pursel, Casper, Wyo. Duplex power scraper. 1,786,448; Dec. 30.
Pusey & Jones Corporation, The. (See Bowman Frederick A., assignor.)
Putt, Edward D., assignor to The Firestone Tire & Rubber Company, Akron, Ohio. Tire-flap-making apparatus. 1,787,168; Dec. 30.
Quick, Floyd R., Fort Dodge, Iowa, assignor to United States Gypsum Company, Chicago, Ill. Conveyer mechanism. 1,786,779; Dec. 30.
Rabun, George D., assignor to Cheatham Electric Switching Device Company, Louisville, Ky. Trolley-wire contactor. 1,786,449; Dec. 30.
Rachlin, Max, Brooklyn, N. Y. Eaves trough. Des. 82,957; Dec. 30.
Radio Corporation of America. (See Ziola, Henry A., assignor.)
Ranck, Edward B., Altoona, Pa. Relief valve. 1,786,918; Dec. 30.
Rauch, Max. (See Hammel, Ernst, assignor.)
Rawleigh, W. T. Company, The. (See Trevillian, William J., assignor.)
Ray, Frederick, Short Hills, N. J. Expansion joint. 1,786,506; Dec. 30.
Raymond Concrete Pile Company. (See Hunt, Francis H., assignor.)
Raymond Concrete Pile Company. (See Hunt, F. H., and Schroeder, assignors.)
Raymond Concrete Pile Company. (See Upson, Maxwell M., assignor.)
Read Machinery Company. (See Dawson, Albert S., assignor.)
Reed Roller Bit Company. (See Duda, Oswald, assignor.)
Reed, Thomas C., Covington, Ky., and A. D. Odell, Cincinnati, Ohio, assignors to American Telephone and Telegraph Company. Preparing insulating sleeves. 1,786,549; Dec. 30.
Reeves Manufacturing Company, The. (See Carroll, John, assignor.)
Regan, John, New Bedford, assignor to Crompton & Knowles Loom Works, Worcester, Mass. Warp stop motion for terry-towel looms. 1,786,675; Dec. 30.
Reichart, James H., Muncie, Ind. Corn popper. 1,786,507; Dec. 30.
Reid, Ebenezer E., Baltimore, Md. Perfumery. 1,786,630; Dec. 30.
Reid, James S., assignor, by mesne assignments, to The Eaton Axle & Spring Company, Clevelond, Ohio. Attachment for tubular members. 1,786,721; Dec. 30.
Reid, James S., assignor to The Eaton Axle and Spring Company, Cleveland, Ohio. Neck and closure structure. 1,786,722; Dec. 30.
Reiners, Wilhelm, and G. Kahlisch, assignors to W. Schlafhorst & Co., Munich-Gladbach, Germany. Warping frame. 1,787,323; Dec. 30.
Reinke, Fred C., Mukwonago, Wis. Ensilage distributor. 1,787,261; Dec. 30.
Remington Rand Inc. (See Hunt, Alfred E., assignor.)
Remington Rand Inc. (See Hutchings, Le Roi E., assignor.)
Remington Rand Inc. (See Ohnstrand, Enoch, assignor.)
Renshaw, Joseph H., Cincinnati, Ohio, assignor to Continental Can Company, Inc., New York, N. Y. Attachment for can-body makers. 1,787,324; Dec. 30.
Repenning, Albert E., and C. J. Howel, assignors to Orange-Crush Company, Chicago, Ill. Agitating display jar. 1,786,450; Dec. 30.
Republic Flow Meters Company. (See Spitzglass, Albert F., assignor.)
Republic Steel Corporation. (See Williams, Julius E., assignor.)
Reserve Holding Company. (See Crocker, Thomas F., assignor.)
Reutter, Philip A. (See Wild, H. W., and Reutter.)
Rex Manufacturing Company. (See Hull, Robert W., assignor.)
Reynolds, Ernest. (See Wilson, T. A. D., and Reynolds.)
Reynolds, Richard, Nashville, Tenn. Bumper for motor cars and automobiles. 1,786,865; Dec. 30.
Reyrolle, A., & Company Limited. (See Coates, Frank, assignor.)
Ribard, Jean L., Paris, France. Oar blade or the like. 1,786,451; Dec. 30.
Richards-Wilcox Manufacturing Company. (See Phillips, Ellis, J. G., assignor.)
Richardson Company, The. (See Cain, John R., assignor.)

Rickenberg, Frederick B., Pittsburgh, Pa. Valve. 1,787,212; Dec. 30.
Ricker, Chester S., Indianapolis, Ind. Hood fastener. 1,786,452; Dec. 30.
Rieger, Carl, Aalen, Germany. Washing mangle. 1,787,286; Dec. 30.
Rieser Company, The. (See Natkiel, Harry, assignor.)
Right Idea Jap-Beetle Trap Co. (See Ruddell, William A., assignor.)
Riley Stoker Corporation. (See Prantner, Karl, assignor.)
Ripley, George A., Dallas, Tex. Shirt. 1,786,919; Dec. 30.
Risdon, Ivan, Seattle, Wash. Combination fireplace. 1,786,453; Dec. 30.
Rivkin, Menahem, Philadelphia, Pa. Throttle valve. 1,786,578; Dec. 30.
Robbins, Jay, Cooledge, Tex. Stalk cutter. 1,786,455; Dec. 30.
Roberton, Lloyd T., Milwaukee, Wis. Switch. 1,787,262; Dec. 30.
Roberts, Edward F., assignor to Packard Motor Car Company, Detroit, Mich. Motor-vehicle body. 1,787,169; Dec. 30.
Robertson, Peter L., Milton, Ontario, Canada. Screw driver and making same. 1,787,087; Dec. 30.
Robertson, William H., assignor to The National Cash Register Company, Dayton, Ohio. Cash register. 1,786,454; Dec. 30.
Robinson, John T., Company. (See Robinson, J. T., and Cook, assignors.)
Robinson, John T., and H. F. Cook, assignors to John T. Robinson Company, Boston, Mass. Creasing and cutting machine. 1,787,170; Dec. 30.
Robinson, Joseph, New York, N. Y. Automatic connecter. 1,787,122; Dec. 30.
Röder, Karl, Hanover, Germany. Steam turbine. 1,787,263; Dec. 30.
Rodman, Clarence J., Alliance, Ohio. Jack. 1,786,866; Dec. 30.
Roe, Ralph C., Englewood, assignor of one-half to S. W. Borden, Summit, N. J. Supporting pole for electrical conductors. 1,786,631; Dec. 30.
Roebling's, John A., Sons Company. (See Craig, William E., assignor.)
Roessler & Hasslacher Chemical Company, The. (See Lehrecke, Hans, assignor.)
Rogers, Arthur R., Jonesport, Me. Fish-cutting machine. 1,786,632; Dec. 30.
Rognlie, Ingolf H. M. (See Hasselquist, A. A., and Rognlie.)
Rohl, Erich H., assignor to The Mantle Lamp Company of America, Chicago, Ill. Method of and apparatus for assembling glass blanks. 1,786,456; Dec. 30.
Rohrmann, Alfred, Oakland, and H. Schmidt, Berkeley, Calif. Culinary means. 1,787,171; Dec. 30.
Rohrmann, Alfred, Oakland, and H. Schmidt, Berkeley, Calif. Cover for cooking vessels. 1,787,172; Dec. 30.
Root Spring Scraper Company. (See Weeks, Ernest A., assignor.)
Rosemary Mfg. Co. (See Haug, Herman, assignor.)
Rosenberg, Heyman, New York, N. Y. Apparatus for and art of treatment of metal work. 1,786,508; Dec. 30.
Rosenthal, Arthur, Grand Rapids, Mich. Label printing, feeding, and cutting machine. 1,786,867; Dec. 30.
Rossman, Allen M., assignor, by mesne assignments, to Rossman Patents, Incorporated, Chicago, Ill. Station construction. 1,787,053; Dec. 30.
Rossman Patents, Incorporated. (See Rossman, Allen M., assignor.)
Roterkleen Manufacturing Company. (See Day, Howard D., assignor.)
Rowan, Thomas, Brooklyn, assignor to Structural Gypsum Corporation, New York, N. Y. Building construction. Re17,913; Dec. 30.
Rowland, John. (See Tarone, P., and Rowland.)
Rubber Service Laboratories Co., The. (See North, Clayton O., assignor.)
Rubber Shock Insulator Corporation, The. (See Edson, William R., assignor.)
Rubin, Ernest, Atlanta, Ga. Aircraft. 1,787,325; Dec. 30.
Ruddell, William A., Cape May Point, N. J., assignor to Right Idea Jap-Beetle Trap Co., Norfolk, Va. Beetle trap. 1,787,421; Dec. 30.
Rüdenberg, Reinhold, Berlin-Grunewald, and W. Schottky, Berlin-Charlottenburg, assignors to Siemens-Schuckertwerke, Aktiengesellschaft, Berlin-Siemensstadt, Germany. Producing thin insulating layers upon wires. 1,786,920; Dec. 30.
Rumford Chemical Works. (See Fiske, Augustus H., assignor.)
Runnels, Walter S., Kalamazoo, Mich. Vending machine. 1,786,868; Dec. 30.
Rushmore, Samuel W., Plainfield, N. J. Hydraulic brake. 1,786,633; Dec. 30.
Russell, Bennett, Huntington, W. Va. Attachment for percolators. 1,787,394; Dec. 30.
Russell, Roy V. (See Byrum, J. R., Russell, and Meeks.)
Rutenber, Edwin A., assignor to A. J. Lindemann-Hoverson Company, Milwaukee, Wis. Toaster. Des. 82,965; Dec. 30.
Rutledge, George E., Chicago, Ill., assignor to The Munsingwear Corporation, Minneapolis, Minn. Bathing suit. 1,786,869; Dec. 30.
Rys, Ladislav, Ruzomberok, Czechoslovakia. Bleaching cellulose of any kind. 1,787,395; Dec. 30.
Sachs, Abraham, Salisbury, Md., assignor to Sachs Sole Shaping Machine Company, Incorporated. Device for forming recesses and enlargements on shoe insoles. Re17,914; Dec. 30.
Sachs Sole Shaping Machine Company. (See Sachs, Abraham, assignor.)
Safety Car Heating & Lighting Company, The. (See Schepmoes, Lindsley, assignor.)
St. Clair, Merle C. (See Swain, F. T., and St. Clair.)
St. Joseph Iron Works. (See Schmidtke, Albert H., assignor.)
Sala, David G. (See Lindstrom, L. O. B., and Sala.)
Salmar, Frank W., Chicago, Ill. Cigar knife. 1,787,396; Dec. 30.
Salomonsen, Jacob, Greenwood, Wis. Motor-truck trailer. 1,787,213; Dec. 30.
Samuels, William, Detroit, Mich. Piston drive. 1,787,173; Dec. 30.
Sanders, Arthur F., assignor to R. A. Lister & Company, Limited, Dursley, England. Compression-ignition internal-combustion engine. 1,787,326; Dec. 30.
Sanford-Riley Stoker Corporation. (See Grahame, Dallas F., assignor.)
Sargeant, Nathan E., Montesano, Wash. Trimming machine. 1,786,676; Dec. 30.
Sargent & Greenleaf, Inc. (See Hill, Reuben, assignor.)
Sarver, Ray D., Minneapolis, Minn. Windshield-wiper element and construction. 1,786,457; Dec. 30.
Sautter, Hosea F., Fort Worth, Tex. Packing for rods and shafts. 1,787,020; Dec. 30.
Sauvage, William H., assignor, by mesne assignments, to Gould Coupler Company, New York, N. Y. Slack adjuster. 1,787,123; Dec. 30.
Savage, John C., London, England. Apparatus for disseminated material in finely-divided or powderous form. 1,787,397; Dec. 30.
Schalk, Jacob R. (See Parsons, Sylvanus H. H., assignor.)
Schauseil, Albert P. (See Bullock, E. W., Schauseil, Draeseke, Galloway, and Hill.)
Schellens, Christopher A., Marblehead, Mass., and E. L. Schellens, Maplewood, assignors to C-S Engineering Company, Jersey City, N. J. Superheater. 1,787,021; Dec. 30.
Schellens, Eugene L. (See Schellens, C. A. and E. L.)
Schellentrager, Eugene W., Cleveland Heights, assignor to The Atlas Bolt & Screw Company, Cleveland, Ohio. Automatic recording means for dump cars. 1,787,287; Dec. 30.
Schepmoes, Lindsley, New Haven, Conn., assignor to The Safety Car Heating & Lighting Company. Lighting fixture. 1,786,962; Dec. 30.
Scheuer, Jacob H., New York, assignor to Herman Scheuer's Son & Co., Long Island City, N. Y. Wallet. 1,787,054; Dec. 30.
Scheuer's, Herman, Son & Co. (See Scheuer, Jacob H., assignor.)
Schibsted, Helge. (See Merrell, I. S., and Schibsted.)
Schlafhorst, W., & Co. (See Reiners, W., and Kahlisch, assignors.)
Schlaich, Herman, Long Island City, N. Y. Temperature indicator for transformers and the like. 1,787,327; Dec. 30.
Schlenker, Vesper A., Orange, N. J. Acoustic diaphragm. 1,787,055; Dec. 30.
Schleyer, Victor, Anderson, Ind. Turbo pump. 1,787,088; Dec. 30.
Schmid, Walter. (See Bürgin, E., and Schmid.)
Schmidt, Ernest H., Mankato, Minn. Mechanical movement and toy. 1,787,174; Dec. 30.
Schmidt, Hellmuth. (See Rohrmann, A., and Schmidt.)
Schmidtke, Albert H., assignor to St. Joseph Iron Works, St. Joseph, Mich. Stapling machine. 1,786,870; Dec. 30.
Schmitz, Carl, Oelde, Germany. Centrifugal bowl separator. 1,786,921; Dec. 30.
Schoeller, Walter, Berlin-Westend, and H. Jordan, Berlin-Steglitz, assignors to the firm Chemische Fabrik auf Action, (vorm. E. Schering), Berlin, Germany. Production of thymol. 1,786,922; Dec. 30.
Schoenberger, Paul, Belton, assignor of one-half to C. Yale, Whitefish, Mont. Sprinkler system. 1,786,963; Dec. 30.
Schoenhut, A., Company, The. (See Schoenhut, Frederick C., assignor.)
Schoenhut, Frederick C., assignor to The A. Schoenhut Company, Philadelphia, Pa. Lamp shade. Des. 82,958; Dec. 30.
Schoenrock, Otto R., Chicago, Ill., assignor to International Harvester Company. Overtire for lugged traction wheels. 1,786,871; Dec. 30.
Scholes, Richard T., Hinsdale, Ill. Rail joint. 1,787,089; Dec. 30.
Scholes, Richard T., Hinsdale, Ill. Rail joint. 1,787,090; Dec. 30.
Scholl Mfg. Co. Inc., The. (See Priest, Charles A., assignor.)
Schottky, Walter. (See Rüdenberg, R., and Schottky.)
Schöttler, Emil, Essen-Rutt, Germany. Distributing gear for big hydraulic working machines. 1,787,328; Dec. 30.
Schriever, Otto, assignor to Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H., Berlin, Germany. Intermediate frequency modulation inside a radio-frequency modulator tube. 1,786,579; Dec. 30.

Schroeder, Frederick A. (See Hunt, F. H., and Schroeder.)
Schubert, Max. (See Kaufmann, H. P., and Schubert.)
Schuhmann, Richard L. (See Stimpson, W. F., and Schuhmann.)
Schumacher, Elmer L., assignor to American Optical Company, Southbridge, Mass. Ophthalmic mounting. 1,786,580; Dec. 30.
Schwarz, Gotthold P., Bridgeport, Conn. Smoker's stand. Des. 82,959; Dec. 30.
Scott, Angus C., Shaker Heights, Ohio. Trolley ear and attachment therefor. 1,787,091; Dec. 30.
Scovill Manufacturing Company. (See Fenton, Paul E., assignor.)
Scovill Manufacturing Company. (See King, George A., assignor.)
Scovill Manufacturing Company. (See Wild, H. W., and Reutter, assignors.)
Scruby, George E., Dallas, Tex. Garment-hanger attachment. 1,786,923; Dec. 30.
Sears, Roebuck and Co. (See Cooper, W. L., and Fortier, assignors.)
Seeley, Frank E., assignor to Abendroth Brothers, Port Chester, N. Y. Oven shelf. 1,787,022; Dec. 30.
Seil, Gilbert E., Newark, N. J., assignor to The Koppers Company, Pittsburgh, Pa. Gas purification. 1,786,509; Dec. 30.
Seitz, John F., Hollywood, Calif. Camera and method of photography. 1,787,023; Dec. 30.
Selden Company, The. (See Jaeger, Alphons O., assignor.)
Sexe, Ammon T., Hills, Minn. Rerailing device. 1,787,329; Dec. 30.
Sgritta, Alfonso, Brooklyn, N. Y. Automatic night-candle-molding machine. 1,786,634; Dec. 30.
Shafer Bearing Corporation. (See Shafer, Julius E., assignor.)
Shafer, Julius E., assignor to Shafer Bearing Corporation, Chicago, Ill. Antifriction bearing. 1,787,214; Dec. 30.
Sharrock and Pursel. (See Pursel, Harold M., assignor.)
Shehan, William E., and G. Bell, Los Angeles, Calif. Closed-car wind-wing bracket. 1,786,635; Dec. 30.
Shepherd, Judson O., Atlanta, Ga. Supervisory and control system. 1,786,780; Dec. 30.
Sherman, Alvin G., Grosse Pointe, and A. Meadows, Detroit, assignors to The Detroit Vapor Stove Company, Detroit, Mich. Apparatus for enameling metal articles. 1,787,175; Dec. 30.
Shipley, Bernis M., assignor, by mesne assignments, to The National Cash Register Company, Dayton, Ohio. Cash register. 1,786,964; Dec. 30.
Shipman, Emanuel F., Philadelphia, Pa. Insulating non-tilting stool. 1,786,458; Dec. 30.
Shoemaker, Milton J., Madison, assignor to C. F. Burgess Laboratories, Inc., Madison, Wis. Cloth-like fabric. 1,786,781; Dec. 30.
Shonnard, Harold W., Montclair, N. J., assignor to Elevator Supplies Company, Inc. Automatic door closer. 1,786,782; Dec. 30.
Short, Charles R., and C. L. Lee, assignors to General Motors Research Corporation, Dayton, Ohio. Oil-treating apparatus. 1,787,409; Dec. 30.
Short, Otto R. (See Pentler, S. J., and Short.)
Sidgreaves, Henry W., Newark, N. J. Toe supporter. 1,787,398; Dec. 30.
Siegens, Hans, Horrem, near Cologne, Germany. Making pure alumina by electrothermal reduction of the impurities in alumina-containing raw materials. 1,787,124; Dec. 30.
Siemens, Bauunion Gesellschaft mit beschränkter Haftung, Kommanditgesellschaft. (See Greim, Walther, assignor.)
Siemens-Schuckertwerke Aktiengesellschaft. (See Rüdenberg, R., and Schottky, assignors.)
Sierad, Albert E., assignor to George W. Button Corporation, New York, N. Y. Face-powder container. Des. 82,960; Dec. 30.
Sievert, Albert A., Kaukauna, Wis. Automatic ensilage distributor. 1,786,677; Dec. 30.
Simmen Automatic Railway Signal Company. (See Simmen, Paul J., assignor.)
Simmen, Paul J., assignor to Simmen Automatic Railway Signal Company, Eden, N. Y. Automatic train control. 1,786,783; Dec. 30.
Simmons, William J., jr., et al. (See Simmons, William J. sr., assignor.)
Simmons, William J., sr., assignor of one-third to W. J. Simmons, jr., and one-third to M. Pavlik, jr., Coaldale, Pa. Car-coupling pin. 1,786,872; Dec. 30.
Simon, Louis J., London, England. Distillation apparatus. 1,787,399; Dec. 30.
Simons, Burdick, Denver, Colo. Baby bottle holder. 1,786,459; Dec. 30.
Sinclair, Leonard, assignor to Becker Valve and Specialty Corporation, Newburgh, N. Y. Mixing valve. 1,787,215; Dec. 30.
Sinclair Refining Company. (See Ison, E. W., and Phillips, assignors.)
Singer Manufacturing Company, The. (See Hemleb, Martin, assignor.)
Singer Manufacturing Company, The. (See Kaier, Richard, assignor.)
Sjöström, Bertha, Los Angeles, Calif. Manually-operated irrigator. 1,787,024; Dec. 30.
Sly, Caryl. (See Dykstra, H. B., and Sly.)
Smart, James, Orlando, Fla. Shoe stretcher. 1,786,965; Dec. 30.
Smiley, Samuel, jr., assignor to The Globe-Wernicke Company, Cincinnati, Ohio. Filing tray. 1,787,410; Dec. 30.
Smith & Crosby. (See Gammell, Ove L., assignor.)
Smith, Harold B., Worcester, Mass., assignor to Westinghouse Electric & Manufacturing Company. Insulator. 1,786,784; Dec. 30.
Smith, John W., assignor to Budd Wheel Company, Philadelphia, Pa. Power-equalizing device for vehicle brakes. 1,787,092; Dec. 30.
Smith, R. E., et al. (See Clayton, William F., assignor.)
Smith, Wallace D., New Britain, Conn. Golf-tee retriever. 1,787,400; Dec. 30.
Snow, Arthur E., assignor, by mesne assignments, to The Daly Manufacturing Company, Cincinnati, Ohio. Press. 1,787,125; Dec. 30.
Societe Anonyme des Etablissements Luteraan. (See Caillaud, René F. H., assignor.)
"Societe Anonyme Solex". (See Goudard, Maurice, assignor.)
Soda, Alessandro, New York, N. Y. Standard barber-razor holder. 1,787,093; Dec. 30.
Sorensen, Claude S., San Carlos, assignor to California Concrete Products Co., Sunnyvale, Calif. Centrifugal molding apparatus and process. 1,787,094; Dec. 30.
Spangler, Samuel, Glenalum, W. Va. Valve lock. 1,787,401; Dec. 30.
Spaulding, Arch W., assignor to The American Rolling Mill Company, Middletown, Ohio. Machine for internally-coating culvert pipes. 1,786,785; Dec. 30.
Speakman Company. (See Fraser, James, assignor.)
Spelcher, Daniel E., assignor to The Cyclone Manufacturing Company, Urbana, Ind. Adjustable guard for poultry feeders. 1,787,330; Dec. 30.
Sperry Gyroscope Company. (See Carter, L. F., and Hodgman, assignors.)
Spielberger, Sigmond, Jamaica, N. Y. Suspender vest. 1,787,216; Dec. 30.
Spilsbury, Hugh G., Cranford, assignor, by mesne assignments, to F. Earle, Montclair, N. J. Welding process. 1,787,056; Dec. 30.
Spitzglass, Albert F., assignor to Republic Flow Meters Company, Chicago, Ill. Heat regulator and recorder. 1,787,176; Dec. 30.
Springfield Metallic Casket Company, The. (See Henderson, Roe P., assignor.)
Sprunger, Jacob J., Fort Wayne, Ind. Wedge for tool handles. 1,786,636; Dec. 30.
Square D Company. (See Van Valkenburg, Hermon L., assignor.)
Stampen, Jacob J., assignor to Babson Manufacturing Corporation, Chicago, Ill. Teat cup. 1,786,786; Dec. 30.
Standard Car Truck Company. (See Barber, F. L., and Webb, assignors.)
Standard Oil Company. (See Bacheldor, William H., assignor.)
Standard Oil Development Company. (See Wiess, Harry C., assignor.)
Standard Patent Process Corporation. (See Conant, Leon B., assignor.)
Stanton, Edgar L., Union County, Ind. Traffic stop. 1,786,678; Dec. 30.
Starkenstein, Emil, Prague, Czechoslovakia, assignor to the firm Chemische Fabrik auf Actien (vorm. E. Schering), Berlin, Germany. Pharmaceutical product and making same. 1,786,873; Dec. 30.
Stearns & Foster Company, The. (See Nash, Benjamin S., assignor.)
Steel Penetrometer Company, The. (See Bindschedler, T. S., and Wood, assignors.)
Steele, Harry. (See Jackson, G. P., Toensfeldt, and Steele.)
Steere, Clarence E., Los Angeles, Calif. Automatic timing mechanism. 1,787,217; Dec. 30.
Steerup, Godfrey, Maywood, assignor to Electrical Engineers Equipment Co., Melrose Park, Ill. Arc-quenching material. 1,786,581; Dec. 30.
Stein, Frederick W., Atchison, Kans. Cleaning implement. 1,786,723; Dec. 30.
Steinmeyer, Fred W., Oakland, Calif. Window-drape illuminator. 1,786,787; Dec. 30.
Steinnes, Johann, Oberhausen, Germany. Device for coating the interior of walls of pipes or conduits. 1,787,126; Dec. 30.
Steppé, Alphonse. (See Steppé, H., A., and G.)
Steppé, Gustave. (See Steppé, H., A., and G.)
Steppé, Hector, A., and G., Berchem-Ste. Agathe, near Brussels, Belgium. Mold for manufacturing boots, shoes, and similar articles of rubber or other plastic material. 1,787,177; Dec. 30.
Sternberger, Charles. (See Harry, G. M., and Sternberger.)
Stevens, Edward W., Detroit, Mich., assignor, to Chicago Pneumatic Tool Company, New York, N. Y. Tool-retaining coupling. 1,787,178; Dec. 30.
Stevens, Horace D., assignor to The Firestone Tire and Rubber Company, Akron, Ohio. Apparatus for reenforcing tire beads. 1,787,411; Dec. 30.
Stevens, Horace D., assignor to The Firestone Tire and Rubber Company, Akron, Ohio. Grinding or buffing machine. 1,787,412; Dec. 30.

Stevens, J., Arms Company. (See Jefferson, Charles J., assignor.)
Stevens, William C., assignor to The Firestone Tire and Rubber Company, Akron, Ohio. Tire-building machine. 1,787,413; Dec. 30.
Stevens, William C., assignor to The Firestone Tire and Rubber Company, Akron, Ohio. Strip-applying device for tire-building machines. 1,787,414; Dec. 30.
Stewart, John E. (See Joaquin, Nathan E., assignor.)
Stimpson, Walter F., and R. L. Schuhmann, Louisville, Ky.; said Schuhmann assignor to said Stimpson. Scale. 1,786,788; Dec. 30.
Stinson, Lewis A., Oak Park, Ill. Cargo-discharging apparatus for ships. 1,787,025; Dec. 30.
Stoddard, William B., Stamford, Conn., and V. R. Kokatnur, New York, N. Y., assignors to Pilot Laboratory, Inc., Arlington, N. J. Bleaching agent and making the same. 1,787,402; Dec. 30.
Stokes, Francis J., Philadelphia, Pa. Compressing machine. 1,786,637; Dec. 30.
Stone, John S., assignor to Penrod Walnut and Veneer Company, Kansas City, Mo. Stay log. 1,786,460; Dec. 30.
Stoner-Ames Brake Company. (See Stoner, George H., assignor.)
Stoner, George H., East Boston, assignor, by mesne assignments, to Stoner-Ames Brake Company, Inc., Boston, Mass. Internal expansion brake. 1,786,461; Dec. 30.
Story, John H., Oakland, Calif. Roller screen. 1,786,550; Dec. 30.
Strandlund, Carl G., assignor to Deere & Company, Moline, Ill. Plow. 1,787,127; Dec. 30.
Strausbaugh, Carey E., Chillicothe, Ohio. Coal-car stake-straightening device. 1,787,095; Dec. 30.
Strauss, Benno, Essen-Bredeney, assignor to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Steel alloy insensible to hot gases and vapors. 1,787,403; Dec. 30.
Streckfuss, Elmer G., assignor to The Cincinnati Time Recorder Company, Cincinnati, Ohio. Meat slicer. 1,787,288; Dec. 30.
Structural Gypsum Corporation. (See Rowan, Thomas, assignor.)
Stryker, George B., jr., assignor to The Weatherproof Products Company, Memphis, Tenn. Plastic composition. 1,786,462; Dec. 30.
Stuart, Elmer H., assignor to Eli Lilly and Company, Indianapolis, Ind. Lens extract and making it. 1,787,179; Dec. 30.
Summit Thread Company. (See Johnson, Henry G., assignor.)
Sun Oil Company. (See Pew, Arthur E., jr., assignor.)
Sutphen, Robert M., Newark, N. J., assignor to American Enameled Brick & Tile Company, New York, N. Y. Producing illusory ornamental effects in architectural structures. 1,786,789; Dec. 30.
Sutton, Clarence L., Tulsa, Okla. Separator. 1,786,790; Dec. 30.
Swain, Francis T., Newcastle, Ind. Gear-cutting machine. 1,786,551; Dec. 30.
Swain, Francis T., and M. C. St. Clair, Newcastle, Ind. Gear-cutting machine. 1,786,552; Dec. 30.
Swain, Joseph G., assignor to The Firestone Steel Products Company, Akron, Ohio. Making wire wheels. 1,787,128; Dec. 30.
Swanson, Arthur. (See Trotter, F., and Swanson.)
Swanson, Peter, Ely, Minn. Gravity lock. 1,786,582; Dec. 30.
Sweet, Donald H. (See Pierce, E. F., and Sweet.)
Swensson, Herbert A., Rose Creek, Minn. Combination harrow and scraper. 1,786,510; Dec. 30.
Symington Company, The. (See Barrows, Donald S., assignor.)
Symington Company, The. (See Martin, Mark H., assignor.)
Syracuse Washing Machine Corporation. (See Geldhof, Peter E., assignor.)
Talarn, Camilo, Rosario De Santa Fe, Argentina. Indicating copyholder. 1,786,874; Dec. 30.
Tarone, Philip, and J. Rowland, Ravenrun, Pa. Coal separator. 1,787,096; Dec. 30.
Taylor, John M., Bridgeport, C. N. Jacobs, Norristown, and R. R. Titus, Villanova, Pa., assignors, by mesne assignments to Continental-Diamond Fibre Company, Newark, Del. Manufacturing gum-bonded laminated bodies. 1,787,404; Dec. 30.
Taylor, Maurice C. (See MacMullin, R. B., and Taylor.)
Teitscheld, Alfred F. (See Zornig, H. H., and Teitscheld.)
Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H. (See Schriever, Otto, assignor.)
Terry, Matson C., Mansfield, Ohio, assignor to Westinghouse Electric & Manufacturing Company. Refrigerator equalizer valve. 1,786,791; Dec. 30.
Tessky, Karl, Esslingen-on-the-Neckar, Germany. Safety device for cam-controlled mechanisms. 1,786,875; Dec. 30.
Tessky, Karl, Esslingen-on-the-Neckar, Germany. Feeding device for machine tools. 1,786,876; Dec. 30.
Texas Company, The. (See Goodwin, John M., assignor.)
Texas Company, The. (See Holmes, R. C., and Manley, assignors.)
Thaler, Wilhelm, Heidenheim-on-the-Brenz, Germany, assignor to American Voith Contact Company, Incorporated, New York, N. Y. Wood grinder. 1,786,679; Dec. 30.
Thomann, Frederick A. (See Neighbour, L. B., and Thomann.)
Thomas, David R., Cleveland, Ohio. Trailer construction. 1,786,463; Dec. 30.
Thomas, George G., Hillside, Ariz., assignor to American Cyanamid Company, New York, N. Y. Reagent feeder. 1,787,289; Dec. 30.
Thomas, Phillips, Edgewood, Pa., assignor to Westinghouse Electric & Manufacturing Company. Paralleling relay system. 1,786,792; Dec. 30.
Thomas, William, New York, N. Y. Spring-winding control device. 1,787,343; Dec. 30.
Thompson, Charles W., Wollaston, assignor to H. C. Wheeler, Boston, Mass. Towel cabinet. 1,786,966; Dec. 30.
Thompson, Elmer B., assignor to National Sales and Manufacturing Company, Des Moines, Iowa. Corn popper. 1,786,877; Dec. 30.
Thompson, Lincoln, Naugatuck, assignor to Wm. H. Bristol Talking Picture Corporation, Waterbury, Conn. Electromagnetic pick-up device for phonographic records. 1,787,290; Dec. 30.
Thompson Motor Corporation. (See Frederickson, Clayton E., assignor.)
Thompson, Norman F., jr., Colebrook, assignor to The William L. Gilbert Clock Company, Winsted, Conn. Clock case. Des. 82,961; Dec. 30.
Thompson Products, Inc. (See Bissell, Richard E., assignor.)
Thomsen, Peter Skovby, Great Village, Nova Scotia, Canada. Shovel for potato diggers. 1,786,464; Dec. 30.
Thomson-Gibb Electric Welding Company. (See Gibb, William H., assignor.)
Thorngren, Helmer, Detroit, Mich. Skate sharpener. 1,786,553; Dec. 30.
Thumim, Carl, Philadelphia, Pa., assignor to General Electric switch. 1,787,291; Dec. 30.
Tiefel, Charles G. (See Bohrer, R. E., Payne, and Tiefel.)
Tiefel, Ella M., executrix. (See Bohrer, R. E., Payne, and Tiefel.)
Tinsley, John F., assignor to Crompton & Knowles Loom Works, Worcester, Mass. Bobbin support for weft-replenishing looms. 1,786,680; Dec. 30.
Titus, Robert R. (See Taylor, J. M., Jacobs, and Titus.)
Todd Company, The. (See Bohrer, R. E., Payne, and Tiefel, assignors.)
Todd Company Inc., The. (See Payne, W. B., Bohrer, and Fuhlborn, assignors.)
Todd, Ernest G., Brussels, Belgium. Mill for grinding paints, inks, enamels, and other viscous materials. 1,787,180; Dec. 30.
Toensfeldt, Kurt. (See Jackson, G. P., Toensfeldt, and Steele.)
Tolhurst Machine Works, Inc. (See Bryson, Tandy A., assignor.)
Tower Manufacturing Co. (See Merrill, Hamilton, assignor.)
Townsend, George R., Schenectady, N. Y., assignor to General Electric Company. Circuit-controlling device. 1,787,292; Dec. 30.
Tracy, Ida M. (See McGee, Rupert E., assignor.)
Traquair, John, Chillicothe, assignor to The Mead Pulp & Paper Company, Dayton, Ohio. Method of and apparatus for manufacturing paper. 1,786,681; Dec. 30.
Trask, Jesse H., Wausau, Wis. Making decorated paper. 1,787,218; Dec. 30.
Traver, Oliver C., Pennfield, Upper Darby, Pa., assignor to General Electric Company. Protective arrangement. 1,787,181; Dec. 30.
Treadwell Engineering Company. (See Mikaelson, Erik W., assignor.)
Trevillian, William J., assignor to The W. T. Rawleigh Company, Freeport, Ill. Extracting pyrethrum. 1,786,967; Dec. 30.
Trotter, Fred, and A. Swanson, Fort Dodge, Iowa, assignors to United States Gypsum Company, Chicago, Ill. Method of and apparatus for scoring blocks. 1,787,219; Dec. 30.
Trouton, Maurice, Buckinghamshire, assignor to Wireless Music Limited, London, England. Electrically-operated vibratory device. 1,786,583; Dec. 30.
Trouton, Maurice, Buckinghamshire, assignor to Wireless Music Limited, London, England. Electromechanical vibration translating device such for example as loud-speakers. 1,786,584; Dec. 30.
Troy, Seymour, Brooklyn, N. Y. Woman's shoe. Des. 82,962; Dec. 30.
Truscinski, Peter F. (See Brown, H. P., and Truscinski.)
Turbine Patents Corporation. (See Klimek, Gustav A., assignor.)
Turnbull, William, Peoria, Ill., assignor to Caterpillar Tractor Co., San Leandro, Calif. Track shoe. 1,786,924; Dec. 30.
Turner, Edward T., Dayton, Ohio. Water-softening apparatus. 1,787,129; Dec. 30.
Turner, Edward T., Dayton, Ohio. Level-controlling device for liquid containers. 1,787,130; Dec. 30.
Turner, Hal, Tulsa, Okla. Index-cabinet slide. 1,787,344; Dec. 30.

Turner, Richard G., assignor to Crompton & Knowles Loom Works, Worcester, Mass. Bobbin for weft-replenishing looms. 1,786,682; Dec. 30.
Turner, Richard G., assignor to Crompton & Knowles Loom Works, Worcester, Mass. Weft detector. 1,786,683; Dec. 30.
Turner, Richard G., assignor to Crompton & Knowles Loom Works, Worcester, Mass. Temple for double-fabric looms. 1,786,684; Dec. 30.
Tytus, John B., assignor to The American Rolling Mill Company, Middletown, Ohio. Rolling mill. 1,786,793; Dec. 30.
Underwood, Leon, New York, N. Y. Vehicle construction. 1,787,131; Dec. 30.
Union Hardware Company. (See Washington, Bowden, assignor.)
Union Metal Products Company. (See Gilpin, Garth G., assignor.)
Union Special Machine Company. (See Zeier, Frederick F., assignor.)
Union Special Maschinenfabrik G. m. b. H., (See Maier, Karl, assignor.)
Union Switch & Signal Company, The. (See Baughman, George W., assignor.)
Union Switch & Signal Company, The. (See Vanhorn, James J., assignor.)
United Shoe Machinery Corporation. (See Knowlton, Cutler D., assignor.)
United Shoe Machinery Corporation. (See Lawson, Oscar L., assignor.)
United Shoe Machinery Corporation. (See Leveque, Bernard T., assignor.)
United States Gypsum Company. (See Absmeier, Carl, assignor.)
United States Gypsum Company. (See Balduf, Bruno E., assignor.)
United States Gypsum Company. (See Farnham, Merton W., assignor.)
United States Gypsum Company. (See Heeren, Arthur A., assignor.)
United States Gypsum Company. (See Marks, Herbert E., assignor.)
United States Gypsum Company. (See Quick, Floyd R., assignor.)
United States Gypsum Company. (See Trotter F., and Swanson, assignors.)
Universal Button Fastening & Button Company. (See Ford, Ira D., assignor.)
Unwin, Kenneth J., assignor to Crompton & Knowles Loom Works, Worcester, Mass. Bobbin support for weft-replenishing looms. 1,786,685; Dec. 30.
Upson, Maxwell M., Englewood, N. J., assignor to Raymond Concrete Pile Company, New York, N. Y. Composite pile. 1,786,968; Dec. 30.
Van Der Heuel, Corneal, Richmond Hill, N. Y. Hair-drying apparatus. 1,786,969; Dec. 30.
Van Halteren, Andrew S., East Lansing, assignor to Motor Wheel Corporation, Lansing, Mich. Demountable wheel spider. 1,786,794; Dec. 30.
Vanhorn, James J., Wilkinsburg, assignor to The Union Switch & Signal Company, Swissvale, Pa. Railway-train-indicating apparatus. 1,786,795; Dec. 30.
Van Keuren, Herbert, Kingstree, assignor to The Electro Automatic Drainage Company, Columbia, S. C. Electromagnetic draining device. 1,786,878; Dec. 30.
Van Orsdale, Allen A., Houston, Tex., assignor to The Brown Instrument Company, Philadelphia, Pa. Gravity-indicating system. 1,787,132; Dec. 30.
Van Valkenburg, H. L., Wauwatosa, Wis., assignor, by mesne assignments, to Square D Company, Detroit, Mich. Motor-control system. 1,786,554; Dec. 30.
Van Wagenen, James H., Washington, D. C. Electromagnetic sound-producing device. 1,786,465; Dec. 30.
Vaughn, Frank O., Poughkeepsie, N. Y. Brake mechanism. 1,786,970; Dec. 30.
Vedoveili, Mario, Milan, Italy. Steering gear for vehicles. 1,787,345; Dec. 30.
Verhoff, John B., Lima, Ohio. Agricultural implement. 1,787,026; Dec. 30.
Verona Chemical Co. (See Ehrlich, Jacob, assignor.)
Viliella, Charles J., Emporium, Pa. Testing outfit. 1,786,971; Dec. 30.
Vineberg, Louis, Windsor, Ontario, Canada. Safety pocket. 1,786,879; Dec. 30.
Vitrefrax Corporation. (See Curtis, Thomas S., assignor.)
Von Hoorn, Fred G., Bridgeport, Conn., assignor to Westinghouse Electric & Manufacturing Company. Circuit breaker. 1,786,796; Dec. 30.
Von Hoorn, Fred G., Bridgeport, Conn., assignor to Westinghouse Electric & Manufacturing Company. Circuit breaker. 1,786,797; Dec. 30.
Von Hoorn, Fred G., Bridgeport, Conn., assignor to Westinghouse Electric & Manufacturing Company. Circuit breaker. 1,786,798; Dec. 30.
Von Kandó, Kalman, Budapest, Hungary, assignor to Westinghouse Electric & Manufacturing Company. Control system. 1,786,799; Dec. 30.
Von Kert Hott, Ion. (See Hott, Ion V. K.)
Vortex Cup Company. (See Carle, Harold, assignor.)
Vortex Cup Company. (See Wood, Andrew C., assignor.)
Wackenreuter, Andreas G., Chicago, Ill. Treating tanning solutions. 1,786,880; Dec. 30.
Wadell, Albert H., Newark, N. J. Gauge for adjusting brake linings. 1,786,638; Dec. 30.
Wahl Company, The. (See Mungen, D. D., and Back, assignors.)
Wahlberg, Nils A., Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company. Transmission-line device. 1,786,801; Dec. 30.
Wait, Justin F., New York, N. Y., assignor to National Aniline & Chemical Co., Inc. Producing indigo by arylglycine fusion. 1,786,800; Dec. 30.
Wakefield, Walter H., assignor to Crompton & Knowles Loom Works, Worcester, Mass. Mechanical warp-stop motion. 1,786,686; Dec. 30.
Walker Dishwasher Corporation. (See Walker, Forrest A., assignor.)
Walker, Forrest A., assignor to Walker Dishwasher Corporation, Syracuse, N. Y. Impeller for mechanical dishwashers. 1,787,220; Dec. 30.
Walker, Harry, Oil City, La., assignor, by mesne assignments, to Mills Novelty Company, Chicago, Ill. Coin depository. 1,786,466; Dec. 30.
Walker, Herbert E., Los Angeles, Calif. Device for holding looms on cables. 1,786,585; Dec. 30.
Wallace, Jeffrey J., assignor to Gullett Gin Company, Amite, La. Gin rib. 1,786,972; Dec. 30.
Walter, Georges, Perroy, Switzerland. Method and an apparatus for manufacturing hollow bodies. 1,786,586; Dec. 30.
Walter, Harrison B., assignor to Container Corporation of America, Chicago, Ill. Protective means for pipes. 1,786,467; Dec. 30.
Wamelink, Eugene C., assignor, by mesne assignments, to The Eaton Axle & Spring Company, Cleveland, Ohio. Cover attaching and locking means. 1,786,802; Dec. 30.
Wantz, Solomon E. (See Arnold, R. V., Flickinger, and Wantz.)
Ward, Hugh H., Chester, Pa. Metallic receptacle. 1,787,221; Dec. 30.
Ward, Ottomar L., Waterville, Nova Scotia, Canada. Pruning saw. 1,787,057; Dec. 30.
Ward, Willis C., Orchard Lake, Mich. Safety aircraft. 1,787,293; Dec. 30.
Ward, Willis C., Orchard Lake, Mich. Safety device for aircraft. 1,787,294; Dec. 30.
Ward, Willis C., Orchard Lake, Mich. Grader. 1,787,295; Dec. 30.
Warner, Clarence, assignor to Delco Light Company, Dayton, Ohio. Water system. 1,786,468; Dec. 30.
Warner Electric Brake Corporation. (See Whyte, John, assignor.)
Warner, Harry C., Kansas City, Mo. Combination container and display device. 1,787,222; Dec. 30.
Warren, Julian K., Saucier, Miss. Lock. 1,786,511; Dec. 30.
Washington, Bowden, New York, N. Y., assignor to Union Hardware Company, Torrington, Conn. Golf club. 1,787,415; Dec. 30.
Wasleff, Alex, Chicago, Ill. Herringbone flooring. 1,787,027; Dec. 30.
Wasson, Harry C., Franklin, Pa., assignor to Chicago Pneumatic Tool Company, New York, N. Y. Safety-stop apparatus for engines. 1,787,223; Dec. 30.
Watchek, Harry A. (See Johnston, E. A., Merwin, and Watchek.)
Watters, Kenneth J., Ocheyeden, Iowa. Fuel pump. 1,787,346; Dec. 30.
Wattie, William M., assignor to Crompton & Knowles Loom Works, Worcester, Mass. Attachment for reversible dobby heads. 1,786,687; Dec. 30.
Wattie, William M., assignor to Crompton & Knowles Loom Works, Worcester, Mass. Multicolor magazine for looms. 1,786,688; Dec. 30.
Watts, Warren S., Louisville, assignor to Arlette, Inc., Louisville, Ky. Hair-waving wrapper. 1,786,881; Dec. 30.
Weatherproof Products Company. The. (See Stryker, George B., jr., assignor.)
Weaver, Franklin E. (See Fountain, Lee C., assignor.)
Weaver, Harry F., Evansville, Ind. Water-closet bowl. Des. 82,963; Dec. 30.
Webb, Edwin W. (See Barber, F. L., and Webb.)
Webber, Robert A., assignor to Brown Company, Berlin, N. H. Method of and apparatus for selecting fiber. 1,786,973; Dec. 30.
Weeks, Ernest A., assignor to Root Spring Scraper Company, Kalamazoo, Mich. Road scraper. 1,786,803; Dec. 30.
Wehrle Company, The. (See Pickup, George E., assignor.)
Weil, Maurice I., assignor to Chicago Pump Company, Chicago, Ill. Constant-water-supply system. 1,786,804; Dec. 30.
Weiss, Alfred H., Wilmette, assignor to Kellogg Switchboard and Supply Company, Chicago, Ill. Ignition and lighting switch. 1,787,058; Dec. 30.
Weiss, Valentin, Berlin-Weissensee, assignor to the Firm Jaroslaws Erste Glimmerwarenfabrik, Berlin, Germany. Loom picker. 1,787,182; Dec. 30.
Wellemeyer, Arthur, Klemme, Iowa. Combined display and dispensing apparatus. 1,787,347; Dec. 30.
Wells, Reginald E., East Orange, N. J., assignor to General Motors Corporation, Detroit, Mich. Roller bearing. 1,786,926; Dec. 30.
Wendel, Ada B., Smithland, Iowa. Shade and curtain fixture. 1,787,097; Dec. 30.

Wensley, Roy J., Edgewood, Pa., assignor to Westinghouse Electric & Manufacturing Company. Supervisory-control system. 1,786,805; Dec. 30.
Wenzel, John, Chillicothe, Ohio. Doctor for paper-making machines. 1,786,587; Dec. 30.
Westberg, Sigurd, Germantown, Pa. Refining iron and steel. 1,786,806; Dec. 30.
Westinghouse Electric & Manufacturing Company. (See Aspinwall, Louis M., assignor.)
Westinghouse Electric & Manufacturing Company. (See Callsen, Albert, assignor.)
Westinghouse Electric & Manufacturing Company. (See Carrington, M., and Klinck, assignors.)
Westinghouse Electric & Manufacturing Company. (See Cochran, Paul B., assignor.)
Westinghouse Electric & Manufacturing Company. (See Davies, David R., assignor.)
Westinghouse Electric & Manufacturing Company. (See Flanders, Warren B., assignor.)
Westinghouse Electric & Manufacturing Company. (See Fletcher, Lindsey C., assignor.)
Westinghouse Electric & Manufacturing Company. (See Gibbs, Jesse B., assignor.)
Westinghouse Electric & Manufacturing Company. (See Guy, Henry L., assignor.)
Westinghouse Electric & Manufacturing Company. (See James, Henry D., assignor.)
Westinghouse Electric & Manufacturing Company. (See Krantz, Hubert K., assignor.)
Westinghouse Electric & Manufacturing Company. (See Marbury, Ralph E., assignor.)
Westinghouse Electric & Manufacturing Company. (See Miller, Frederic H., assignor.)
Westinghouse Electric & Manufacturing Company. (See Pierce, Raymond T., assignor.)
Westinghouse Electric & Manufacturing Company. (See Smith, Harold B., assignor.)
Westinghouse Electric & Manufacturing Company. (See Terry, Matson, C., assignor.)
Westinghouse Electric & Manufacturing Company. (See Thomas, Phillips, assignor.)
Westinghouse Electric & Manufacturing Company. (See von Hoorn, Fred G., assignor.)
Westinghouse Electric & Manufacturing Company. (See von Kandó, Kalman, assignor.)
Westinghouse Electric & Manufacturing Company. (See Wahlberg, Nils A., assignor.)
Westinghouse Electric & Manufacturing Company. (See Wensley, Roy J., assignor.)
Westinghouse Electric & Manufacturing Company. (See White, Thomas U., assignor.)
Westinghouse Electric & Manufacturing Company. (See Zworykin, Vladimir K., assignor.)
Wheeler, Harvey C. (See Thompson, Charles W., assignor.)
White, Floyd E., Winamac, Ind. Electric clock. 1,787,059; Dec. 30.
White, Harry B., Canton, Ohio, assignor to The Hoover Company. Suction cleaner. 1,787,224; Dec. 30.
White, Herbert J., assignor to Gleason Works, Rochester, N. Y. Completely automatic gear-cutting machine. 1,786,689; Dec. 30.
White, Thomas U., Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company. Supervisory control system. 1,786,807; Dec. 30.
Whitsitt, William B., and W. R. Iiedeman, Baltimore, Md. Superheater tube. 1,786,882; Dec. 30.
Whitworth, Bevill W., Omaha, Nebr. Automatic shade-roller stop. 1,786,512; Dec. 30.
Whyte, John, Beloit, Wis., assignor to Warner Electric Brake Corporation, South Beloit, Ill. Brake. 1,786,808; Dec. 30.
Wiegelmann, Hubert, Neheim, Germany. Device for producing shadow lines on work pieces. 1,786,925; Dec. 30.
Wiess, Harry C., Houston, Tex., assignor to Standard Oil Development Company. Vacuum distillation of hydrocarbon oils. 1,786,639; Dec. 30.
Wilcox, George, Riverside, Calif., assignor to California Canning Machinery Co., Los Angeles, Calif. Peach pitter. 1,786,724; Dec. 30.
Wild, Gunther P., Philadelphia, Pa. Door fastener. 1,787,296; Dec. 30.
Wild, Henry W., and P. A. Reutter, assignors to Scovill Manufacturing Company, Waterbury, Conn. Cosmetic holder. 1,787,183; Dec. 30.
Wilhelm, John H., Rockaway Beach, Long Island, assignor to Markon Manufacturing Co., Inc., New York, N. Y. Doll eyes. 1,786,588; Dec. 30.
Willard Storage Battery Company. (See Dunzweiler, Carl J., assignor.)
Williams, Julius E., Willoughby, Ohio, assignor, by mesne assignments, to Republic Steel Corporation. Nut-feeding mechanism. 1,786,469; Dec. 30.
Williamson, Alva, San Bernardino, Calif. Tilting device for vehicles. 1,786,589; Dec. 30.
Wilson, Donald R., Peshastin, Wash. Nail tongs. 1,787,331; Dec. 30.
Wilson, John, Chicago, Ill., assignor to Ilg Electric Ventilating Co. Regulating the speed of induction motors. 1,787,133; Dec. 30.
Wilson, Thomas A. D. and E. Reynolds, Dunedin, New Zealand. Radio circuit testing unit. 1,786,555; Dec. 30.
Window Glass Machine Company. (See Byrnes, Clarence P., assignor.)
Winter, Henry, Baltimore, Md. Window-sash fastener. 1,786,470; Dec. 30.
Wireless Music Limited. (See Trouton, Maurice, assignor.)
Wireless Specialty Apparatus Company. (See Proctor, J. A., and Bailey, assignors.)
Wise, Solomon, Cincinnati, Ohio. Locking device for automotive equipment. 1,787,134; Dec. 30.
Wittek, Herbert, Beuthen, Germany. Reducing ores. 1,787,348; Dec. 30.
Wittkuhns, Bruno, New York, N. Y., assignor to the firm Magnet-Werk G. m. b. H. Eisenach Spezialfabrik fur Elektromagnet-Apparate, Eisenach, Germany. Electromagnetic coupling. 1,787,225; Dec. 30.
Wohl, Alfred, Danzig-Langfuhr, Free City of Danzig, assignor to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Catalytic oxidation of organic compounds. 1,787,416; Dec. 30.
Wohl, Alfred, Danzig-Langfuhr, Free City of Danzig, assignor to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Catalytic oxidation of organic compounds. 1,787,417; Dec. 30.
Wolf, Frank, New York, N. Y. Attachment for containers. 1,787,060; Dec. 30.
Wolf, Frank, New York, N. Y. Accessory for containers. 1,787,061; Dec. 30.
Wolf, Harry, assignor to Cutter-Crossette Company, Chicago, Ill. Necktie. 1,787,226; Dec. 30.
Wolfermann, Carl E. E., New York, N. Y. Collapsible roof body for automobiles. 1,786,927; Dec. 30.
Wolff, Nathan, New York, N. Y. Union suit. 1,787,098; Dec. 30.
Wolverine Carburetor Company. (See Atkins, Edward G., assignor.)
Wolyn, David F., Woodmere, N. Y. Silent bridge bidding device. 1,786,809; Dec. 30.
Wood, Andrew C., assignor, by mesne assignments to Vortex Cup Company, Chicago, Ill. Vehicle service tray. 1,786,471; Dec. 30.
Wood, J. R., & Sons, Inc. (See Burgess, Andrew O., assignor.)
Wood, Joseph D., Quincy, assignor, by mesne assignments, to Condit Electrical Manufacturing Corporation, Boston, Mass. Electric switch. 1,787,227; Dec. 30.
Wood, William A. (See Bindschedler, T. S., and Wood.)
Woodbury Shoe Mfg. Co. (See Johnson, William A., assignor.)
Woodul, Walter F. (See Yates, Paul C., assignor.)
Woolworth, F. W., Company. (See Payne, James M., jr. assignor.)
Worcester Loom Works. (See Alvord, Clinton, assignor.)
Woroshilow, Anatoly P. (See Lurie, M. J., and Woroshilow.)
Wright, Wilbur L., assignor to Oswego Falls Corporation, Fulton, N. Y. Tapered or nesting paper can. 1,787,332; Dec. 30.
Wrigley, Sylvanus E., Sturgeon Creek, Manitoba, Canada. Tent. 1,786,928; Dec. 30.
Yale, Chester. (See Schoenberger, Paul, assignor.)
Yates, Paul C., assignor of one-fourth to W. F. Woodul, Houston, Tex. Airfoil. 1,786,472; Dec. 30.
Yawman & Erbe Manufacturing Company, The. (See Furlong, Roland A., assignor.)
Yecker, Joseph C., Lancaster, Pa. Glider plane. 1,787,297; Dec. 30.
Yoder, Howard D., assignor to Penberthy Injector Company, Detroit, Mich. Flexible coupling for pumps. 1,786,810; Dec. 30.
Ytterberg, Arle, Hogberget, Ludvika, and I. Herlitz, Magnet, Ludvika, assignors to Allmänna Svenska Elektriska Aktiebolaget, Vasteras, Sweden. Exciting means for direct-current generators. 1,787,028; Dec. 30.
Zahonyi, Louis W., St. Paul, Minn. Highway-sign bracket. 1,786,883; Dec. 30.
Zalesky, Frank J., Buckholts, Tex. Agricultural implement. 1,787,228; Dec. 30.
Zeier, Frederick F., assignor to Union Special Machine Company, Chicago, Ill. Throat-plate support for sewing machines. 1,786,929; Dec. 30.
Zeininger, Gustav A., Oberesslingen, assignor to Robert Bosch Aktiengesellschaft, Stuttgart, Germany. Acoustic signaling apparatus. 1,786,930; Dec. 30.
Zeiss, firm: Carl. (See Hansen, Gerhard, assignor.)
Zeiss, firm of Carl. (See Merté, Willy, assignor.)
Zell, David H., Brooklyn, N. Y. Savings bank. 1,786,725; Dec. 30.
Zell, David H., Brooklyn, N. Y. Savings bank. 1,786,811; Dec. 30.
Zimmerman, William F., Waverly, N. Y., assignor to Ingersoll-Rand Company, Jersey City, N. J. Tool retainer for pneumatic tools. 1,787,229; Dec. 30.
Ziola, Henry A., Milwaukee, Wis., assignor, by mesne assignments, to Radio Corporation of America, New York, N. Y. Radio dial control. 1 787,298; Dec. 30.
Zornig, Hermann H., Newhall, Iowa, and A. F. Teitscheid, Wharton, N. J. Combination fuse for projectiles. 1,786,640; Dec. 30.
Zuckerman, Roscoe C., Stockton, Calif. Sponge pad. 1,786,513; Dec. 30.
Zworykin, Vladimir K., Swissvale, Pa., assignor to Westinghouse Electric & Manufacturing Company. Facsimile transmission system. 1,786,812; Dec. 30.

ALPHABETICAL LIST OF INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 30TH DAY OF DECEMBER, 1930

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice). Includes patents, reissues, and designs.

Acid, Preparation for 2-halogen-para-phenyl-ortho-benzoyl-benzoic. P. H. Groggins. 1,786,527; Dec. 30.
Acid, Preparation of 4-halogen-para-phenyl-ortho-benzoyl-benzoic. P. H. Groggins. 1,786,526; Dec. 30.
Acid, Preparation of para-phenoxy-ortho-benzoyl-benzoic. P. H. Groggins. 1,786,532; Dec. 30.
Acid, Preparation of 2-amino-para-phenyl-ortho-benzoyl-benzoic. P. H. Groggins. 1,786,529; Dec. 30.
Acid, Preparing 4-amino-para-phenyl-ortho-benzoyl-benzoic. P. H. Groggins. 1,786,528; Dec. 30.
Acoustic diaphragm. V. A. Schlenker. 1,787,055; Dec. 30.
Acoustic signaling apparatus. G. A. Zeininger. 1,786,930; Dec. 30.
Adhesive compound and making same. W. Alexander. 1,786,417; Dec. 30.
Advertising device, Light. A. Abel. 1,787,333; Dec. 30.
Aeroplane for horizontal and vertical flight. J. E. Noeggerath. 1,786,545; Dec. 30.
Aeroplane wing. W. S. Hall. 1,787,370; Dec. 30.
Agricultural implement. J. B. Verhoff. 1,787,026; Dec. 30.
Agricultural implement. F. J. Zalesky. 1,787,228; Dec. 30.
Air cleaner and coupling. F. A. Donaldson. 1,787,235; Dec. 30.
Air compressor. B. Bischof. 1,786,595; Dec. 30.
Aircraft. E. Rubin. 1,787,325; Dec. 30.
Aircraft, Safety. W. C. Ward. 1,787,293; Dec. 30.
Airfoil. P. C. Yates. 1,786,472; Dec. 30.
Airplane-landing device. A. C. Gonzalez. 1,786,649; Dec. 30.
Airplane wing. M. Orr. 1,787,321; Dec. 30.
Airplanes. Controlling means for. G. W. Lyons. 1,786,668; Dec. 30.
Air-speed indicator. W. Gilbert. 1,786,841; Dec. 30.
Alarm system, Fire-. V. Durbin. 1,786,524; Dec. 30.
Alcohols, Production of. O. Loehr. 1,787,205; Dec. 30.
Alkalies, Continuous production of fused caustic. E. Bürgin and W. Schmid. 1,786,516; Dec. 30.
Alkaline ferric solution, Stable. W. J. Huff, D. L. Jacobson, and W. H. Hill. 1,786,490; Dec. 30.
Alumina by electrothermal reduction of the impurities in alumina containing raw materials, Making pure. H. Siegens. 1,787,124; Dec. 30.
Anthracene, Catalytic oxidation of. A. O. Jaeger. 1,786,950; Dec. 30.
Apparel, Wearing. F. C. Merrilies. 1,787,117; Dec. 30.
Aqueous dispersions, Apparatus for producing. A. L. Clapp. 1,787,339; Dec. 30.
Aqueous dispersions, Producing. A. L. Clapp. 1,787,338; Dec. 30.
Arc-quenching material. G. Steerup. 1,786,581; Dec. 30.
Articles consisting of regenerated cellulose, Desulphurizing. W. Eller and T. Madlung. 1,786,941; Dec. 30.
Auger and stoppage grip, Closet. R. A. King. 1,787,112; Dec. 30.
Automatic recording means for dump cars. E. W. Schellentrager. 1,787,287; Dec. 30.
Automobiles and the like, Mechanism for operating upon metal parts of. G. L. Hunt. 1,786,847; Dec. 30.
Bait, Artificial. W. G. Kutz. 1,786,568; Dec. 30.
Baking apparatus. W. Ebrhart. 1,786,485; Dec. 30.
Balloon spinner. B. C. Merritt. 1,787,159; Dec. 30.
Band-stretching machine. W. E. Humphrey. 1,787,423; Dec. 30.
Bank, Savings. D. H. Zell. 1,786,725; Dec. 30.
Bank, Savings. D. H. Zell. 1,786,811; Dec. 30.
Bar: *See*—
  Bus bar.
Base-exchanging properties, Increasing. O. Liebknecht. 1,787,008; Dec. 30.
Basket. E. V. Hawkins. 1,786,998; Dec. 30.
Battery: *See*—
  Storage battery.
Bearing, Antifriction. J. E. Shafer. 1,787,214; Dec. 30.
Bearing, Demountable sheave. S. H. H. Parsons. 1,786,741; Dec. 30.
Bearing, Knife-edge. R. F. H. Caillaud. 1,786,424; Dec. 30.
Bearing, Roller. R. E. Wells. 1,786,926; Dec. 30.
Bearing, Thrust. A. E. Freeman. 1,786,565; Dec. 30.
Bearings, Making sheet-metal. W. H. Klocke. 1,787,255; Dec. 30.
Bearings on arbors in multiple, Mounting. L. C. Blomstrom. 1,786,557; Dec. 30.
Bed, Invalid. A. Iplicjian. 1,787,380; Dec. 30.
Bedpost or similar article. T. G. Kindel. Des. 82,945; Dec. 30.
Beetle trap. E. S. Bullock. 1,786,599; Dec. 30.
Beetle trap. W. A. Ruddell. 1,787,421; Dec. 30.
Beets, Method of and apparatus for handling. L. B. Neighbour and F. A. Thomann. 1,787,161; Dec. 30.
Belt, Metal and rubber track. A. Kégresse. 1,786,539; Dec. 30.
Bent-tube boiler. L. J. Marshall. 1,786,913; Dec. 30.
Bidding device, Silent bridge. D. F. Wolyn. 1,786,809; Dec. 30.
Binder, Loose-leaf. J. Barker. 1,786,816; Dec. 30.
Binder, Visible index. J. L. McMillan. 1,786,857; Dec. 30.
Blade-attaching means for windshield wipers. A. F. Gillet. 1,787,068; Dec. 30.
Blank feeding and gluing device. H. Carle. 1,786,476; Dec. 30.
Blank-separating mechanism. H. Carle. 1,786,477; Dec. 30.
Bleaching agent and making the same. W. B. Stoddard and V. R. Kokatnur. 1,787,402; Dec. 30.
Block: *See*—
  Loading block.
Blocks, Method of and apparatus for scoring. F. Trotter and A. Swanson. 1,787,219; Dec. 30.
Blood of a mass capable of being colored, Manufacture from. F. Homberg. 1,786,488; Dec. 30.
Blower. E. L. Anderson. 1,787,062; Dec. 30.
Board: *See*—
  Gypsum wall board. Sounding board.
Bobbin for electrical feelers. E. R. Holmes. 1,786,654; Dec. 30.
Bobbin for weft-replenishing looms. R. G. Turner. 1,786,682; Dec. 30.
Bodice, Bust. M. Cadolle. 1,786,895; Dec. 30.
Body panels, Flanging. O. J. Groehn. 1,787,151; Dec. 30.
Boiler: *See*—
  Bent-tube boiler. Steam boiler.
Boiler installation, High-pressure-. J. B. Crane and L. J. Marshall. 1,786,828; Dec. 30.
Bookholder. C. J. Hilkey. 1,786,567; Dec. 30.
Book, Loose-leaf. L. E. Hutchings. 1,786,617; Dec. 30.
Book with page-ruling attachment therefor. P. H. Kaufman. 1,787,005; Dec. 30.
Boots or shoes, Device for use in the manufacture of. W. A. Johnson. 1,786,619; Dec. 30.
Bottle-blowing machine. H. Hillmann. 1,787,312; Dec. 30.
Bottle capper. E. R. Leighton. 1,786,760; Dec. 30.
Bottle caps, Removing. N. P. Porz. 1,787,018; Dec. 30.
Bottle-straightening device. A. P. Ekvall. 1,786,939; Dec. 30.
Box: *See*—
  Cigarette and match box. Stuffing box.
  One-piece box.
Box. M. Feybusch. 1,786,743; Dec. 30.
Bracelet construction. O. L. Gammell. 1,786,943; Dec. 30.
Bracket: *See*—
  Car-wind-wing bracket. Sign bracket.
Brake: *See*—
  Fluid-pressure brake. Motor-operated brake.
  Hydraulic brake. Torque brake.
  Internal-expansion brake. Vehicle brake.
Brake. J. Whyte. 1,786,808; Dec. 30.
Brake control. G. F. Michael. 1,786,670; Dec. 30.
Brake for motor vehicles, Clutch. A. Moorhouse. 1,787,160; Dec. 30.
Brake mechanism. F. O. Vaughn. 1,786,970; Dec. 30.
Brake-resistance device for winding machines, Variable. J. A. Cameron. 1,787,104; Dec. 30.
Braking mechanism for automobiles and other motor or power driven vehicles. G. R. Hoffman. 1,787,377; Dec. 30.
Bricklaying machine. F. C. Layer. 1,786,622; Dec. 30.
Building construction. W. D. Belding. 1,786,691; Dec. 30.
Building construction. T. Rowan. Re17,913; Dec. 30.
Building insulation. B. E. Balduf. 1,786,732; Dec. 30.
Building slab. J. H. Powers. 1,787,166; Dec. 30.
Bumper for motor cars and automobiles. R. Reynolds. 1,786,865; Dec. 30.
Buoy for seaside resorts, Pleasure. M. W. Iden. 1,786,658; Dec. 30.
Bus bar, Sectional electrical. D. R. Davies. 1,786,880; Dec. 30.
Bushing. E. Cooper. 1,786,826; Dec. 30.
Button. I. D. Ford. 1,786,839–40; Dec. 30.
Cabinet, Refrigerator. R. W. Hull. 1,787,379; Dec. 30.
Cabinet slide, Index-. H. Turner. 1,787,344; Dec. 30.

Cabinet, Towel. C. W. Thompson. 1,786,966; Dec. 30.
Cables, Terminal housing for. A. O. Austin. 1,786,731; Dec. 30.
Calculating machine. W. B. Payne, R. E. Bohrer, and W. Fuhlborn. 1,787,259; Dec. 30.
Camera and method of photography. J. F. Seitz. 1,787,023; Dec. 30.
Cameras, Audible footage meter and exposed film indicator for motion-picture. A. C. Hayden. 1,787,271; Dec. 30.
Can: *See*—
  Paper can.
Can-body makers, Attachment for. J. H. Renshaw. 1,787,324; Dec. 30.
Can opener. C. A. Liquori. 1,787,046; Dec. 30.
Cans in ice-cream cabinets, Method and apparatus for positioning and sealing ice-cream. L. G. Copeman. 1,786,827; Dec. 30.
Cap. C. D. Hollenbeck. 1,787,378; Dec. 30.
Cap and making the same, Knitted. D. Karger. 1,787,043; Dec. 30.
Car or carriage, Baby. J. W. Leek. 1,786,663; Dec. 30.
Car, Poultry. I. V. Edgerton. 1,786,427; Dec. 30.
Car stake-straightening device, Coal-. C. E. Strausbaugh. 1,787,095; Dec. 30.
Car wind-wing bracket, Closed-. W. E. Shehan and G. Bell. 1,786,635; Dec. 30.
Car with closed carriage body into a platform lorry, Transformer of a motor. W. Bliss. 1,786,693; Dec. 30.
Carbon deposits from cylinders, Removing. T. Midgley, jr., and C. A. Hochwalt. 1,786,860; Dec. 30.
Carburetor. E. G. Atkins. 1,787,230; Dec. 30.
Carburetor. O. H. Ensign. 1,787,148; Dec. 30.
Carburizing apparatus, Operating. R. Kaier. 1,786,951; Dec. 30.
Cargo-discharging apparatus for ships. L. A. Stinson. 1,787,025; Dec. 30.
Carrier for dispatch systems. F. W. MacMartin. 1,787,206; Dec. 30.
Cash register. W. H. Robertson. 1,786,454; Dec. 30.
Cash register. B. M. Shipley. 1,786,964; Dec. 30.
Casing for a weighing and vending machine. O. D. Jennings. Des. 82,943; Dec. 30.
Casing ripper. R. Althansen. 1,786,590; Dec. 30.
Casing shoe and valve. J. Q. Little. 1,786,761; Dec. 30.
Casting machine for battery grids. D. Pepper. 1,786,629; Dec. 30.
Catch and combination lock, Keyless. G. J. Nyrose. 1,786,447; Dec. 30.
Cellular composition and making same. H. L. Fisher. 1,786,563; Dec. 30.
Cellulose and textile fibers from vegetable matter, Manufacturing. C. A. Braun. 1,786,890; Dec. 30.
Cellulose of any kind, Bleaching. L. Rys. 1,787,395; Dec. 30.
Centrifugal bowl separator. C. Schmitz. 1,786,921; Dec. 30.
Chain. C. E. Dansereau. 1,787,405; Dec. 30.
Chain manufacture, Apparatus for. R. W. Dull. 1,786,707; Dec. 30.
Chain or traveling-grate stoker. W. M. Duncan. 1,786,646; Dec. 30.
Chair: *See*—
  Collapsible chair.
Chair or similar article. E. Hauser. Des. 82,937–8; Dec. 30.
Chair, table, and bed, Combined. W. A. Graham and W. F. Doyle. 1,787,245; Dec. 30.
Change maker. A. F. Nelson. 1,787,085; Dec. 30.
Check-controlled mechanism. A. D. Antoine. 1,787,099; Dec. 30.
Check writer. R. E. Bohrer, W. B. Payne, and C. G. Tiefel. 1,787,234; Dec. 30.
Chopper: *See*—
  Cotton chopper.
Cigar machines, Bunch transfer for. J. F. Halstead. 1,786,608–9; Dec. 30.
Cigarette and match box, Combination. E. Derwish. 1,787,361; Dec. 30.
Circuit breaker. F. G. Von Hoorn. 1,786,796–8; Dec. 30.
Circuit closer, Prison bar and alarm system. W. M. Barton. 1,787,350; Dec. 30.
Circuit-controlling device. G. R. Townsend. 1,787,292; Dec. 30.
Clamp: *See*—
  Hose clamp. Strap clamp.
Clay, Sintering. J. E. Greenawalt. 1,786,714; Dec. 30.
Cleaner: *See*—
  Gun cleaner. Vacuum cleaner.
  Suction cleaner.
Cleaning device, Internal-combustion engine. F. F. Cowherd. 1,787,360; Dec. 30.
Cleaning implement. F. W. Stein. 1,786,723; Dec. 30.
Cleaning machine, Used journal-box-waste. T. M. Lawson. 1,787,156; Dec. 30.
Clip: *See*—
  Comb clip.
Clock case. N. F. Thompson, jr. Des. 82,961; Dec. 30.
Clock, Electric. F. E. White. 1,787,059; Dec. 30.
Closet bowl, Water-. H. F. Weaver. Des. 82,963; Dec. 30.
Closure, Bag. J. K. Diamond. 1,786,426; Dec. 30.
Clothes washer and drier, Mechanical. P. E. Geldhof. 1,787,243; Dec. 30.
Clothes washer, Mechanical. P. E. Geldhof. 1,787,244; Dec. 30.
Clothlike fabric. M. J. Shoemaker. 1,786,781; Dec. 30.
Clutch. A. D. Gargolinski. 1,786,708; Dec. 30.
Clutch and brake bands, Operating mechanism for. G. M. Harry and C. Sternberger. 1,786,749; Dec. 30.
Clutch, Differential. J. T. Hustvet. 1,786,492; Dec. 30.
Clutch driving mechanism, Friction-. K. Maier. 1,786,955; Dec. 30.
Clutch for Axminster-loom tube frames. J. Lyle. 1,786,667; Dec. 30.
Coal separator. P. Tarone and J. Rowland. 1,787,096; Dec. 30.
Cock or faucet for fluids. N. W. Bancroft. 1,786,885; Dec. 30.
Coil, Choke. A. B. Dibner. 1,786,604; Dec. 30.
Coin depository. H. Walker. 1,786,466; Dec. 30.
Collapsible chair. W. J. Bauer. 1,786,473; Dec. 30.
Collar and cuff. E. C. Larson. 1,787,113; Dec. 30.
Collar, Soft. J. Hillman. 1,786,535; Dec. 30.
Color-slide control for multicolor magazines. A. A. Gordon. 1,786,711; Dec. 30.
Coloring matter of the anthracene series. I. Gubelmann, R. J. Goodrich and W. Dettwyler. 1,787,069; Dec. 30.
Comb clip, Pocket. F. D. Perry. 1,786,674; Dec. 30.
Combination hanger. S. E. Livingston. Des. 82,948; Dec. 30.
Combustion-control apparatus. T. A. Peebles. 1,787,407; Dec. 30.
Composition for use in the manufacture of rubber and the like. C. O. North. 1,787,258; Dec. 30.
Compounds of the thiazolic series and making same, New. H. P. Kaufmann and M. Schubert. 1,787,315; Dec. 30.
Compounds of the thiazolic series, New. H. P. Kaufmann and M. Schubert. 1,787,316; Dec. 30.
Compressing machine. F. J. Stokes. 1,786,637; Dec. 30.
Compressor, Rotary fluid. A. T. Burger. 1,786,893; Dec. 30.
Computing machine. M. M. Goldberg. 1,786,525; Dec. 30.
Concrete structure and making same. C. R. Geisler. 1,787,149; Dec. 30.
Condensation product of aromatic sulphonic acids. F. Pospiech. 1,787,408; Dec. 30.
Condenser. R. R. Collins. 1,787,144; Dec. 30.
Condenser, Electric. J. A. Proctor and W. M. Bailey. Re17,916; Dec. 30.
Conditioning machine. V. Cano. 1,787,063; Dec. 30.
Conduit and making same. L. M. Christie. 1,786,425; Dec. 30.
Confection, Frozen. E. L. Gordon. 1,786,606; Dec. 30.
Connecter, Automatic. J. Robinson. 1,787,122; Dec. 30.
Connecter, Electrical. W. H. Broer. 1,786,598; Dec. 30.
Connecting means for rafters. F. L. Purdy. 1,787,167; Dec. 30.
Connecting mechanism for jacquard levers. E. R. Holmes. 1,786,656; Dec. 30.
Connecting rod. B. B. Briggs. 1,786,934; Dec. 30.
Container and display device, Combination. H. C. Warner. 1,787,222; Dec. 30.
Container, Face-powder. A. E. Sierad. Des. 82,960; Dec. 30.
Container for barbers, Sterilizing. C. C. Betzer. 1,786,594; Dec. 30.
Container, Multiple-compartment. G. A. Pfeiffer. 1,787,283; Dec. 30.
Container or box for motor vehicles and the like, Shipping. J. Campbell. 1,787,305; Dec. 30.
Containers, Accessory for. F. Wolf. 1,787,061; Dec. 30.
Containers, Attachment for. F. Wolf. 1,787,060; Dec. 30.
Control system. E. F. W. Alexanderson. 1,787,299; Dec. 30.
Control system. K. Von Kando. 1,786,799; Dec. 30.
Conveyer mechanism. F. R. Quick. 1,786,779; Dec. 30.
Conveyer table. E. W. Mikaelson. 1,786,575; Dec. 30.
Conveying or delivering biscuits or like articles. H. Kirman and G. R. Baker. 1,787,254; Dec. 30.
Cooling system for outboard motors, Water-. O. Evinrude. 1,786,835; Dec. 30.
Cord hanger. C. M. Glazener. 1,787,106; Dec. 30.
Corn popper. J. H. Reichart. 1,786,507; Dec. 30.
Corn popper. E. B. Thompson. 1,786,877; Dec. 30.
Corner for burial casket. R. P. Henderson. Des. 82,941–2; Dec. 30.
Cotton-boll extracting and cleaning device. G. E. Evans. 1,786,904; Dec. 30.
Cotton chopper. J. A. Laird. 1,786,661; Dec. 30.
Cotton picker. E. A. Johnston, B. R. Benjamin, D. B. Baker, and C. R. Hagen. 1,786,851; Dec. 30.
Coupling: *See*—
  Electric coupling. Pipe coupling.
  Electromagnetic coupling. Tool-retaining coupling.
  Hose coupling.
Coupling device. R. Kemlein. 1,787,203; Dec. 30.
Coupling for pumps, Flexible. H. D. Yoder. 1,786,810; Dec. 30.
Coupling pin, Car. W. J. Simmons, sr. 1,786,872; Dec. 30.
Cover attaching and locking means. E. C. Wamelink. 1,786,802; Dec. 30.

Cover for cooking vessels. A. Rohrmann and H. Schmidt. 1,787,172; Dec. 30.
Covering, Process and apparatus for the production of felt base floor. J. B. Campbell. 1,787,140; Dec. 30.
Creasing and cutting machine. J. T. Robinson and H. F. Cook. 1,787,170; Dec. 30.
Cribbing. J. S. Huntoon. 1,787,199–200; Dec. 30.
Crimping machine. J. M. Christman. 1,787,142; Dec. 30.
Crusher: *See*—
Hammer crusher.
Crystallization process. W. E. Burke. 1,787,356; Dec. 30.
Culinary means. A. Rohrmann and H. Schmidt. 1,787,171; Dec. 30.
Cup: *See*—
Teat cup.
Current generator, Alternating. T. S. Bindschedler and W. A. Wood. 1,786,888; Dec. 30.
Current impulses, Indicating. O. Lohaus. 1,786,666; Dec. 30.
Curtain-rod structure. G. W. Dover. 1,786,645; Dec. 30.
Cushion-tire bases, Bridging ring for. H. L. Mueller. 1,786,957; Dec. 30.
Cut-off for cigarette machines. R. J. A. Chandler. 1,786,519; Dec. 30.
Cut-outs, Secondary contact spring for plug. E. L. Hawley. 1,787,109; Dec. 30.
Cutter: *See*—
Paper cutter. Stalk cutter.
Cutting machine, Board-. C. Absmeier. 1,786,726; Dec. 30.
Cutting machine, Fish-. A. R. Rogers. 1,786,632; Dec. 30.
Cyanides, Recovering. R. R. Bryan. 1,787,033; Dec. 30.
Cylinders, Apparatus for driving hollow. F. H. Hunt. 1,787,000; Dec. 30.
Decking device for freight cars. A. Copony. 1,786,735–6; Dec. 30.
Deflection of a conical pencil of imaging rays, Device for partial. G. Hansen. 1,787,269; Dec. 30.
Dental apparatus. D. W. McLean. 1,786,915; Dec. 30.
Desk. M. Carrington and J. H. Klinck. 1,786,823; Dec. 30.
Desk, Card-record. E. Ohnstrand. 1,786,628; Dec. 30.
Desk, Folding. W. B. Fahnestock. 1,787,363; Dec. 30.
Detector: *See*—
Leak detector.
Diathermic treatment of the human body, Device for the. E. Last. 1,786,541; Dec. 30.

Disk harrow. W. R. Peterson. 1,786,863; Dec. 30.
Dispersion and making the same. R. W. Lewis. 1,787,418; Dec. 30.
Display and dispensing apparatus, Combined. A. Wellemeyer. 1,787,347; Dec. 30.
Display and vending case, Combined. R. M. Messinger. Des. 82,951; Dec. 30.
Display jar, Agitating. A. E. Repenning and C. J. Howel. 1,786,450; Dec. 30.
Display matter, Device for the production of apparently-moving. A. Abel. 1,787,334; Dec. 30.
Display stand, Advertising powder-puff-. S. L. Pomerantz. Des. 82,956; Dec. 30.
Distillation apparatus. L. J. Simon. 1,787,399; Dec. 30.
Distributor, Automatic ensilage. A. A. Sievert. 1,786,677; Dec. 30.
Dobby heads, Attachment for reversible. W. M. Wattie. 1,786,687; Dec. 30.
Doll eyes. S. Marcus. 1,787,572; Dec. 30.
Doll eyes. J. H. Wilhelm. 1,786,588; Dec. 30.
Dolls' heads, Mouth equipment for. S. Marcus and A. Konoff. 1,787,207; Dec. 30.
Door. D. C. Bakehouse. 1,787,302; Dec. 30.
Door. B. B. Kahn. 1,786,429; Dec. 30.
Doorcheck. - M. L. Dodge. 1,787,147; Dec. 30.
Door closer, Automatic. H. W. Shonnard. 1,786,782; Dec. 30.
Door construction, Garage-. W. D. Ferris. 1,787,238; Dec. 30.
Door-control apparatus. R. Hill. 1,787,073; Dec. 30.
Door for railway hopper cars. G. G. Gilpin. 1,786,747; Dec. 30.
Door lock. J. Holtzman. 1,787,272; Dec. 30.
Draft member. M. H. Martin. 1,786,914; Dec. 30.
Draft regulator, Automatic. C. J. Ashley. 1,786,931; Dec. 30.
Draft rigging. D. S. Barrows. 1,786,419; Dec. 30.
Drain connection. E. F. Niedecken. 1,786,771; Dec. 30.
Drain, floor. E. W. N. Boosey. 1,786,558; Dec. 30.
Drainage fitting. E. W. N. Boosey. 1,786,597; Dec. 30.
Drawer pull. J. A. McBride. Des. 82,949; Dec. 30.
Drier: *See*—
Rotary drier. Salt drier.
Drier for sand and the like. H. W. Nagel. 1,787,280; Dec. 30.
Drilling system, Rotary earth-. H. D. James. 1,786,755; Dec. 30.
Drinking fountain, Poultry. E. J. J. Mueller. 1,787,015; Dec. 30.
Drive mechanism, Carpet-sweeper brush-. F. W. Pullen. 1,786,864; Dec. 30.
Dry cells, Making. W. F. Hendry. 1,786,945; Dec. 30.
Drying and rinsing apparatus, Centrifugal clothes. P. E. Geldhof. 1,787,242; Dec. 30.
Drying machine, Centrifugal. T. A. Bryson. 1,786,475; Dec. 30.
Dusting device, Automatic tube-. P. W. Lehman. 1,786,437; Dec. 30.
Economizer. G. P. Jackson, K. Toensfeldt, and H. Steele. 1,786,909; Dec. 30.
Electric barriers and the like, Securing. P. Nicholay. 1,786,446; Dec. 30.
Electric coupling. F. Coates. 1,786,600; Dec. 30.
Electric discharge device. E. F. W. Alexanderson. 1,787,300; Dec. 30.
Electric regulator or overload-limiting apparatus, Automatic. A. Barbagelata. 1,787,303; Dec. 30.
Electric switch. F. B. Adsm. 1,786,727; Dec. 30.
Electric switch. G. A. Burgess. 1,786,935; Dec. 30.
Electric switch. C. Thumlm. 1,787,291; Dec. 30.
Electric switch. J. D. Wood. 1,787,227; Dec. 30.
Electric transformer. S. Z. De Ferranti. 1,786,899; Dec. 30.
Electrical plug receptacle. G. J. Meuer. 1,787,084; Dec. 30.
Electromagnetic coupling. B. Wittkuhns. 1,787,225; Dec. 30.
Electromagnetic draining device. H. Van Keuren. 1,786,878; Dec. 30.
Electromagnetic sound-producing device. J. H. Van Wagenen. 1,786,465; Dec. 30.
Electrooptical system. R. V. L. Hartley. 1,786,652; Dec. 30.
Electroplating apparatus. K. Baranowski. 1,786,592; Dec. 30.
Electrostatic reproducer. R. H. Leffler. 1,786,436; Dec. 30.
Engine: *See*—
Internal-combustion engine.
Engines, Fuel-injecting device for internal-combustion. K. J. E. Hesselman. 1,786,844; Dec. 30.
Engines, Fuel-injection device for explosion. F. Hofmann. 1,786,946; Dec. 30.
Ensilage distributor. F. C. Reinke. 1,787,261; Dec. 30.
Excavating apparatus. F. H. Hunt and F. A. Schroeder. 1,787,001; Dec. 30.
Expansion joint. D. S. Boyden. 1,786,642; Dec. 30.
Expansion joint. F. Ray. 1,786,506; Dec. 30.
Extracting pyrethrum. W. J. Trevillian. 1,786,967; Dec. 30.
Fabric: *See*
Cloth-like fabric. Pile fabric.
Knitted fabric.
Fabric. C. F. Lee. 1,786,569; Dec. 30.
Fan. J. Karageorge. Des. 82,944; Dec. 30.
Fare indicator. K. Gehlen. 1,786,745; Dec. 30.
Farrowing house. E. B. Morris. 1,786,769; Dec. 30.
Fastener, Door. G. P. Wild. 1,787,296; Dec. 30.
Fastener for fruit baskets, Adjustable. O. O. Kendall. 1,787,202; Dec. 30.
Fastener, Hood. C. S. Ricker. 1,786,452; Dec. 30.
Fastener, Separable. P. A. Aronson. 1,786,978; Dec. 30.
Fastener, Snap. C. F. and M. V. Clark. 1,787,143; Dec. 30.
Fastener, Window-sash. H. Winter. 1,786,470; Dec. 30.
Feeder. G. F. Pfeiffer. 1,786,777; Dec. 30.
Feeder and disintegrator or mixer. R. V. Arnold, E. E. Flickinger, and S. E. Wantz. 1,786,556; Dec. 30.
Feeders, Adjustable guard for poultry. D. E. Speicher. 1,787,330; Dec. 30.
Fence-post connection. J. B. Mascrang. 1,786,573; Dec. 30.
Fertilizer distributor. W. L. Beall. 1,786,886; Dec. 30.
Fiber, Method of and apparatus for selecting. R. A. Webber. 1,786,973; Dec. 30.
Fibers, Process of and apparatus for the dry disintegration of and deposition of. F. W. Manning. 1,786,669; Dec. 30.
File, Finger-nail. C. A. Foresman. Des. 82,932; Dec. 30.
Filing appliance. W. E. Dunning. 1,787,237; Dec. 30.
Films, Device for the automatic adjustment of the tensions of. E. Oehmichen. 1,786,917; Dec. 30.
Films, Drying varnish. P. B. Cochran. 1,786,824; Dec. 30.
Filter, Air. E. L. Barnes. 1,787,135; Dec. 30.
Filter-leaf construction. W. H. Bacheldor. 1,787,100; Dec. 30.
Filtering machine, Pulp-. E. C. Loetscher. 1,787,047; Dec. 30.
Finger ring. J. Granat. Des. 82,934; Dec. 30.
Firearm. C. J. Jefferson. 1,787,004; Dec. 30.
Firearms, Apparatus for filling magazines for self-loading. V. Holek. 1,786,537; Dec. 30.
Firearms, Firing mechanism for automatic. E. Holek. 1,786,536; Dec. 30.
Firearms, Marksmanship-training device for. D. B. Howard. 1,786,614; Dec. 30.
Fireplace, Combination. I. Risdon. 1,786,453; Dec. 30.
Fitting for insulators. A. O. Austin. 1,786,730; Dec. 30.
Fixture construction. R. B. Benjamin. 1,787,032; Dec. 30.

Line follower. O. Erickson. 1,787,362; Dec. 30.
Lining vessel for carrying out operations with liquids and the like. F. H. Bramwell. 1,787,101; Dec. 30.
Liquefaction. W. L. De Baufre. 1,786,898; Dec. 30.
Liquid-delivering apparatus. R. Meijer. 1,787,389; Dec. 30.
Loading block. C. B. Parsons. 1,786,774; Dec. 30.
Lock: *See*—
Door lock. Valve lock.
Gravity lock.
Lock. S. P. Goldberg. 1,786,648; Dec. 30.
Lock. J. K. Warren. 1,786,511; Dec. 30.
Lock for automobiles, Antitheft. E. M. Heidorn. 1,787,110; Dec. 30.
Lock washer, Spring nut-. H. G. Norwood. 1,786,502–3; Dec. 30.
Locking device for automotive equipment. S. Wise. 1,787,134; Dec. 30.
Locking device, Nut-. W. A. Lelean and D. C. Brown. 1,787,114; Dec. 30.
Log, Stay. J. S. Stone. 1,786,460; Dec. 30.
Loom dobby. A. A. Gordon. 1,786,712; Dec. 30.
Loom picker. V. Weiss. 1,787,182; Dec. 30.
Loom, Weft-replenishing. V. H. Jennings. 1,786,659; Dec. 30.
Looms, Harness-sheave stand for. A. E. Brickman. 1,786,696; Dec. 30.
Looms, Harness-sheave stand for. A. D. Gargolinski. 1,786,710; Dec. 30.
Looms, Lay and shuttle box for. J. F. Colgan. 1,786,703; Dec. 30.
Looms, Let-off for narrow-ware. E. R. Holmes. 1,786,657; Dec. 30.
Looms, Multicolor magazine for. W. M. Wattie. 1,786,688; Dec. 30.
Looms on cables, Device for holding. H. E. Walker. 1,786,585; Dec. 30.
Looms, Picker-stick retriever for. A. D. Gargolinski. 1,786,709; Dec. 30.
Looms, Resetting mechanism for weft-replenishing. P. D. Doherty. 1,786,706; Dec. 30.
Looms, Shuttle-box construction for. J. F. Colgan. 1,786,702; Dec. 30.
Looms, Temple for double-fabric. R. G. Turner. 1,786,684; Dec. 30.
Looms, Warp stop motion for terry towel. J. Regan. 1,786,675; Dec. 30.
Loud-speaker motor. R. Conover. 1,786,479; Dec. 30.
Lubricant-receiving fittings, Making. G. L. Moore. 1,787,257; Dec. 30.
Lubricating device. G. Kirk and A. C. Danver. 1,786,432; Dec. 30.
Lubricating system, Pressure. E. F. Pierce and D. H. Sweet. 1,786,548; Dec. 30.
Lubricator filler. B. Montoya. 1,787,011; Dec. 30.
Luggage lock. O. A. Boesel. Des. 82,926; Dec. 30.
Machine for closing and sealing cans. J. M. McClatchie. 1,787,050; Dec. 30.
Machine for cutting articles from sheet material. F. J. MacDonald. 1,786,542; Dec. 30.
Machine for cutting bias fabrics. J. P. Morris. 1,787,208; Dec. 30.
Machine for internally coating culvert pipes. A. W. Spaulding. 1,786,785; Dec. 30.
Machine for producing gears. E. W. Bullock, A. P. Schansell, A. W. Draeseke, C. T. Galloway, and M. H. Hill. 1,786,697; Dec. 30.
Machine for stitching patterns on fabric bases. A. Curioni. 1,786,481; Dec. 30.
Machine for the production of mesh fabric and chains. K. Kindl. 1,786,953; Dec. 30.
Machine for transferring designs onto cylindrical surfaces. L. Linzell and T. E. Phythian. 1,786,570; Dec. 30.
Magnetic pick-up. O. M. Dunning. 1,786,985; Dec. 30.
Magneto-electric machine for the generation of monophase current. E. Morel. 1,787,014; Dec. 30.
Mangle, Washing. C. Rieger. 1,787,286; Dec. 30.
Manifold for straight-eight internal-combustion engines, inlet. J. A. H. Barkeij. 1,787,186; Dec. 30.
Marine propulsion. J. W. Harvey. 1,786,997; Dec. 30.
Match machine. S. M. Friede and F. J. McGuire. 1,786,486; Dec. 30.
Material, Forming. C. D. Knowlton 1,786,496; Dec. 30.
Material-handling apparatus. J. R. Allan. 1,786,884; Dec. 30.
Material-handling plant. C. F. Bledsoe. 1,786,734; Dec. 30.
Material in finely-divided or powderous form, Apparatus for disseminating. J. C. Savage. 1,787,397; Dec. 30.
Materials, Apparatus for cutting. E. P. Burrell. 1,786,698–9; Dec. 30.
Materials, Mechanism and process for separating intermixed divided. K. Davis. 1,787,340; Dec. 30.
Materials, Method and mechanism for separating divided. K. Davis. 1,786,739; Dec. 30.
Measuring and cutting device. F. G. Gronemeyer. 1,786,992; Dec. 30.
Meat slicer. E. G. Streckfuss. 1,787,288; Dec. 30.
Mechanical movement and toy. E. H. Schmidt. 1,787,174; Dec. 30.
Metal articles, Apparatus for enameling. A. G. Sherman and A. Meadows. 1,787,175; Dec. 30.
Metal by rolling mills, Reduction of. A. Paterson. 1,786,775; Dec. 30.
Metal, Rolling. D. Eppelsheimer. 1,786,834; Dec. 30.
Metal work, Apparatus for and art of treatment of. H. Rosenberg. 1,786,508; Dec. 30.
Metallic structure. M. L. Carr. 1,786,822; Dec. 30.
Metals and metallic alloys, Separation and purification of. A. Hanak. 1,786,908; Dec. 30.
Metals from ores, Reduction of. J. W. Hornsey. 1,786,999; Dec. 30.
Meter: *See*—
Induction meter.
Milk and cream preparations, Production of solid. P. Born. 1,786,559; Dec. 30.
Milk powder, Treatment of. I. S. Merrell and H. Schibsted. 1,786,858; Dec. 30.
Milking apparatus, Cow-. C. H. Hapgood. 1,787,152; Dec. 30.
Milking machine. F. G. Hodsdon. 1,786,846; Dec. 30.
Mill: *See*—
Rolling mill.
Mill for grinding paints, inks, enamels and other viscous materials. E. G. Todd. 1,787,180; Dec. 30.
Mirror, Illuminated. N. B. Braly. 1,786,420; Dec. 30
Mold for manufacturing boots, shoes, and similar articles of rubber of other plastic material H., A., and G. Steppé. 1,787,177; Dec. 30.
Molding apparatus and process, Centrifugal. C. S. Sorensen. 1,787,094; Dec. 30.
Molding machine. M. W. Farnham. 1,786,837; Dec. 30.
Molding machine. T. O. Morris and J. J. Lawlor. 1,786,672; Dec. 30.
Molding machine, Automatic night-candle-. A. Sgritta. 1,786,634; Dec. 30.
Mortars and concretes, Manufacturing artificial aggregate for. J. E. Greenawalt. 1,786,173; Dec. 30.
Motor: *See*—
Loud-speaker motor.
Motor-control means. J. D. Nies. 1,786,772; Dec. 30.

Motor-control system. H. L. Van Valkenburg. 1,786,554; Dec. 30.
Motor-control system, Electric. W. O. Lum. 1,787,278; Dec. 30.
Motor-operated brake. G. W. Lautrup. 1,787,044; Dec. 30.
Motors, Regulating the speed of induction. J. Wilson. 1,787,133; Dec. 30.
Mount for machine guns, Combination. F. K. Howard. 1,786,615; Dec. 30.
Mounting, Disk-wheel. J. H. Hunt. 1,787,074; Dec. 30.
Mounting for electric conductors. W. R. Edson. 1,786,937; Dec. 30.
Mounting for glass windows or the like. A. H. Marty. 1,787,386; Dec. 30.
Mower attachment. R. W. George. 1,786,487; Dec. 30.
Musical wind instrument. H. Dytch. 1,786,833; Dec. 30.
Neck and closure structure. J. S. Reid. 1,786,722; Dec. 30.
Necktie. H. Wolf. 1,787,226; Dec. 30.
Neutralizing apparatus. W. H. Chapman. 1,787,188; Dec. 30.
Nitrocellulose, Acetylation of. H. A. Gardner and C. A. Knauss. 1,786,989; Dec. 30.
Nonskid device. G. A. Hathorne. 1,786,653; Dec. 30.
Nut, Cap. J. W. Hughes. 1,787,154; Dec. 30.
Nut-feeding mechanism. J. E. Williams. 1,786,469; Dec. 30.
Oar blade or the like. J. L. Ribard. 1,786,451; Dec. 30.
Objective corrected spherically, chromatically, astigmatically, and for coma. W. Merté. 1,786,916; Dec. 30.
Oil-burning apparatus. H. B. Donley, A. J. Frame, and J. G. Gilmore. 1,786,832; Dec. 30.
Oil-refinery fitting. C. B. Harbison. 1,787,040; Dec. 30.
Oil-treating apparatus. C. R. Short and C. L. Lee. 1,787,409; Dec. 30.
Oil, Treating hydrocarbon. J. M. Goodwin. 1,786,650; Dec. 30.
Oil-well-testing device. E. H. Cox. 1,786,897; Dec. 30.
Oils, Cracking. R. C. Holmes and F. T. Manley. 1,786,947; Dec. 30.
Oils, Regeneration of lubricating. H. Bensmann. 1,787,353; Dec. 30.
Oils, Vacuum distillation of hydrocarbon. H. C. Wiess. 1,786,639; Dec. 30.
One-piece box. C. S. Andrews. 1,787,030; Dec. 30.
Ophthalmic mounting. E. L. Schumacher. 1,786,580; Dec. 30.
Ores, Reducing. H. Wittek. 1,787,348; Dec. 30.
Organic compounds, Catalytic oxidation of. A. Wohl. 1,787,416–17; Dec. 30.
Ornamental effects in architectural structures, Producing illusory. R. M. Sutphen. 1,786,789; Dec. 30.
Packing for rods and shafts. H. F. Sautter. 1,787,020; Dec. 30.
Pad: *See*—
Sponge pad.
Paint or fard distributor with stump, Face. P. Baquey. 1,786,418; Dec. 30.
Paper can, Tapered or nesting. W. L. Wright. 1,787,332; Dec. 30.
Paper cutter. M. I. Higbie. 1,787,375; Dec. 30.
Paper, Making decorated. J. H. Trask. 1,787,218; Dec. 30.
Paper-making machine, Doctor for. J. Wenzel. 1,786,587; Dec. 30.
Paper-making process, Chemical-pulp. F. A. Johnson. 1,786,538; Dec. 30.
Paper, Method of and apparatus for manufacturing. J. Traquair. 1,786,681; Dec. 30.
Paper-sorting device. C. März. 1,787,387; Dec. 30.
Papers, particularly those used for the packing of edible articles, Manufacture of transparent. O. Klotz. 1,786,911; Dec. 30.
Parachute. C. Fisher. 1,786,838; Dec. 30.
Para-nitraniline, Manufacture of. H. Merrill. 1,786,766; Dec. 30.
Partition, Folding. E. J. G. Phillips. 1,786,505; Dec. 30.
Pasteurizing apparatus. A. H. Bolleau. 1,786,819; Dec. 30.
Patterns, Simulating natural. L. V. Casto. Re17,912; Dec. 30.
Peach pitter. G. Wilcox. 1,786,724; Dec. 30.
Pen, Fountain. D. D. Mungen and R. Back. 1,787,406; Dec. 30.
Pencil, Multicolor. P. Kohler. 1,786,434; Dec. 30.
Percolator attachment. B. Russell. 1,787,394; Dec. 30.
Perfumery. E. E. Reid. 1,786,630; Dec. 30.
Pharmaceutical product and making same. E. Starkenstein. 1,786,873; Dec. 30.
Phonograph bezel. H. R. Naylor. 1,786,445; Dec. 30.
Phonograph reproducer, Aeroplane. J. M. Coburn. 1,786,982; Dec. 30.
Phonographic records, Electromagnetic pick-up device for. L. Thompson. 1,787,290; Dec. 30.
Phosphate for fertilizing, Manufacturing a. E. Hammel. 1,786,651; Dec. 30.
Phosphoric acid and the like, Purifying. A. H. Fiske. 1,787,192; Dec. 30.
Photographic apparatus. E. O. Goldbeck. 1,787,309; Dec. 30.
Photographic device. A. S. Howell. 1,787,198; Dec. 30.
Photography, Combined black and white and colored image. W. V. D. Kelley. 1,787,201; Dec. 30.
Pick for stringed musical instruments. G. D. Beauchamp. 1,787,136; Dec. 30.
Picker: *See*—
Cotton picker. Loom picker.
Picture apparatus, Motion-. N. D. Anostchenko. 1,786,977; Dec. 30.
Picture projector and photographic sound-reproducing machine, Combined motion-. C. W. Ebeling. 1,786,903; Dec. 30.
Pictures, Electrical transmission of. C. A. Hoxie. 1,787,273; Dec. 30.
Pile, Composite. M. M. Upson. 1,786,968; Dec. 30.
Pile fabric. W. F. Miller. 1,787,051; Dec. 30.
Pin: *See*—
Coupling pin.
Pin fastener, Double-point-. G. A. King. 1,787,253; Dec. 30.
Pipe coupling. F. E. Comer. 1,786,825; Dec. 30.
Pipes or conduits, Device for coating the interior of walls of. J. Steinnes. 1,787,126; Dec. 30.
Pipes, Protective means for. H. B. Walter. 1,786,467; Dec. 30.
Piston. W. Noble. 1,787,119; Dec. 30.
Piston drive. W. Samuels. 1,787,173; Dec. 30.
Plastic composition. G. B. Stryker. 1,786,462; Dec. 30.
Plow. T. Brown. 1,787,137; Dec. 30.
Plow. C. G. Strandlund. 1,787,127; Dec. 30.
Plow point. L. C. Fountain. 1,787,366; Dec. 30.
Plugging device. J. H. Pengilly and V. Brown. 1,787,260; Dec. 30.
Pocket, Safety. L. Vineberg. 1,786,879; Dec. 30.
Pocketbook. C. G. Conger. 1,786,896; Dec. 30.
Polishing device, Roll-. J. R. Byrum. 1,786,820; Dec. 30.
Pool, Swimming. J. P. Hooper. 1,786,613; Dec. 30.
Pools, Apparatus for cleaning swimming. J. J. Johnston. 1,787,274; Dec. 30.
Pothead for conductors. A. O. Austin. 1,786,728; Dec. 30.
Pothead for insulated conductors. A. O. Austin. 1,786,729; Dec. 30.
Power-equalizing device for vehicle brakes. J. W. Smith. 1,787,092; Dec. 30.
Power standard device. H. Nyquist. 1,786,546; Dec. 30.
Power transmitter. G. A. Klimek. 1,786,433; Dec. 30.
Power wheel, Fluid. W. R. Caldwell. 1,787,103; Dec. 30.
Press: *See*—
Tube-splicing press.
Press. A. E. Snow. 1,787,125; Dec. 30.
Press cylinder, Printing-. M. W. Brueshaber. 1,787,187; Dec. 30.
Press for tennis and like rackets. R. Purcell. 1,786,577; Dec. 30.
Press for tread splices. C. E. Maynard. 1,786,499; Dec. 30.
Prop, Clothes. H. B. Griner. 1,786,533; Dec. 30.
Propeller, Screw. D. R. Davis. 1,786,644; Dec. 30.
Protective arrangement. L. F. Kennedy. 1,787,277; Dec. 30.
Protective arrangement. O. C. Traver. 1,787,181; Dec. 30.
Protector, Pipe-thread. P. E. Hunter. 1,786,491; Dec. 30.
Pruning device, Electric. L. O. B. Lindstrom. 1,786,625; Dec. 30.
Puller: *See*—
Gear puller. Wheel puller.
Pulley shield, Window-. R. L. Howard. 1,786,428; Dec. 30.
Pulverized-material segregator. H. G. Lykken. 1,787,079; Dec. 30.
Pump, Centrifugal. S. Komfala. 1,786,435; Dec. 30.
Pump, Fuel. K. J. Watters. 1,787,346; Dec. 30.
Pump, Turbo. V. Schleyer. 1,787,088; Dec. 30.
Pumping jack. H. W. Parkin. 1,787,164; Dec. 30.
Putlog. T. H. Kingston. 1,787,006; Dec. 30.
Radiant-energy-generating unit. R. H. Maxson. 1,786,439; Dec. 30.
Radiator. J. Karmazin. 1,786,952; Dec. 30.
Radiator. P. W. Murray. 1,878,118; Dec. 30.
Radiator shield. B. Altheimer. 1,787,184; Dec. 30.
Radio circuit-testing unit. T. A. D. Wilson and E. Reynolds. 1,786,555; Dec. 30.
Radio dial control. H. A. Ziola. 1,787,298; Dec. 30.
Radio frequency amplifying system. L. L. Jones. Re17,915; Dec. 30.
Radio frequency modulator tube, Intermediate frequency modulation inside a. O. Schriever. 1,786,579; Dec. 30.
Radio loud-speaker. B. G. Groom. 1,787,268; Dec. 30.
Rail joint. R. T. Schole. 1,787,089; Dec. 30.
Railway switch. F. H. Bagley. 1,787,336; Dec. 30.
Raising mechanism. H. F. Flowers. 1,787,342; Dec. 30.
Rake: *See*—
Self-cleaning rake.
Razor, Safety. H. J. Gaisman. 1,787,240–1; Dec. 30.
Razor strop. F. K. Hebnly. 1,787,372; Dec. 30.
Reagent feeder. G. G. Thomas. 1,787,289; Dec. 30.
Reamer. O. Duda. 1,786,484; Dec. 30.
Receptacle, Metallic. H. H. Ward. 1,787,221; Dec. 30.
Recorder: *See*—
Time recorder.
Reel: *See*—
Hose reel.
Reflector, Traffic-signal. V. L. Oestnaes. 1,786,958; Dec. 30.
Refractory composition, Recrystallized. T. S. Curtis. 1,786,482; Dec. 30.

Refrigerating and water-heating units, Combination. E. B. Miller and W. H. Gabeler. 1,786,861; Dec. 30.
Refrigerating apparatus. P. Farmer. 1,786,836; Dec. 30.
Refrigerating composition. O. Hannach. 1,786,842; Dec. 30.
Refrigerator. G. S. Bataille. 1,786,817; Dec. 30.
Refrigerator control. G. Muffly. 1,787,209; Dec. 30.
Refrigerators, Sanitation of. G. C. Bacon. 1,787,231; Dec. 30.
Register: *See*—
Cash register.
Regulator: *See*—
Draft regulator. Temperature regulator.
Relay system, Paralleling. P. E. Thomas. 1,786,792; Dec. 30.

Self-cleaning rake. W. L. Myers. 1,786,770; Dec. 30.
Separating machine for milk. F. Henrard. 1,787,311; Dec. 30.
Separator: *See*—
Centrifugal bowl separator. Coal separator.
Separator. C. L. Sutton. 1,786,790; Dec. 30.
Series and groups of I-beams. J. H. Edwards, F. T. Llewellyn, and R. A. Marble. 1,786,938; Dec. 30.
Setworks. G. M. Pelton. 1,786,776; Dec. 30.
Sewing machine, Lock-stitch. M. Hemleb. 1,786,944; Dec. 30.
Sewing-machine shuttle bobbin. H. G. Johnson. 1,786,618; Dec. 30.
Sewing machines, Feed mechanism for. B. T. Leveque. 1,787,157; Dec. 30.
Sewing machines, Thread-measuring mechanism for shoe-. O. L. Lawson. 1,786,621; Dec. 30.
Shade and curtain fixture. A. B. Wendel. 1,787,097; Dec. 30.
Shade, Lamp. F. C. Shoenhut. Des. 82,958; Dec. 30.
Shade, Ornamental lamp. P. Capocci. 1,787,357; Dec. 30.
Shade-roller stop, Automatic. B. W. Whitworth. 1,786,512; Dec. 30.
Shadow lines on work pieces, Device for producing. H. Wiegelmann. 1,786,925; Dec. 30.
Shake mechanism. F. A. Bowman. 1,786,933; Dec. 30.
Sharpener, Knife. E. W. Carpenter. Des. 82,929; Dec. 30.
Sharpener, Skate. H. Thorngren. 1,786,553; Dec. 30.
Sheets, Apparatus for separating. P. Kruse. 1,787,077; Dec. 30.
Shelf, Oven. F. E. Seeley. 1,787,022; Dec. 30.
Shield for automobile radiators. C. R. Davis. 1,787,035; Dec. 30.
Shirt. G. A. Ripley. 1,786,919; Dec. 30.
Shock absorber. B. L. Mallory. 1,786,956; Dec. 30.
Shoe-sole skiver. S. A. Lewis. 1,787,384; Dec. 30.
Shoe stretcher. J. Smart. 1,786,965; Dec. 30.
Shoe, Woman's. S. Troy. Des. 82,962; Dec. 30.
Shoes, Repairing apparel. C. H. Geppert. 1,786,907; Dec. 30.
Shovel for potato diggers. P. S. Thomsen. 1,786,464; Dec. 30.
Shower head. J. Fraser. 1,786,988; Dec. 30.
Sign. M. V. Brown. 1,787,355; Dec. 30.
Sign bracket, Highway-. L. W. Zahonyi. 1,786,883; Dec. 30.
Signal: *See*—
Vehicle signal.
Signal light, Direction. R. E. McGee. Des. 82,950; Dec. 30.
Signal light for street cars, Safety. A. G. Hale. 1,786,534; Dec. 30.
Signature conveyor, Portable. J. C. Lacy. 1,787,383; Dec. 30.
Skiving machine. S. J. Pentler and O. R. Short. 1,787,052; Dec. 30.
Slack adjuster. W. H. Sauvage. 1,787,123; Dec. 30.
Smoker's article. J. P. Doughty, jr. 1,786,902; Dec. 30.
Smoker's stand. G. P. Schwarz. Des. 82,959; Dec. 30.
Snowplow. G. C. Abbe. 1,786,974; Dec. 30.
Snubber. P. N. Peters. 1,787,282; Dec. 30.
Soaping flowing water, Device for. E. Collenburg. 1,786,561; Dec. 30.
Sodium stannate, Producing. W. T. Little. 1,787,078; Dec. 30.
Sound-producing instrument. P. L. Haims. 1,787,196; Dec. 30.
Sound-propagating diaphragm. M. R. Hutchison. 1,786,949; Dec. 30.
Sound-propagating diaphragm. M. R. Hutchison. 1,787,003; Dec. 30.
Sound-source-locating means. L. F. Merrill. 1,786,859; Dec. 30.
Sounding board, Reenforced. M. R. Hutchison. 1,787,002; Dec. 30.
Specific-gravity balance. D. O. Lima. 1,787,256; Dec. 30.
Speed transmission, Variable-. H. B. Greening and J. W. Galloway. 1,787,246; Dec. 30.
Spoke-end-cap construction. J. H. Hunt. 1,787,075; Dec. 30.
Sponge pad. R. C. Zuckerman. 1,786,513; Dec. 30.
Sprayer. H. E. Brandt. 1,786,889; Dec. 30.
Sprayer. A. W. Kegler. 1,786,431; Dec. 30.
Spring-winding-control device. W. Thomas. 1,787,343; Dec. 30.
Sprinkler system. P. B. Schoenberger. 1,786,963; Dec. 30.
Stacker. R. Hitchcock. 1,786,752; Dec. 30.
Stalk cutter. J. Robbins. 1,786,455; Dec. 30.
Stand: *See*—
Flowerpot stand.
Stand for motion-picture-projector apparatus. A. C. Hayden. 1,787,270; Dec. 30.
Stapling machine. A. H. Schmidtke. 1,786,870; Dec. 30.
Stapling machines, Clinching means for. F. Polzer. 1,787,285; Dec. 30.
Starter, Engine. P. E. Mack. 1,786,763; Dec. 30.
Station construction. A. M. Rossman. 1,787,053; Dec. 30.
Statuette or similar article. A. Culin. Des. 82,931; Dec. 30.
Steam boiler. F. W. Chipman. 1,786,981; Dec. 30.
Steam trap. E. T. Hewitt. 1,787,374; Dec. 30.
Steel alloy insensible to hot gases and vapors. B. Strauss. 1,787,403; Dec. 30.
Steering device, Electric. J. A. Mellon. 1,787,320; Dec. 30.
Steering gear for vehicles. M. Vedovelli. 1,787,345; Dec. 30.
Steering mechanism, Power. W. L. McDonald. 1,787,319; Dec. 30.
Steering stabilizer. N. E. Joaquin. 1,787,042; Dec. 30.
Stocking, Striped. E. T. Floyd. 1,787,365; Dec. 30.
Stocking, Varicose. A. Mouthe. 1,786,862; Dec. 30.
Stool, Insulating nontilting. E. F. Shipman. 1,786,458; Dec. 30.
Stop apparatus for engines, Safety. H. C. Wasson. 1,787,223; Dec. 30.
Storage battery. C. J. Dunzweiler. 1,786,742; Dec. 30.
Stove, Heating. G. E. Pickup. Des. 82,955; Dec. 30.
Stove, Liquid-fuel. W. L. Cooper, and L. D. Fortier. 1,787,189; Dec. 30.
Strainer, Sanitary milk. M. M. McGonigal. 1,786,500; Dec. 30.
Strap clamp, Door-. A. F. Paul. 1,787,017; Dec. 30.
Stucco mix and making the same. G. A. New. 1,787,162; Dec. 30.

Stuffing box. O. A. Labus. 1,787,317; Dec. 30.
Suction cleaner. H. B. White. 1,787,224; Dec. 30.
Suit, Bathing. G. E. Rutledge. 1,786,869; Dec. 30.
Suitcase and card table, Combination. F. Gunchick. 1,786,607; Dec. 30.
Suit, Union. N. Wolff. 1,787,098; Dec. 30.
Superheater. C. A. and E. L. Schellens. 1,787,021; Dec. 30.
Superheater tube. W. B. Whitsitt and W. R. Hedeman. 1,786,882; Dec. 30.
Supervisory and control system. J. O. Shepherd. 1,786,780; Dec. 30.
Supervisory control system. R. J. Wensley. 1,786,805; Dec. 30.
Supervisory control system. T. U. White. 1,786,807; Dec. 30.
Support, Current-collector. F. R. Dippman and E. D. Moore. 1,786,719; Dec. 30.
Support, Current-collector. E. D. Moore and F. R. Dippman. 1,786,718; Dec. 30.
Support, Current-collector. E. D. Moore and F. R. Dippman. 1,786,720; Dec. 30.
Support, Drapery. F. V. Maroney. 1,786,498; Dec. 30.
Support for bobbin tips, Yieldable. C. P. Bergstrom. 1,786,692; Dec. 30.
Support for flexible electrical conductors, Extension. H. D. Jones. 1,787,252; Dec. 30.
Support for sewing machines, Throat-plate. F. F. Zeier. 1,786,929; Dec. 30.
Support for weft-replenishing looms, Bobbin. E. R. Holmes. 1,786,655; Dec. 30.
Support for weft-replenishing looms, Bobbin. J. F. Tinsley. 1,786,680; Dec. 30.
Support for weft-replenishing looms, Bobbin. K. J. Unwin. 1,786,685; Dec. 30.
Support, Form. F. G. Dickman. 1,786,522; Dec. 30.
Supporter, Maternity. S. F. Morgan. 1,786,544; Dec. 30.
Supporter, Toe. H. W. Sidgreaves. 1,787,398; Dec. 30.
Supporting pole for electrical conductors. R. C. Roe. 1,786,631; Dec. 30.
Supporting structure, Locomotive frame and engine. R. B. Krueger. 1,786,854; Dec. 30.
Suspender vest. S. Spielberger. 1,787,216; Dec. 30.
Switch: *See*—
Electric switch. Railway switch.
Ignition and lighting switch.
Switch. L. T. Roberton. 1,787,262; Dec. 30.
Switch and cover plate therefor, Push-button electric. G. W. O'Keefe. 1,787,210; Dec. 30.
Switch apparatus for gas burners, Time. G. B. Collier. 1,787,422; Dec. 30.
Switch for motor-operated vehicles, Safety. P. Irizarry. 1,787,381; Dec. 30.
Switch for music-reproducing machines, Change-key. B. E. Mills. 1,786,441; Dec. 30.
Switch mechanism. H. K. Krantz. 1,786,757; Dec. 30.
Switch mechanism. R. T. Pierce. 1,786,778; Dec. 30.
Switches, Actuating and controlling mechanism for electric. W. R. Huttinger. 1,787,314; Dec. 30.
Table: *See*—
Conveyor table.
Table for clothes wringers, Feeding. W. C. F. Dietz. 1,786,705; Dec. 30.
Table construction. G. W. Krick and D. G. Anderson. 1,786,497; Dec. 30.
Talking machines, Remote control for. W. R. Moore, jr. 1,787,392; Dec. 30.
Tanks, Theft-preventing attachment for. T. W. Hughes. 1,787,250; Dec. 30.
Tanning solutions, Treating. A. G. Wackenreuter. 1,786,880; Dec. 30.
Tape-applying apparatus. L. K. Butler. 1,787,138; Dec. 30.
Tape measure. G. R. Hipple. 1,786,845; Dec. 30.
Teat cup. J. J. Stampen. 1,786,786; Dec. 30.
Telegraph and recorder system, Ship's. L. F. Carter and F. S. Hodgman. 1,787,066; Dec. 30.
Telephone attachment. J. R. Ellis. 1,786,986; Dec. 30.
Temperature-control device. M. Goudard. 1,787,310; Dec. 30.
Temperature indicator for transformers and the like. H. Schlaich. 1,787,327; Dec. 30.
Temperature regulator. G. Craig. 1,787,146; Dec. 30.
Tent. S. E. Wrigley. 1,786,928; Dec. 30.
Terminal block for current transformers. J. B. Gibbs. 1,786,746; Dec. 30.
Terminal structure. R. E. Marbury. 1,786,765; Dec. 30.
Terra-cotta article. A. F. Hottinger. 1,786,753; Dec. 30.
Testing instrument for electrical condensers. C. C. Jones. 1,786,910; Dec. 30.
Testing outfit. C. J. Villella. 1,786,971; Dec. 30.
Textile fabric. B. S. Nash. Des. 82,952; Dec. 30.
Textile panel for a mattress covering. H. Haug. Des. 82,936; Dec. 30.
Textiles of cellulose fiber, Treating. A. W. Buhlmann. 1,786,421; Dec. 30.
Thermostat. J. J. Kenney. 1,786,852; Dec. 30.
Thermostat-controlled fan. W. J. Hughes. 1,787,041; Dec. 30.
Thin-place preventer, Automatic. W. F. Clayton. 1,787,359; Dec. 30.
Thread guide for shuttles. W. P. Craig. 1,786,602; Dec. 30.
Threading device, Tuft-frame. C. Alvord. 1,786,818; Dec. 30.
Thymol, Production of. W. Schoeller and H. Jordan. 1,786,922; Dec. 30.
Time fuse with clockwork, Mechanical. P. Liebergeld. 1,786,664; Dec. 30.
Time recorder. J. W. Bryce. 1,786,979; Dec. 30.
Timing mechanism, Automatic. C. E. Steere. 1,787,217; Dec. 30.
Tire beads, Apparatus for reenforcing. H. D. Stevens. 1,787,411; Dec. 30.
Tire-building machine. W. C. Stevens. 1,787,413; Dec. 30.
Tire-building machines, Strip-applying device for. W. C. Stevens. 1,787,414; Dec. 30.
Tire-flap-making apparatus. E. D. Putt. 1,787,168; Dec. 30.
Tire for lugged traction wheels, Over. O. R. Schoenrock. 1,786,871; Dec. 30.
Toaster. E. A. Rutenber. Des. 82,965; Dec. 30.
Toll-service trunking system. T. F. Crocker. 1,786,480; Dec. 30.
Tongs, Nail. D. R. Wilson. 1,787,331; Dec. 30.
Tool. W. F. Clay. 1,787,358; Dec. 30.
Tool handles, Wedge for. J. J. Sprunger. 1,786,636; Dec. 30.
Tool retainer for pneumatic tools. W. F. Zimmermann. 1,787,229; Dec. 30.
Tool-retaining coupling. E. W. Stevens. 1,787,178; Dec. 30.
Tool, Valve-lifting. A. Kaufman. 1,786,715; Dec. 30.
Tools, Feeding device for machine. K. Tessky. 1,786,876; Dec. 30.
Torque brake. A. W. Harrison. 1,786,996; Dec. 30.
Toy, Motion. C. R. Crew. 1,786,737; Dec. 30.
Toy, Spark. C. Arnold. 1,787,349; Dec. 30.
Toy vehicle frame. O. R. Burns. 1,787,034; Dec. 30.
Track shoe. W. Turnbull. 1,786,924; Dec. 30.
Trackway apparatus for automatic train-control systems. G. W. Baughman. 1,786,818; Dec. 30.
Traction wheel. E. London. 1,786,855; Dec. 30.
Tractors, Lister attachment for. W. M. Anderson. 1,786,591; Dec. 30.
Traffic stop. E. L. Stanton. 1,786,678; Dec. 30.
Trailer construction. D. R. Thomas. 1,786,463; Dec. 30.
Train control, Automatic. P. J. Simmen. 1,786,783; Dec. 30.
Train-control system. L. M. Aspinwall. 1,786,815; Dec. 30.
Train control, Wireless. J. H. Hammond, jr. 1,786,610; Dec. 30.
Train-indicating apparatus, Railway-. J. J. Vanhorn. 1,786,795; Dec. 30.
Transformer. J. C. Daley and E. G. Goddard. 1,786,422; Dec. 30.
Transformer, Current. H. Klemm. 1,786,853; Dec. 30.
Transmission band. G. R. Hoffman. 1,787,376; Dec. 30.
Transmission-line device. N. A. Wahlberg. 1,786,801; Dec. 30.
Transmission system, Facsimile. V. K. Zworykin. 1,786,812; Dec. 30.
Transmission, Variable-speed. H. B. Greening and J. W. Galloway. 1,787,267; Dec. 30.
Trap: *See*—
Beetle trap. Steam trap.
Insect trap.
Tray, Filing. S. Smiley, jr. 1,787,410; Dec. 30.
Tray for use on store counters, Display. E. O. Henderson. 1,787,373; Dec. 30.
Tray, Vehicle service. A. C. Wood. 1,786,471; Dec. 30.
Trimmer. O. O. Johnson. 1,786,849; Dec. 30.
Trimming machine. N. E. Sargeant. 1,786,676; Dec. 30.
Trip hook. G. J. Doering. 1,786,523; Dec. 30.
Trolley ear and attachment therefor. A. G. Scott. 1,787,091; Dec. 30.
Trolley pole. E. D. Moore. 1,787,013; Dec. 30.
Trolley-pole base. E. D. Moore. 1,787,012; Dec. 30.
Trolley silencer. E. D. Moore and F. R. Dippman. 1,786,717; Dec. 30.
Trolley-wire contactor. G. D. Rabun. 1,786,449; Dec. 30.
Trough, Eaves. M. Rachlin. Des. 82,957; Dec. 30.
Truck, Car. F. L. Barber and E. W. Webb. 1,787,031; Dec. 30.
Truck, Dumping. R. J. Burrown and H. D. Burnside. 1,786,560; Dec. 30.
Truck trailer, Motor-. J. Salomonsen. 1,787,213; Dec. 30.
Tube: *See*—
Superheater tube.
Tube forming and reeling machine. L. A. Becker and J. M. Munson. 1,787,232; Dec. 30.
Tube making, Vacuum-. F. S. McCullough. 1,787,082; Dec. 30.
Tube-splicing press. C. E. Maynard. 1,786,440; Dec. 30.
Tubular members, Attachment for. J. S. Reid. 1,786,721; Dec. 30.
Tumbler. J. M. Payne, jr. Des. 82,953–4; Dec. 30.
Turbine, Elastic-fluid. L. C. Fletcher. 1,786,942; Dec. 30.
Turbine, Elastic-fluid. H. L. Guy. 1,786,993; Dec. 30.
Turbine, Steam. K. Röder. 1,787,263; Dec. 30.
2-amine-beta-phenyl-anthraquinone by amination, Preparation of. P. H. Groggins. 1,786,531; Dec. 30.
Undergarment. F. J. Lewis. 1,787,045; Dec. 30.
Unicontrol apparatus for radio receiving sets. L. L. Jones. 1,787,275; Dec. 30.

Unloading machine, Portable. W. K. Liggett. 1,786,665; Dec. 30.
Vacuum cleaner. E. Jnelson. 1,786,756; Dec. 30.
Valve. C. A. Dopp. 1,787,236; Dec. 30.
Valve. A. A. Hasselquist and I. H. M. Rognlie. 1,786,750; Dec. 30.
Valve. F. B. Rickenberg. 1,787,212; Dec. 30.
Valve, Automatic water-heater control. R. C. Hoyt. 1,786,948; Dec. 30.
Valve for maintaining constant liquid height in tank. C. F. Peltzman. 1,787,420; Dec. 30.
Valve lock. S. Spangler. 1,787,401; Dec. 30.
Valve lock, Gas. A. E. Kramer and J. W. Platt. 1,786,954; Dec. 30.
Valve, Mixing. H. R. Becker. 1,787,304; Dec. 30.
Valve, Mixing. L. Sinclair. 1,787,215; Dec. 30.
Valve-operating mechanism, Hydraulic. W. Noble. 1,787,120; Dec. 30.
Valve, Pump-regulating. H. F. Bickel. 1,786,474; Dec. 30.
Valve, Refrigerator equalizer. M. C. Terry. 1,786,791; Dec. 30.
Valve, Relief. E. B. Ranck. 1,786,918; Dec. 30.
Valve, Throttle. M. Rivkin. 1,786,578; Dec. 30.
Valve with removable ring-seating surface. R. E. Bissell 1,786,596; Dec. 30.
Valves, Apparatus for making composition-rubber float. E. L. Delany. 1,786,483; Dec. 30.
Vanity case. S. Morrison. Des. 82,964; Dec. 30.
Vault release. H. Anderson. 1,786,975; Dec. 30.
Vehicle. H. Aanonson. 1,787,029; Dec. 30.
Vehicle body, Motor. W. Gowen. 1,786,990; Dec. 30.
Vehicle body, Motor. E. F. Roberts. 1,787,169; Dec. 30.
Vehicle brake. E. J. Madden. 1,786,856; Dec. 30.
Vehicle brake. E. J. Madden. 1,786,912; Dec. 30.
Vehicle construction. L. Underwood. 1,787,131; Dec. 30.
Vehicle, Endless-track. A. Kégresse. 1,786,430; Dec. 30.
Vehicle, Motor. C. H. Ingwer. 1,787,155; Dec. 30.
Vehicle, Occupant-propelled. W. J. Pugh. 1,787,322; Dec. 30.
Vehicle, Self-propelled railway. H. Glaenzer and C. C. Burkhardt. 1,787,368; Dec. 30.
Vehicle signal. E. Jones. 1,787,382; Dec. 30.
Vehicles, Lighting motor. K. D. Chambers. 1,786,518; Dec. 30.
Vehicles, Tilting device for. A. Williamson. 1,787,589; Dec. 30.
Vending machine. C. Lea. 1,787,204; Dec. 30.
Vending machine. W. S. Runnels. 1,786,868; Dec. 30.
Vent for storage batteries. G. E. Petrosky. 1,786,961; Dec. 30.
Vibration-translating device such for example as loud-speakers, Electromechanical. M. Trouton. 1,786,584; Dec. 30.
Vibrator and using the same. C. A. Priest. 1,787,211; Dec. 30.
Vibratory device, Electrically-operated. M. Trouton. 1,786,583; Dec. 30.
Vinyl esters of organic acids, Preparing. H. B. Dykstra and C. Sly. 1,786,647; Dec. 30.
Violin. H. P. Brown and P. F. Truscinski. 1,786,891; Dec. 30.
Violins. Attachment for. M. F. Connell. 1,786,478; Dec. 30.
Viscometer. A. G. M. Michell. 1,786,574; Dec. 30.
Wall for buildings and the like, Iron frame. A. Frank. 1,787,367; Dec. 30.
Wall-protecting device, Vault-. E. C. Kinnear. 1,787,007; Dec. 30.
Wall structure and attachment. H. G. Geoffray. 1,787,038; Dec. 30.
Wall, Water-cooled. K. Prantner. 1,787,019; Dec. 30.
Wallett. J. H. Scheuer. 1,787,054; Dec. 30.
Warp stop motion, Mechanical. W. E. Wakefield. 1,786,686; Dec. 30.
Warping frame. W. Reiners and G. Kahlisch. 1,787,323; Dec. 30.
Washer: *See*—
Clothes washer. Lock washer.
Watchcase. D. P. Lyons. 1,786,762; Dec. 30.
Water and steam generator, Hot-. A. M. Kolstad. 1,786,660; Dec. 30.
Water heater, Secondary. G. Olson, and E. H. Kehl. 1,786,547; Dec. 30.
Water softening and purification. A. R. Moberg. 1,786,501; Dec. 30.
Water-softening apparatus. E. T. Turner. 1,787,129; Dec. 30.
Water-supply system, Constant-. M. I. Weil. 1,786,804; Dec. 30.
Water system. C. Warner. 1,786,468; Dec. 30.
Water system for reclaiming white water or any fiber, White-. C. Dupuis. 1,787,341; Dec. 30.
Webs of woven material, Treating dry. H. Maly. 1,787,385; Dec. 30.
Weft detector. R. G. Turner. 1,786,683; Dec. 30.
Welding, Electric. J. F. Lawson. 1,786,759; Dec. 30.
Welding machine. G. S. Lewis. 1,787,115; Dec. 30.
Welding machine, Seam-. W. H. Gibb. 1,787,039; Dec. 30.
Welding process. H. G. Spilsbury. 1,787,056; Dec. 30.
Welding, Shaping edges for fusion. H. J. Grow. 1,787,247; Dec. 30.
Well-capping device. J. O. Johnson. 1,786,848; Dec. 30.
Wheel: *See*—
Power wheel. Traction wheel.
Resilient wheel.
Wheel and wheel journal. J. A. Mahr. 1,786,764; Dec. 30.
Wheel puller, Gear-. W. G. Opel. 1,787,016; Dec. 30.
Wheel spider, Demountable. A. S. Van Halteren. 1,786,794; Dec. 30.
Wheels, Making wire. J. G. Swain. 1,787,128; Dec. 30.
Whisk whip. A. S. Dawson. 1,786,603; Dec. 30.
Whistle, Exhaust. J. Evich. 1,786,905; Dec. 30.
Windmill. J. Henderson. 1,787,072; Dec. 30.
Window-drape illuminator. F. W. Steinmeyer. 1,786,787; Dec. 30.
Window, Sash. A. Pietronigro. 1,787,284; Dec. 30.
Windshield-clearing device. A. W. Becker. 1,786,932; Dec. 30.
Wiper element and construction, Windshield. R. D. Sarver. 1,786,457; Dec. 30.
Wiper, Label. A. P. Exvall. 1,786,940; Dec. 30.
Wire feeding, Method and apparatus for continuous. C. F. Bailey. 1,787,301; Dec. 30.
Withdrawing feeler. O. V. Payne. 1,786,673; Dec. 30.
Wooden construction. W. Greim. 1,786,991; Dec. 30.
Woodworking machine. W. T. Fisk. 1,787,191; Dec. 30.
Wrap, All-weather double-service. M. B. Paradise. 1,786,960; Dec. 30.
Wrapping machine, Semiautomatic. F. Marasso. 1,787,116; Dec. 30.
Wrapping machines, Article feed for. C. Kehling. 1,786,494; Dec. 30.
Wrench. L. D. Baird. 1,787,185; Dec. 30.
Wrench. H. B. Butlin. 1,786,701; Dec. 30.
Yarn-tensioning device. J. O. McKean. 1,787,083; Dec. 30.

CLASSIFICATION OF PATENTS

ISSUED DECEMBER 30, 1930

NOTE.—First number=class, second number=subclass, third number=patent number

1— 2: 1,786,870; 3: 1,787,285
2— 41: 1,786,544; 42: 1,786,895; 65: 1,787,117; 67: 1,786,869; 78: 1,787,045; 1,787,098; 88: 1,786,900; 102: 1,787,216; 116: 1,786,919; 123: 1,787,113; 132: 1,786,535; 146: 1,787,226; 195: 1,787,378; 201: 1,787,043; 254: 1,786,879
4— 177: 1,786,613
5— 81: 1,787,380
8— 2: 1,787,395
9— 24: 1,786,451
10— 162: 1,786,469
12— 17: R. 17,914; 1,787,384; 128.5: 1,786,965; 136: 1,786,540; 142: 1,786,907; 1,786,983
15— 21: 1,787,306; 41: 1,786,864; 134: 1,786,723; 255: 1,786,457; 1,787,068
16— 62: 1,786,782; 66: 1,787,073; 160: 1,787,249; 194: 1,787,111; 210: 1,786,428
17— 4: 1,786,632
18— 17: 1,786,440; 27: 1,786,634; 35: 1,786,483; 1,787,177; 47.5: 1,786,488; 50: 1,787,064; 1,787,065; 53: 1,786,563; 1,787,258; 54: 1,786,941; 59: 1,787,145
19— 37: 1,786,904; 62: 1,786,972; 147: 1,786,669
20— 6: 1,787,067; 8: 1,787,027; 20: 1,786,505; 1,787,238; 1,787,302; 40.5: 1,786,932; 50: 1,787,284; 92: 1,786,497; 1,786,991
22— 33: 1,786,672; 57: 1,786,629; 206: 1,787,056
23— 8: 1,786,581; 41: 1,787,356; 53: 1,787,078; 84: 1,787,033; 86: 1,787,048; 1,787,080; 112: 1,787,008; 142: 1,787,124; 165: 1,787,192; 184: 1,786,516; 225: 1,786,509; 234: 1,786,490; 250: 1,787,402
24— 3: 1,786,674; 19: 1,786,612; 1,787,150; 90: 1,786,839; 1,786,840; 150: 1,787,143; 152: 1,787,253; 205: 1,786,978; 206: 1,786,943
24— 238: 1,787,318
25— 1: 1,787,219; 2: 1,787,175; 30: 1,786,586; 1,787,094; 99: 1,786,837; 131: 1,787,107; 131.5: 1,786,522
26— 49: 1,786,421; 1,787,385
28— 32: 1,787,323; 56: 1,786,813
29— 17: 1,786,793; 18: 1,786,834; 27: 1,786,442; 85: 1,787,016; 1,787,070; 86.3: 1,786,715; 87.1: 1,787,142; 148: 1,787,266; 149.5: 1,787,255; 156: 1,787,257; 157.3: 1,786,571; 174: 1,787,128
30— 3: 1,787,046; 9: 1,787,375; 11: 1,786,625; 1,786,849; 1,787,057; 12: 1,787,093; 1,787,240; 1,787,241; 58: 1,786,846; 1,787,152; 85: 1,786,786
32— 1: 1,786,915
33— 42: 1,787,313; 137: 1,786,845; 180: 1,786,638; 184.5: 1,787,037; 6: 1,787,197; 12: 1,787,063; 26: 1,786,969; 1,787,251; 33: 1,787,280; 34: 1,787,009
36— 5: 1,786,984
37— 42: 1,786,974; 118: 1,786,448; 155: 1,786,803; 181: 1,787,295; 16: 1,787,308; 28: 1,786,450; 52: 1,787,333; 1,787,334; 102: 1,787,237; 125: 1,787,335; 130: 1,787,355; 133: 1,786,564; 145: 1,786,883
41— 17: 1,786,789; 23: 1,787,371
42— 1: 1,786,614; 3: 1,786,536; 44: 1,787,004; 59: 1,787,354; 87: 1,786,537; 91: 1,786,520
43— 46: 1,786,568; 107: 1,786,599; 1,787,421; 122: 1,786,704
45— 2: 1,787,344; 6: 1,786,628; 1,786,823; 51: 1,786,471; 69: 1,787,363; 141: 1,787,373
46— 14: 1,787,349; 40: 1,786,572; 1,786,588; 1,786,737; 1,787,174; 1,787,207; 48: 1,787,034; 53: 1,787,159
47— 39: 1,786,995
49— 1: 1,786,456; 5: 1,787,312; 17: 1,786,892; 33: 1,787,391
50— 27: 1,786,894
51— 102: 1,786,553; 103: 1,787,337; 108: 1,787,412; 200: 1,787,372; 251: 1,786,820
53— 3: 1,787,394; 4: 1,786,507; 1,786,877; 7: 1,787,171; 1,787,172
55— 9: 1,786,464; 23: 1,786,510; 81: 1,786,863; 108: 1,787,026; 146: 1,786,770

U. S. GOVERNMENT PRINTING OFFICE: 1930

THE
OFFICIAL GAZETTE
OF THE
United States Patent Office

Vol 401—No. 1 TUESDAY, DECEMBER 2, 1930 Price—$10 per year

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscription, $10.00 per annum; including annual indexes, $11.50; single numbers, 25 cents each.
PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.
CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

Trade-Marks Canceled

40,397. Hair lotions. Augustine Cornioley, Paris, France. Registered May 19, 1903. Canceled October 1, 1930.

100,031. Treatment of tuberculosis. Emil Roller, New York, N. Y. Registered September 29, 1914. Canceled November 5, 1930.

118,590. Certain named medicinal preparation. Henry Thayer & Company, Inc., Cambridge, Mass. Registered September 18, 1917. Canceled November 5, 1930.

145,823. Certain named medicinal preparation. Frederick Stearns & Company, Detroit, Mich. Registered August 16, 1921. Canceled November 5, 1930.

180,094. Fresh fish and shellfish. Birdseye Seafoods, Inc., New York, N. Y. Registered February 19, 1924. Canceled November 5, 1930.

180,095. Fresh fish and shellfish. Birdseye Seafoods, Inc., New York, N. Y. Registered February 19, 1924. Canceled November 5, 1930.

182,608. Fresh fish and shellfish. Birdseye Seafoods, Inc., New York, N. Y. Registered April 15, 1924. Canceled November 5, 1930.

189,811. Ginger ale. Canada Dry Ginger Ale, Incorporated, New York, N. Y. Registered September 23, 1924. Canceled November 6, 1930.

191,102. Ginger ale. Canada Dry Ginger Ale, Incorporated, New York, N. Y. Registered October 28, 1924. Canceled November 6, 1930.

195,934. Ginger ale. Canada Dry Ginger Ale, Inc., New York, N. Y., assignor to Canada Dry Ginger Ale, Incorporated, New York, N. Y. Registered March 3, 1925. Canceled November 6, 1930.

195,935. Ginger ale. Canada Dry Ginger Ale, Inc., New York, N. Y., assignor to Canada Dry Ginger Ale, Incorporated, New York, N. Y. Registered March 3, 1925. Canceled November 6, 1930.

195,936. Ginger ale. Canada Dry Ginger Ale, Inc., New York, N. Y., assignor to Canada Dry Ginger Ale, Incorporated, New York, N. Y. Registered March 3, 1925. Canceled November 6, 1930.

233,007. Women's and children's wearing apparel. Felix Brunschwig & Co., Inc., El Paso, Tex. Registered September 20, 1927. Canceled November 5, 1930.

235,551. Combination corsets and brassières. International Corset Company, Aurora, Ill. Registered November 22, 1927. Canceled November 5, 1930.

235,687. Certain named electrical apparatus and machines. Chicago Pneumatic Tool Company, New York, N. Y. Registered November 22, 1927. Canceled November 5, 1930.

247,470. Waterproof boxes and receptacles worn or carried by sportsmen. Daniel H. Strayer, Venice, Calif. Registered September 25, 1928. Canceled November 5, 1930.

254,340. Toilet lotion and cleanser for the skin. Petroleum Derivatives Company, Montclair, N. J. Registered March 19, 1929. Canceled November 5, 1930.

262,085. Cakes. Carmelo Scavuzzo, Boston, Mass. Registered September 24, 1929. Canceled November 5, 1930.

262,743. Liniment. The J. R. Watkins Company, Winona, Minn. Registered October 22, 1929. Canceled October 1, 1930.

Adjudicated Patents

(D. C. Tex.) Lovell and Brown patent, No. 1,544,465, for truck, *Held* invalid. *Atlas Trailers & Water Mufflers v. Gray's Iron Works*, 43 F.(2d) 191.

DECISIONS IN PATENT AND TRADE-MARK CASES

Commissioner's Decision

EX PARTE JENKINS

Decided August 29, 1930

1. APPLICATION—CLAIMS—UNDUE MULTIPLICITY—ACT OF 1927.

The act of 1927 providing for a fee of $1 for each claim in excess of 20 has no bearing upon the question whether the claims are unduly multiplied.

2. SAME—SAME—SAME.

Obviously claims should not be allowed which differ one from the other only in the inclusion of elements the addition of which could not in any sense of the word constitute invention.

3. SAME—SAME—SAME—ACTION BY EXAMINER.

Where an argument is presented in response to a requirement for a reduction of the number of claims because they are unduly multiplied, it was not necessary for the Examiner to answer, claim by claim, the argument as to the patentable differences between them. When he considered the argument and pointed out why in typical instances the alleged differences were not matters of invention, he had done all that was necessary.

4. SAME—REJECTION—WHAT RESPONSE NECESSARY.

Where the Examiner, in addition to requiring a reduction in the number of claims, required division between certain groups and applied the art to each claim, *Held* that a proper response would include not only an argument as to the requirement for reduction of the number of claims but a response to the requirement for division and to the action on the merits.

ON PETITION.

RIGID SUSPENSION SYSTEM AND METHOD OF ELECTRIC WIRING

Messrs. Jones, Addington, Ames & Seibold for the applicant.

ROBERTSON, *Commissioner:*

This is a petition that the Examiner be required to make a detailed reply to applicant's amendment of August 10, 1929, and "particularly to permit the present number of claims herewith submitted to stand."

In the first Office action the Examiner, after citing what he regarded as the pertinent art, stated that the number of claims is excessive. He divided the claims into groups and stated that there was no patentable difference between the claims of each group. He pointed out why certain features of the device as disclosed were broadly anticipated by certain of the references. In response to that action the applicant filed an amendment arguing that since the passage of the law requiring for the filing fee $20 and $1 for each claim over 20 the ruling made in *Ex parte Oswald*, 333 O. G. 3 no longer applied, and that the Examiner should give a detailed examination of each claim no matter how many there were and regardless of the differences between them. It was pointed out why the claims were deemed to be patentably different from each other.

In response to that action the Examiner cited additional references, stated that the passage of the law referred to had no bearing on the question, again pointed out why certain claims were regarded as not patentably different from each other, and stated that in view of applicant's argument as to the differences of the claims these claims were divided into groups and division between these groups required. He went further and applied the art to each claim, stating as to three groups that the claims thereof contained allowable subject matter but stood under the general rejection for multiplicity of claims.

The passage of the act referred to has nothing to do with the question whether certain claims presented are patentably different from each other. Obviously claims should not be allowed which differ one from the other only by the inclusion of elements the addition of which could not in any sense of the word constitute invention. For example, a claim which included the holes in the flanges by which two portions of the conduit were to be fastened together could not by any stretch of the imagination be patentably different from the claim identical therewith except for the statement as to the holes in the flanges (see *Ex parte McCullough*, 355 O. G. 185).

Moreover it was not necessary for the Examiner to answer, claim by claim, the argument which applicant presented as to the patentable differences between the claims. Having considered the argument and pointed out why, in typical instances, the alleged differences were not matters for invention, he had done all that was necessary. In view of that action it was for the applicant to decide whether he would acquiesce in the Examiner's ruling and cancel certain claims or insist upon his right to the claims as they then stood.

In the present case the Examiner has gone further than to merely repeat his rejection based on the multiplicity of the claims and has treated each claim individually as well as required division between certain groups of claims. A proper response to that action would include not only a response to the rejection based on the multiplicity of claims but also a response to the requirement for division and to the action on the merits.

Of course applicant need not repeat the argument he has already presented as to the patentable differences between the claims if he desires to rely upon that argument. A reference thereto would be sufficient.

The petition is denied.

U. S. Court of Customs and Patent Appeals

IN RE COLEY

No. 2,344. Decided May 28, 1930

[40 F.(2d) 982]

1. PATENTABILITY—PROCESS OF REDUCING ORES.
Claims for reducing ores *Held* patentable over the prior art.

2. SAME—SAME—RESOLUTION OF DOUBT.
Where there was filed an affidavit of a highly skilled metallurgist that applicant's process is not identical with those of the prior art and he seems to be supported by respectable authority, although the experts of the Patent Office assert that they are identical *Held* that there is shown such doubt that "the scales should be inclined toward the applicant."

3. APPEAL—WHAT MAY BE CONSIDERED.
The statute providing for appeals from the Patent Office states that the revision shall be restricted to the evidence produced before the Commissioner and the rule of the court provides that on appeal the Patent Office shall certify all papers and evidence in the matter which shall constitute the record to be considered by the court *Held* that the court will not consider a reference called to its attention in the brief for the Patent Office but not previously cited.

APPEAL from the Patent Office. Reversed.

Mr. Paul A. Blair, Mr. J. Harold Kilcoyne, Mr. Albert F. Nathan, Mr. Elmer R. Helferich, and *Mr. Ellis S. Middleton* for Coley.

Mr. T. A. Hostetler and *Mr. Howard S. Miller* for the Commissioner of Patents.

GRAHAM, *P. J.:*

This is an appeal in the matter of the application of Henry Edwin Coley, Serial No. 672,451, filed November 2, 1923, for a patent on an alleged improved process for the reduction of ores. Two claims, numbered 1 and 2, accompanied the application. These seem to have become, by amendment, claims 13 and 14, are the only claims in the case, and are as follows:

13. A process for reducing ores which comprises heating said ores to a reducing temperature and upon reaching said temperature injecting into the body of ore an undecomposed hydrocarbon, thereby producing nascent carbon.

14. A process for reducing ores which comprises heating said ores to a reducing temperature and upon reaching said temperature injecting into the body of ore an undecomposed liquid hydrocarbon, thereby producing nascent carbon.

The Examiner rejected the claims by reference to Alford, 1,097,156, of May 19, 1914, or Jones, 1,319,589, of October 21, 1919. The Board of Appeals affirmed this decision on October 31, 1928. On December 10, 1928, the applicant made his motion for a rehearing, and in support thereof filed an elaborate brief and argument and in addition thereo, the affidavit of John R. Cain, a metallurgist and chemist of note and distinction, having thirty years of active experience, fifteen of which were spent as research chemist and metallurgist with the Bureau of Standards at Washington, D. C.

On consideration of this motion and affidavit, the Examiner adhered to his original position, which decision was again affirmed by the Board of Appeals.

The applicant's process is roughly outlined in his claim, namely, he proposes to heat the ores which are to be reduced to a reducing temperature and, when they arrive at the precise temperature when reduction will occur, to inject into them a hydrocarbon, either solid or liquid. He claims that because of this addition of hydrocarbons at this particular temperature, the carbon will be freed from the hydrocarbons at the exact moment the oxygen is set free from the ores; that the carbon, being nascent, as the applicant terms it, will be more active than if it had been previously separated and had been deposited upon the ores in a solid form. He claims by this process reduction is speedier and can be accomplished at lower temperatures than by the methods heretofore known to the art. The generally accepted former method, as he represents, of reducing ores, was to mix a charge of ores and some solid hydrocarbon, usually coke, in a furnace and subject them to heat to such a degree that reduction was finally effected. In this process, however, no attempt was made to insert the hydrocarbons at any particular period of the process. Both ores and hydrocarbons accompanied each other throughout the process.

In describing his process, appellant specifies that the reduction should take place in a chamber or cylinder from which air is excluded, the ores to be fed into the top and passed gradually downward by a system of baffles or intermittent movement by which the ores are kept in constant agitation. He illustrates his process by taking for example iron oxide ore. This he first crushes to approximately ¼ inch mesh and passes it through a hopper down through baffles in a brick tower. The bottom of the tower is heated by a flame of gas, oil or coal. The heat from this flame becomes less intense as the distance up the tower away from the flame increases. As the ores are passed down through the tower, which occurs in a certain fixed time, they gradually arrive at the reducing temperature. At this point, an injection of hydrocarbon, or hydrocarbon containing body, is thrown into the ores. The hydrocarbon at once decomposes, the carbon unites with the oxygen in the ores, and the reduced material is, to prevent reoxidation, at once drawn from the tower into a cooling cylinder before coming in contact with the flame.. The applicant states that this process is so efficacious, that he has been able to reduce magnetite ore, the normal reduction temperature of which is 1100° C., at a temperature of about 950° C.

It seems to be conceded by both the applicant and the Patent Office that the process involved herein is more particularly directed to the reduction of iron ores, especially oxides. We shall therefore treat the matter from this viewpoint.

The whole matter depends upon whether Alford and Jones, the references, anticipate appellant's process. We shall first examine the Alford reference.

Alford manifestly has in mind the use of either solid or liquid hydrocarbons as reducing reagents, and his underlying theory seems to be that in his process an excess of carbon should be added to prevent reoxidation.

CARNEGIE LIBRARY OF ATLANTA

Alford proposes to carry on his process by means of an apparatus briefly described as follows: He provides a furnace and firebox fed with fuel from above. The ore is heated and finally reduced in two rotatable tubes extending longitudinally, one above the other, through the two compartments of the furnace. The upper tube is described as an ore heating tube and the lower one as a reduction tube. Ore is fed into one end of the upper tube, propelled through it by an Archimedean screw, and is discharged from the other end into a chute, from which it passes into the end of the lower reduction tube, through which it is likewise propelled by a similar screw. As the ore passes through the chute, powdered or crushed coal or carbon is added to it, which has been fed down an inclined tube, which tube leads from the outside, through the spent gases above the heating stove.

Alford's specifications recite, on this point: "said ore being advanced through the tube until it is discharged in a properly heated condition into a chute 22 which in turn discharges *the ore* (*mixed with carbon*) into the intake end of the reduction tube 15." (Italics are ours.) Again he says: "It follows from the foregoing that the heated ore and reduction carbon are jointly fed into the reduction tube 15 where they are intimately mixed by the screw *a*." Reduction is said to occur in the lower tube and the metal is drawn from the lower end of a Y at the end, the gases escaping from the upper end thereof.

Alford states that his temperature in his reduction tube 15 will approximate 1100° F., while the temperature in his upper ore heating tube is 1300° F., and in the carbon tube about 800° F. He states that while the temperature in the upper heating tube may be 1300° F., it "must never reach the temperature of fusion." The gist of his invention is stated in his sixth claim, which is as follows:

6. In the reduction of oxid ores, the process of externally heating a charge of ore in a finely divided state while under agitation in a container, to a temperature below the point of fusion, conducting said heated ore to a container in conjunction with a proper complement of powdered hydrocarbon fuel without access of air to furnish carbon in excess of that necessary to effect reduction, agitating and externally heating the mixed charge in said container and maintaining the same at a temperature approximating 1000 degrees Fahrenheit, whereby the oxid is reduced to the metallic state with production of mixed gas in the presence of such carbon excess as a result of the reaction.

The Patent Office contends this Alford process is identical with that of the appellant. We are unable to see it that way.

Alford expressly states, repeatedly, that he mixes his reducing carbon or hydrocarbon with his ores when the ores are *below the reduction temperature.* The appellant's entire process centers about the theory of the admixture of the reducing hydrocarbon *at the reducing temperature.*

A great deal has been said, in argument, about the various temperatures which Alford's process creates and their reducing effect on ores generally. Comment is also made by appellant upon the alleged fact that Alford's reduction tube, being of metal, will itself be reduced at the reducing temperature of its contents. With these questions of operativeness we are not now concerned. It is sufficient to note that there is an essential difference in the processes of appellant and Alford and that Alford's disclosure does not read on appellant's rejected claims. The Examiner, we think, falls into error in stating that Alford gives 1000° F. as the reducing temperature. What Alford states is that "no reduction of iron can take place under 1000 degrees," which is a much different proposition.

The Examiner states that "the functional, limitation 'thereby producing nascent carbon,' per se, is, clearly, of no patentable significance." Doctor Cain, whose knowledge of the subject is extensive and thorough, states in his affidavit that this production of nascent carbon at the very moment of reduction has great metallurgical significance. His reasons for this view are as follows:

Coley's reducing agent is an active form of carbon which is generated in immediate contact with the ore to be reduced by reason of the cracking of the oil, coal or other suitable hydrocarbon which he injects into or onto the ore that has previously been heated to 950 to 1000° C.; the cracking of the hydrocarbon is effected mainly by the high temperature he uses. Coley claims that this form of carbon is highly efficient in reduction operations, and I believe this to be so, for it is evident that he accomplishes at least three things highly favorable to a quick and effective reduction: (a) He obtains the very finely divided, flocculent form of carbon that results from suitably cracking or decomposing hydrocarbons; (b) he deposits this carbon upon and between the ore particles, or liberates it in such fashion that there is the intimate contact necessary for reduction; (c) he has his ore at a very high temperature favorable for immediate reduction by the active carbon.

It will be observed that Doctor Cain refers to the reducing temperature in Coley's process as from 950 to 1000° (Coley's specifications state 1100°) C., or the equivalent of 1742 to 1832° F. Certainly, Alford indicates no such temperatures in his process. Cain also sets out quite clearly that the powdered coal or carbon used in Alford's process reaches a temperature of 800° F. before it enters the mass of ore and that, doubtless, at least partial carbonization thereof would occur before the ores reached a reduction temperature. In support of his propositions he cites various authorities, which, on examination, seem to indicate the correctness of his theories. Greenwood's experiments described in Transactions of the Chemical Society (London) for 1928, p. 1490; Bureau of Mines Technical Paper 396, by A. C. Fieldner, entitled "Low temperature carbonization of coal;" Bureau of Mines Bulletin No. 1, Table 20.

We are of opinion the Alford reference is not a sufficient reference for the rejection of appellant's claims.

The Jones reference discloses a method of reducing iron from ores. This Jones proposes to do by the use of a natural gas, or a hydrocarbon gas of similar composition, as a "reducing, carbonizing and cooling agent." Jones employs a vertical furnace surrounding a central stack, in which reduction is to take place. Heat is applied from the sides, at the base of the furnace, to the exterior of the central stack. This stack extends below the base of the furnace a considerable distance, giving the material in the base of the furnace an opportunity to cool somewhat before the products of re-

duction are drawn off. Jones thus describes his furnace:

The operation of the furnace and the processes involved are divisible into three zones or stages in which the several reactions are going on continuously and contemporaneously. The first zone or stage "C" is in the interior stack 4 from the top of the furnace down to the point of highest temperature opposite the gas or oil burners 10.

The second zone or stage "D" is the upper part of the cooling section of the interior stack, just below zone "C", in which the reduced iron from zone "C" is carburized.

The third zone or stage "E" is the final cooling zone before removal of the iron for refining to steel.

The natural or other gas used in the reduction is injected through pipes into zones D and E. These gases pass upward through the mass of hot ore or metal. What happens is thus described by Jones:

The first stage comprises heating to the temperature necessary for reduction of the contained metal, the column of broken iron ore in the interior stack 4 * * *

The second stage takes place in the upper part of the cooling section of furnace 7, during which the reduced ore from the first stage, passing downwardly through the furnace, cools from the temperature of reduction down to about 150 degrees centigrade and in the course of which cooling carburization of the reduced iron sponge takes place by reason of the well known property of natural gas of depositing carbon when highly heated.

The reduced ore from the first stage is in the form of a more or less porous iron sponge as it enters the cooling portion 7 of the furnace and in an ideal condition for receiving and combining with the deposited carbon when the equilibrium temperature is reached in the cooling of the sponge at which carbon will be deposited from the gas and be retained by the iron sponge, thereby altering it to a more fusible compound of iron and carbon and less easily oxidized than pure sponge.

A further correlated reaction due to the deposition of carbon from the natural gas in stage two, and of an intensifying reducing effect in the first stage, is the enrichment of the reducing gas by reason of the greater proportion of hydrogen in it due to the removal of a portion of the carbon of the original natural gas in carburizing the iron sponge.

* * * * * * *

The final or third stage, before drawing the reduced carburized product, is a further cooling of it from contact with the column of gas entering at 11, which gas is always supplied under pressure at ordinary temperatures.

* * * * * * * *

I claim:

1. A zonal process of reducing iron ore by means of natural gas, or a hydrocarbon gas of similar composition, comprising heating a descending column of broken ore, under the exclusion of air, to the temperature necessary for reduction of the contained metal and less than fusing, passing the column of ore, under the exclusion of air, through this heating and reducing zone in intimate contact with an ascending column of natural gas, or other gaseous hydrocarbon of similar composition, thereby reducing the iron wholly or in part to the metallic state by the action of the gas in this zone; continuing passing the descending column of reduced or partly reduced iron, under the exclusion of air, into and through a lower cooling and carburizing zone, in intimate contact with the ascending column of natural or other hydrocarbon gas, passing the descending column of reduced and carburized iron through the final cooling zone in the ascending column of gas, and delivering the product from the furnace without allowing air to enter the furnace.

Much difficulty is experienced in attempting to understand Jones' process, as thus set forth. He injects a hydrocarbon gas which must pass first through a zone where the ores are reduced, to cool them, then through a zone where the temperature is at the proper stage to decarburize the gases and carburize the iron, and finally into a zone of reduction, where it must deoxidize the ores by yielding up carbon. It is difficult for a layman to understand just how these gases can retain their carbon and carry it to the reduction stage of the process. The apparent purpose of the processes of appellant and Alford seem to be to obtain "sponge iron." Jones, however, gets as his ultimate product "carburized iron."

Doctor Cain discusses the Jones process in the light of the result of certain experiments conducted by the Bureau of Standards and described in "Chemical and Metallurgical Engineering," vol. 28, April 30, 1923, "Production of hydrogen by the thermal decomposition of oil," and Giolitti in his book "Cementation of Iron and Steel," by McGrew Hill Co., New York, 1916, page 78, as well as Bureau of Mines Technical Paper 418, "Electric furnace cast iron," p. 29. From these authorities, and from his own experience, he deduces these conclusions:

Summarizing as to Jones, it is believed that his process is of doubtful operability because; 1. He cannot reduce iron ore with methane at any practicable speed at the temperature he specifies; 2. He cannot get the carburizing action claimed at Zone D at the temperature prevailing there; 3. He cannot get the "intensifying reducing effect" he claims because of supposed decomposition of methane at Zone D.

It is quite obvious that in the Jones process the reducing hydrocarbon is not injected into the ores at the moment they arrive at a reduction temperature. On the contrary, the methane, or natural gas, used, performs other functions and is subjected to other forces, the exact reaction of which is uncertain, before it reaches the ores at their reduction point, if, in fact, it reaches them there at all.

We are inclined to think the Patent Office should have granted this patent. To our minds, unskilled in this art, the Jones and Alford processes, as disclosed in their patents, differ essentially from appellant's process. The experts differ in their views of the matter. Doctor Cain is quite positive the processes are not identical and he seems to be supported by respectable authority. On the other hand, the experts of the Patent Office assert they are identical. Where there is such doubt, the scales should be inclined toward the applicant. *In re Huff*, 48 App. D. C. 258, 259 O. G. 386; *In re Champeau*, 17 C. C. P. A. —, 34 F.(2d) 1012, 388 O. G. 783; *In re Uddenborg*, 17 C. C. P. A. —, 39 F.(2d) 710, 397 O. G. 166; *In re Williams*, 17 C. C. P. A. —, 36 F.(2d) 436, 392 O. G. 737.

The solicitor for the Patent Office cites, as an additional reference in his brief filed in this court, the patent to Rendall, No. 721,092, Feb. 17, 1903. He contends this patent is a full and complete anticipation of appellant's application, even if the Alford and Jones patents are not. The Rendall patent was not referred to in the Patent Office during the hearing on this application, either by the Examiner or the Board, and its attempted citation here is some indication that there is some doubt in the solicitor's mind as to whether the Jones and Alford references are sufficient justification for rejection of this application. The appellant vigorously insists we should not consider the same here.

The statute under which these appeals are heard by us (sections 4913 and 4914 R. S.) provide, in part:

SEC. 4913. * * * The party appealing shall lay before the court certified copies of all the original papers and evidence in the case, and the Commissioner shall furnish the court with the grounds of his decision, fully set forth in writing, touching all the points involved by the reasons of appeal.

SEC. 4914. The court, on petition, shall hear and determine such appeal, and revise the decision appealed from in a summary way, on the evidence produced before the Commissioner, at such early and convenient time as the court may appoint; and the revision shall be confined to the points set forth in the reasons of appeal. * * *

The rules of the Court of Appeals of the District of Columbia heretofore adopted, so far as applicable, by this court, provide, (Rule XXII) that the Patent Office shall certify all papers and evidence in the matter to this court and that these, with the petition for appeal, shall constitute the record to be considered by the court. This has been done in the case at bar, and no reference to the Rendall patent appears therein.

It is urged that the court may take judicial notice of the Rendall patent. Whether we may or may not do so, is a matter, in our judgment, not necessary for our consideration. It is quite certain that if we were to here consider reference patents for the first time, we should speedily find ourselves usurping the functions of the Patent Office. The appellant has the right to have the decision of the tribunals of the Patent Office upon the Rendall reference, if it is to be cited against him. If rejected by the office upon that reference, he might amend under section 4903 R. S. and possibly avoid the reference, something which he may not do in this court. The rules of orderly practice and reason both require that we should not consider for the first time, on appeal, references cited against an application. In re Gillam, 17 C. C. P. A. —, 37 F.(2d) 959, 395 O. G. 1135.

The order will be, therefore, that the decision of the Board of Appeals is reversed, and patent will issue on both claims in issue.

Reversed.

Adverse Decisions in Interference

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,675,894, C. D. Lindridge, Method and apparatus for recording and reproducing sound, decided October 21, 1930, claims 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, and 17.

Pat. 1,685,932, W. B. Andersson, Hydraulic gate and check valve, decided November 15, 1930, claim 1.

Pat. 1,696,341, J. M. Blanchard, Shipping box, decided November 13, 1930, claims 1, 2, 3, 5, 8, 9, 10, and 11.

Pat. 1,698,043, F. C. Wise and W. Greenwood, Smoker's petrol lighter, decided October 14, 1930, claims 1 and 2.

Pat. 1,708,360, H. A. Douglas, Control means, decided October 17, 1930, claims 1, 3, 5, 6, 7, 8, 9, and 10.

Pat. 1,759,635, K. B. Thews and J. S. Carlitz, Treatment of iron or steel, decided November 6, 1930, claims 2 and 7.

TRADE-MARKS

OFFICIAL GAZETTE, DECEMBER 2, 1930

[VOL. 401. No. 1]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 1 of said act, a fee of ten dollars must accompany each notice of opposition.

CLASS 1

Raw or Partly-Prepared Materials

Ser. No. 286,357. MCNEELY COMPANY, Philadelphia, Pa. Filed June 29, 1929.

For Glazed Kid Manufactured from Goatskins.
Claims use since June 1, 1928.

Ser. No. 302,691. PENNRICH & COMPANY, INC., New York, N. Y. Filed June 21, 1930.

P E C O
STANDARD

No claim is made to the exclusive use of the word "Standard" apart from the mark as shown on the drawing.
For Peat-Moss Products.
Claims use since October, 1929.

Ser. No. 305,427. WHITNEY-ECKSTEIN SEED CO., Buffalo, N. Y. Filed Sept. 6, 1930.

EUREKA

For Clover Seeds, Grass Seeds, and Mixtures Thereof.
Claims use since Nov. 1, 1901.

Ser. No. 306,555. BROWN COMPANY, Portland, Me., and Berlin, N. H. Filed Oct. 9, 1930.

DURACEL

For Cellulose Pulps.
Claims use since Apr. 25, 1929.

Ser. No. 307,027. THE AMERICAN FLURESIT COMPANY, Cincinnati, Ohio. Filed Oct. 22, 1930.

Duromit

For Mined Raw Material Classified as Quartz Sand.
Claims use since Jan. 1, 1930.

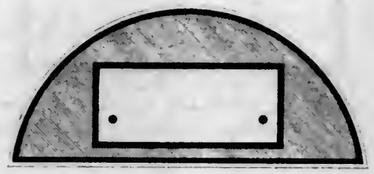
Bonalin

For Fuel for Pocket and Table Lighters.

Claims use since Nov. 2, 1929.



Ser. No. 305,914. JOHN W. WALTERS, doing business as Denocin Products Co., Indianapolis, Ind. Filed Sept. 20, 1930.

DENOCIN

For Analgesic Tablets and Mouth Wash.

Claims use since December, 1926.

Ser. No. 306,021. STANDARD BRANDS INCORPORATED, New York, N. Y. Filed Sept. 24, 1930.

The lines shown on the drawing are not intended to be restrictively indicative of any particular color. Applicant is the owner of registered Trade-Mark No. 271,490.

For Baking Powder.

Claims use since Apr. 16, 1930.

Ser. No. 306,101. JOHN B. MILAM, Jr., doing business as Mi-La Company, Ruston, La. Filed Sept. 26, 1930.

MI-LA

For Cosmetic, for Instance a Cleansing Cream, Bleach Cream, Hair Oil, Hair Dressing.

Claims use since July 1, 1929.

Ser. No. 306,248. J. W. SPENCER, doing business as Hygienic Laboratories, New Orleans, La. Filed Sept. 30, 1930.

PROTECTABS

For Antiseptic, Germicidal, and Therapeutic Composition of the Type Employed for Vaginal Douching.

Claims use since Aug. 1, 1930.

Ser. No. 306,339. BONIDE CHEMICAL CO. INC., Utica, N. Y. Filed Oct. 3, 1930.

CROW-FEZ

No claim is made to the word "Crow" apart from the mark shown in the drawing.

For Preparation for Protecting Seed Against Birds and Animals.

Claims use since Sept. 28, 1928.

Ser. No. 306,379. THE WHITE TAR COMPANY OF NEW JERSEY, INC., Kearny, N. J. Filed Oct. 8, 1930.

BIM

For Insecticides.

Claims use since Aug. 20, 1930.

Ser. No. 306,433. WILLIAM H. ECKHART & SON, Hondo, Tex. Filed Oct. 6, 1930.

SSSS

For Liniment for External Use and Designed for Use by Human Beings and Animals for Treatment of Eczema, Cuts, Sores, Burns, and Rheumatic and Muscular Pains.

Claims use since Sept. 15, 1930.

Ser. No. 306,574. PRISCILLA CO., New York, N. Y. Filed Oct. 9, 1930.

Priscilla
"QUANTITIVE KEY SYSTEM"

The words "Quantitive Key System" are disclaimed apart from the mark as shown.

For Fabric Dyes.

Claims use since Sept. 15, 1930.

Ser. No. 306,579. WILLIAM D. H. SMEATON, Vincennes, Ind. Filed Oct. 9, 1930.

"IT'S GONE"

For Preparation for Treatment of Common Eye Ailments.

Claims use since Mar. 1, 1929.

Ser. No. 306,580. TENNESSEE PRODUCTS CORPORATION, Nashville, Tenn. Filed Oct. 9, 1930.

TENN-GREO

For Chemical Preparations—Namely Wood Preserves, Disinfectants, and Germicides.
Claims use since Aug. 1, 1930.

Ser. No. 306,596. CORN PRODUCTS REFINING COMPANY, New York, N. Y. Filed Oct. 10, 1930.

ARGO

For Laundry Starch.
Claims use since December, 1907.

Ser. No. 306,683. WILLIAM H. BATES, doing business as Sunray Chemical Co., Columbus, Ohio. Filed Oct. 13, 1930.

Noxburn

For Sunburn Lotion.
Claims use since August, 1930.

Ser. No. 306,684. H. TH. BÖHME A. G., Chemnitz, Germany. Filed Oct. 13, 1930.

Uniavirol

For Chemical Dye Aids—Namely, Moistening Preparations, Thread and Fibre Protecting Preparations, Thread and Fibre Penetrating Preparations, and Smoothing Preparations.
Claims use since Aug. 19, 1930.

Ser. No. 306,686. H. TH. BÖHME A. G., Chemnitz, Germany. Filed Oct. 13, 1930.

Acorit

For Chemical Dye Aids—Namely, Moistening Preparations, Thread and Fibre Protecting Preparations, Thread and Fibre Penetrating Preparations, and Smoothing Preparations.

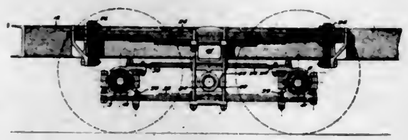
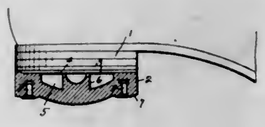
REISSUES



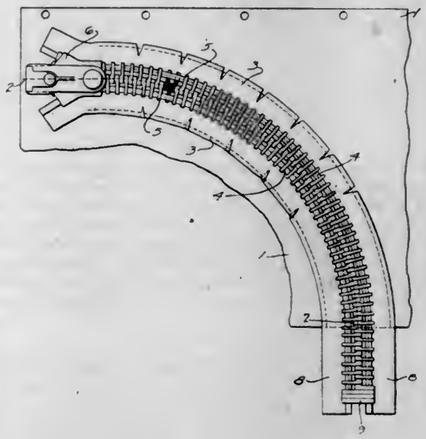
DECEMBER 2, 1930

17,888. BRAKE OPERATING MECHANISM. PAUL BASTIEN, Lansing, Mich., assignor to Bendix Brake Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 10, 1929. Serial No. 384,910. Original No. 1,639,071, dated Aug. 16, 1927, Serial No. 582,682, filed Aug. 18, 1922. 10 Claims. (Cl. 188—78.)



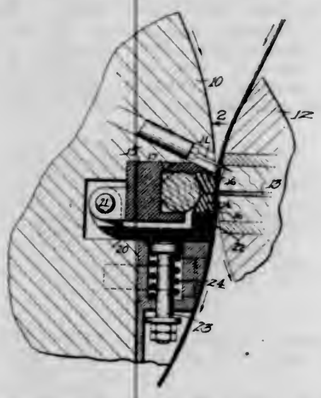
1. In a brake mechanism, a brake drum, a pair of complementary brake shoes pivoted within said drum at corresponding extremities, the other extremities of said shoes having bearing surfaces, a spreader positioned between and engaging said bearing surfaces, said spreader having a central aperture in one end thereof and a slot in one side thereof extending transversely to said aperture, a head extending into the aperture in said spreader providing a journal therefor, and a rotatable shaft connected to said head and extending through the slot in said spreader, said spreader being free to swivel with said brake shoes and being rotatable with said head to spread said shoes in any position it may assume while swiveling upon said head.

17,889. ROAD VEHICLE. ROLLIE B. FAGEOL, Los Angeles, Calif., assignor to The Eight Wheel Motor Vehicle Company, San Francisco, Calif., a Corporation of California. Filed Jan. 24, 1930. Serial No. 423,241. Original application filed Apr. 23, 1923, Serial No. 633,867. Renewed Apr. 7, 1928. Original No. 1,692,891, dated Nov. 27, 1928. 11 Claims. (Cl. 280—124.)



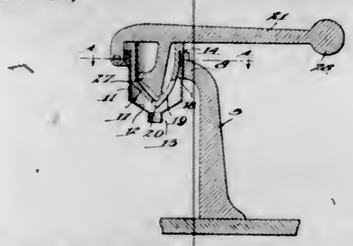
1. In a road vehicle, a pair of substantially parallel axes; means interconnecting said axles, said means comprising a leaf spring and connections permitting universal movement of each of said axles with relation to said spring; a bracket pivotally supported from the mid portion of said spring; a second leaf spring supported at its mid portion from said bracket; yielding connections supported from each end of said second spring; and a frame supported from said yielding connections.

17,890. RUBBER CUSHIONED HEEL. HARRY G. NORWOOD, Baltimore, Md., assignor, by mesne assignments, to Balloon Rubber Heel Corporation, a Corporation of Delaware. Filed Aug. 7, 1929. Serial No. 284,055. Original No. 1,638,701, dated Aug. 9, 1927, Serial No. 2,632, filed Jan. 15, 1925. 7 Claims. (Cl. 36—35.)



1. A cushion heel, comprising a resilient heel body of rubber having a tread surface, an upper surface, and a peripheral surface, said upper surface being provided with a recess in inwardly spaced relation to said peripheral surface, and a cushioning element also of rubber and of greater resiliency than said heel body disposed in said recess, and substantially integrally connected to the heel body, said heel having a space in relation to said cushioning element into which said element expands in its compressed relation.

17,891. FASTENER. GIDEON SUNDBACK, Meadville, Pa., assignor to Hookless Fastener Company, a Corporation of Pennsylvania. Filed Dec. 3, 1929. Serial No. 411,357. Original application filed Apr. 2, 1917, Serial No. 159,139. Divided and application filed Aug. 15, 1921, Serial No. 492,621. Patent No. 1,508,133, dated Sept. 9, 1924. 26 Claims. (Cl. 24—205.)

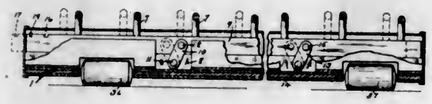


6. A pair of body portions having relatively stiff edges, flexible stringers secured to and extending beyond said edges, means connecting the edges of said stringers, and means on said stringers for progressively connecting and disconnecting said edges and permitting said stringer extensions to stretch out end to end when said body portions are to have maximum opening.

17,892. CUTTING CUSHION FOR FOLDING CYLINDERS. HENRY A. WISE WOOD, New York, N. Y., assignor to Wood Newspaper Machinery Corporation, New York, N. Y., a Corporation of Virginia. Filed Aug. 27, 1930. Serial No. 478,261. Original No. 1,766,807, dated June 24, 1930, Serial No. 308,686, filed Sept. 27, 1928. 8 Claims. (Cl. 164—66.)

1. The combination with a cutting blade, of a cushion for receiving the blade, a carrier or support for the cushion, and solid means behind the cushion for backing it up, capable of being turned to present different surfaces to the blade.

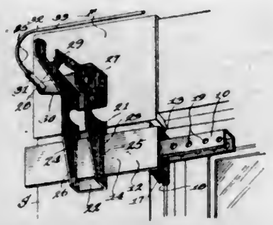
17,893. JUICE EXTRACTOR. CHARLES MEYER, Miami, Fla., assignor to Press-Or Company, a Corporation of Florida. Filed May 10, 1930. Serial No. 451,446. Original No. 1,742,089, dated Dec. 31, 1929, Serial No. 261,326, filed Mar. 13, 1928. 6 Claims. (Cl. 100—41.)



4. A press comprising a wall curved longitudinally and transversely, an abutment wall at an angle to the curved wall, a pivoted plunger mounted to swing on its axis and move toward and away from the abutment wall, said curved wall having slots therein which are radial to the axis of the plunger, and are open and unobstructed at their lower ends, said slots being continuous and unbroken and extending away from the lower end of the curved wall.

17,894. DYEING. ALBERT BODMER, Wattwil, Switzerland, assignor to Heberlein & Co., A. G., Wattwil, Switzerland, a Corporation of Switzerland. Filed Sept. 14, 1929. Serial No. 392,749. Original No. 1,694,526, dated Dec. 11, 1928, Serial No. 121,736, filed July 10, 1926, and in Germany July 14, 1925. 17 Claims. (Cl. 8—5.)

1. Method of modifying the dyeing properties of cellulosic fibers which consists in treating the fibers with alcoholic caustic alkali and acting on the same with a compound of the class consisting of phosphorous halogen compound and triphenyl-phosphate capable of making the cellulosic fibers relatively immune to substantive dyestuffs and relatively attractive to basic dyestuffs.



15. A cellulosic fiber in which at least some of the cellulose has been subjected to caustic alkali deposited thereon from an alcoholic solution and to a phosphorous halogen compound, and which is relatively more resistant to substantive dyestuffs and more attractive to basic dyestuffs.

17,895. LOOSE-LEAF BINDER. JOHN L. MCMILLAN, Syracuse, N. Y., assignor to McMillan Book Company, Syracuse, N. Y., a Corporation of New York. Filed July 30, 1930. Serial No. 471,861. Original No. 1,747,257, dated Feb. 18, 1930, Serial No. 367,572, filed May 31, 1929. 11 Claims. (Cl. 129—17.)

10. A loose leaf book comprising a back, a pair of plates positioned at opposite sides of the back, a set of prongs mounted upon each plate, and a pair of crank arms each having one end pivoted to one of the plates and its opposite end pivotally connected to the back.

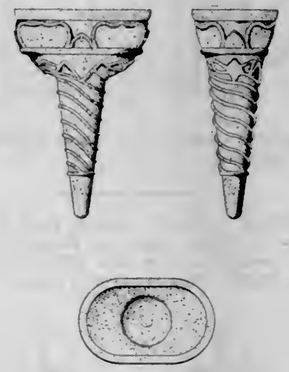
17,896. SUPPORTING BRACKET FOR WINDOW HANGINGS. KARL H. WHITNEY, Kirksville, Mo., assignor to Whitney Manufacturing Company, Kirksville, Mo., a Corporation of Missouri. Filed Feb. 15, 1928. Serial No. 254,571. Original No. 1,573,286, dated Feb. 16, 1926, Serial No. 6,579, filed Feb. 3, 1925. 1 Claim. (Cl. 156—28.)

A window hanging support comprising a pair of bracket members having angularly disposed end portions, a resilient pad applied to the inner surface of one end portion of each bracket member, each of said end portions being provided with parallel slots, and slidable rail sections each having an end portion passing through the slots of the respective bracket members whereby the rail section is pivotally connected with the respective bracket members, the said end portion of the rail section engaging in the side surface of the pad.

DESIGNS

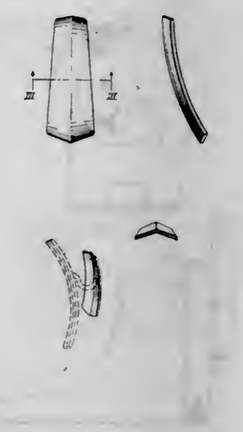
DECEMBER 2, 1930

82,648. LAMP. ALBERT L. ARENBERG, Chicago, Ill. Filed Mar. 22, 1930. Serial No. 35,005. Term of patent 7 years.



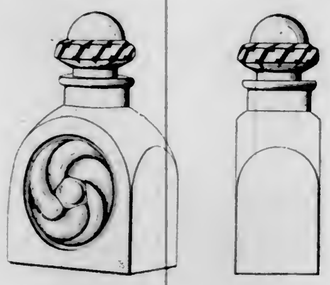
The ornamental design for a lamp, as shown and described.

82,649. LAMP. ALBERT L. ARENBERG, Chicago, Ill. Filed Apr. 11, 1930. Serial No. 35,221. Term of patent 7 years.



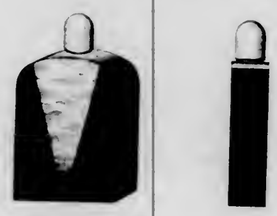
The ornamental design for a lamp, as shown and described.

82,650. ICE-CREAM CONE. JAMES L. BALTON, Baltimore, Md. Filed Mar. 20, 1930. Serial No. 34,986. Term of patent 14 years.



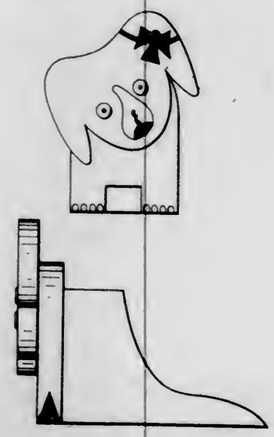
The ornamental design for an ice cream cone, as shown.

82,651. GUARD FOR AN OPHTHALMIC MOUNTING. NELSON M. BAKER, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Aug. 26, 1929. Serial No. 32,535. Term of patent 14 years.



The ornamental design for a guard for an ophthalmic mounting as shown and described.

82,652. BOTTLE. RAYMOND BARBAS, Paris, France, assignor to La Société Anonyme Jean Patou, Paris, France, a Corporation of France. Filed Oct. 11, 1930. Serial No. 37,229. Term of patent 7 years.



The ornamental design for a bottle substantially as shown and described.

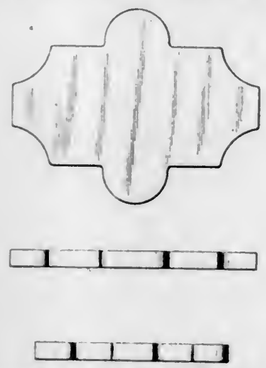
82,653. BOTTLE. RAYMOND BARBAS, Paris, France, assignor to La Société Anonyme Jean Patou, Paris, France, a Corporation of France. Filed Oct. 11, 1930. Serial No. 37,231. Term of patent 7 years.

The ornamental design for a bottle substantially as shown and described.

82,654. DOORSTOP. JAMES W. BARNETT, Spokane, Wash. Filed Sept. 16, 1930. Serial No. 36,986. Term of patent 3½ years.

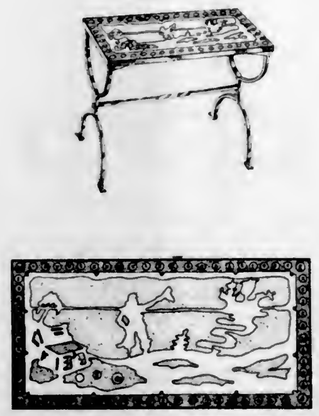
The ornamental design for a door stop as shown.

82,655. PEDESTAL FOR A GOBLET OR SIMILAR ARTICLE. CHARLES C. BEAM, Pittsburgh, Pa., assignor to United States Glass Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Aug. 13, 1930. Serial No. 36,650. Term of patent 14 years.



The ornamental design for a pedestal for a goblet or similar article, as shown.

82,656. DOLL. CAMILLE C. BLAIR, Los Angeles, Calif. Filed July 29, 1930. Serial No. 36,506. Term of patent 14 years.

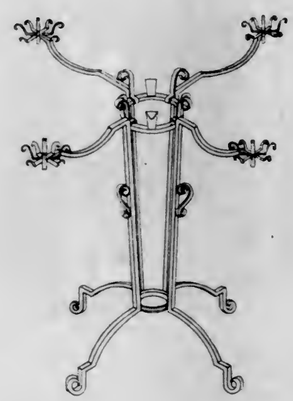


The ornamental design for a doll substantially as shown and described.

82,657. TILE BLOCK. BECHER B. BOLTON, Rosemead, Calif., assignor to Willa Steen, Brea, Calif. Filed Dec. 12, 1929. Serial No. 33,755. Term of patent 14 years.

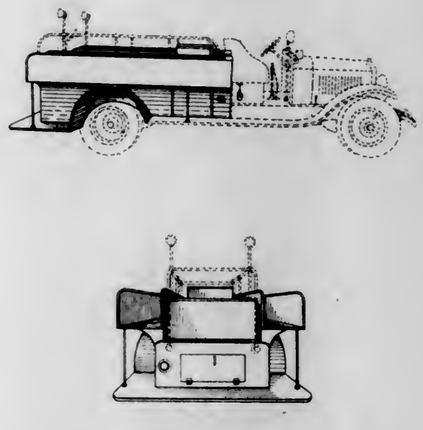
The ornamental design for a tile block as shown.

82,658. COFFEE TABLE. HUGH C. BROWN, Asheville, N. C. Filed Oct. 21, 1929. Serial No. 33,125. Term of patent 3½ years.



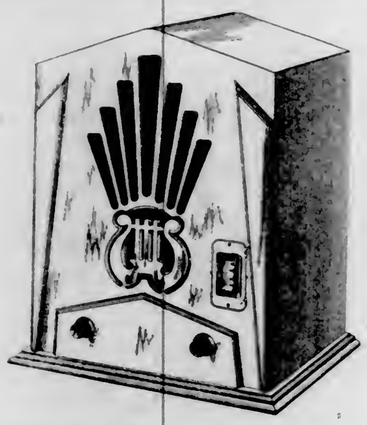
The ornamental design for a coffee table as shown.

82,659. WEIGHING-SCALE CASING. LEVERETT D. CHAMBERS, New York, N. Y., assignor to Camco Scale Corporation, New York, N. Y. Filed Oct. 4, 1930. Serial No. 37,140. Term of patent 14 years.



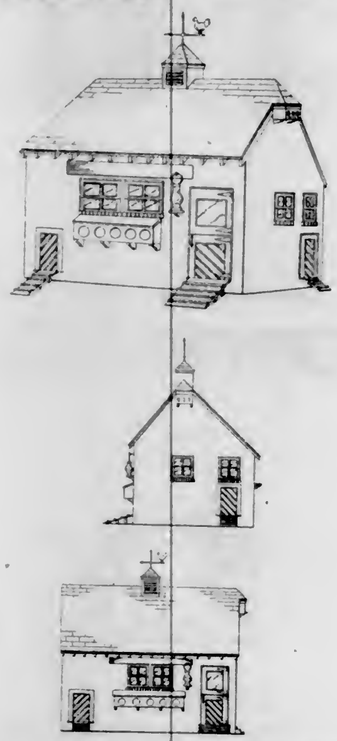
The ornamental design for a weighing scale casing, as shown.

82,660. FLOWERPOT HOLDER. JOSEPH DAMELIO, Youngstown, Ohio. Filed Apr. 23, 1930. Serial No. 35,365. Term of patent 14 years.



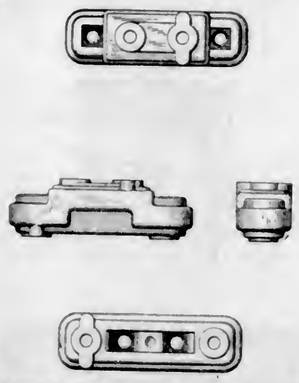
The ornamental design for a flower pot holder as shown.

82,661. FIRE TRUCK. ALBERT DE LA MARE, San Francisco, Calif. Filed July 23, 1930. Serial No. 36,442. Term of patent 7 years.



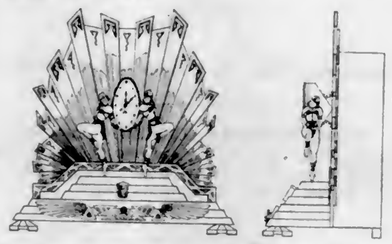
The ornamental design for a fire truck as shown.

82,662. RADIOCABINET OR SIMILAR ARTICLE. HAROLD C. EDWARDS, Kansas City, Mo. Filed Sept. 11, 1930. Serial No. 36,942. Term of patent 3½ years.



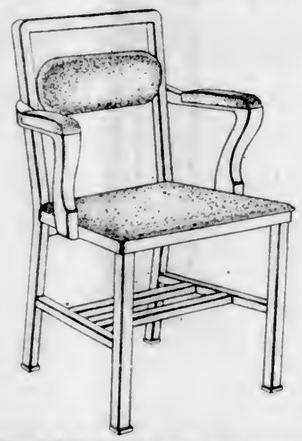
The ornamental design for a radiocabinet or similar article, as shown and described.

82,663. RESTAURANT BUILDING. ALBERT J. ERRETT and CYRIL P. PESEK, Minneapolis, Minn., assignors to Hen House, Inc., Minneapolis, Minn., a Corporation of South Dakota. Filed Sept. 5, 1930. Serial No. 36,881. Term of patent 14 years.



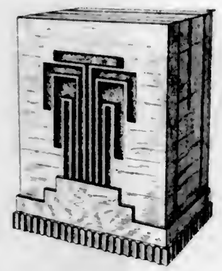
The ornamental design for a restaurant building substantially as shown.

82,664. INSULATION BLOCK FOR ELECTRIC TERMINALS. EDWARD A. EVERETT, Long Island City, N. Y. Filed July 21, 1930. Serial No. 36,411. Term of patent 14 years.



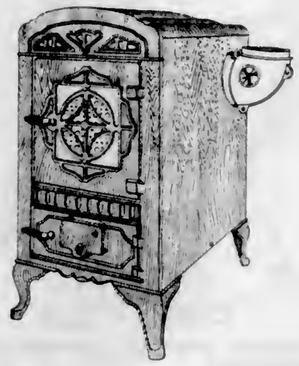
The ornamental design for an insulation block for electric terminals, as shown.

82,665. COMBINED RADIO RECEIVER CABINET AND CLOCK. HARRY M. FARRAND, Los Angeles, Calif. Filed Jan. 17, 1930. Serial No. 34,170. Term of patent 3½ years.



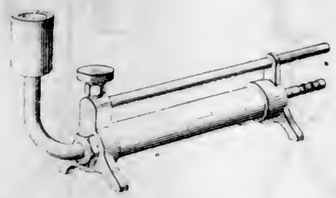
The ornamental design for a combined radio receiver cabinet and clock, substantially as shown.

82,666. CHAIR. WILLIAM S. FERRIS, Elkhart, Ind., and EVAN C. HARTER, Sturgis, Mich. Filed Oct. 2, 1930. Serial No. 37,114. Term of patent 14 years.



The ornamental design for a chair substantially as shown.

82,667. RADIOCABINET OR SIMILAR ARTICLE. HERMAN L. FINNEGAN and PRENTISS O. LANHAM, Kansas City, Mo., assignors to Harold Edwards, Kansas City, Mo. Filed Aug. 26, 1930. Serial No. 36,764. Term of patent 7 years.



The ornamental design for a radio cabinet or similar article as shown, and described.

82,668. STOVE. HARRY H. FLEER, Quincy, Ill., assignor to Orbon Stove Co., Belleville, Ill., a Corporation of Delaware. Filed Aug. 25, 1930. Serial No. 36,756. Term of patent 7 years.

The ornamental design for a stove, substantially as shown and described.

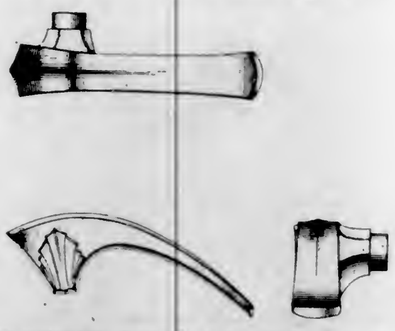
82,669. DENTAL GAS BURNER. PERCY M. FORSTER, Berkeley, Calif. Filed Aug. 18, 1930. Serial No. 36,698. Term of patent 14 years.

The ornamental design for a dental gas burner substantially as shown.

82,670. DISPLAY CARD OR SIMILAR ARTICLE. SOLOMON H. GOLDBERG, Chicago, Ill., assignor to The Hump Hairpin Manufacturing Co., Chicago, Ill., a Corporation of West Virginia. Filed May 2, 1930. Serial No. 35,479. Term of patent 14 years.

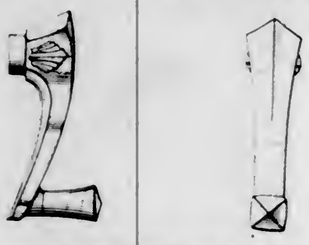
The ornamental design for a display card or similar article, as shown and described.

82,671. FINGER RING OR ARTICLE OF SIMILAR NATURE. EDWARD J. GROSS, New Rochelle, N. Y., assignor to Benjamin & Edward J. Gross Co., Inc., New York, N. Y. Filed Dec. 4, 1929. Serial No. 33,632. Term of patent 3½ years.



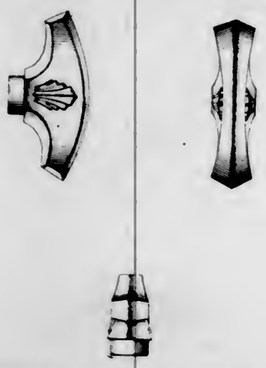
The ornamental design for a finger ring or article of similar nature, as shown.

82,672. FINGER RING OR ARTICLE OF SIMILAR NATURE. EDWARD J. GROSS, New Rochelle, N. Y., assignor to Benjamin & Edward J. Gross Co., Inc., New York, N. Y. Filed Dec. 5, 1929. Serial No. 33,660. Term of patent 3½ years.



The ornamental design for a finger ring or article of similar nature, as shown.

82,673. HANDLE FOR DOOR OF AUTOMOBILE OR THE LIKE. JOHN STERLING GULLBORG, Chicago Ill., assignor to Alemite Die Casting & Mfg. Co., Woodstock, Ill., a Corporation of Delaware. Filed Sept. 11, 1930. Serial No. 36,935. Term of patent 3½ years.

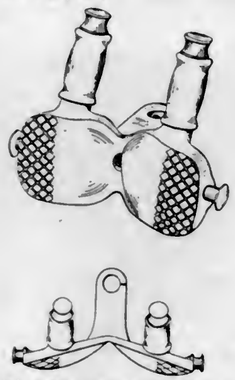


The ornamental design for a handle for door of automobile or the like as shown.

82,674. HANDLE FOR AUTOMOBILE WINDOW LIFTER OR THE LIKE. JOHN STERLING GULLBORG, Chicago, Ill., assignor to Alemite Die Casting & Mfg. Co., Woodstock, Ill., a Corporation of Delaware. Filed Sept. 11, 1930. Serial No. 36,936. Term of patent 3½ years.

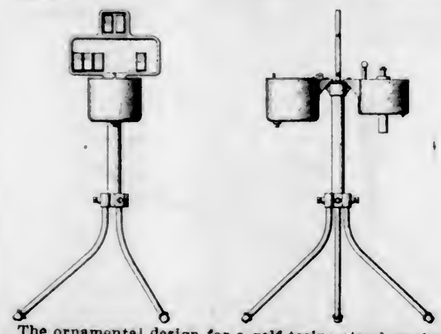
The ornamental design for a handle for automobile window lifter or the like as shown.

82,675. HANDLE FOR AUTOMOBILE WINDOW LIFTER OR THE LIKE. JOHN STERLING GULLBORG, Chicago, Ill., assignor to Alemite Die Casting & Mfg. Co., Woodstock, Ill., a Corporation of Delaware. Filed Sept. 11, 1930. Serial No. 36,937. Term of patent 3½ years.



The ornamental design for a handle for automobile window lifter or the like as shown.

82,676. HANDLE ESCUTCHEON FOR AUTOMOBILE HARDWARE OR THE LIKE. JOHN STERLING GULLBORG, Chicago, Ill., assignor to Alemite Die Casting & Mfg. Co., Woodstock, Ill., a Corporation of Delaware. Filed Sept. 11, 1930. Serial No. 36,938. Term of patent 3½ years.

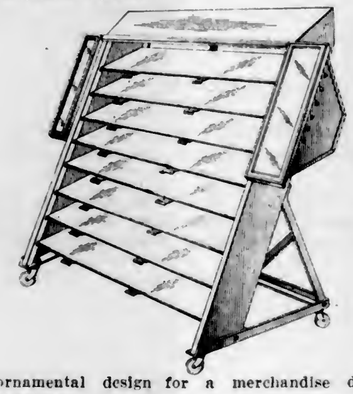


The ornamental design for a handle escutcheon for automobile hardware or the like as shown.

82,677. MASSAGING OSCILLATOR. DON HEYER, Los Angeles, Calif. Filed May 13, 1930. Serial No. 35,624. Term of patent 3½ years.

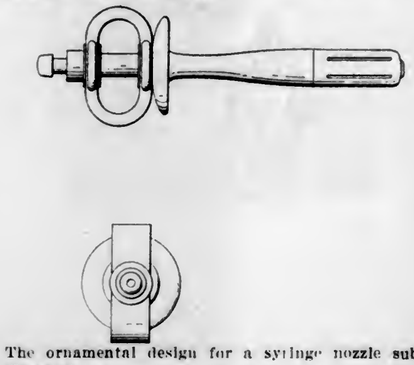
The ornamental design for a massaging oscillator, as shown and described.

82,678. GOLF-TEEING STAND OR SIMILAR DEVICE. JOHN H. HOLM, Kenosha, Wis., assignor to Holm Company, Kenosha, Wis., a Corporation of Wisconsin. Filed July 14, 1930. Serial No. 36,342. Term of patent 3½ years.



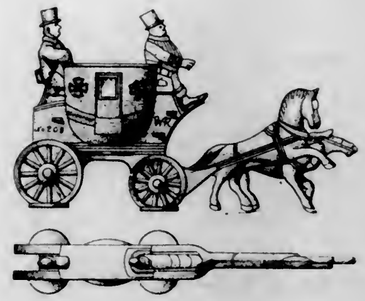
The ornamental design for a golf teeing stand or similar device, as shown.

82,679. BOTTLE STOPPER. RAY R. HUTCHESON, Richmond Hill, N. Y., assignor to Wm. Demuth & Co., a Corporation of New York. Filed Sept. 23, 1930. Serial No. 37,054. Term of patent 3½ years.



The ornamental design for a bottle stopper substantially as shown and described.

82,680. MERCHANDISE-DISPLAY CABINET. CARL C. IRWIN, Kirkwood, Mo., assignor to Ely & Walker Dry Goods Company, St. Louis, Mo., a Corporation of Missouri. Filed Sept. 5, 1930. Serial No. 36,882. Term of patent 7 years.

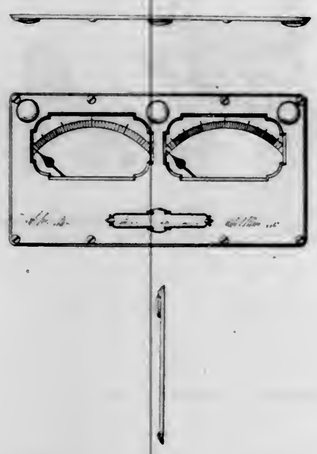


The ornamental design for a merchandise display cabinet, as shown.

82,681. SYRINGE NOZZLE. GERSON KAUFMAN, New York, N. Y. Filed Aug. 25, 1930. Serial No. 36,761. Term of patent 14 years.

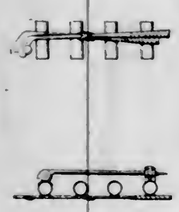
The ornamental design for a syringe nozzle substantially as shown.

82,682. DOORSTOP OR THE LIKE. LOUIS J. LAROCHE, Reading, Pa. Filed Sept. 24, 1930. Serial No. 37,061. Term of patent 3½ years.



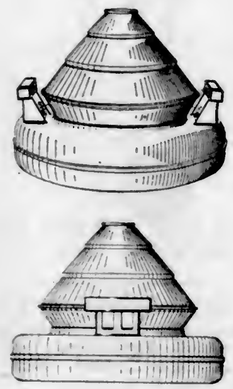
The ornamental design for a door stop or the like, as shown.

82,683. ENSEMBLE SUIT. DOROTHY LONG, New York, N. Y., assignor to Franklin Simon & Company, Inc., New York, N. Y., a Corporation of New York. Filed Aug. 27, 1930. Serial No. 36,804. Term of patent 3½ years.



The ornamental design for an ensemble suit substantially as shown and described.

82,684. INSTRUMENT PANEL FOR SWITCHBOARDS. PAUL MACGAHAN, Orange, N. J., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed June 16, 1930. Serial No. 36,060. Term of patent 14 years.

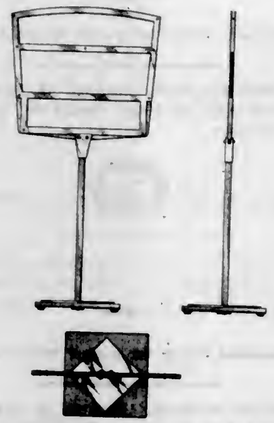


The ornamental design for an instrument panel for switchboards substantially as shown.

82,685. PIN FOR HOLDING GOLF TEES. ROYAL MARCHER, New York, N. Y., assignor to Cohn & Rosenberger, Inc., New York, N. Y., a Corporation of New York. Filed Aug. 20, 1930. Serial No. 36,712. Term of patent 7 years.

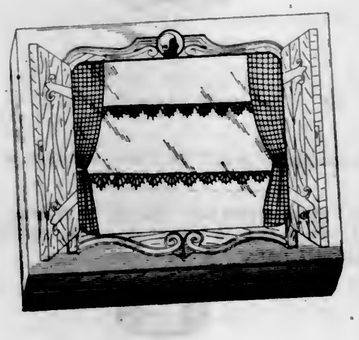
The ornamental design for a pin for holding golf tees, as shown.

82,686. HUMIDIFIER CASING. BERTRAM M. MILLS, Pawtucket, R. I., assignor to The Standard Engineering Works, Pawtucket, R. I., a Corporation of Rhode Island. Filed Oct. 9, 1930. Serial No. 37,199. Term of patent 14 years.



The ornamental design for a humidifier casing substantially as shown.

82,687. ELECTRIC BULB OR SIMILAR ARTICLE. GOTTFRIED NIEBEL, New York, N. Y. Filed Dec. 31, 1929. Serial No. 33,986. Term of patent 14 years.

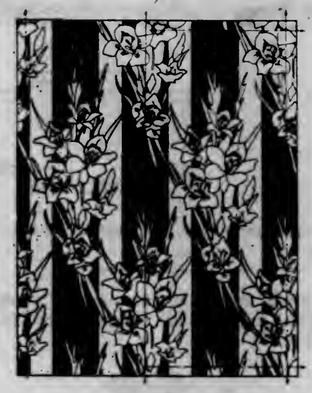


The ornamental design for an electric bulb or similar article substantially as shown.

82,688. DISPLAY DEVICE. TEX O'ROURKE, New York, N. Y., assignor to Card Display Inc., New York, N. Y., a Corporation of New York. Filed Sept. 10, 1930. Serial No. 36,925. Term of patent 14 years.

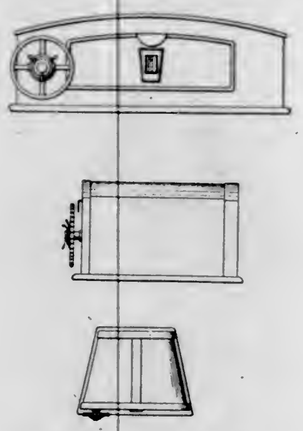
The ornamental design for a display device, as shown.

82,689. BOX. ROBERT WALTER PHELPS, Chicago, Ill., assignor to Julia King's Candy Corporation, Chicago, Ill., a Corporation of Illinois. Filed Sept. 17, 1930. Serial No. 37,000. Term of patent 7 years.



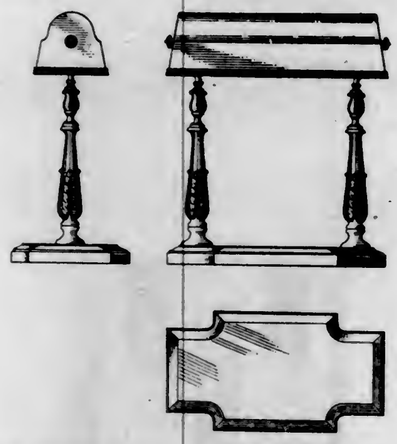
The ornamental design for a box as shown and described.

82,690. GLOBE FOR INCLOSED LIGHTING UNITS. PETER PARLATO, Astoria, N. Y., assignor to Max Schaefer Co., Inc., a Corporation of New York. Filed Sept. 9, 1930. Serial No. 36,918. Term of patent 3½ years.



The ornamental design for a globe for inclosed lighting units substantially as shown.

82,691. TEXTILE FABRIC. ETHEL PARSONS, New York, N. Y., assignor to The Stearns & Foster Company, Lockland, Ohio, a Corporation of Ohio. Filed July 24, 1929. Serial No. 32,182. Term of patent 3½ years.



The ornamental design for textile fabric substantially as shown and described.

82,692. RADIOCABINET. MARTIN PASTERNAK, New York, N. Y., assignor to Radio Corporation of America, a Corporation of Delaware. Filed Jan. 16, 1930. Serial No. 34,161. Term of patent 3½ years.

The ornamental design for a radiocabinet substantially as shown.

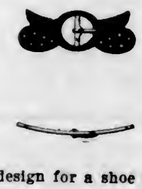
82,693. PORTABLE ELECTRIC LAMP. HENRY M. PETERS, Chicago, Ill., assignor to Faries Manufacturing Company, Decatur, Ill., a Corporation of Illinois. Filed Feb. 19, 1930. Serial No. 34,589. Term of patent 3½ years.

The ornamental design for portable electric lamp, as shown.

82,694. SHOE BUCKLE. SAMUEL M. RIKER, Chester, N. J. Filed Aug. 26, 1930. Serial No. 36,770. Term of patent 7 years.

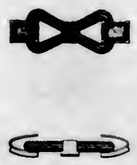
The ornamental design for a shoe buckle, as shown.

82,695. SHOE BUCKLE. SAMUEL M. RIKER, Chester, N. J. Filed Aug. 26, 1930. Serial No. 36,771. Term of patent 7 years.



The ornamental design for a shoe buckle, as shown.

82,696. SHOE BUCKLE. SAMUEL M. RIKER, Chester, N. J. Filed Aug. 26, 1930. Serial No. 36,773. Term of patent 7 years.



The ornamental design for a shoe buckle, as shown.

82,697. SHOE BUCKLE. SAMUEL M. RIKER, Chester, N. J. Filed Aug. 26, 1930. Serial No. 36,774. Term of patent 7 years.

The ornamental design for a shoe buckle, as shown.

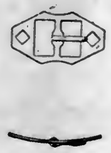
82,698. SHOE ORNAMENT. SAMUEL M. RIKER, Chester, N. J. Filed Aug. 26, 1930. Serial No. 36,775. Term of patent 7 years.

The ornamental design for a shoe ornament, as shown.

82,699. SHOE BUCKLE. SAMUEL M. RIKER, Chester, N. J. Filed Aug. 26, 1930. Serial No. 36,776. Term of patent 7 years.

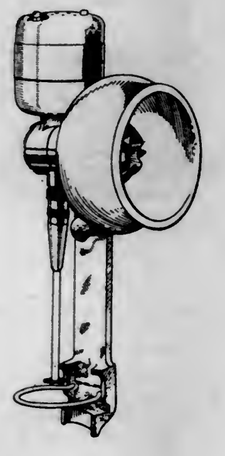
The ornamental design for a shoe buckle, as shown.

82,700. SHOE BUCKLE. SAMUEL M. RIKER, Chester, N. J. Filed Aug. 26, 1930. Serial No. 36,779. Term of patent 7 years.

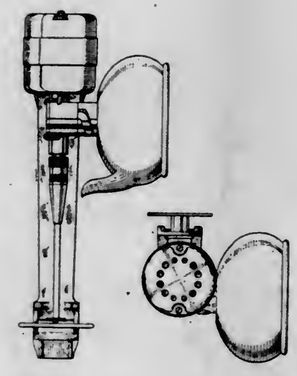


The ornamental design for a shoe buckle, as shown.

82,701. SHOE BUCKLE. SAMUEL M. RIKER, Chester, N. J. Filed Aug. 26, 1930. Serial No. 36,781. Term of patent 7 years.

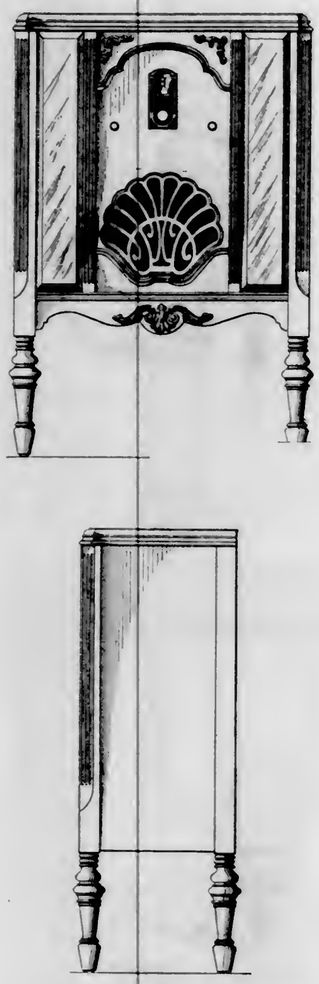


The ornamental design for a shoe buckle, as shown.



82,702. SHOE BUCKLE. SAMUEL M. RIKER, Chester, N. J. Filed Aug. 26, 1930. Serial No. 36,782. Term of patent 7 years.

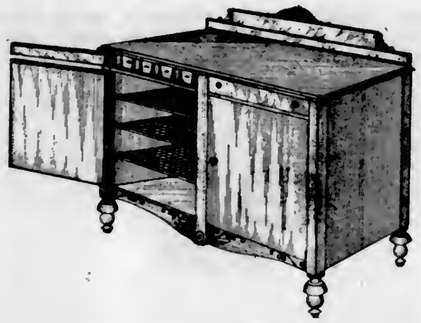
The ornamental design for a shoe buckle, as shown.



82,703. COMBINED DRINK MIXER AND JUICE EXTRACTOR. CLARENCE RINGWALD, North Hampton, Ohio, assignor to Robbins & Myers, Inc., Springfield, Ohio, a Corporation of Ohio. Filed Feb. 17, 1930. Serial No. 34,582. Term of patent 14 years.

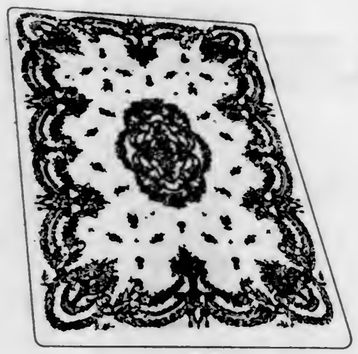
The ornamental design for a combined drink mixer and juice extractor, as shown.

82,704. CABINET. DAVID ROBERTS, Collingswood, N. J., assignor to Philadelphia Storage Battery Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Jan. 28, 1930. Serial No. 34,320. Term of patent 7 years.



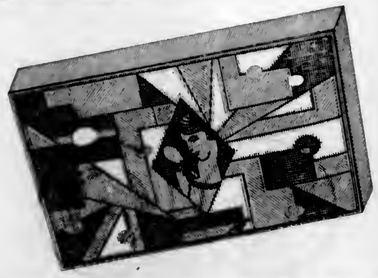
The ornamental design for a cabinet, as shown.

82,705. FINGER RING. JACOB H. SCHAEFFER, Brooklyn, N. Y. Filed June 11, 1930. Serial No. 36,015. Term of patent 7 years.



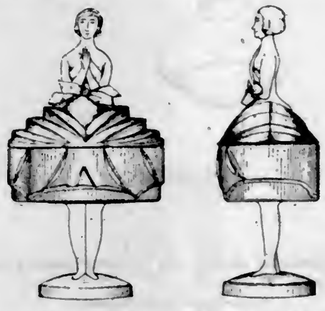
The ornamental design for a finger ring, as shown.

82,706. REFRIGERATOR. JAMES G. SCOTT, Washington, D. C. Filed Mar. 25, 1930. Serial No. 35,019. Term of patent 14 years.



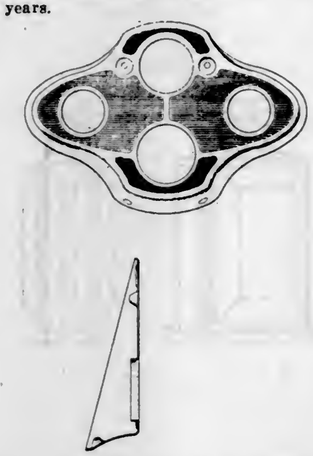
The ornamental design for a refrigerator, as shown.

82,707. MATTRESS COVER. MAX SHEROVER, New York, N. Y., assignor to Golding Bros. Company, Inc., New York, N. Y., a Corporation of New York. Filed Sept. 18, 1930. Serial No. 37,015. Term of patent 3½ years.



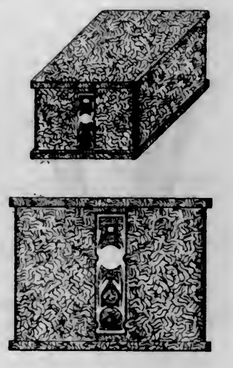
The ornamental design for a mattress cover substantially as shown.

82,708. BOX LID. FRANK J. SCHLEICHER, St. Louis, Mo. Filed Sept. 29, 1930. Serial No. 37,086. Term of patent 7 years.



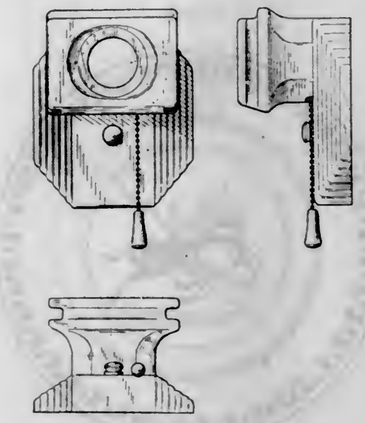
The ornamental design for a box lid, substantially as shown and described.

82,709. FACE-POWDER CONTAINER. MILTON SIERAD, New York, N. Y., assignor to George W. Button Corporation, New York, N. Y., a Corporation of New York. Filed Sept. 16, 1930. Serial No. 36,983. Term of patent 7 years.



The ornamental design for a face powder container substantially as shown.

82,710. INSTRUMENT PANEL. LAURENCE S. SHELDRICK, Dearborn, Mich., assignor to Ford Motor Company, Dearborn, Mich., a Corporation of Delaware. Filed June 13, 1930. Serial No. 36,032. Term of patent 14 years.



The ornamental design for an instrument panel as shown.

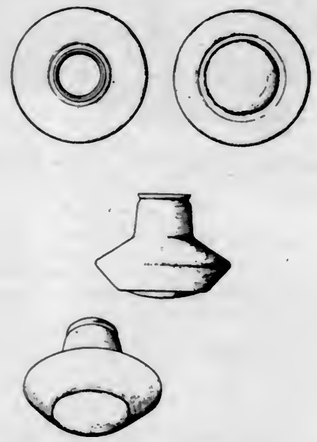
82,711. RADIOCABINET. FREDERICK W. STEIN, Atchison, Kans. Filed Mar. 17, 1930. Serial No. 34,907. Term of patent 3½ years.

The ornamental design for a radio cabinet, as shown.

82,712. LIGHTING-FIXTURE BRACKET OR ARTICLE OF SIMILAR NATURE. WALTER VON NESSEN, New York, N. Y., assignor to Efcolite Corporation, Trenton, N. J. Filed Sept. 17, 1930. Serial No. 36,994. Term of patent 7 years.

The ornamental design for a lighting fixture bracket, or article of similar nature, as shown.

82,713. ESCUTCHEON PLATE. FRED WEINDEL, Jr., Allentown, Pa., assignor to Philadelphia Storage Battery Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Oct. 4, 1930. Serial No. 37,142. Term of patent 7 years.

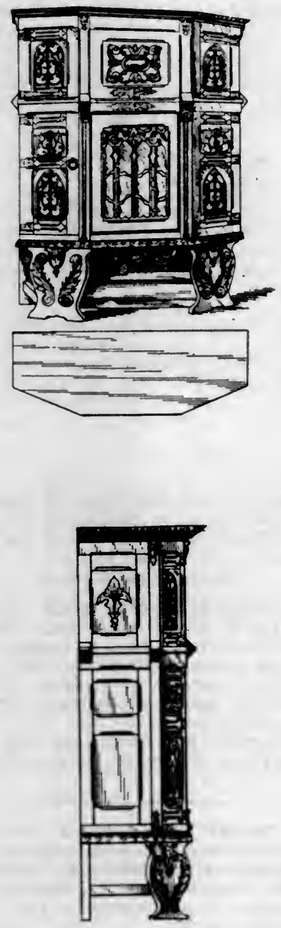


The ornamental design for an escutcheon plate, as shown.

82,714. PLATE OR SIMILAR ARTICLE. JOSEPH WUYTS, Staten Island, N. Y., assignor to Black, Starr and Frost, New York, N. Y. Filed Sept. 22, 1930. Serial No. 37,034. Term of patent 3½ years.

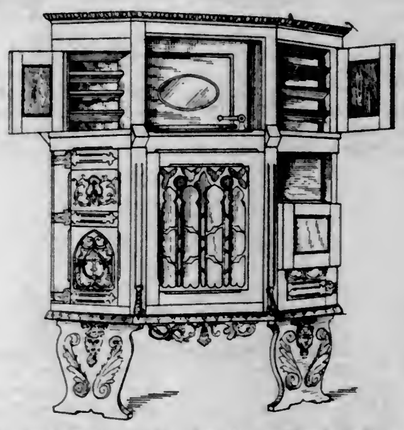
The ornamental design for a plate or similar article, as shown.

82,715. SEMIINDIRECT DIFFUSING BOWL. FREDERICK CHARLES BAKER, Portland, Oreg. Filed Sept. 16, 1930. Serial No. 36,981. Term of patent 7 years.



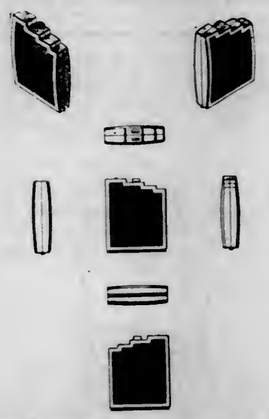
The ornamental design for a semi-indirect diffusing bowl as shown.

82,716. BOTTLE. RAYMOND BARBAS, Paris, France, assignor to La Société Anonyme Jean Patou, Paris, France, a Corporation of France. Filed Oct. 11, 1930. Serial No. 37,230. Term of patent 7 years.



The ornamental design for a bottle, as shown.

82,717. COMBINED RADIO AND PHONOGRAPH CABINET. GEORGE L. GILBERT, Lakewood, Ohio. Filed Sept. 6, 1930. Serial No. 36,884. Term of patent 14 years.



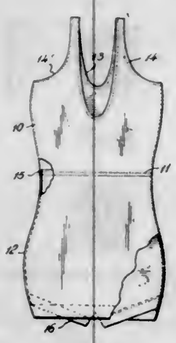
82,717—Continued.

The ornamental design for a combined radio and phonograph cabinet, as shown and described.

82,718. COMPACT OR SIMILAR ARTICLE. FELIX B. MILLER, Attleboro, Mass., assignor to William F. Denney, Philadelphia, Pa. Filed Oct. 26, 1929. Serial No. 33,176. Term of patent 7 years.

The ornamental design for a compact or similar article, as shown and described.

PATENTS



GRANTED DECEMBER 2, 1930

1,783,173. MOUTH ORGAN. JACOB HOHNER, Trossingen, Germany. Filed Oct. 25, 1927, Serial No. 228,533, and in Germany Mar. 7, 1927. 5 Claims. (Cl. 84—377.)

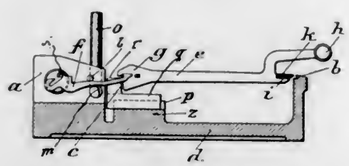
4. A combination harmonica and casing comprising a pair of casing members turnably mounted upon a hinge pin, said casing member being so mounted intermediate the ends thereof, spring means mounted on said hinge pin, and adapted to force the casing members into the closing position, guide means mounted upon the said hinge pin, and adapted to engage a harmonica so that the said harmonica can be slid into and out of the said casing, said harmonica having a guide pin connected thereto which passes through a slot in the rear portion of said guide means, said harmonica also having a member at the rear end thereof which is adapted to be engaged by the rear edges of said casing members, when said harmonica is located within the casing.

1,783,174. BATHING SUIT. WALTER D. IDE, Piqua, Ohio, assignor to B. V. D. Company, Inc., Baltimore, Md., a Corporation of Delaware. Filed Jan. 28, 1930. Serial No. 423,964. 2 Claims. (Cl. 2—67.)

1. A garment which comprises a trunk portion and a pants portion connected to said trunk portion, the pants portion comprising a front divided to form leg members, a back having a straight horizontal top and divided to form leg members, and a gusset lying between the divided parts of the front and back, the front and back having side edges of substantially the same length connected together, the back elsewhere than at the side edges being longer than the front.

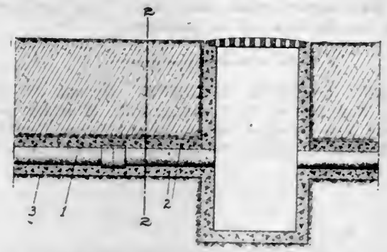
1,783,175. STARTING DEVICE FOR FAN MOTORS. RICHARD H. JORDAN, Springfield, Mass., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 13, 1928. Serial No. 305,726. 3 Claims. (Cl. 172—179.)

1. In a power motor, the combination with an energizing winding and a voltage-reducing winding having a plurality of taps, electrically connected in series circuit with the energizing winding, and a switch lever for selectively engaging the taps, of centrifugally-actuable



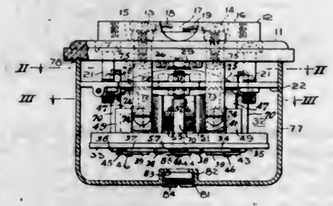
means operatively associated with the voltage-reducing winding for initially short circuiting it when the switch lever is caused to engage predetermined taps for starting the motor.

1,783,176. MANUFACTURE OF SOFT AND PLIABLE MASSES FROM CELLULOSE ESTERS. OSKAR LOEHR, Uerdingn (Niederrhein), Germany, assignor to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany, a Corporation of Germany. Filed June 1, 1928, Serial No. 282,267, and in Germany May 7, 1926. 9 Claims. (Cl. 106—40.)



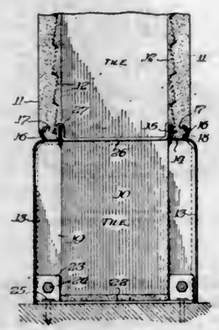
9. A new composition of matter comprising acetyl cellulose, an ester of a polyglycol, a solvent therefor and a diluent.

1,783,177. MEANS FOR SETTING TYPE LEVERS. HANS LUCE, Dusseldorf, Germany, assignor to Rheinische Metallwaaren- und Maschinenfabrik Sömmerda Aktiengesellschaft, Sommerda, Germany. Filed Dec. 27, 1928, Serial No. 328,708, and in Germany Dec. 23, 1927. 3 Claims. (Cl. 153—32.)



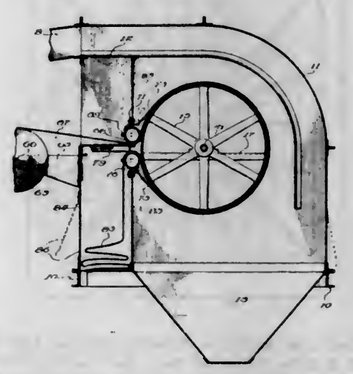
1. A device for bending type levers comprising means extending up to the portion to be bent for holding said lever against movement, an extension member adapted to be secured to the portion to be bent, and cooperating means on said extension and on said holding means for indicating the bending and twisting of said lever.

1,783,178. CONDUIT CONSTRUCTION. JOHN F. MAKOWSKI, Oakland, Calif., assignor to Fireproof Wall Company, Reno, Nev., a Corporation of Nevada. Filed Apr. 15, 1929. Serial No. 355,141. 8 Claims. (Cl. 247—27.)



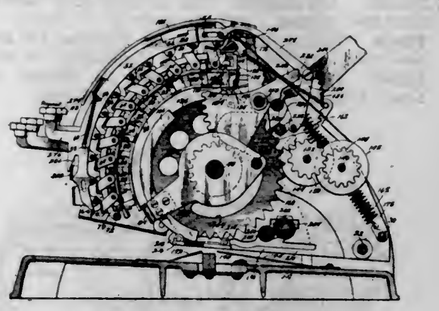
7. A conduit comprising soapstone, clay and cement mixed together in the preferred proportions by weight of two parts of soapstone, one and one-half parts of clay and one part of cement intimately mixed together.

1,783,179. THERMOSTATIC SWITCH. HOWARD D. MATTHEWS, Mansfield, Ohio, assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 23, 1927. Serial No. 221,413. 3 Claims. (Cl. 200—122.)



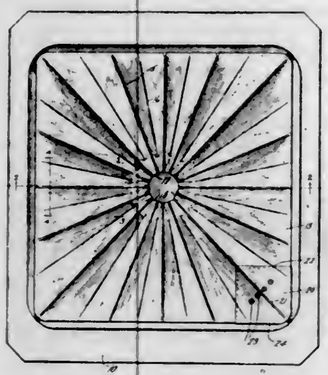
1. A thermally actuable switch including a casing, a combined terminal-supporting and cover member for the casing, a plate in the casing supported from the cover member, a contact table supported from the plate, a bimetallic element supported from the plate, on that side thereof adjacent to the contact table, and an adjustable heating element mounted on said contact table at that side thereof adjacent to the plate.

1,783,180. BASEBOARD CONSTRUCTION. ISAAC A. BAUM, Chicago, Ill. Filed Dec. 27, 1927. Serial No. 242,628. 6 Claims. (Cl. 189—87.)



1. In combination, a pair of metal baseboard elements each having a vertical flange at its upper margin, and a narrow spacer having hook ends adapted to engage said flanges and hold the elements against lateral separation.

1,783,181. AUTOMATIC RESISTANCE-CONTROLLED AIR AND GAS FILTER. HANS E. BIAKHOLZ, Chicago, Ill., assignor, by mesne assignments, to American Air Filter Company, Inc., Louisville, Ky., a Corporation of Delaware. Filed Dec. 23, 1927, Serial No. 242,080. Renewed May 1, 1930. 9 Claims. (Cl. 183—62.)

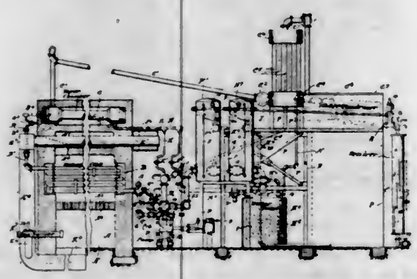


6. An air and gas filter comprising the combination of a housing, a drum journaled in said housing, a web of filtering paper supported on said drum, means for inducing a flow of air through said filtering paper and means automatically controlled by the resistance of said filtering paper to the passage of air therethrough for rotating said drum whereby fresh filtering paper is brought into position on said drum and used filtering paper is discharged from position thereon.

1,783,182. CHECK PROTECTOR. JOHN W. CARLSON, Chicago, Ill., assignor to Hedman Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 24, 1927. Serial No. 242,470. 10 Claims. (Cl. 101—20.)

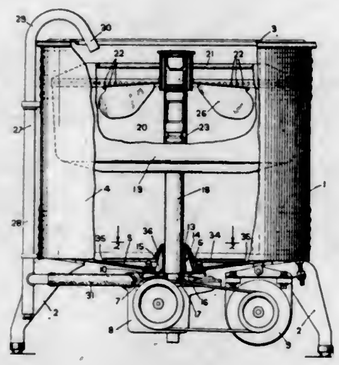
1. In a machine of the class described, the combination of a plurality of tiers of settable stops, a plurality of manipulative keys for setting said stops, a bail connected to each of said keys, a carriage slidable from tier to tier of said stops, a plurality of dogs pivoted on said carriage having sliding contact with said bails and adapted to overlie a tier of said stops, whereby depression of any one of said keys will cause the operative setting of one of said stops in one of said tiers, and means operated by the depression of any one of said keys to advance said carriage from one tier to the next adjacent tire of stops.

1,783,183. BROILER. CLAUDE M. DIBBLE, Joliet, Ill., assignor to Moore Brothers Company, Joliet, Ill., a Corporation of Illinois. Filed Sept. 26, 1927. Serial No. 222,032. 7 Claims. (Cl. 53—5.)



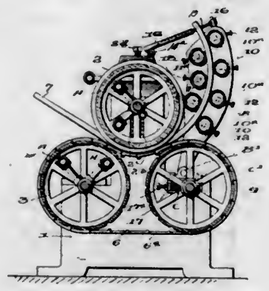
1. A drip pan having a draining opening and a plurality of grooves radiating from the opening, the ends of the grooves adjacent the opening widening out to a flattened discharge edge.

1,783,184. PROCESS OF TREATING CELLULOSIC MATERIAL. CAMILLE DREYFUS, New York, N. Y., and GEORGE SCHNEIDER, Cumberland, Md., assignors to Celanese Corporation of America, a Corporation of Delaware. Filed Mar. 12, 1927. Serial No. 175,004. 8 Claims. (Cl. 260—101.)



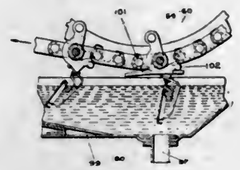
1. A process of treating cellulosic material which consists in subjecting the cellulosic material to a high degree of vacuum, introducing into the cellulosic material, while the same is under reduced pressure, a heated lower fatty acid and allowing the acid to act upon the cellulosic material until all portions of the latter are in suitable condition for esterification.

1,783,185. APPARATUS FOR PRODUCING LOWER-BOILING-POINT HYDROCARBONS. CARBON P. DUBBS, Wilmette, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed Nov. 4, 1918, Serial No. 260,957. Renewed June 9, 1926. 8 Claims. (Cl. 196—99.)



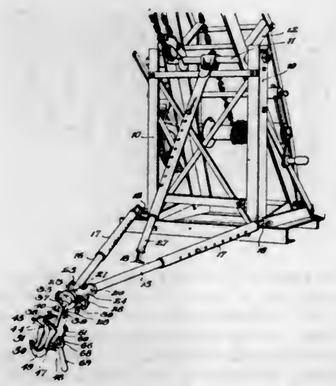
4. An apparatus for treating hydrocarbons, comprising a furnace, a cracking coil therein, a vapor chamber receiving products of conversion from said cracking coil, a reflux condenser in communication with said vapor chamber, a pair of tanks, means for admitting raw oil to one of the tanks through a valve actuated by the level of oil within said tank, means for discharging light residue from the vapor chamber, means for introducing to the cracking coil a hydrocarbon mixture consisting of oil from said raw oil tank, said light residue from the vapor chamber, and reflux condensate from the reflux condenser, independent means for passing heavy residue from the vapor chamber to the other of said tanks, and liquid level means within said other tank operative to control the discharge of oil therefrom.

1,783,186. LAUNDRY MACHINE. GEORGE W. DUNHAM, New Haven, Conn., assignor to Whirldry Corporation, New Haven, Conn., a Corporation of New York. Filed Jan. 8, 1927. Serial No. 159,783. 1 Claim. (Cl. 68—18.)



In a clothes washing machine, a tank having a conical bottom sloping to an opening in said bottom, a post rising from said bottom at said opening, a receptacle mounted in said tank on said post, means for continuously circulating washing liquid from said opening back through said receptacle back to the opening, and a large flat strainer having a large effective area during low water in said tank disposed over said opening and around said post.

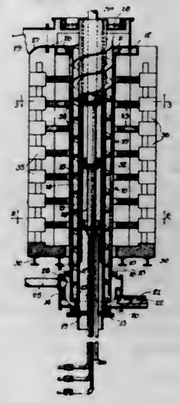
1,783,187. WOOD-BENDING MACHINE. CHARLES W. ELLIOTT, Seymour, Ind. Filed Mar. 11, 1927. Serial No. 174,533. 5 Claims. (Cl. 144—255.)



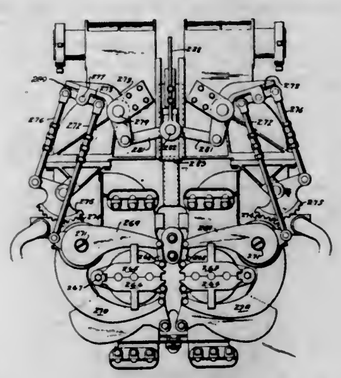
1. A wood bending machine of the class described comprising a plurality of rollers, bearings therefor, said rollers being spaced apart and arranged in triangular relation to permit the work to pass therebetween, the uppermost roller being a driven roller, said upper roller having a plurality of longitudinally spaced grooves in its surface, and sectional work confining rings removably seated in said grooves.

1,783,188. METHOD OF COATING METAL ARTICLES. JAMES S. GEORGE and ROGER S. SPERRY, Waterbury, Conn., assignors to Scovill Manufacturing Company, Waterbury, Conn., a Corporation of Connecticut. Original application filed Aug. 11, 1925, Serial No. 49,524. Divided and this application filed Dec. 23, 1926. Serial No. 156,620. 8 Claims. (Cl. 91—68.)

2. The method of coating articles with lacquer or the like, which comprises submerging the articles in a bath of the coating material, withdrawing the articles from the bath at a rate of emergence substantially the same as the rate of drain of the lacquer from the emerging articles, rocking the articles back and forth across the horizontal after complete withdrawal from the bath to periodically reverse the direction of drain of the lacquer on the articles, and drying.



1,783,189. TOWING MECHANISM. EARL F. GREEN, York, Pa. Filed Aug. 19, 1927. Serial No. 214,085. 7 Claims. (Cl. 280—33.14.)

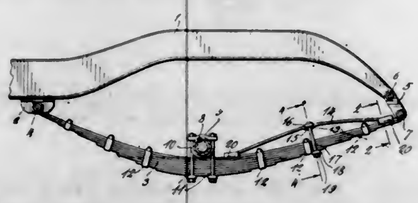


5. In combination, a service truck, a clamp fixedly secured in spaced relation thereto by three diverging arms at least two of which are pivoted to the truck, a hitch, and a towing pole having universal connections with both the clamp and hitch.

1,783,190. CARBONIZING APPARATUS. OTTO H. HERTEL, Chicago, Ill., assignor to Old Ben Coal Corporation, Chicago, Ill., a Corporation of Delaware. Filed May 7, 1925. Serial No. 28,614. 16 Claims. (Cl. 202—118.)

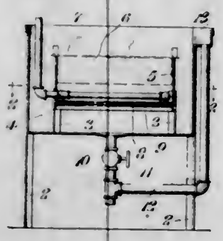
1. A carbonizing apparatus comprising, in combination, a cylindrical retort, a tubular rotor in said retort having helical flights thereon filling the space between the walls of the rotor and the walls of the retort, said rotor being operated to convey material from end to end through the retort, means outside the retort for heating said retort in zones, and means within said rotor for heating the retort in zones, said means including controls to equalize the temperature inside and outside at the several zones.

1,783,191. MACHINE FOR FORMING GLASS ARTICLES. RICHARD LA FRANCE, Toledo, Ohio, assignor to Owens-Illinois Glass Company, Toledo, Ohio, a Corporation of Ohio. Original application filed Apr. 22, 1924, Serial No. 708,172. Divided and this application filed Oct. 30, 1926. Serial No. 145,140. 2 Claims. (Cl. 49—42.)



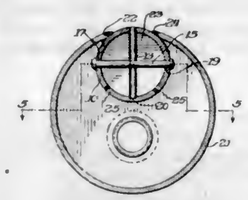
1. In a glass forming machine, the combination of a pair of molds arranged side by side and each comprising separable sections, a pair of levers, operating connections between each lever and the sections of one mold for closing the molds when the levers are operated in one direction, a slide block, and toggle links pivotally connected to said slide block and to said levers for transmitting motion from the slide block to the levers, the pivotal point of connection between each toggle link and the slide block being shiftable relatively to the slide block to permit an equalization of pressure transmitted through the toggle links to the molds when one mold is brought to a closed position in advance of the other.

1,783,192. STRAPPING JOINT. JOHN W. LESLIE, Evanston, Ill., assignor, by mesne assignments, to Signode Steel Strapping Company, a Corporation of Delaware. Filed Mar. 12, 1928, Serial No. 260,911. Renewed Mar. 16, 1929. 16 Claims. (Cl. 24—23.)



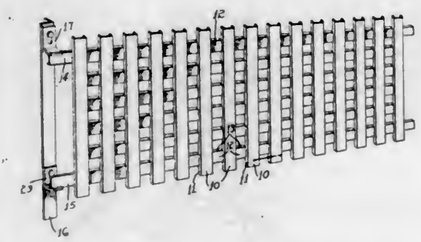
1. In a joint for interconnecting overlapping binder ends, a plurality of deformations therein for interlocking the binder ends, said deformations being of lesser intensity at the ends of the joint than at the central portion of the joint.

1,783,193. SNUBBER FOR AUTOMOBILES. EDWARD MATTHEWS, Denver, Colo. Filed Mar. 26, 1928. Serial No. 264,747. 2 Claims. (Cl. 267—48.)



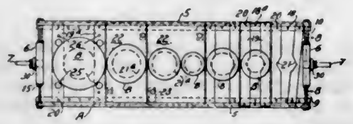
1. A snubber for preventing excessive rebound of semi-elliptical multiple leaf springs provided with a master leaf, comprising an arched auxiliary spring provided with a shallow transverse depression on its convex side, means for securing the arched spring to the master leaf of the multiple leaf spring, said means comprising a bar located in the depression, and a rubber pad between the ends of the arched spring and the master leaf, said pads having each side provided with spaced parallel flanges adapted to embrace the sides of the master leaf and the sides of the end portions of the arched spring.

1,783,194. APPARATUS FOR CLEANING AIR-FILTER CELLS. JOHN R. MCCONNELL, Anchorage, and ALBERT S. LEWIS, Jr., Louisville, Ky., assignors, by mesne assignments, to American Air Filter Company, Inc., Louisville, Ky., a Corporation of Delaware. Filed Dec. 9, 1926. Serial No. 153,583. 1 Claim. (Cl. 141—1.)



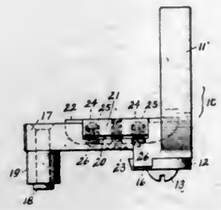
Cleaning apparatus for air filter units comprising a tank adapted to contain a liquid, a unit supporting receptacle therein having a unit receiving opening and walls including a strainer, adapted to form an enclosure for separating strained liquid in the receptacle from unstrained liquid in the tank, and a steam projector in the receptacle effectively positioned between the strainer and said opening and having steam outlets directed toward said opening.

1,783,195. RIBBON BURNER. GARNET W. MCKEE, Rockford, Ill. Filed July 11, 1927. Serial No. 204,984. 9 Claims. (Cl. 158—99.)



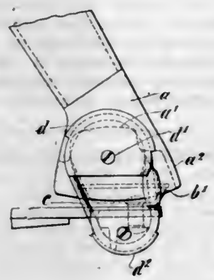
1. A gas burner having in combination an outer burner tube closed at one end and adapted to receive gas at the other end, said tube being formed longitudinally in one side with a slot substantially coextensive in length therewith, an inner burner tube disposed in said outer tube and substantially coextensive in length with said slot, said inner tube being formed in one side with a longitudinal slot in register with said first mentioned slot, the edges of said first mentioned slot being rigidly secured to said inner tube, a strip member forming jet passages in said last mentioned slot and extending a substantial distance into said inner tube, means for rigidly securing said member in position, and a plurality of spaced openings in said inner tube and at opposite sides of said member communicating with the interior of said outer tube.

1,783,196. LATTICE WORK AND MEANS FOR SUPPORTING THE SAME. WILLIAM G. PURDY and JOHN P. SPECK, Tiffin, Ohio. Filed Mar. 30, 1929. Serial No. 351,321. 2 Claims. (Cl. 189—82.)



1. A metal lattice consisting of a single piece of sheet metal formed with a series of continuous parallel channels, and webs connecting the edge of one channel to the adjacent edge of the next channel, each web portion having rearwardly turned side flanges forming channel portions extending between the continuous channels, transversely thereof and in rear of the same.

1,783,197. TRAY FOR POTTERY-FABRICATING APPARATUS. WILLIAM J. MILLER, Swissvale, Pa. Filed Apr. 11, 1928. Serial No. 269,273. 20 Claims. (Cl. 25—22.)

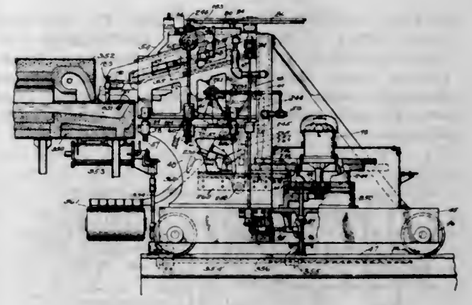


1. A tray of the class specified, comprising, in combination, a frame, fabricating units disposed on said frame, the frame being so constructed as to provide seats for said units, the latter being accessible through said seats.

1,783,198. SHOE-STITCHER ATTACHMENT. FRANK PARADISO, Philadelphia, Pa. Filed May 29, 1928. Serial No. 281,438. 1 Claim. (Cl. 112—51.)

In a machine for stitching soles to shoes, means for embedding the stitching in the sole including an attaching member, a knife mounted thereon, a shoe guide mounted on the attaching member and having recesses, springs in the recesses abutting the attaching member, and a screw for moving the guide against the action of the springs.

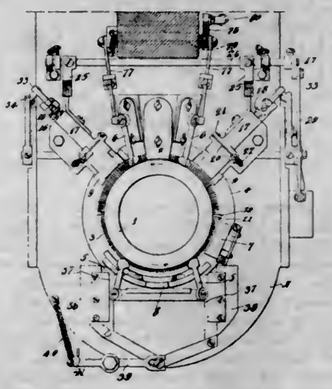
1,783,199. SHACKLE CONNECTION BETWEEN SPRING AND FRAME. ANDREW LAWRENCE RIKER, Jr., Fairfield, Conn., assignor to The Rubber Shock Insulator Corporation, Wilmington, Del., a Corporation of Delaware. Filed July 13, 1927. Serial No. 205,282. 16 Claims. (Cl. 267—30.)



1. A connection of the character described comprising a block of yielding non-metallic material disposed between two members to be connected, means to position the block to carry the weight of one member upon another, non-yielding, flexible tensioning means, and means to wind the tensioning means between the elements to prevent them from separating and maintain the non-metallic means always under a predetermined minimum compression.

1,783,200. DRESSING SEED. HEINRICH RÖSSNER, ADOLF STEINDORFF, and KASPAR PFAFF, Hochst-on-the-Main, Germany, assignors to Farbwerke vorm. Meister Lucius and Bruning, Hochst-on-the-Main, Germany, a Corporation of Germany. Filed Oct. 8, 1925, Serial No. 61,352, and in Germany Oct. 15, 1924. 2 Claims. (Cl. 167—38.)

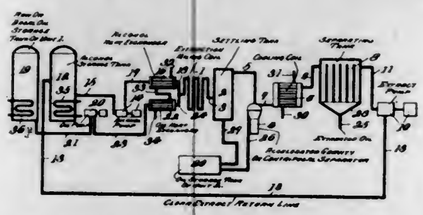
1. A composition of matter comprising about 32 to 48 parts of an indifferent extender, about 30 to 40 parts of a sulfonate of resin and about 2 to 3 parts of an oily material, the remainder of the composition being a metal-containing compound possessing a fungicidal action.



1,783,201. GLASSWARE-FORMING MACHINE. LEONARD D. SOUBIER, Toledo, Ohio, assignor to Owens-Illinois Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed June 30, 1927. Serial No. 202,633. 37 Claims. (Cl. 49—5.)

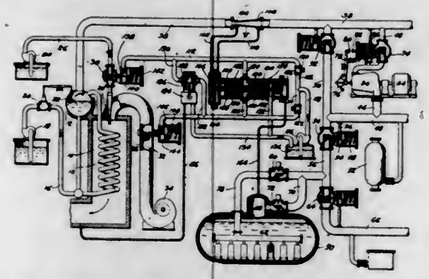
7. In a glassware forming machine, a stationary support, a blank mold mounted on said support and reciprocable thereon between horizontally spaced charge gathering and blank transfer stations, a finishing mold mounted for oscillatory movement vertically on said support between the transfer station and a ware ejecting station, means to transfer a blank from the blank mold to the finishing mold at said transfer station, means to expand the parison at the transfer station while in the finishing mold, and means to apply additional air pressure to the interior of the blank after expansion thereof.

27. In a glassware forming machine, means to form a parison, means to place the parison at a transfer station, a finishing mold to enclose the parison at said transfer station, means for moving the finishing mold between the transfer station and a discharge station, and means including a knock-out disk having an opening therein to apply air under pressure and freely circulating air to the finishing mold in alternation to blow the blank to its final form.



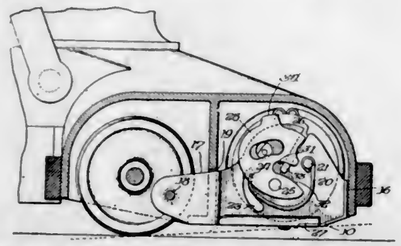
1,783,202. KNITTING MACHINE. JOHN L. SUTPHEN, Philadelphia, Pa., assignor to Scott & Williams, Inc., New York, N. Y., a Corporation of Massachusetts. Filed July 21, 1925. Serial No. 44,976. 12 Claims. (Cl. 66—43.)

1. In a knitting machine, a cylinder carrying knitting needles; a finger for feeding yarn to the needles; tripping mechanism for holding the finger out of operative position; mechanism for bringing the tripping mechanism to



tripping position when the cylinder rotates in one direction, and means on the cylinder adapted, when the cylinder rotates in the opposite direction, to actuate the tripping mechanism to allow the finger to move into operative position.

1,783,203. PROCESS OF AND APPARATUS FOR THE FRACTIONAL EXTRACTION OF PETROLEUM HYDROCARBONS WITH ALCOHOL. THEODORE A. WERKENTHIN, Lima, Ohio, assignor to The Solar Refining Company, Lima, Ohio, a Corporation of Ohio. Filed Dec. 30, 1927. Serial No. 243,644. 6 Claims. (Cl. 196—13.)



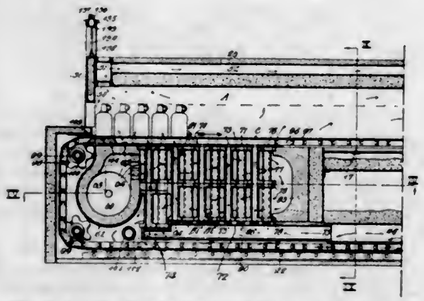
2. The process of treating heavy petroleum oils comprising successively extracting the same with alcohol at an elevated temperature not exceeding the boiling point of the alcohol whereby there is insured a high degree of insolubility of the oil in the alcohol, thereafter cooling each successive alcohol extraction product to a low temperature substantially as set forth, to decrease the solubility of the oil in the alcohol and permit the oil to settle out, the cooling being carried out so as to allow about 1 to 3% of alcohol to be retained in the oil to decrease its viscosity, permitting it to be easily pumped, and cold pressing the oil in the presence of the retained alcohol whereby the crystal formation of the wax is improved.

1,783,204. STEAM PLANT. FRITZ WETTSTEIN, Summit, N. J., assignor, by mesne assignments, to Ruths Steam Storage Incorporated, New York, N. Y., a Corporation of Delaware. Filed June 23, 1926. Serial No. 117,914. 22 Claims. (Cl. 60—94.)

3. In a steam plant, in combination, a steam generator, a steam motor, a steam accumulator, a high pressure conduit connected to said generator, a motor supply conduit extending between said high pressure conduit and said motor, over-flow mechanism controlling flow of steam through said motor supply conduit and operating to maintain a constant steam pressure in said high pressure conduit, means to supply fuel to said generator, flow responsive mechanism actuated by changes in rate of flow through said high pressure conduit automatically regulating the supply of fuel to the generator to maintain a constant rate of flow of steam from said generator and through said high pressure conduit, means to conduct steam from said high pressure conduit to said accumulator and from said motor to said accumulator and means to discharge said accumulator.

1,783,205. CLEANER. HARRY B. WHITE, Canton, Ohio, assignor to The Hoover Company, a Corporation of Ohio. Filed Dec. 24, 1927. Serial No. 242,310. 9 Claims. (Cl. 15—8.)

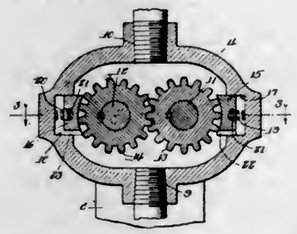
1. In a suction cleaner having a downwardly opening intake nozzle, a U-shaped mounting frame, said mounting frame having a long base portion and short side members, the side members of the frame being pivotally mounted adjacent the intake nozzle, a revoluble agitator in the intake nozzle and having supports projecting from its ends, said side members being provided with seats for said supports, and a latch member pivotally mounted on each side member to secure said supports on their seats and each having two cam surfaces, one of said cam surfaces having a progressively decreasing effective radius in one direction of rotation of the latch member, and the other of said cam surfaces having an effective radius progressively increasing at a relatively high rate with respect to the other cam surface and effective in the opposite direction of rotation of the latch member.



1,783,206. CONCENTRATION OF ORES. GEORGE H. WIGTON, Eureka, Utah. Filed June 21, 1928. Serial No. 287,349. 10 Claims. (Cl. 209—166.)

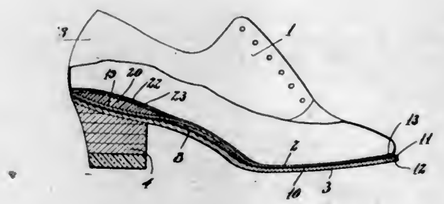
1. The process of concentrating oxidized ores by froth flotation which comprises subjecting the ore in the form of a pulp to a flotation operation in the presence of the reaction product of an alcoholic solution of alpha naphthylamine and phosphorous pentasulfid.

1,783,207. CONCENTRATION OF ORES. GEORGE H. WIGTON, Eureka, Utah. Filed July 3, 1929. Serial No. 375,892. 9 Claims. (Cl. 209—166.)



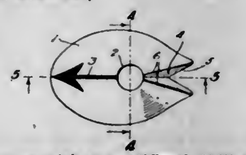
1. The process of concentrating ores by froth flotation which comprises subjecting the ore in the form of a pulp to a flotation operation in the presence of the reaction product of an oxygen free aromatic amino compound and phosphorus pentasulfid.

1,783,208. GLASSWARE-ANNEALING LEER. PERCY Q. WILLIAMS, Toledo, Ohio, assignor to Owens-Illinois Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed Aug. 16, 1926. Serial No. 129,373. 30 Claims. (Cl. 49—47.)



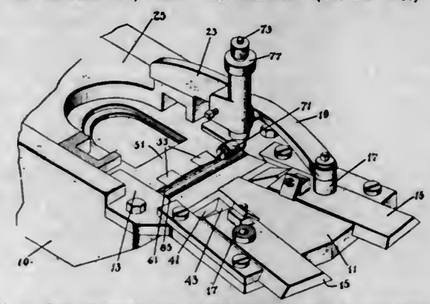
15. A leer including an annealing chamber, a recuperator having a set of vertical tubes open at both ends and communicating at their upper ends with said chamber, said chamber having outlets spaced along its ceiling, means for forcing air thru said tubes into the annealing chamber and exhausting the air thru said outlets, means to conduct the exhausted air to the lower ends of the recuperator tubes, means separating the recuperator into upper and lower sections, means for directing products of combustion rearwardly thru the upper section and forwardly thru the lower section of the recuperator over the exterior surfaces of the tubes, a longitudinal flue arranged below the recuperator to receive products of combustion from the lower section of the recuperator, and means for exhausting products of combustion from the opposite end of said flue to the atmosphere.

1,783,209. SPUR GEAR PUMP. IRVEN H. WILSEY, Chicago, Ill., assignor to James B. Tuthill, Chicago, Ill. Filed Dec. 29, 1926. Serial No. 157,673. 3 Claims. (Cl. 103—126.)



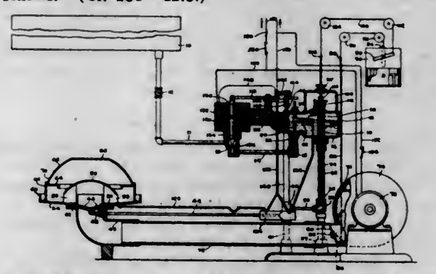
1. A gear pump having, in combination, a casing, an inlet passage in one side of said casing, a discharge passage in the other side of said casing, a pair of gear members mounted side by side in said casing and meshing with each other, a pair of opposed guideways formed in said casing, a pair of lands slidably mounted in said guideways for engaging the respective peripheries of said gear members, vent passages formed in the sides of said lands for venting the ends of said guideways back of said lands to said inlet passage, and spring means tending to press said lands into engagement with said gear members.

1,783,210. BOOT OR SHOE. PAUL C. WOLFER, Everett, Mass. Original application filed July 11, 1927, Serial No. 204,727. Divided and this application filed Dec. 30, 1927. Serial No. 243,691. 1 Claim. (Cl. 36—71.)



In a shoe having an insole, an upper lasted thereto, an outsole, a shank stiffener interposed between said insole and outsole and permanently incorporated in the shoe structure, a yielding heel seat cushion, a metatarsal arch support positioned substantially centrally in the fore part of the shoe, said heel cushion, when compressed, constituting a supporting plane for the wearer, cooperating with the supporting bearing of the metatarsal arch support and the shank stiffener extending from the heel cushion to said metatarsal arch supporting structure and constituting a permanent portion of the shoe.

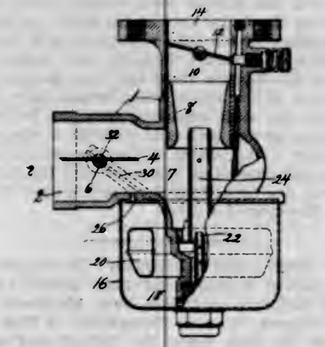
1,783,211. GOLF TEE. WILLIAM E. BALDWIN, New York, N. Y. Filed Oct. 10, 1928. Serial No. 311,675. 1 Claim. (Cl. 273—33.)



A golf tee comprising a stiff, shell-like body formed of a single sheet of readily severable sheet material, substantially elliptical in plan, having a convex upper surface and formed to support a ball at a high point of its convexity, said ball support being located at an intermediate point on the major axis of the body; an arrow on the upper surface of the body co-incident with the major axis thereof and extending from the ball support longitudinally to the opposite front and rear margins of the body, the tail of the arrow being formed by a tapered depression in the shell extending from the ball support to the margin of the shell and defining a substantially V-shaped cleft in the outline of the rear margin directed toward the ball support to cooperate with the portion of the arrow at the opposite side of said support for indicating the direction of a drive.

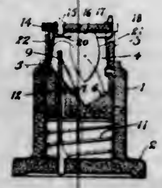
1,783,212. HEEL-SEAT-FITTING MACHINE. WILLIAM RODERICK BARCLAY and FRED RICKS, Leicester, England, assignors to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Feb. 27, 1928, Serial No. 257,421, and in Great Britain Mar. 28, 1927. 29 Claims. (Cl. 12—17.)

1. A heel-seat fitting machine, having in combination means for positioning a sole with a narrowed heel-seat portion, and knives constructed and arranged to straddle said narrowed heel-seat portion for cutting on each side of the narrowed sole portion a tab tapered longitudinally of the sole upon a long bevel.



1,783,213. APPARATUS FOR SUPPLYING FUEL OIL TO FURNACES. ASHLEY C. BENNETT, Minneapolis, Minn. Filed Sept. 20, 1928. Serial No. 307,094. 6 Claims. (Cl. 158—42.3.)

1. Apparatus for supplying fuel oil to furnaces comprising a storage tank, a burner, a pipe system connect-

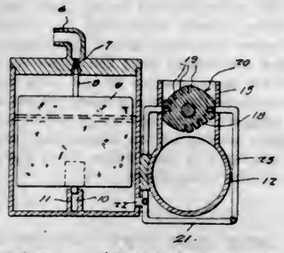


ing said tank and burner, a solenoid coil, an upper and a lower core for said coil, said lower core constituting a shut-off valve for said pipe system when said coil is deenergized, a switch for the circuit of said coil normally held in closed position by said upper core when said coil is energized, an overflow drain for said pipe system, and an overflow trip device between said drain and switch for opening the latter.

1,783,214. CARBURETOR. GEORGE M. BICKNELL, St. Louis, Mo., assignor to Carter Carburetor Corporation, St. Louis, Mo., a Corporation of Delaware. Filed May 5, 1927. Serial No. 189,035. 7 Claims. (Cl. 261—64.)

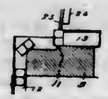
1. In a carburetor, a float chamber, an air chamber, a choke valve controlling the admission of air to said air chamber, an operator for said choke valve, a passage connecting said chambers, another passage from said float chamber to atmosphere and means actuated by said operator for controlling said passage to atmosphere, said means operating reversely to said choke valve.

1,783,215. PINHOLDER. GEORGE BODEN, Waterbury, Conn., assignor to Scovill Manufacturing Company, Waterbury, Conn., a Corporation of Connecticut. Filed Apr. 9, 1929. Serial No. 353,858. 6 Claims. (Cl. 312—77.)



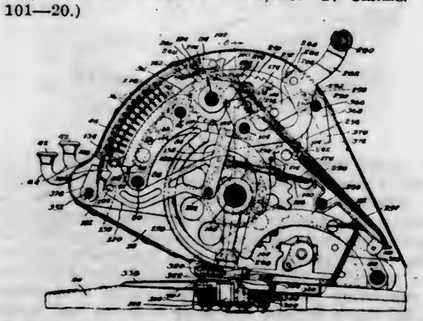
1. In a pin case from which the pins are delivered mechanically, the combination of a casing, a pin carrier slidable relatively to the casing and having an aperture, a pin dispenser in the casing extending into the aperture, and a curved rigid guide and stop through which the dispenser passes so located as to prevent pins passing into the aperture.

1,783,216. PROCESS OF PRODUCING VULCANIZED RUBBER. MAX BÖGEMANN, Elberfeld, and HERMANN FRIEDRICH, Weisdorf-on-the-Rhine, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Filed June 3, 1924. Serial No. 717,640. 6 Claims. (Cl. 18—53.)



2. As vulcanization accelerators the mixtures of di- and polyamines obtainable by reacting with ammonia upon ethylenedichloride.

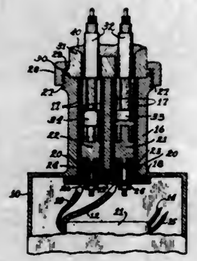
1,783,217. CARBURETOR. WILLIAM F. BROGE, Detroit, Mich., assignor of one-third to John Frame. Filed Dec. 21, 1928. Serial No. 327,719. 4 Claims. (Cl. 261—53.)



1. A carburetor comprising a float chamber, a mixing chamber having a throat formed at one side thereof for admitting air into said last named chamber, a cylindrical valve rotatably mounted in the throat having its sides arranged for cooperation with the walls of the throat whereby to control the passage of air into the mixing chamber, longitudinally extending grooves formed in the sides of the valve for the entire length thereof and a fuel feed pipe extending from the float chamber and communicating with the ends of the groove for feeding fuel thereto for uniform discharge along the sides of the valve.

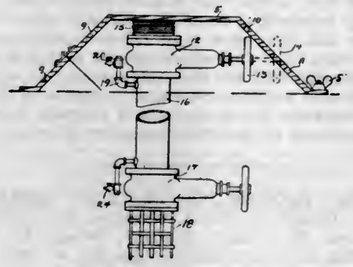
1,783,218. MACHINE FOR ASSEMBLING NUTS. RICHARD L. BURDSALL, Port Chester, N. Y., assignor to Russell, Burdsall & Ward Bolt & Nut Company, Port Chester, N. Y., a Corporation of New York. Filed Jan. 3, 1930. Serial No. 418,395. 4 Claims. (Cl. 10—162.)

1. A mechanism for assembling nut blanks comprising a hopper having a chute down which the blanks gravitate, a block with a downward step on its upper face, located below said chute, a plunger movable across said block and adapted to push blanks successively from the lower end of the chute across the block and over said step, yielding means extending into the path of the pushed blanks, said means passing such blanks as are pushed with their crowned faces forward and tripping such blanks as are pushed with their back faces forward, and a chute for receiving the blanks thus manipulated.



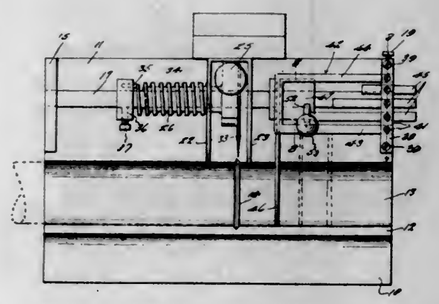
1,783,219. CHECK PROTECTOR. JOHN W. CARLSON, Chicago, Ill., assignor to The Hedman Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed July 19, 1928. Serial No. 293,906. 17 Claims. (Cl. 101—20.)

1. In a machine of the class described, the combination of a key having an arcuate plate secured thereto, a



stop bar reciprocable transversely with respect to said plate, a pin and cam slot connection between said bar and said plate, and means to impart a lateral movement to said stop bar as an incident to its transverse movement.

1,783,220. MULTIPLE CONNECTING DEVICE. GEORGE L. CHAMBERLAIN, Chicago, Ill. Filed Aug. 14, 1929. Serial No. 385,956. 7 Claims. (Cl. 175—361.)



1. The combination of a transformer and a unitary primary and secondary circuit connecting device, said transformer having a single connection extension provided with separate primary contact receiving portions in circuit with the primary winding of the transformer, and a single secondary contact receiving portion in circuit with the secondary winding of the transformer, said unitary circuit connecting device having separate primary contact members and a single plug carrying the several secondary terminal contact members, and an emergency reconnecting device having provision similar to that of said transformer single connection extension for the attachment thereto of said unitary connecting element and having provision for electrically connecting the primary terminal contacts of said unitary device but not the secondary terminal contacts thereof.

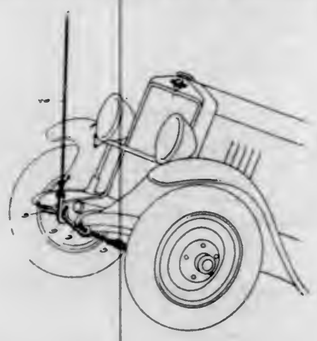
1,783,221. EMERGENCY FEEDER DEVICE FOR SUBMARINES. JOHN M. CLARK, New York, N. Y. Filed Feb. 25, 1928, Serial No. 256,969. Renewed Aug. 23, 1930. 3 Claims. (Cl. 114—16.4.)

1. An emergency feeder device for submarines comprising an enlarged tubular member extending through the skin of a submarine, a plurality of valves, one at each end of said tubular member and means for equalizing the pressure at each side of each said valve prior to the opening thereof.

1,783,222. ADJUSTABLE SLICING MACHINE. CHARLES L. COLLINS and JAMES V. ANZULOVIC, Omaha, Nebr. Filed Jan. 3, 1930. Serial No. 418,339. 8 Claims. (Cl. 107—21.)

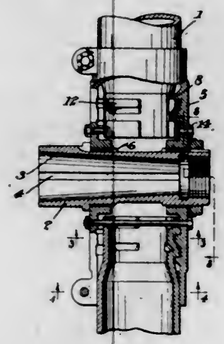
5. A slicing machine comprising a base having a longitudinal depression, a pair of spaced supports on the base, a spindle secured between the supports, a knife rotatable on the spindle, an abutment plate, means slidable on the spindle for supporting the abutment plate, a plurality of inwardly projecting adjustable gauge fingers secured to one of the supports adapted to engage the last mentioned means for selectively regulating the length of the slice, and a groove in the depression in alinement with the knife blade, said means including a sleeve having a reduced end and said abutment plate rotatable on the reduced end, and said depression being arcuate and coextensive with the base, and spring means disposed about the spindle to normally urge the knife blade out of the depression.

1,783,223. ORNAMENTAL DEVICE. ERNEST I. DAUER, Providence, R. I., assignor to Cohn & Rosenberger, Inc., New York, N. Y., a Corporation of New York. Filed July 19, 1929. Serial No. 379,422. 1 Claim. (Cl. 41—10.)



A device of the character described comprising a support having a central portion of rectangular cross-section, extensions of reduced cross-section at both ends, one of which is longer than the other and is bent to form an eye, a plurality of spiders each having two or more arms and having rectangular openings to slidably engage the rectangular central portion of the support, the axes of the openings in the successive spiders being disposed at angles of 45°, self-spacing ornaments secured to the arms of the spiders whereby the ornaments are staggered on the support, and ornaments secured to the reduced extensions of the support.

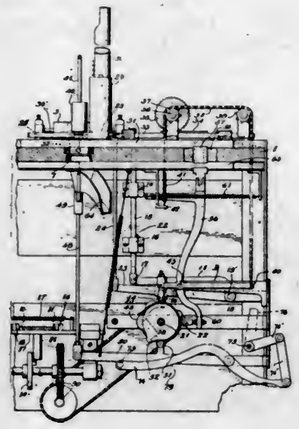
1,783,224. LIFTING DEVICE FOR MOTOR VEHICLES. ARTHUR P. DAVIDSON, Odessa, Tex. Filed Aug. 9, 1929. Serial No. 384,609. 1 Claim. (Cl. 294—82.)



In a lifting device for motor vehicles, the combination of a bar arranged to engage the opposite end portions of

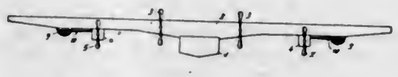
the forward springs of the vehicle and provided with hooks to pass under, around and over said ends, and an-

gular locking extensions on said hooks adapted to be moved in position adjacent the inner faces of said springs upon rotation of said bar.



1,783,225. PROPELLER. THOMAS A. DICKS, Pittsburgh, Pa., assignor, by mesne assignments, to Pittsburgh Screw & Bolt Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Dec. 31, 1927. Serial No. 244,021, 11 Claims. (Cl. 170—173.)

1. In a device of the character disclosed, the combination of a propeller hub having a blade shank encircling socket and a propeller blade, said socket and the circular shank of said blade being provided with cooperating segmental shoulders adapted to interlock with each other and to permit relative rotation therebetween and to permit quick removal of the blade shank from said socket, sand shank and socket being provided with registering openings for receiving a common securing means, the openings in said shank being circumferentially elongated so that said shank can be rotated in respect to said socket for permitting pitch adjustment of the propeller blade while said securing means is positioned but not rigidly secured.

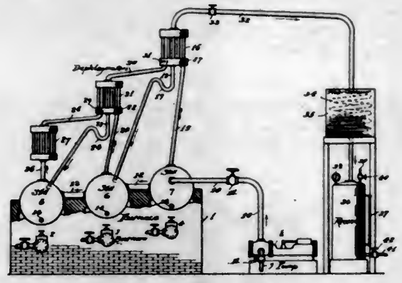


1,783,226. WRAPPING MACHINE. HAROLD W. A. DIXON, Hollis, N. Y., assignor to Columbia Ribbon & Carbon Manufacturing Company, Inc., Glen Cove, Long Island, a Corporation of New York. Filed Feb. 3, 1928. Serial No. 251,511. 6 Claims. (Cl. 93—2.)

1. In a machine provided with a wrapping station at which articles are wrapped, means for moving an article to be wrapped together with a wrapper therefor into said wrapping station, the restricted opening provided by the wrapping station effecting on this movement a partial wrapping of the article, resilient means adjacent the wrapping station for retaining the wrapper and partially wrapped article therein, a member for completing the

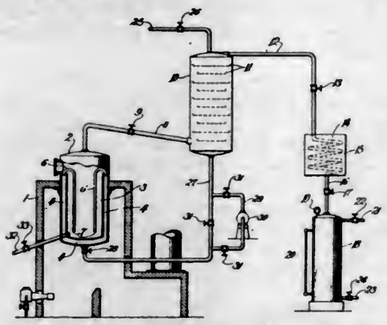
wrapping operation, and means for feeding a second article and wrapper into said station to partially wrap the second article and to simultaneously discharge the wrapped article.

1,783,227. STARTING OF LARGE FLYING MACHINES. CLAUDIUS DORNIER, Friedrichshafen-on-the-Bodensee, Germany, assignor to the Firm: Dornier-Metalbauten G. m. b. H., Friedrichshafen-on-the-Bodensee, Germany. Filed Sept. 28, 1928, Serial No. 309,002, and in Germany Oct. 5, 1927. 1 Claim. (Cl. 244—2.)



The combination with an aeroplane comprising a longitudinally extending main body portion, a transversely disposed wing member and a motor-propeller unit, of an auxiliary independent motor-propeller unit detachably secured to said wing at a point removed from said main body portion, and a parachute secured to said auxiliary motor-propeller unit and detachably secured to said wing in a collapsed position, and means controlled by the pilot of the aeroplane for detaching said auxiliary motor-propeller unit and its associated parachute from said wing.

1,783,228. PROCESS FOR CRACKING PETROLEUM OIL. CARBON P. DUBBS, Wilmette, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed Oct. 8, 1920, Serial No. 415,601. Renewed Nov. 19, 1929. 3 Claims. (Cl. 196—499.)

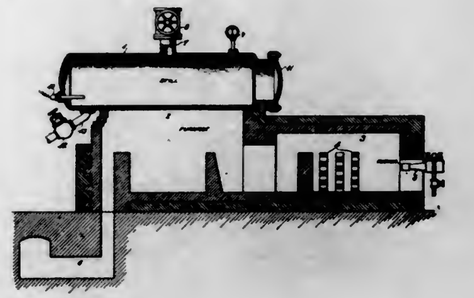


1. A process of cracking oil, consisting in passing the oil through a series of stills of successively increasing temperature, taking off vapors from each still, passing them to a reflux condenser individual to each still, returning the reflux condensate separated from vapors removed from a still of lower temperature directly to a still of higher temperature, passing the vapors which are not

condensed in the reflux condenser connected to a still of higher temperature directly through the reflux condenser

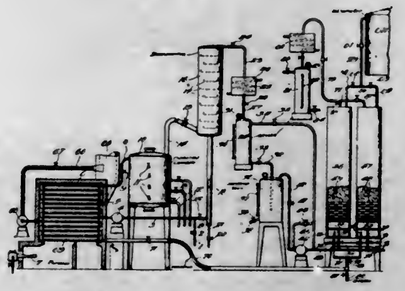
connected to a still of lower temperature and finally taking off the vapors from the reflux condenser connected to the still of lower temperature.

1,783,229. PROCESS AND APPARATUS FOR TREATING OILS. CARBON P. DUBBS, Wilmette, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed Feb. 11, 1922, Serial No. 535,783. Renewed Sept. 14, 1928. 7 Claims. (Cl. 196—48.)



1. In an apparatus for cracking oil, the combination with a furnace, of a still mounted therein, and provided with a circumferentially extending chamber, connections between said chamber and the main body of the still and means for feeding oil to be treated to the chamber and means for drawing off residue from the main body of the still.

4. A process for converting higher boiling point hydrocarbon oils into lower boiling point hydrocarbon oils consisting in passing oil through a narrow annular passage adjacent the walls of the still where the oil is subjected to a cracking temperature, in then discharging the heated oil from said narrow passage into a main interior chamber of said still where it is maintained out of contact with the oil being heated in said narrow passage, in subjecting the vapors from said main chamber to reflux condensation, in returning the reflux condensate to said narrow passage, in withdrawing residuum from said interior chamber, and in maintaining a superatmospheric pressure on said still.

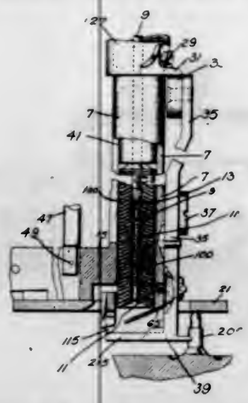


1,783,230. PROCESS OF CRACKING ROSIN. GUSTAV EGLOFF and HARRY P. BENNER, Chicago, Ill., assignors to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed Dec. 20, 1920, Serial No. 432,070. Renewed Mar. 15, 1928. 3 Claims. (Cl. 202—5.)

1. A process of cracking rosin in the presence of water, which consists in introducing said mixture to a still, in subjecting the mixture to heat and pressure sufficient to raise its temperature above 900° F. and to generate a

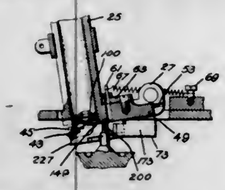
vapor pressure exceeding 5000 pounds per square inch to convert a substantial portion of the mixture into a light oily product.

1,783,231. PROCESS FOR CONVERTING PETROLEUM OIL. GUSTAV EGLOFF and JACQUE C. MORRELL, Chicago, Ill., assignors to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed Dec. 1, 1922, Serial No. 604,163. Renewed Feb. 5, 1929. 4 Claims. (Cl. 196—58.)



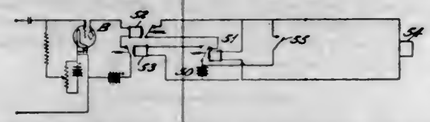
1. A process for cracking oil consisting in heating the oil to a conversion temperature in a heating zone, passing the oil to a conversion stage and there maintaining it in a substantial body, dephlegmating and condensing the evolved vapors and passing the uncondensed gases through an adsorbent substance, thereby adsorbing any vapors entrained by the uncondensed gases, driving off the adsorbed products by treating the adsorbent substance with heated gases of combustion from the heating zone so regulated as to relieve said substance of said products and condensing and collecting the products thus driven off.

1,783,232. WASHER-LOADING DEVICE. SIDNEY J. FINN, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Jan. 10, 1927. Serial No. 160,280. 36 Claims. (Cl. 18—1.)



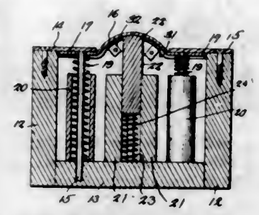
1. A device for placing washers upon the pins of a mold by relative traverse between the device and the mold,

having in combination, a magazine for a stack of washers, and means movable axially of the stack and operated by



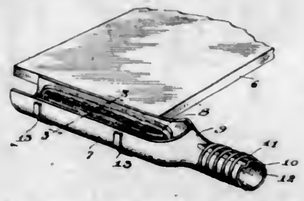
a mold pin during said traverse for displacing the lowermost washer from the stack and moving it into position to be threaded upon the mold pin.

1,783,233. WASHER-LOADING DEVICE. SIDNEY J. FINN, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Jan. 12, 1927. Serial No. 160,660. 6 Claims. (Cl. 18—1.)



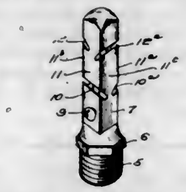
1. A device for placing washers upon the pins of a mold by relative traverse between the mold and the device, having in combination, a magazine for a stack of washers, a plurality of means for engaging the under side of the lowermost washer to support the stack, one of said means being capable of yielding relatively to another of said means to enable the lowermost washer to be tilted, and means responsive to said relative traverse for moving said lowermost washer out of stacked relation and into a tilted position while still engaged by said yielding means.

1,783,234. ELECTRICAL APPARATUS. FLOYD FIRESTONE, Ann Arbor, Mich., assignor to The Regents of the University of Michigan, Ann Arbor, Mich., a Corporation of Michigan. Filed June 6, 1927. Serial No. 196,828. 10 Claims. (Cl. 250—27.)



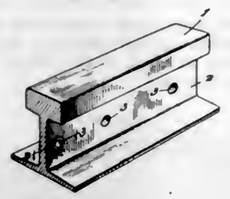
1. The combination of a gas content electron tube having a filament, a control grid and a plate, a substantially steady source of electrical energy of such strength and so connected to said plate as to normally maintain a substantially steady plate potential large enough to produce ionization of the gas in the tube above a certain grid potential, a source of grid potential large enough to normally overcome the tendency of the gas in the tube to ionize, means for applying electromotive force to the grid, and a device in the plate circuit irresponsive to the normal current therein but responsive to the current therein during such ionization.

1,783,235. REFRIGERATOR-DOOR FRAME. GEORGE W. FRICK, Baltimore, Md. Filed Mar. 29, 1930. Serial No. 439,969. 8 Claims. (Cl. 189—46.)



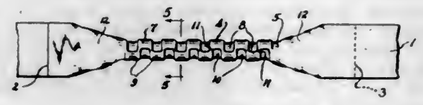
1. A door frame having side, top and bottom members, each of said members being of channel form provided with a bottom and side walls, strips secured to the side walls and projecting inwardly therefrom and having their inner edges spaced to provide a slot, a sealing strip having a transversely arcuate central portion projecting through the slot and lateral flanges underlying the inwardly projecting portions of the first strips, and spring means yieldably holding the arcuate portion of the sealing strip in projected position.

1,783,236. HANK-BUNDLING DEVICE. WILLIAM H. GOSCH, Reading, and ADDISON KOHOUT, Shillington, Pa., assignors to The Nolde and Horst Company, Reading, Pa., a Corporation of Pennsylvania. Filed Apr. 10, 1930. Serial No. 443,235. 7 Claims. (Cl. 28—21.)



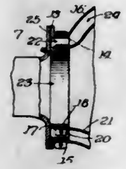
1. A device for building hanks of silk or the like, comprising a trough in which the hanks are piled, and a discharge tube at one end of said trough adapted to hold a fastening device.

1,783,237. SPRINKLER. LESLIE W. GREER, Phoenix, Ariz. Filed Feb. 18, 1930. Serial No. 429,387. 4 Claims. (Cl. 299—141.)



2. A device of the character described, comprising a vertically elongated tubular head that is substantially square in horizontal cross section to present four flat outer faces, there being oblique slots formed in each of the walls of said head extending from the bore thereof to the outer faces thereof.

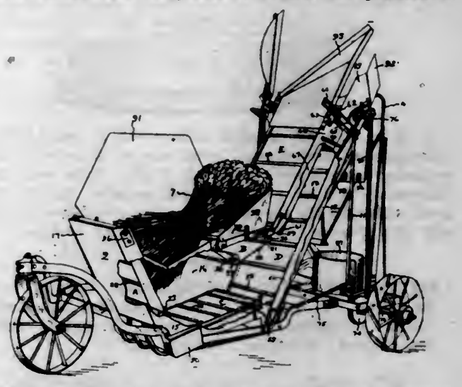
1,783,238. MEANS TO FACILITATE THE ELECTRICAL BONDING OF RAILWAY RAILS. GEORGE F. GRUNDON, Middletown, and FRED E. KNIGHT, High Spire, Pa. Filed Feb. 8, 1930. Serial No. 426,922. 6 Claims. (Cl. 238—151.)



1. A new article of manufacture, a railway rail having two sets of openings formed in the web thereof prior to shipment from the mill, one set of openings adapted to receive the bolts of the usual joint and the other set adapted to receive the electrical bond, and means sealing the bond-receiving opening.

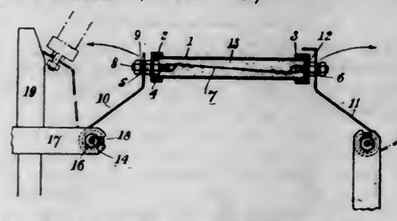
1,783,239. TIE FOR METAL STRAPS. LEO M. HARVEY, Los Angeles, Calif. Filed Oct. 2, 1929. Serial No. 396,848. 5 Claims. (Cl. 24—23.)

1. A tie for connecting the overlapping ends of a metal strap comprising two rolls of metal formed on a common axis and extending longitudinally of the strap but intermediate the ends thereof, the end portions of the strap being flat and engaging the flat body of the strap, and the portions intermediate the ends of the strap and the extremities of the tie being gradually flared outwardly as described.



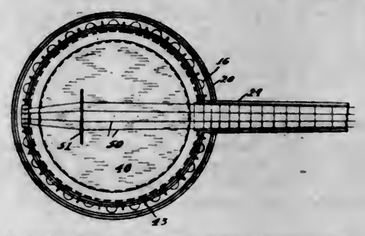
1,783,240. DUST-BAG RING. HOWARD EARL HOOVER, Glencoe, Ill., assignor to The Hoover Company, a Corporation of Ohio. Filed Jan. 28, 1929. Serial No. 335,437. 4 Claims. (Cl. 183—51.)

1. A bag ring for attachment to a suction cleaner having a plurality of bag receiving flanges spaced by a perforated web.



1,783,241. GRAIN-SHOCKING MECHANISM. GEORGE INNES, Davenport, Iowa, assignor to Innes Manufacturing Company, Bettendorf, Iowa, a Corporation of Delaware. Filed June 17, 1926. Serial No. 116,548. 17 Claims. (Cl. 56—417.)

1. In binding and shocking apparatus, in combination, a trough arranged to receive grain bundles from a binder, an open-top grain-receiving receptacle, means for transferring said bundles from said trough to said receptacle, means within said receptacle to reverse the position of



grain bundles in a vertical plane, and conveying means arranged to carry the reversed bundles upwardly to the top of a shocker basket.

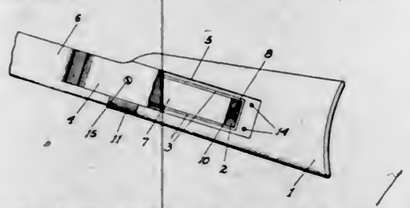
1,783,242. ELECTRIC FUSE. WILLIAM JAMES JOHN, Croydon, and HERBERT WRIGHT, Jr., London, England; said Wright, jr., assignor to said John. Filed Jan. 5, 1929, Serial No. 330,484, and in Great Britain Jan. 6, 1928. 5 Claims. (Cl. 200—117.)

1. An electric fuse for high tension circuits including a cartridge enclosure, fuse terminals carried by the enclosure, a fuse wire connecting the terminals within the enclosure, and means for bodily moving the cartridge and one of said terminals in opposite directions in the event of rupture of the wire.

1,783,243. FRAME FOR MUSICAL INSTRUMENTS. WILLIAM L. LANGE, New York, N. Y. Filed May 8, 1928. Serial No. 276,002. 13 Claims. (Cl. 84—269.)

1. In a musical instrument a frame, having thereon at the lower end thereof a bevel, a ring, having thereon a conical flange, disposed with said flange in engagement with said bevel, an annular band, concentrically disposed with relation to said frame and spaced therefrom, mounted on said ring, means for spacing said band from said frame, a diaphragm, distended over said spacing means and band, and a means for securing said diaphragm to said ring, thereby also securing said band with said spacing means thereto.

1,783,244. RESONATING MEANS FOR BANJOS. WILLIAM L. LANGE, New York, N. Y. Filed July 11, 1929. Serial No. 377,375. 16 Claims. (Cl. 84—270.)

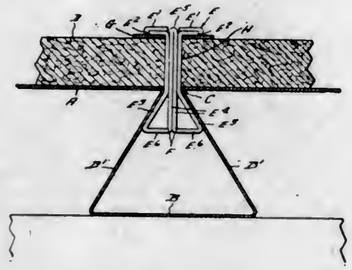


1. In a stringed musical instrument a frame, parts encompassing said frame, being spaced therefrom, and enclosing therebetween and said frame three resonator chambers, forming and including annular spaces, disposed substantially one above the other around said frame and each provided with one or more sound outlets.

1,783,245. METALLIC CLOTHESLINE. OTIS E. LAW, Brookfield, Ill., assignor to Pliless Clothes Line Corporation, Brookfield, Ill. Filed Aug. 21, 1930. Serial No. 476,788. 5 Claims. (Cl. 68—3.)

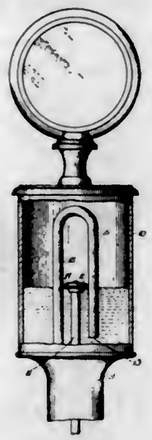
1. A device of the class described comprising a section formed of resilient metal bent to provide two side portions and a connecting end portion, said end portion formed into a cylindrical coil to provide a socket, said side portions twisted to provide an overlapping article engaging portion, and said side portions bent for extension within the cylindrical coil of an adjoining section.

1,783,246. SHOCK-ABSORBING STRUCTURE FOR FIREARMS. GROVER R. LEDFORD, San Joaquin, Calif. Filed May 16, 1929. Serial No. 363,549. 2 Claims. (Cl. 42—74.)



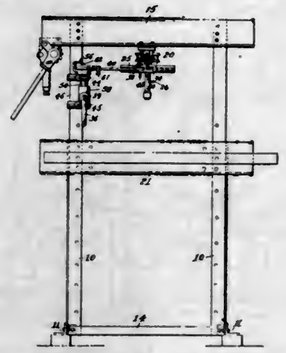
2. In a rifle or like firearm, separate stock and butt portions, a tongue projecting from the rear end of the stock and sliding in a socket cut in the butt, the bottom edges of the butt and stock being substantially in longitudinal alinement and the adjacent edge of the tongue being parallel to but above said edges, a compression spring between the rear end of the tongue and the butt, and a plate secured to the bottom of the stock at the front and bridging the gap between the stock and butt and slidably engaging the stock.

1,783,247. STRAPPING JOINT. JOHN W. LESLIE, Evanston, Ill., assignor, by mesne assignments, to Signode Steel Strapping Company, a Corporation of Delaware. Filed Oct. 22, 1928. Serial No. 314,216. 15 Claims. (Cl. 24—23.)



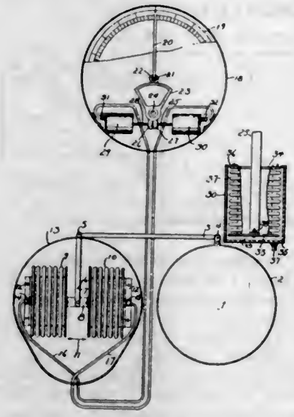
1. A joint for connecting overlapping portions of metal strap, comprising a metal sleeve embracing said overlapped portions, and a pair of indentations extending in opposite directions through the sleeve and overlapped portions of strap, said indentations having oppositely disposed relatively abrupt shoulders therebetween.

1,783,248. BUILDING-CONSTRUCTION UNIT. JAMES F. LOUCKS, Cleveland, Ohio, assignor to Detroit Steel Products Company, Detroit, Mich., a Corporation of Michigan. Filed Nov. 12, 1928. Serial No. 318,608. 9 Claims. (Cl. 72—70.)



5. As a means for fastening a covering to a foundation having a triangular rib projecting from one side thereof, a fastening device comprising a head adapted to bear upon the covering and a shank adapted to extend through said covering and across said foundation and into the rib projecting therefrom, the shank having a pair of side members and said device also comprising means whereby, on driving the said device, the bottoms of the side members will be spread apart thereby to bring the lower portions of the said members into engagement with the inner surfaces of the sides of said rib.

1,783,249. LIQUID-OVERFLOW-CONTROL MEANS. WILLIAM C. MACMILLEN, Rochester, Pa., assignor, by mesne assignments, to The Wayne Pump Company, Baltimore, Md., a Corporation of Maryland. Filed June 14, 1926. Serial No. 115,727. 16 Claims. (Cl. 137—21.)

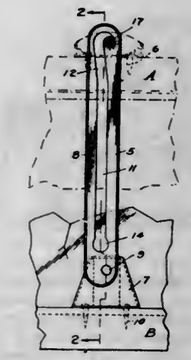


1. In combination with an overflow pipe, means mounted thereon having spaced cooperating upper and lower surfaces forming a liquid passageway and being inclined downwardly toward the middle of the overflow pipe for creating a siphon effect upon the liquid until such liquid has overflowed to a level slightly below the upper edge of such lower surface, whereupon the siphon effect is overcome and the level of the liquid remains constant.

1,783,250. LEVER MECHANISM. ROBERT E. MANLEY, York, Pa., assignor to Manley Manufacturing Company, York, Pa., a Corporation of Delaware. Filed Oct. 15, 1926. Serial No. 141,850. 10 Claims. (Cl. 153—53.)

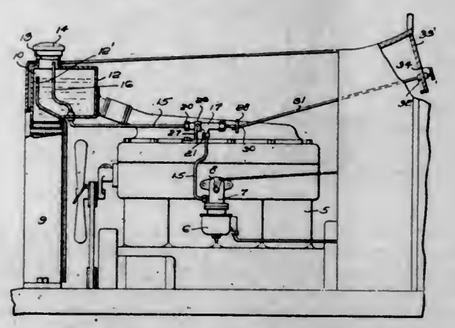
1. In a press, a screw, a member for advancing the screw, a vertical shaft, a pair of arms on said vertical shaft forming with it a bell crank lever, quick detachable means for connecting the screw advancing means and one arm of the bell crank lever so that oscillation of the vertical shaft advances the screw, and means permitting the ready securing and releasing of the connection between said screw advancing means and lever arm.

1,783,251. RUDDER-ANGLE-INDICATING DEVICE. GEORGE M. MARR and ARTHUR PHELPS MARR, New York, N. Y. Filed Oct. 23, 1929. Serial No. 401,759. 6 Claims. (Cl. 116—126.)



1. A rudder angle indicator comprising a plurality of accordion bellows members, and means for connecting them to a rudder post, and a plurality of accordion bellows members and an indicating means connected thereto, and means for transferring fluid pressure from the first bellows members to the second bellows members.

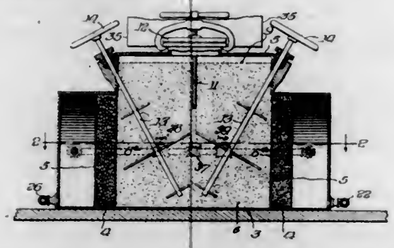
1,783,252. DENTAL INSTRUMENT. THOMAS K. MCKENZIE, Harrisonville, Mo. Filed June 19, 1929. Serial No. 372,146. 3 Claims. (Cl. 32—10.)



1. A dental instrument including a body portion having a beveled end formed with a groove, a bar secured to the body portion and having a right angled extremity overlying the groove, a slidable plugger point positioned in the groove and held in the groove by the right angled end of the bar, means for restricting movement of the plugger point, and means for exerting pressure on the plugger point.

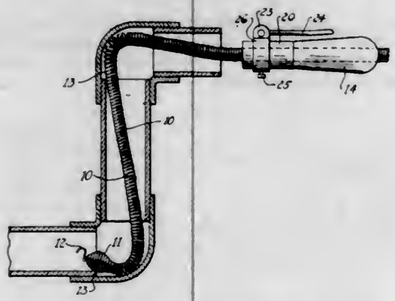
1,783,253. FASTENING MECHANISM. LEON MCNAMARA, Rochelle, Ill. Filed Mar. 12, 1928. Serial No. 261,012. 1 Claim. (Cl. 292—268.)

In a fastening mechanism comprising in combination, a base member attached to a slidable section, an arm pivotally carried by the base member, the pivot point of the arm being offset from the longitudinal center line of the arm, said arm being provided with a longitudinal slot having one end offset and terminating in a pocket in longitudinal alinement with the pivot point of the arm, and the other end terminating in an enlarged opening, a second member attached to an adjacent slidable section, and a stud carried thereby engageable by the arm in one of its positions and seatable in the pocket in another of its positions.



1,783,254. AIR MOISTENER FOR INTERNAL-COMBUSTION ENGINES. ERNEST MILLER, Saginaw West Side, Mich. Filed Feb. 11, 1929. Serial No. 339,101. 4 Claims. (Cl. 123—25.)

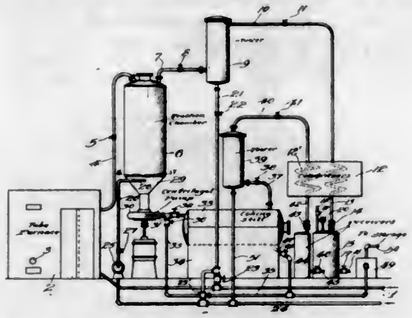
1. Means for supplying moisture to the cylinder or cylinders of an automobile engine, comprising a radiator including a shell provided near its top with an auxiliary tank for holding additional water, an overflow pipe for the radiator shell, a moisture supply pipe leading into the auxiliary tank and having its intake end terminating at a substantial elevation above the intake of the overflow pipe, a carburetor having an outlet pipe leading to the cylinder or cylinders of the engine, means whereby the moisture supply pipe leads into the outlet pipe between the



spray nozzle of the carburetor and the throttle valve, a valve structure including a casing and valve element, said casing being connected in the moisture supply pipe, and a rod to turn the valve element and extending to the dash of the automobile.

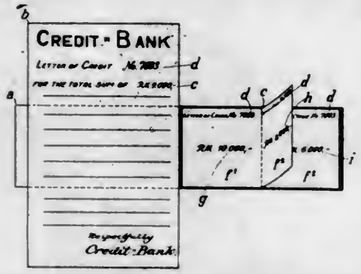
1,783,255. WATER SOFTENER. FRANK W. MILLER, Chicago, Ill., assignor of one-half to Ira J. Wilson, Winnetka, Ill. Filed Oct. 4, 1928. Serial No. 310,281. 3 Claims. (Cl. 210—24.)

1. A water softening apparatus comprising a casing, a pair of longitudinally spaced compartments containing filtering material within the casing, a body of a base-exchange material disposed between said compartments, means for passing water to be softened horizontally through said compartments and body, a space being provided at the top of said body beneath the top of the casing, a partition extending from the top of the casing downwardly through said space a substantial distance into said body disposed transversely across said body, and means for passing a fluid through the body for reconditioning the same.



1,783,256. APPARATUS FOR CLEANING OUT DRAIN PIPES. JOHN C. MILLER, Chicago, Ill. Filed Dec. 13, 1928. Serial No. 325,696. 6 Claims. (Cl. 137—70.)

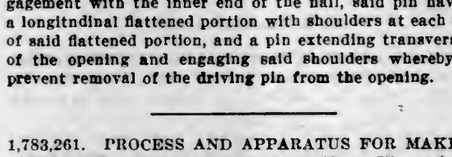
1. A passageway cleaner comprising a long coil of wire, the coil being of relatively small diameter and having an integral enlarged coiled head on one end, said head being oval-shaped with the adjacent coil turns normally substantially in contact, and having an integral screw-shaped hook on the outer end of said head.



1,783,257. PROCESS AND APPARATUS FOR CONVERTING HYDROCARBONS. JACQUE C. MORRELL and HARRY P. BENNER, Chicago, Ill., assignors to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed July 17, 1924. Serial No. 726,440. 9 Claims. (Cl. 196—49.)

9. An oil cracking process which comprises passing a stream of the oil through a heating zone and heating the same therein to cracking temperature under superatmospheric pressure, discharging the heated oil into a reaction zone maintained under superatmospheric pressure and in which a separation of vapors and unvaporized oil takes place, separately removing the vapors and unvaporized oil from said reaction zone, reducing the pressure

on said unvaporized oil to effect distillation of a portion thereof, subjecting the vapors resulting from said distillation to reflux condensation and injecting the reflux condensate thus obtained without passage through said heating zone back into the unvaporized oil in said reaction zone to prevent the settling out of carbon from the oil in said reaction zone.

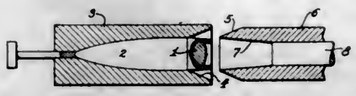


1,783,258. LETTER-OF-CREDIT FORM. GEORG OPITZ, Berlin, Germany. Filed Nov. 14, 1929, Serial No. 407,168, and in Germany Sept. 7, 1928. 3 Claims. (Cl. 283—59.)

1. A letter-of-credit book of safety-coupons comprising a folder, a plurality of safety-coupons arranged therein, and formed of safety-paper, each coupon being perforated thereacross, thus dividing each coupon into two portions, and each coupon having a value denomination thereon in diminishing sequence from coupon to coupon, the difference in value from one coupon to another designating the maximum and minimum limits of the remaining value of the book, the said value denomination occurring twice on each coupon, once on each side of the perforations, whereby upon detachment of one portion of the particular coupon representing the next higher printed value than the remaining maximum value of the letter-of-credit book there will be left remaining a corresponding stub, and the original total and remaining partial value of the letter-of-credit book can be determined.

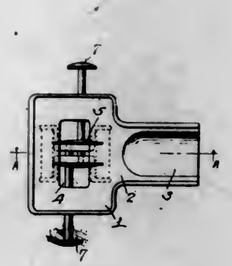
1,783,259. PROCESS FOR CRACKING PETROLEUM OIL. ROBERT T. POLLOCK, New York, N. Y., assignor to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Original application filed Mar. 9, 1927, Serial No. 173,921. Divided and this application filed Nov. 14, 1929. Serial No. 407,203. 4 Claims. (Cl. 196—49.)

1. The process of converting heavy hydrocarbon oils into oils of lower boiling point which comprises subjecting oil to a cracking temperature and pressure in a pressure zone, separating the high boiling fractions of the evolved vapors from the low boiling fractions in the form of a condensate, then subjecting the condensate



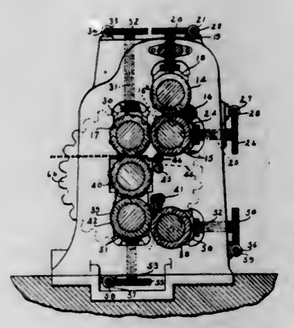
while still hot to increased cracking temperature and pressure, simultaneously distilling another independent body of oil, separating the evolved vapors according to their boiling points, and comingling the condensate thus formed with the oil in one of the pressure zones.

1,783,260. GAUGE. ROBERT W. REED, Fairport, N. Y., assignor of one-half to Harry W. Mountain, Aberdeen, S. Dak. Filed Feb. 27, 1928. Serial No. 257,346. 1 Claim. (Cl. 33—187.)



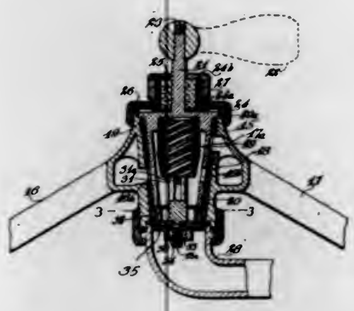
In a combination lap-siding support and gauge, a supporting arm having a hook formed at one end, said hooked end having an adjustable gauge extending therefrom, said arm having an opening extending through its opposite end, a nail retained within said opening having its pointed end protruding from the arm, an enlongated driving pin slidably arranged in the opening in driving engagement with the inner end of the nail, said pin having a longitndinal flattened portion with shoulders at each end of said flattened portion, and a pin extending transversely of the opening and engaging said shoulders whereby to prevent removal of the driving pin from the opening.

1,783,261. PROCESS AND APPARATUS FOR MAKING BULLETS. STANISLAS ROUSSEAU, Alton, Ill., assignor to Western Cartridge Company, East Alton, Ill., a Corporation of Delaware. Filed Sept. 3, 1926. Serial No. 133,376. 6 Claims. (Cl. 29—1.23.)



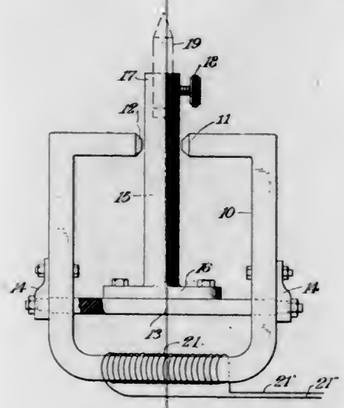
1. In the art of making jacketed boat tail bullets, the process of shaping the bullet comprising, frustoconically die-forming the tail of the jacket in successive stages while the core metal is unconfined, condensing the bullet endwise, and thereafter condensing the core metal therein.

1,783,262. APPARATUS FOR FACILITATING THE MANIPULATION OF MANICURING. ERNEST C. SACHSE, Edgewater, N. J. Filed June 18, 1930. Serial No. 462,051. 3 Claims. (Cl. 132—73.)



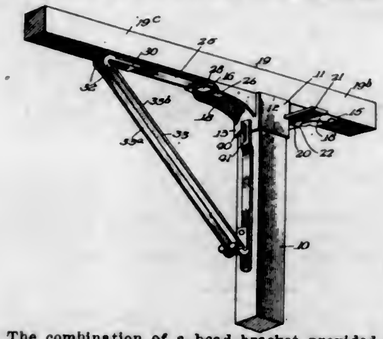
3. A device of the class and for the purpose specified comprising a supporting frame, a finger rest-plate, a pair of clamping jaws, said means including springs for normally closing said jaws, push pins in operative connection with the clamping jaws, an opening in the rest-plate for guiding the movement of the jaws, and a groove in the rest-plate conforming to the contour of the finger-end.

1,783,263. CALENDER. CARL F. SCHNUCK, New Haven, Conn., assignor, by mesne assignments, to Farrel-Birmingham Company, Incorporated, Ansonia, Conn., a Corporation of Connecticut. Filed Sept. 7, 1926. Serial No. 134,005. 2 Claims. (Cl. 91—48.)



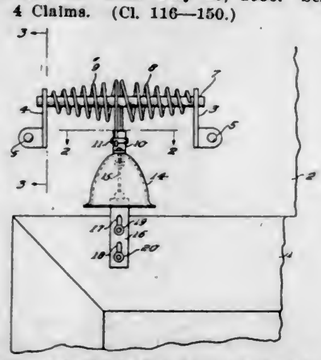
1. A calender provided with a plurality of rolls adapted to receive therebetween a plurality of banks of stock to reduce the same to sheet form and to combine the sheets with a sheet of fabric, three of said rolls having their axes in alignment, additional rolls cooperating with the end rolls of said aligned rolls, said additional rolls being arranged on the same side of the machine and having their axes in parallel alignment with the axes of the three rolls, and another roll cooperating with one of said additional rolls, said roll having its axis in alignment with the axes of the additional rolls, and means for feeding a sheet of fabric between two of said first named three rolls, said feeding means being arranged on the same side of the machine as said additional rolls.

1,783,264. MIXING VALVE. LOUIS SIROTEK, Chicago, Ill. Filed Sept. 8, 1928. Serial No. 304,761. 6 Claims. (Cl. 277—31.)



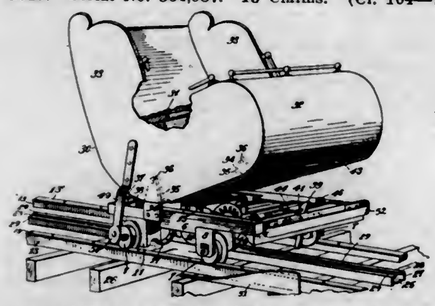
1. A faucet comprising a housing, conduits leading a fluid thereinto, a rotary valve in the housing to control the fluid and having an internal passage, a discharge spout leading from the latter, and a stopper between said passage and the spout effective upon said passage when the rotary valve is moved in one direction to closed position to shut off entry to the housing of said fluid from said conduits.

1,783,265. ELECTRICAL PICK-UP. WINFIELD D. SMITH, Deal, N. J., assignor to Louis G. Sylvester, Scranton, Pa. Original application filed Dec. 23, 1925, Serial No. 77,329. Divided and this application filed Mar. 1, 1928. Serial No. 258,212. 5 Claims. (Cl. 179—100.41.)



1. An electrical pickup comprising a magnet, means for converting fluctuations in the magnetic flux of the magnet into electric current variations, a magnetic member disposed between the poles of opposite polarity of the magnet, yieldingly mounted means for yieldingly supporting said magnetic member to permit the same to move freely between the poles of the magnet without substantial flexure, said supporting means being such as to permit movement of the magnetic member without setting up any appreciable restoring forces and without causing any substantial self-vibrations of the magnetic member, and means for vibrating the magnetic member in correspondence with the vibrations of sound waves.

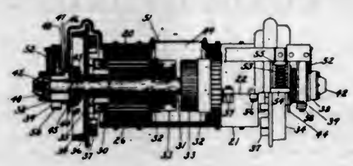
1,783,266. SHORE. ARTHUR H. SYMONS, Chicago, Ill., assignor to Symons Clamp & Mfg. Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 27, 1927. Serial No. 215,811. 8 Claims. (Cl. 248—30.)



1. The combination of a head bracket provided with a socket to receive the upper end of a shore, an extension bar removably secured to the bracket, a suspension bar connected to the bracket, and a brace having its lower end held by the suspension bar and its outer end engaging the extension bar.

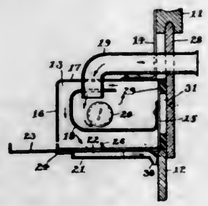
1,783,267. DOOR-OPERATED SIGNAL. CHARLES TILLBERG, Chicago, Ill. Filed July 29, 1930. Serial No. 471,171. 4 Claims. (Cl. 116—150.)

1. In a door-operated signal, a bell resiliently supported above the door, a slotted striker carried by the door and projecting thereabove for contact, in one position, with said bell, and fasteners disposed in the slotted portions of said striker whereby the same is adjustably secured to the door.



1,783,268. AMUSEMENT RIDE AND CAR THEREFOR. HARRY G. TRAVER, Beaver Falls, Pa. Filed May 22, 1929. Serial No. 364,987. 13 Claims. (Cl. 104—76.)

1. A passenger carrying car for amusement rides comprising a frame member arranged with traction wheels,



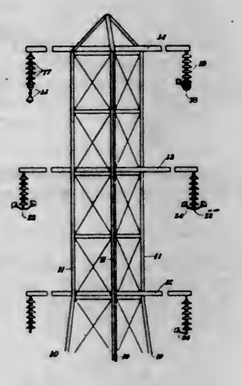
motive means carried by the frame and operatively connected to the wheels to propel the same, and a car body pivotally mounted on the frame on an axis transversely of the body and adapted to assume a position by gravity extending in a plane inclining to the frame.

1,783,269. DIRECT-DRIVE ELECTRIC RAILWAY TRUCK. VINCENT G. APPLE, Dayton, Ohio. Filed June 14, 1928. Serial No. 285,353. 17 Claims. (Cl. 105—54.)

1. An electric motor-axle unit comprising an axle having journals at its outer ends, two wheels having ventilating fan blades extending therefrom mounted on the axle next to the journals, one or more rotors mounted on the axle between the wheels, and a housing carrying the stators extending over and beyond the wheels for support on the journals, said journals to serve as motor bearings and to carry their proportion of the weight of the car.

1,783,270. WINDSHIELD CLARIFIER. LE ROY ASKAM, Milford, Conn. Filed Apr. 2, 1929. Serial No. 351,877. 5 Claims. (Cl. 20—40.5.)

1. In combination, a windshield glass, a casing, a gasket having an opening therein intermediate said glass and a wall of said casing to provide a warm air pocket, a heating means within the casing, means to direct air into said casing, and means to conduct the air from the casing and direct it against the glass below the warm air pocket.

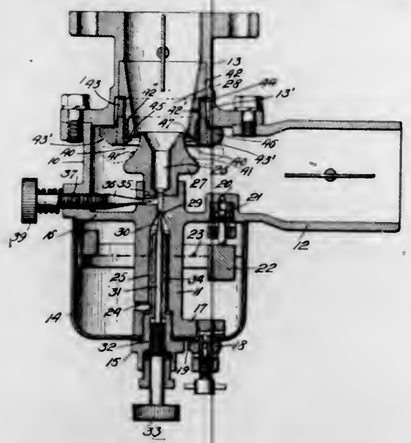


1,783,271. HIGH-POTENTIAL INSTALLATION. ARTHUR O. AUSTIN, Barberton, Ohio, assignor, by mesne assignments, to The Ohio Brass Company, Mansfield, Ohio, a Corporation of New Jersey. Filed May 25, 1925. Serial No. 32,712. 1 Claim. (Cl. 173—251.)

A support for high potential transmission lines comprising two pairs of posts, the pairs being spaced from each other in a direction transverse to the line, and the posts of each pair being connected at their tops and spaced at their bottoms in the direction of the line, a single unitary structural member extending upwardly from the top of each pair of posts, a horizontally disposed cross

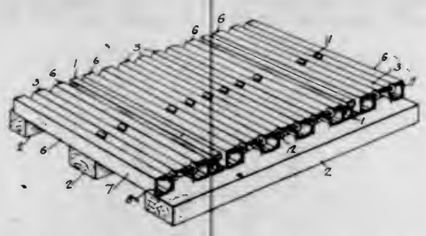
arm connecting said unitary members and supported thereby above the tops of said posts, and a transmission line mounted on said cross arm.

1,783,272. SUPPORT FOR TRANSMISSION LINES. ARTHUR O. AUSTIN, Barberton, Ohio, assignor, by mesne assignments, to The Ohio Brass Company, Mansfield, Ohio, a Corporation of New Jersey. Filed May 25, 1925. Serial No. 32,713. 14 Claims. (Cl. 173—251.)



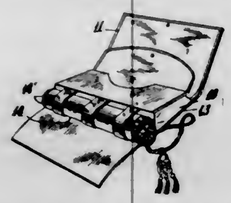
1. The combination with a transmission line of a support for said line which is quadrilateral in cross section, said line being disposed at one side of said support and extending substantially normal to the plane determined by one pair of diagonally opposite longitudinal extending corners of said support.

1,783,273. CARBURETOR. RALPH H. BEACH, Belleville, N. J. Filed May 9, 1927. Serial No. 189,891. 12 Claims. (Cl. 261—64.)



1. In a carburetor having a floating sleeve the bottom of which controls the admission of air in accordance with

the speed of the engine to which the carburetor is connected, a tubular wall extending downward into the upper

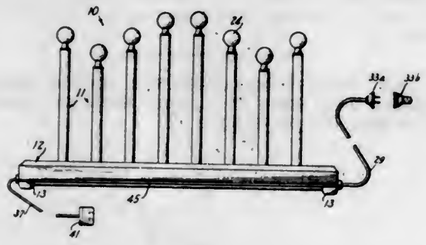


portion of the sleeve and providing between it and the sleeve a narrow clearance space to the top of which inflowing air has access.

1,783,274. RAILWAY-GRADE CROSSING. RAYMOND T. BELL, Milwaukee, Wis., assignor to A. O. Smith Corporation, Milwaukee, Wis., a Corporation of New York. Filed July 29, 1929. Serial No. 382,005. 8 Claims. (Cl. 238—8.)

1. A railroad crossing comprising a plurality of sheet metal channel sections in interlocking engagement with each other.

1,783,275. COMBINED LADY'S HAND BAG FOR UMBRELLAS AND POCKETBOOKS. ALFRED G. BERWIN, New York, N. Y. Filed Aug. 18, 1928. Serial No. 300,469. 2 Claims. (Cl. 150—1.7.)

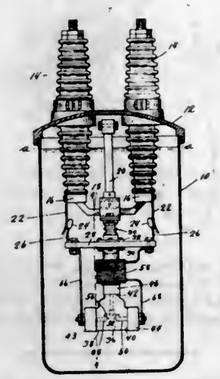


1. In combination with a lady's hand bag, a tubular chamber, an umbrella holding device, comprising a plurality of cross straps mounted within said tubular chamber and spaced from each other and in a straight line for receiving the umbrella, end straps on the ends of said tubular chamber to hold an umbrella against displacement thru the ends, one of the ends of each of the end straps being permanently fixed and the other ends detachable, and means for automatically holding against displacement an umbrella inserted in said chamber upon the closing of said end straps.

1,783,276. SOUND-CONTROLLING VENTILATING DEVICE. HOWARD R. BLISS, Flushing, N. Y. Filed Feb. 21, 1929. Serial No. 341,707. 13 Claims. (Cl. 98—99.)

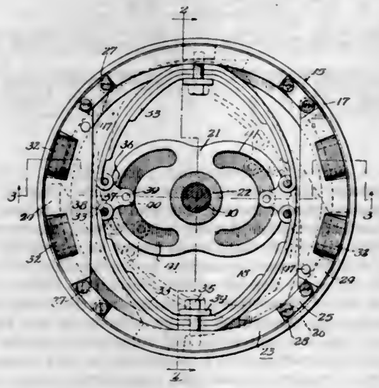
10. A sound reducing and ventilating device including two spaced panels, and two communicating converging passageways, one located to the side of the other, one of the passageways being supported by each panel and both passageways pointing in the same direction.

1,783,277. ELECTRICAL DECORATIVE ILLUMINATING DEVICE. JOSEPH BLOCK, Brooklyn, N. Y., assignor to Noma Electric Corporation, New York, N. Y., a Corporation of New York. Filed Nov. 2, 1928. Serial No. 316,837. 3 Claims. (Cl. 240—10.)



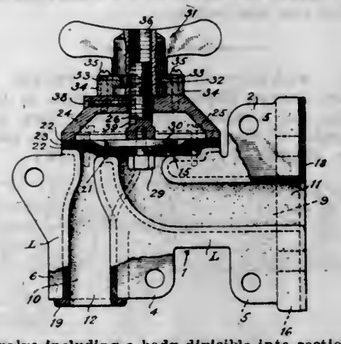
1. In an illuminating device, in combination, a base having a flat undersurface, a plurality of tubular members mounted thereon, lamp sockets attached to the free upper ends of said members, wiring connecting said sockets in electric circuit, said wiring having portions lying against the under-surface of said base, and means for covering said portions, said means comprising a plate secured to the underside of said base and having an elongated semi-cylindrical portion receiving and covering said wiring portions and flat wing portions extending from said semi-cylindrical portion contacting said undersurface of said base.

1,783,278. CLAMP FOR EXAMINATION DEVICES. CHARLES T. BRADY, Detroit, Mich. Filed May 31, 1927. Serial No. 195,570. 2 Claims. (Cl. 248—20.)



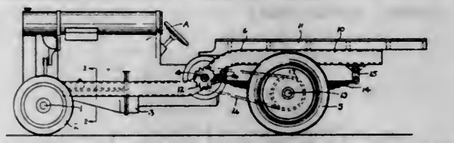
1. In a support for examination devices, a pair of arms each having at one end a flat depression oppositely disposed to each other, and at the other end a curved depression each oppositely disposed to the other, a supporting socket carried by one of the said arms and projecting on the longitudinal axis of such arm, and a clamp screw threaded through openings tapped in the said arms.

1,783,279. CIRCUIT INTERRUPTER. GEORGE A. BURNHAM, Saugus, Mass., assignor to Condit Electrical Manufacturing Corporation, South Boston, Mass., a Corporation of Massachusetts. Filed Oct. 30, 1926. Serial No. 145,321. 19 Claims. (Cl. 200—150.)



1. A circuit interrupter having current carrying members separable in an insulating fluid, circuit interrupting members separable in a vacuum, and separable disconnecting members arranged in series with said circuit interrupting members and in parallel with said current carrying members.

1,783,280. ELECTROMAGNETIC BRAKE. FLOYD O. CLIZBE, Chicago, Ill. Filed Mar. 26, 1928. Serial No. 264,709. 18 Claims. (Cl. 188—140.)



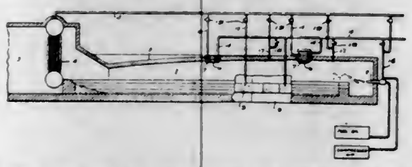
16. In a brake, the combination of a drum, a brake shoe positioned adjacent to said drum, electrically operated means connected to the shoe for imparting rotative movement thereto, and mechanism operable by such movement to force the shoe into contact with the drum for braking purposes.

1,783,281. VALVE. JULIAN H. COX, Newton, Mass., assignor to The Mechanical Rubber Company, Cleveland, Ohio, a Corporation of New Jersey. Filed Feb. 25, 1928. Serial No. 256,826. 9 Claims. (Cl. 251—24.)

1. A valve including a body divisible into sections along opposed faces at the sides of a fluid passage, each section being provided with an individual lining adapted to protect the passage portion thereof and extend between the opposed faces at the sides of the passage portions to form seals.

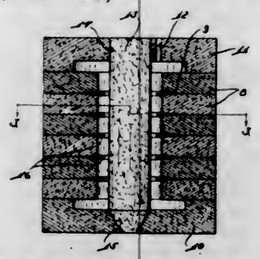
1,783,282. ATTACHMENT FOR TRACTORS. JAMES D. CUMMINGS, Houston, Tex. Filed June 13, 1927. Serial No. 198,374. 5 Claims. (Cl. 180—50.)

1. In a tractor having a crank case, front and rear axles, and means to drive said rear axle; the combination of longitudinal frame members, means on said crank case to support the forward ends of said members, a supplemental axle, drive wheels thereon, means on said supplemental axle to support the rearward ends of said frame members, said rear axle being supported in said frame, a sleeve rotatable on said supplemental axle, a plurality of operative means for connecting said rear axle and said sleeve, and means to engage either of said operative means with said drive wheels.



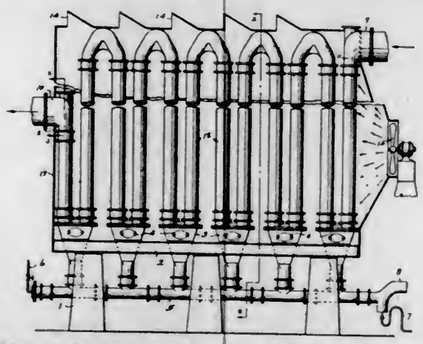
1,783,283. SWITCH STAND. SAMUEL L. EASTBURN, Sloatsburg, N. Y., assignor to Ramapo Ajax Corporation, New York, N. Y., a Corporation of New York. Filed Jan. 22, 1929. Serial No. 334,169. 14 Claims. (Cl. 246—286.)

1. A housing for a switch stand comprising a base member adapted to support the switch stand and con-



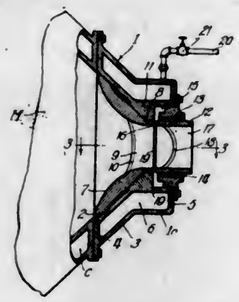
taining the switch operating mechanism, a central casing supported by said base member and separate cover plates extending on opposite sides of said casing and forming in connection therewith a substantially complete closure for said base member.

1,783,284. FURNACE COOLING BY STEAM. HENRY FREDERIC EASTER, Hayden, Ariz., assignor to American Smelting and Refining Company, New York, N. Y., a Corporation of New Jersey. Filed Mar. 9, 1928. Serial No. 260,446. 7 Claims. (Cl. 263—44.)



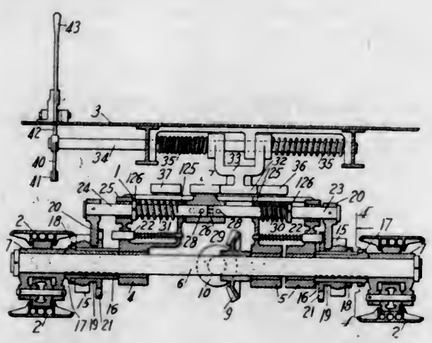
1. The method of protecting the inside wall of a metallurgical furnace from the scorifying action of the contents of said furnace which comprises forming a coating of steam on said inside wall, without substantially changing the normal operating atmosphere throughout the body of the furnace.

1,783,285. MOLD. WILLIAM G. GOODWIN, Royal Oak, Mich. Filed Sept. 10, 1928. Serial No. 304,960. 3 Claims. (Cl. 22—124.)



1. A mold comprising a plurality of superimposed sections each having a central opening and each having its face which engages with an adjacent section inclined to co-operate with the inclined face of the section engaged to provide a recess communicating with the central opening formed in the sections.

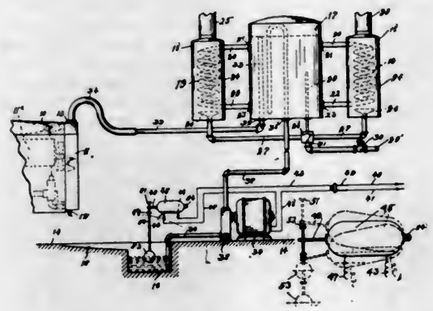
1,783,286. CONDENSER. EMANUEL W. HARTMAN, Phoenix, Ariz. Filed Feb. 13, 1930. Serial No. 428,076. 8 Claims. (Cl. 257—39.)



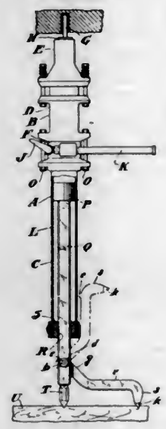
1. A condenser comprising a receiving channel having separate outlets, a plurality of traps connected into said channel, a plurality of coils, the turns of each coil being connected successively into the traps, common headers in which the coils terminate at each end.

1,783,287. BRICK-MAKING MACHINE AND METHOD. HENRY HILGENDORF, Harvey, Ill., assignor to National Brick Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 31, 1928. Serial No. 266,159. 6 Claims. (Cl. 25—17.)

1. In a brick making machine, means for splitting the clay column as it passes through the outlet opening of the machine, and means for supplying a lubricant to the surfaces of the split of the column within said opening.



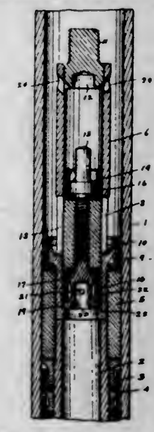
1,783,288. STEERING MECHANISM FOR SELF-PROPELLED VEHICLES. GRANT HOLMES, Danville, Ill. Filed Dec. 29, 1927. Serial No. 243,446. 12 Claims. (Cl. 180—9.2.)



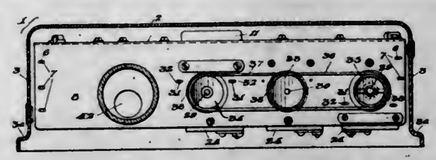
1. In a mechanism comprising a main frame, a structure rotatably mounted on said main frame, traction devices supporting said main frame, and clutches to connect the respective traction devices with driving mechanism, mechanism carried by said main frame to selectively operate said clutches, an actuating device mounted on said rotatable structure for movement lengthwise thereof and arranged to be moved into operative relation with said clutch operating mechanism by the rotation of said structure, and means mounted on said rotatable structure for moving said actuating device lengthwise of said rotatable structure to cause the same to operatively engage said clutch operating mechanism.

1,783,289. MOTOR HEATER. GEORGE W. HOPKINS, Cleveland, Ohio. Filed Sept. 11, 1928. Serial No. 305,290. 9 Claims. (Cl. 123—174.)

1. In a heating apparatus of the character described, the combination with the water circulating system of a motor vehicle, of means adapted to receive the liquid drained off from said system, a liquid storage receptacle, means for transferring said drained off liquid to said storage receptacle, means for heating the liquid in said receptacle, and means for conveying heated liquid from said receptacle to said circulating system.



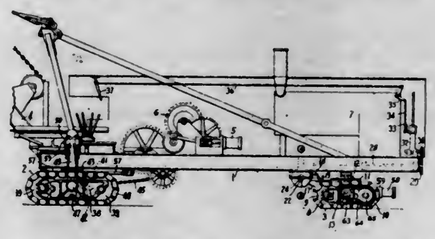
1,783,290. ANCHOR FOR DRILLING MECHANISM. GEORGE W. HULSHIZER, Stewartsville, N. J., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Feb. 19, 1929. Serial No. 341,193. 2 Claims. (Cl. 255—51.)



1. In a rock drill, the combination of a percussive element and a feeding element, said feeding element comprising a cylinder and a piston, a polygonal bore in the cylinder, a rod on the piston slidable in the bore and in engagement therewith to prevent rotation of the piston with respect to the cylinder, a slot in the feed rod, a pivot affixed to the feed rod and extending transversely through the feed rod and the slot and having a flat surface, and an anchor rotatable about the pivot and adapted to engage an abutment for preventing rotation of the rock drill, said anchor being adapted to interlock with the pivot for holding the anchor in the released position.

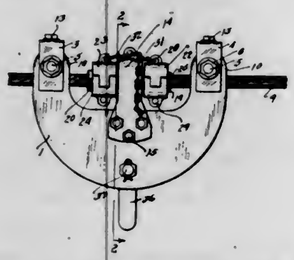
1,783,291. VALVE MECHANISM. JOHN P. HUMASON, Houston, Tex. Filed Apr. 28, 1928. Serial No. 273,651. 3 Claims. (Cl. 103—225.)

1. A traveling valve structure including a valve body, a coupling attached to the upper end thereof, a tubular cage whose lower end is attached to said coupling, said cage having side openings, an annular rib around said cage beneath said openings whose upper side is upwardly flared, an upwardly opening cup ring surrounding said rib and clamped between it and the upper end of said coupling, a plunger like valve slidable in said cage and adapted to open and close said openings.



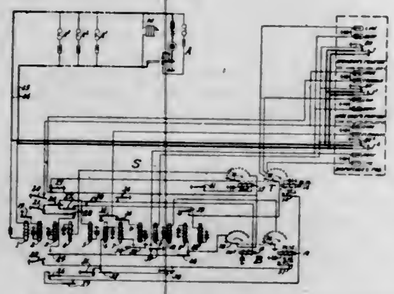
1,783,292. RADIO RECEIVING APPARATUS. ARTHUR ATWATER KENT, Ardmore, Pa. Original application filed Apr. 5, 1926, Serial No. 99,696. Patent No. 1,658,562. Divided and this application filed Jan. 5, 1928. Serial No. 244,605. 8 Claims. (Cl. 250—14.)

1. Radio receiving apparatus comprising a panel, a plurality of condensers having rotors adjustable about parallel axes carried by said panel on one side thereof, a second panel spaced from and substantially parallel with said first named panel on the opposite side thereof, drums secured to said rotors between said panels, and a band coupling said drums, at least one of said condensers being capable of lateral adjustment on said first named panel to effect tightening of said band.



1,783,293. EXCAVATING MACHINE. CHARLES B. KING, BENJAMIN JACOBY, and DWIGHT J. SHELTON, Marion, Ohio, assignors to The Marion Steam Shovel Company, Marion, Ohio, a Corporation of Ohio. Filed Feb. 12, 1923. Serial No. 618,701. 9 Claims. (Cl. 180—81.)

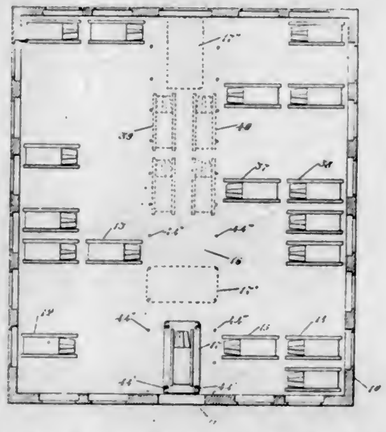
1. In a mechanism of the character described, a main frame, a pivot pin depending from said main frame, a



steering frame having a vertical bearing to receive said pivot pin, an axle mounted on said steering frame beneath said bearing for rocking movement with relation to said steering frame about an axis extending lengthwise of said main frame, traction devices connected with the respective ends of said axle, an arm projecting from said steering frame, means carried by said main frame for actuating said arm to move said steering frame and said axle about the axis of said pivot pin, an engine supporting structure carried by said axle and movable therewith about the axis of said pivot pin, an engine mounted on said structure, and driving connections between said engine and said traction devices.

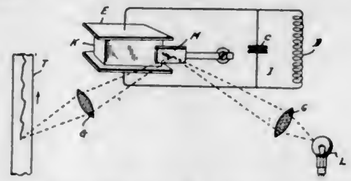
1,783,294. LOADING JACK AND CLAMP. FREDERICK H. KNAPP, Kelso, Wash. Filed Apr. 25, 1929. Serial No. 358,108. 12 Claims. (Cl. 188—42.)

1. In a device of the class described, the combination of side wall body elements, yokes adjustably positioned on the upper opposite top sides of the side wall members, a shoulder pin fixedly positioned within each of the yokes, a sheave rotatably disposed upon each pin, means for raising and lowering each of the yokes relative to the side walls and a clamping head removably secured to the side wall members.



1,783,295. PARTY-LINE TELEPHONE SYSTEM. OSCAR C. LEVY, Chicago, Ill., assignor to Reserve Holding Company, Kansas City, Mo., a Corporation of Delaware. Filed Oct. 29, 1928. Serial No. 315,702. 33 Claims. (Cl. 179—27.)

19. In a telephone system, a dispatching operator's position, a subscriber's line terminating at said position, a flash-over signal for said line at said position, and means for operating said signal responsive to currents being induced in said line from an adjacent power line.



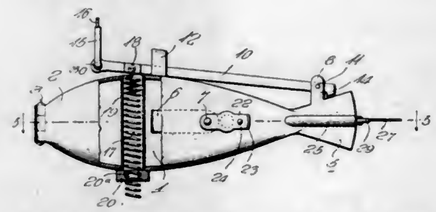
1,783,296. MEANS FOR HANDLING AND STORING MOTOR VEHICLES. GOTHARD LOWENSTEIN, Brooklyn, N. Y. Filed Oct. 17, 1927. Serial No. 226,757. 12 Claims. (Cl. 214—16.1.)

1. In a building for the purpose described, the combination with a floor, of a carrier comprising an overhead traveling carriage, and a platform suspended at a set distance therefrom, said platform extending substantially down and being substantially parallel to the level of said

floor, allowing a small clearance underneath said platform just sufficient to permit free displacement of said platform along said floor.

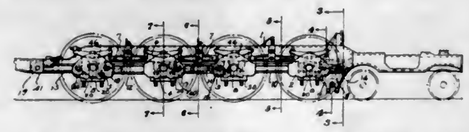
1,783,297. INDICATING MEANS FOR HIGH-FREQUENCY OSCILLATIONS. ALEXANDER MEISSNER, Berlin, Germany, assignor to Gesellschaft für Drahtlose Telegraphie, m. b. H., Berlin, Germany, a Corporation of Germany. Filed Mar. 11, 1927, Serial No. 174,604, and in Germany Mar. 25, 1926. 4 Claims. (Cl. 171—95.)

1. A method for indicating the intensity of oscillations of high frequency energy which consists in measuring the extent of air disturbances occasioned in the immediate vicinity of a piezo electric crystal device while the latter is subjected to the effect of high frequency energy.



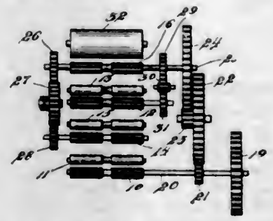
1,783,298. ELECTRIC SWITCH. GEORGE J. MEUER, Milwaukee, Wis., assignor, by mesne assignments, to Cutler-Hammer, Inc., a Corporation of Delaware. Filed May 31, 1928. Serial No. 281,890. 12 Claims. (Cl. 200—67.)

12. In a snap switch, the combination with a stamped sheet metal frame having parallel sides, said sides having perforations forming closed bearings, of a flat punched sheet metal plate of substantially U-shape, the arms of said U-shaped plate having integral angular projections adapted for sequential insertion into said bearings by tilting and edgewise movements of said plate with respect to said frame, said projections each having offset



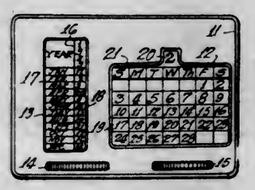
lower edge portions providing shoulders to limit edgewise movement of said plate after assembly of the parts, an actuating lever comprising a flat punched sheet metal plate pivotally supported by said frame above the pivotal center of said first mentioned plate and at right angles to the latter, means comprising a compression spring interposed between said lever and said first mentioned plate to effect snap movements of the latter to alternate extreme positions upon opposite movements of said actuating lever, and projections integral with said second mentioned plate for alternate engagement with said frame to limit movement of said lever in opposite directions respectively.

1,783,299. ANTENNA WEIGHT. CARLOS B. MIRICK, Washington, D. C., assignor to National Electrical Supply Company, Washington, D. C., a Corporation of Virginia. Filed Dec. 6, 1929. Serial No. 412,121. 10 Claims. (Cl. 250—33.)



1. An antenna weight comprising a pair of shell portions hinged together at one end for enclosing a load therein, an antenna wire, a latching mechanism connected with said antenna wire and secured to said antenna weight for normally maintaining the portions of said shell in locked engagement, and means for tripping said latch mechanism for spreading the parts of said shell when the tension on said antenna wire is released.

1,783,300. LOCOMOTIVE STRUCTURE. JOHN L. MOHUN, Omaha, Nebr. Filed Aug. 27, 1927. Serial No. 215,831. 30 Claims. (Cl. 105—172.)



1. In a locomotive, a pedestalless main frame, three or more driving boxes arranged longitudinally of the locomotive, means for transmitting longitudinal forces between all of said boxes independently of said frame, and means for transmitting longitudinal forces from said boxes to said frame.

1,783,301. SPINNING FRAME. CHARLES MORTON, Pawtucket, R. I. Filed Feb. 6, 1930. Serial No. 426,299. 5 Claims. (Cl. 19—130.)

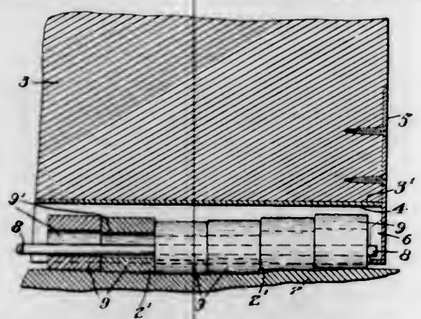
1. In a yarn drafting machine, a group of draft rolls, comprising a pair of front rolls, a pair of back rolls, and a pair of intermediate rolls all arranged in closely spaced relation to run with their peripheries just clear of each other, gears for driving said front and back rolls at different relative speeds, and a back feed draft roll thru which said pair of intermediate rolls is driven.

1,783,302. PERPETUAL CALENDAR. JOHN H. NEWTON, Nutley, N. J. Filed Apr. 17, 1929. Serial No. 355,912. 2 Claims. (Cl. 40—117.)

1. A perpetual calendar comprising a stand with a pair of parallel rollers in the base thereof and a platen mounted above said rollers, a band having calendar characters passing over said platen and engaging said rollers to be rolled and unrolled as the band is passed over the platen in adjusting the calendar, a second pair of rollers parallel with the first mentioned rollers and a platen mounted above said rollers, a second band having calendar characters passing over said second named platen as the calendar is adjusted, a shaft geared to the first pair of rollers and a second shaft geared to the second pair of rollers and a stop mechanism on each of said shafts limiting the movement of said shafts to two revolutions.

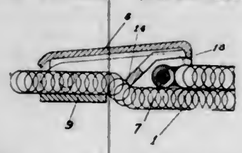
1,783,303. SHOOTING GAME. LOUIS OBERNDORFER, New York, N. Y. Filed Oct. 20, 1928. Serial No. 313,674. 4 Claims. (Cl. 273—106.5.)

1. In combination with a game of the class described, a dart comprising a tail pivotally attached to a body member, a spring adapted to engage the said tail as a means of holding the said tail in an angularly extended position.



1,783,304. METHOD OF PRODUCING COLLOIDAL SILICIC ACID. ALEXANDER P. OKATOFF, Leningrad, Union of Socialist Soviet Republics. Filed Nov. 12, 1928. Serial No. 319,022. 1 Claim. (Cl. 23—182.)

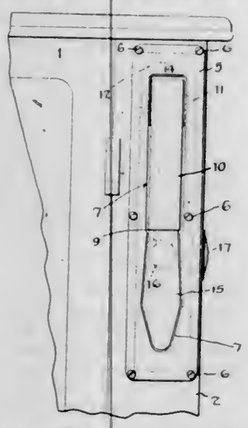
A process of producing colloidal silicic acid, consisting in mixing sodium silicate with hydrochloric acid, determining the beginning of the readiness of the gel by the beginning of the synæresis, treating said gel with solutions of salts of polybasic acids of metals together with ammonia thereby partly neutralizing said hydrochloric acid in said gel.



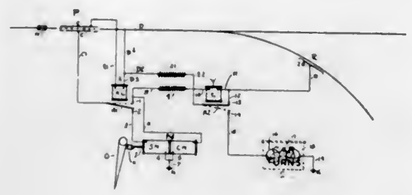
1,783,305. ROLLER WEATHER STRIP FOR DOORS. AXEL OLSON, West Roxbury, Mass. Filed Mar. 18, 1929. Serial No. 347,978. 1 Claim. (Cl. 20—68.)

In combination, a door having a bottom edge channel, bearings at the ends of said channel, a rod extending from end to end of said channel and mounted at its ends in said bearings, and a series of rollers mounted on said rod in end to end relation and having a collective length substantially equal to the length of said channel, said rod being mounted in said bearings for free vertical move-

ment to permit the series of rollers to move vertically independently of any vertical movement of the rollers relative to the rod, and each roller having a rod receiving bore of materially greater diameter than the rod to permit individual vertical movement of the rollers relative to the rod.

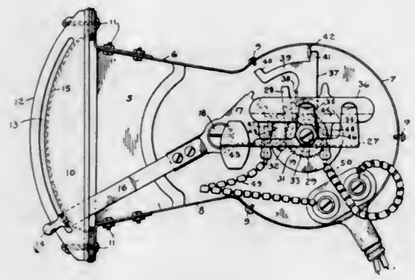


1,783,306. CATCH CLASP FOR LADIES' MESH BRACELETS. LAWRENCE F. OTTEN, Fort Thomas, Ky., assignor to The Wadsworth Watch Case Co., Dayton, Ky., a Corporation of Kentucky. Filed Oct. 8, 1929. Serial No. 398,165. 3 Claims. (Cl. 24—191.)



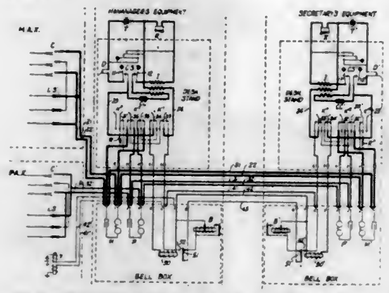
1. A sliding clasp for a mesh wrist watch bracelet comprising a plate to underlie the bracelet and a plate to overlie the bracelet, said plates being hinged together with a hinge pin, a sleeve mounted on said hinge pin and an end of the bracelet soldered to said sleeve, one of said plates having an extension acting as a spring arranged to bear against a continuous portion of the bracelet and thus secure the clasp in desired adjustable positions on said bracelet.

1,783,307. PROTECTED DIRECTIONAL SIGNAL. THEODORE PATOCKA, College Point, N. Y., assignor to Thomas R. Brooks, Scranton, Pa. Filed Feb. 4, 1929. Serial No. 337,322. 1 Claim. (Cl. 116—54.)



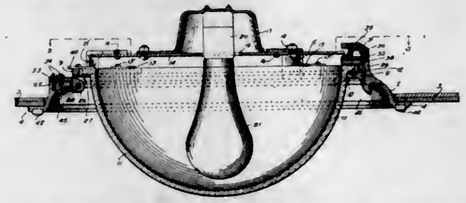
In combination with a signal arm of predetermined shape, a casing for housing said arm having a face-plate with an opening the shape of the arm through which the latter may be swung, a bull's-eye secured to the casing in the side thereof at an angle to the face-plate and at the lower end of the casing, a translucent member carried by the signal arm at its outer end, a lamp carried by said arm and projecting into said member and located opposite said bull's-eye, whereby when the arm is in its casing the lamp will show through the bull's-eye, and when the arm is swung through said opening the lamp will show through said member.

1,783,308. ELECTRIC SWITCH AND SIGNAL SYSTEM. FRANK H. RICHTERKESSING, Louisville, Ky., assignor to The Cheatham Electric Switching Device Co. and Nachod and United States Signal Co., Louisville, Ky. Filed Mar. 24, 1928. Serial No. 264,439. 14 Claims. (Cl. 246—227.)



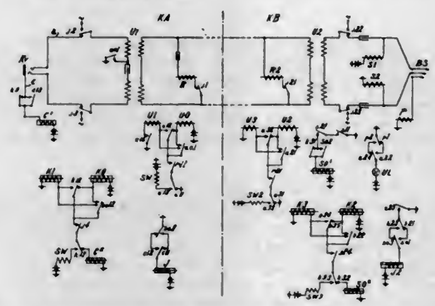
1. In an automatic switch and signal system, the combination of a signal circuit including a signal, an actuating solenoid, a relay operable to selectively direct currents through different parts of the actuating solenoid, and a second relay for controlling the said signal circuit and arranged to be automatically shunted out upon a flow of saturating current through one branch of the said solenoid.

1,783,309. THERMOSTATIC DEVICE. EDWIN A. RUTENBER, Milwaukee, Wis., assignor to A. J. Lindemann & Hoverson Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Sept. 19, 1928. Serial No. 306,885. 9 Claims. (Cl. 200—139.)



1. A thermostatic control for electrical apparatus comprising a supporting member, a movable actuating element supported by said member, thermally responsive means operatively connected with said member and element, means frictionally secured to said member for adjusting the position thereof, an arm fixed to said element, a contactor operable by said arm, said actuating element constructed and arranged to loosely support said contactor and manually operable control means for varying the position of both said member and said element.

1,783,310. TELEPHONE-STATION EQUIPMENT. NORMAN HERBERT SAUNDERS, Homewood, CLARENCE E. LOMAX, Oak Park, and THEODORE C. RIEBE, Chicago, Ill., assignors to Reserve Holding Company, Kansas City, Mo., a Corporation of Delaware. Filed Dec. 22, 1927, Serial No. 241,746. Renewed May 2, 1929. 17 Claims. (Cl. 179—27.)

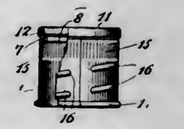


1. In a telephone system, a main exchange line, a branch exchange line, and two telephones terminating said lines from either of which a call to either of said lines may be answered independent of any operation at the other telephone.

1,783,311. LIGHTING FIXTURE. LINDSLEY SCHEPMOES, New Haven, Conn., assignor to The Safety Car Heating & Lighting Company, a Corporation of New Jersey. Filed Feb. 19, 1929. Serial No. 341,129. 15 Claims. (Cl. 240—7.35.)

1. In lighting fixtures, in combination, a ceiling ring adapted to fit a ceiling opening and having a visibly exposed surface disposed above the ceiling surface, and a luminous bowl supported by said ring to illumine the exposed surface thereof.

1,783,312. TELEPHONE SYSTEM. WERNER SCHULZ, MAX FRISCHKE, and KARL SCHIFFMANN, Berlin, Germany, assignors to Siemens & Halske Aktiengesellschaft, Wernerwerk, Siemensstadt, near Berlin, Germany. Filed Oct. 9, 1926, Serial No. 140,448, and in Germany Oct. 22, 1925. Renewed May 20, 1929. 13 Claims. (Cl. 179—41.)

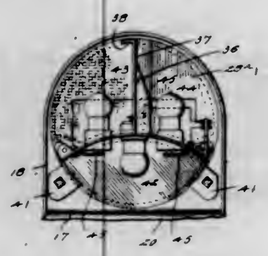


3. In a telephone system, a trunk comprising incoming and outgoing sections, means responsive to the extension of a connection over one of said sections for sending a momentary impulse of current to the other section, means responsive to the extension of a connection over the other section for continuously transmitting current impulses to the first section, and signalling means at each section responsive to impulses transmitted from the other section.

1,783,313. MATERIAL FOR CONVERSION INTO CELLULOSE DERIVATIVES AND PROCESS OF PRODUCING THE SAME. MILTON O. SCHUR and ROYAL H. RASCH, Berlin, N. H., assignors to Brown Company, Berlin, N. H., a Corporation of Maine. Filed Oct. 9, 1926. Serial No. 140,675. 21 Claims. (Cl. 260—146.)

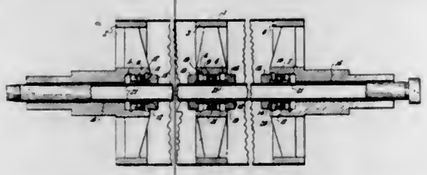
9. A tissue especially suitable for conversion into cellulose derivatives, comprising mercerized wood fiber.

1,783,314. TWO-PIECE CLOSURE CAP. EDGAR SCOFIELD, New York, N. Y., assignor to Anchor Cap & Closure Corporation, Long Island City, N. Y., a Corporation. Filed Aug. 25, 1927. Serial No. 215,313. 11 Claims. (Cl. 215—44.)



1. A two-piece closure cap comprising a body portion having a continuous annular groove pressed inwardly adjacent one end thereof, the convex side of said groove being on the interior of the body portion, and a button adapted to rest against the convex side of said groove and enclosing the end of said body portion, the upper end of said body portion being turned inwardly to rest against the outer circumferential portion of said button and to hold said button firmly against said groove.

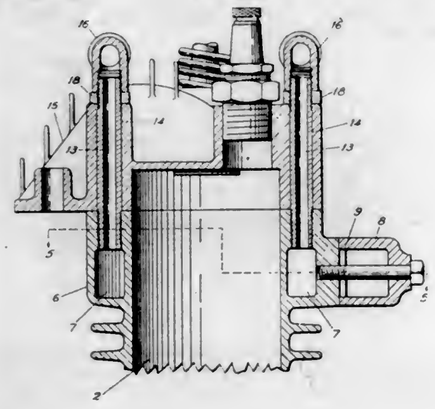
1,783,315. TINSEL CORD. JOHN R. SEXTON, Meriden, Conn. Filed Nov. 4, 1929. Serial No. 404,536. 3 Claims. (Cl. 117—52.)



1. A cord comprised of a core, a strand of tinsel of contrasting color extending parallel with and on the surface of the core, and a strand of tinsel of a different color tightly wound spirally about the core and parallel strand.

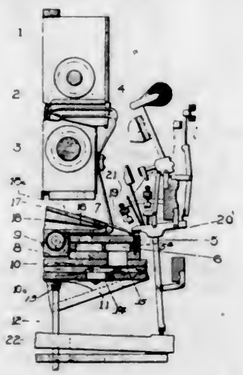
1,783,316. COMBINED LICENSE-TAG MOUNTING AND SIGNAL AND TAIL LIGHT. EDWARD LACY SHELTON, Memphis, Tenn. Filed Jan. 24, 1929. Serial No. 334,787. 1 Claim. (Cl. 177—329.)

In a signal light construction, a cylindrical casing having the opposite ends thereof open, an annular reflector mounted in the casing and engaging the inner walls thereof, a license plate bracket, said license plate bracket having an upstanding flanged ring mounted thereon, the forward end of said casing seating in said casing, said casing having an opening through the bottom wall thereof, a lens removably mounted in said opening, a downwardly inclined arcuate member having reverted end portions mounted in said casing and above said wall opening, said member having outwardly extending eers for engagement with said bracket whereby to hold the casing thereon, a substantially vertically disposed arcuately inclined reflector secured at one end to said first arcuate member and at the opposite end engaging said annular reflector, said first member and second member dividing said casing into light compartments, lamps mounted in each compartment, lenses mounted in the casing and at the opposite end portions of each compartment, and removable means for holding the lenses against the opposite end portions of the casing.



1,783,317. BALL-BEARING MOUNTING FOR DANDY ROLLS. PETER S. SINCLAIR, Holyoke, Mass. Filed Feb. 14, 1930. Serial No. 428,340. 5 Claims. (Cl. 92—48.)

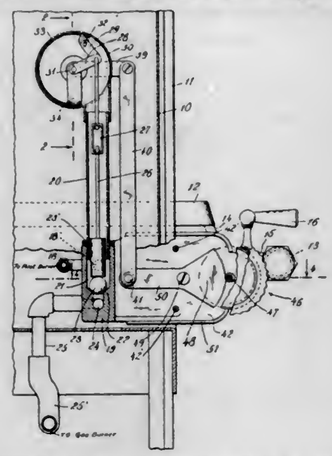
1. A dandy roll construction comprising a tubular member composed of non-corroding material and formed with water discharging openings, a plurality of ball bearings mounted on the tubular member for rotatably supporting the woven wire fabric of the roll, ring members for securing the woven wire of the roll, the ball bearings being located adjacent the discharge openings.



1,783,318. ENGINE-COOLING COWL. OWEN H. SPENCER, Indianapolis, Ind. Filed June 17, 1929. Serial No. 371,362. 6 Claims. (Cl. 123—171.)

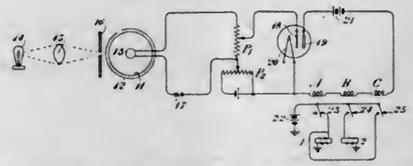
1. The combination with the cylinders of an engine having passage forming jackets surrounding the same, and bores thru which the air escapes from said passages, of means for directing a blast of air over the exterior of said cylinders, means for collecting a portion of the blast of air and directing the same into and thru said passages, and means at the discharge ends of said bores

for causing the external blast of air to create a suction thru said bores and aid in the discharge of the air from said passages.



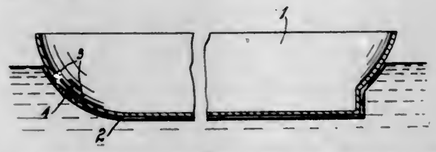
1,783,319. MECHANISM FOR PLAYER PIANOS. WILLIAM B. TUNSTALL, Worcester, Mass. Filed July 11, 1927. Serial No. 204,873. 6 Claims. (Cl. 84—50.)

1. In a mechanism for automatic musical instruments, in combination, a plurality of similar pneumatic power units and a single wind chest having two chambers, one connecting the exhausters and the reservoir, and the other forming a common channel for conveying the vacuum effect from said exhausters to pneumatic power units fastened thereon.



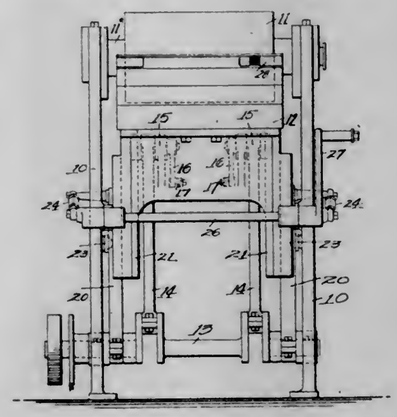
1,783,320. THERMOSTATIC-CONTROL APPARATUS. ARTHUR W. WALKER, Malden, Mass. Filed Oct. 27, 1928. Serial No. 315,443. 2 Claims. (Cl. 236—15.)

1. In combination with an oven a thermostatic element and a fuel valve controlled by said element both located inside said oven, a calibrated adjusting device for said thermostatic element situated outside of said oven near the bottom thereof below said thermostat and remote therefrom and operatively connected to said thermostatic element by means of a segmental gear adapted



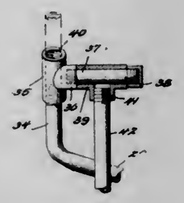
to be operated by said adjusting device, a lever arm adapted to operate said thermostatic element and a link operatively connecting said lever and said gear.

1,783,321. ELECTRICAL TRANSMISSION OF PICTURES. ALLAN WEAVER, Brooklyn, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Mar. 26, 1924. Serial No. 702,109. 6 Claims. (Cl. 178—7.)



1. A picture representation, a light-sensitive element, an electric circuit connected with said light-sensitive element to be controlled thereby, amplifying means associated with said circuit, means to test the elements of said picture representation in succession and actuate said light-sensitive element accordingly, and means associated with said amplifying means adapted to be adjusted to obtain a suitable functional relation between the current in said circuit and the quantity of light incident on said light-sensitive element.

1,783,322. ANTIFRICTION ATTACHMENT FOR VESSELS. ALBERT L. WIDDIS, Harrisville, Mich. Filed Oct. 23, 1929. Serial No. 401,665. 4 Claims. (Cl. 114—67.)

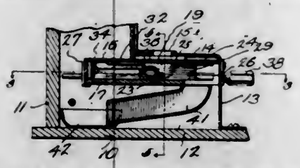


1. An attachment for vessels comprising a pipe extending from substantially the water line at the bow to the water line at the stern, means to secure said pipe to the vessel, said pipe having holes therein which extend outwardly and rearwardly, and intake pipes extending into said first named pipe, and baffles on the hull of the vessel, said baffles extending substantially the length of the vessel.

1,783,323. TILTING CASTING BOX. HENRY A. WISE WOOD, New York, N. Y., assignor to Wood Newspaper Machinery Corporation, New York, N. Y., a Corporation of Virginia. Filed Oct. 12, 1926, Serial No. 141,168. Renewed Apr. 17, 1930. 9 Claims. (Cl. 22—2.)

1. In a stereotype plate casting device, the combination with a core, of a reciprocable concave back cooperating with the core and having means for holding the matrix therein, said back being mounted to swing on a horizontal axis at a distance beyond the convex side of the back to a position at the side of the core for facilitating the positioning of the matrix.

1,783,324. EXTENSION CLUTCH CONTROL FOR TRACTOR EQUIPMENT. FRANK L. YOUNG, Washington, D. C., assignor to William D. Shoemaker, Washington, D. C. Filed Dec. 9, 1927. Serial No. 238,840. 4 Claims. (Cl. 74—39.)

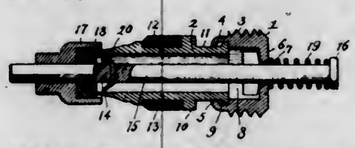


2. In a piece of equipment adapted to be used in connection with a gas tractor, an extension clutch control for the tractor clutch comprising an oscillatory rod, one end of which is provided with means for depressing the clutch pedal during the movement of the rod, an operating element for oscillating said rod, and means for connecting said operating element to said rod either in linear extension of the rod to form a hand control or as a pendant extension from said rod to form a foot control.

1,783,325. COIN-CONTROLLED VENDING MACHINE. JOSEPH W. BEESON, East St. Louis, Ill., assignor to John E. Carson, Belleville, Ill. Original application filed Dec. 29, 1928, Serial No. 329,275. Divided and this application filed Oct. 26, 1929. Serial No. 402,647. 2 Claims. (Cl. 194—80.)

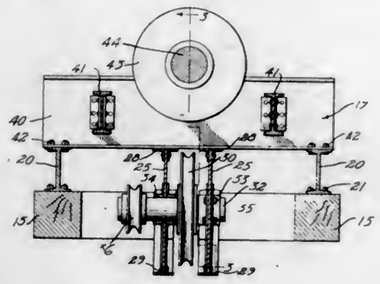
1. In a coin controlled article vending machine, a casing, a pair of spaced guide plates horizontally mounted in said casing, a carriage slidably mounted between said plates including a side strip, the lowermost plate hav-

ing a coin exit slot therein, the uppermost plate having a coin entrance slot therein, in rear of the coin exit slot, a manually controlled operating plunger slidably mounted in the casing having a manipulating knob arranged exteriorly of the casing, a lock plate rigidly connected with the plunger, means slidably connecting the lock plate with one side strip of the carriage, the mentioned side strip of the carriage and the lock plate having inwardly directed coin gripping means formed thereon in spaced relation relative to one another directly below the coin



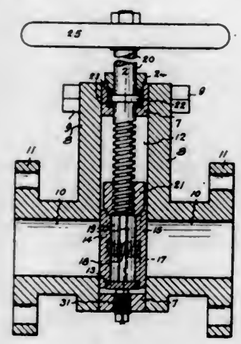
entrance slot, whereby upon the depositing of a coin in said slot the plunger will be locked with the carriage upon forward movement of the plunger, the coin being movable with the carriage and plunger above the coin exit slot upon forward movement of the carriage, whereby upon the return movement of the plunger the coin will be released for movement through said exit slot, and means carried by the lock plate for engaging the carriage on its return movement to return the carriage to its normal position.

1,783,326. WINDOW PANE. AUGUST BÖTTNER, Eltmannshausen, Germany. Filed Sept. 12, 1928, Serial No. 305,550, and in Germany Jan. 23, 1928. 1 Claim. (Cl. 20—56.5.)



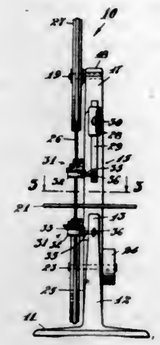
A window pane, comprising two spaced glass plates having each a groove in each rim and being so arranged relatively to one another that the grooves of the two plates lie opposite one another, and packing strips located in said grooves.

1,783,327. VALVE INSIDES. JOHN C. CROWLEY, Cleveland Heights, Ohio, assignor to The Dill Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Nov. 13, 1929. Serial No. 406,767. 2 Claims. (Cl. 152—12.)



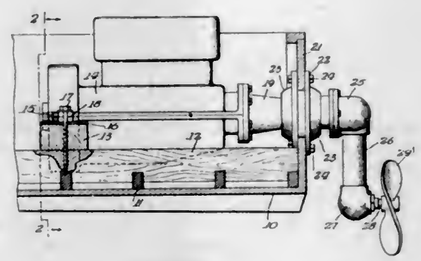
1. A valve pin for use with a valve insides and having an enlargement formed thereon and adapted to lie adjacent the valve proper carried by the pin, said enlargement comprising a cup-like portion integrally formed on said pin and surrounding the same.

1,783,328. CROWN BLOCK. WILLIAM D. DAVIDSON, Los Angeles, Calif., assignor to Emsco Derrick & Equipment Company, Los Angeles, Calif., a Corporation of California. Filed Jan. 9, 1928. Serial No. 245,590. 1 Claim. (Cl. 254—190.)



In a crown block construction the combination of: a frame including a pair of members, end portion of which are adapted to rest upon the water table of the derrick, and a central portion of which extends downwardly from said end portions; and a pair of lower sheaves rotatably mounted between said central portions of said frame members, the lower edges of said central portions being disposed below the lower portions of said sheaves.

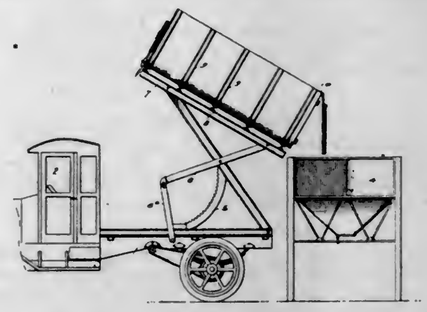
1,783,329. VALVE. JOHN H. EDMONDS, Seattle, Wash., assignor of one-third to Joseph E. Bellam, Seattle, Wash. Filed Jan. 16, 1928. Serial No. 246,938. 2 Claims. (Cl. 251—59.)



1. In a valve, a housing member having an open central portion of rectangular shape, end plates removably secured to said housing member and having aligned passageways that register with the open central portion of the housing member, a valve ring arranged for movement within the housing member, a stem having threaded engagement with the valve ring for moving the same into and out of alignment with the passageways in said end plates, two disks having cylindrical portions telescoped within said ring, said discs having radial grooves in their inner faces affording clearance for said stem when the valve is opened, flanges on said disks arranged to engage the outer side of said ring, springs between the discs for yieldingly holding the same against the end plates, and adjustable means on the bottom of said housing for limiting the downward movement of said valve ring.

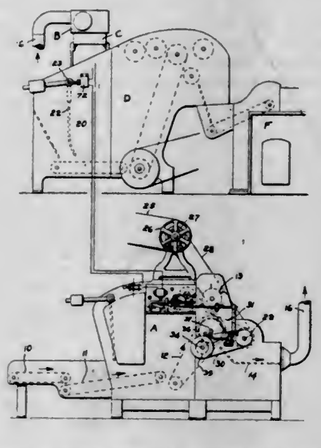
1,783,330. SAW GUIDE. WILLIAM W. EDWARDS, Los Angeles, Calif. Filed Dec. 16, 1929. Serial No. 414,422. 7 Claims. (Cl. 143—162.)

1. A band-saw guide comprising two members mounted in rotatable relation to each other and allowing the band saw to pass therethrough with clearance; means for securing the members to each other in any of selected rotative positions; means adjustably mounted upon one of the members so as to guidably engage the sides of the band saw, the saw-engaging means being adapted to twist the band saw in certain selected positions of the members; and means for securing the saw-engaging means, in any of the adjusted positions to the respective member.



1,783,331. PROPELLING MECHANISM FOR BOATS. EMERY H. FAHRNEY, Chicago, Ill. Filed Nov. 15, 1929. Serial No. 407,450. 6 Claims. (Cl. 115—34.)

1. Boat propelling mechanism of the outboard motor type, embodying a motor arranged adjacent the stern, means providing a three point suspension of the motor directly upon the framework of and within the boat, said suspension means embodying a ball and socket connection between the motor casing and the back board of the boat, a shaft extending from the motor through the back board of the boat, a vertical shaft depending from the motor shaft, and a propeller operatively connected with the vertical shaft.



1,783,332. METHOD OF PRODUCING, TRANSPORTING, AND HANDLING CEMENTITIOUS MATERIAL. OTA T. GRAHAM and OAKLEY J. GRAHAM, Richmond, Va. Filed Feb. 24, 1928. Serial No. 256,709. 6 Claims. (Cl. 83—73.)

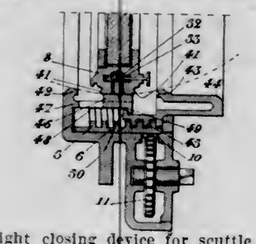
1. In a method of producing, transporting, and handling cementitious materials, those steps which include the mixing of the cementitious material in batches at a mixing plant, dumping the mixed material in quantities as desired into carriers for delivery to points distant while plastic, agitating the cementitious material while in

transit, bodily elevating the whole mass of concrete and dumping the same in quantities as desired at a point above the normal position of the chassis of the carrier.

1,783,333. AUTOMATIC FEED CONTROL FOR COTTON-OPENING MACHINERY. EDWIN M. HOLT, West Durham, N. C., assignor to Whitin Machine Works, Whitinsville, Mass., a Corporation of Massachusetts. Filed July 31, 1929. Serial No. 382,424. 7 Claims. (Cl. 19—68.)

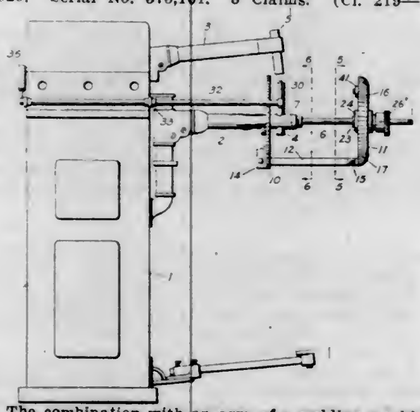
1. A cotton opening machine comprising a feeding conveyor, a belt drive therefor including tight and loose pulleys, a belt shipper to move the belt from one pulley to the other, a sliding bar connected to said belt shipper, a second sliding bar, means to continuously reciprocate said second bar, a plurality of cotton feeders, and means controlled by the joint action of all of said feeders effective to connect said bars to each other, whereby said first bar is actuated to stop the feed in the opening machine.

1,783,334. COLLOIDAL SILVER IODIDE COMPOUND AND METHOD OF PREPARING SAME. HARRY SANDERLIN KEELAN, Brooklyn, N. Y., assignor to E. R. Squibb and Sons, Brooklyn, N. Y., a Corporation of New York. Filed Jan. 13, 1927. Serial No. 161,023. 5 Claims. (Cl. 252—6.)



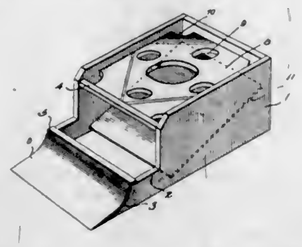
1. The process of preparing colloidal silver iodide, which comprises subjecting an insoluble silver salt in colloidal solution to reaction with an iodide of an alkali forming metal.

1,783,335. AUTOMOBILE BUMPER. FRANK J. LAHER, Oakland, Calif. Filed May 10, 1926. Serial No. 107,845. 5 Claims. (Cl. 293—55.)



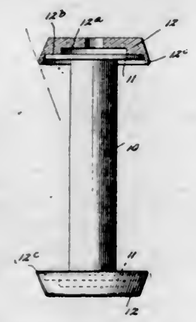
1. An automobile bumper comprising an impact member secured adjacent its ends to a support member so as to form substantially open looped ends, and a rubber block at each end of the impact member forming means for securing said members together.

1,783,336. SCUTTLE PORT AND LIKE TIGHT-CLOSED WINDOW. LOUIS LALANNE, Marseille, France. Filed Mar. 7, 1929, Serial No. 345,046, and in France Jan. 9, 1929. 6 Claims. (Cl. 114—178.)



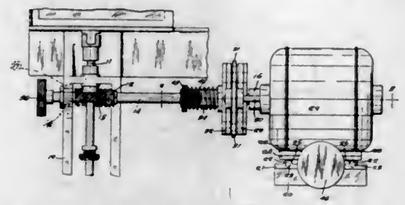
1. In a tight closing device for scuttle ports and the like, the combination of a pane holder constituted by two co-axial rings, the inner one of them having an exterior lateral surface curved in accordance with the radius of the inner lateral surface of the outer ring in such a manner as to ensure a tight closure between both rings, pivots connecting both rings together and enabling the inner ring to oscillate, a projecting member with tenon on the outer circumference of the outer ring of the pane holder, a fixed frame work, a transversal guide for said projecting member and tenon, a movable ring with nose for coacting with said tenon, an actuating ring acting upon said movable ring, means for moving said actuating ring in such a manner as to axially displace said actuating ring and said movable ring relatively to one another, the front side of the inner ring of the pane holder having a ring shaped tightening surface, and a second ring shaped tightening surface with the same diameter as the first one, in front of same and carried by the frame work.

1,783,337. ATTACHMENT FOR WELDING MACHINES. EARL W. LITTLE, Indianapolis, Ind. Filed June 24, 1929. Serial No. 373,101. 5 Claims. (Cl. 219—4.)



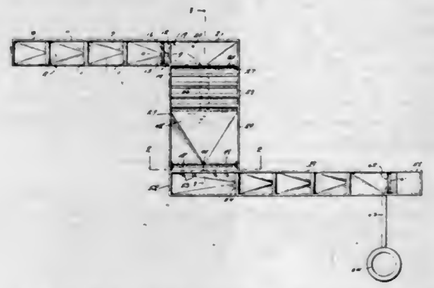
5. The combination with an arm of a welding machine, and an electrode extending therethrough, of a shaft attached to the end of said arm, a supporting and shaping structure adapted to support an assemblage of cage forming wires, said supporting and shaping member and said assemblage of wires enclosing said electrode and the adjoining ends of said arm and shaft, means for adjusting said shaft lengthwise for locking said electrode in adjusted position, and means for operating said shaft for releasing or locking said electrode when the cage forming wires are in position on said combined supporting and shaping means.

1,783,338. GAME APPARATUS. CHAUNCEY R. MANN, Troy, N. Y. Filed Mar. 29, 1930. Serial No. 439,993. 1 Claim. (Cl. 273—123.)



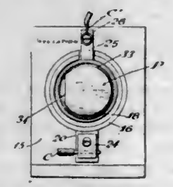
In a unitary baseball game device, a box-like frame having a front apron inclined rearwardly and upwardly and formed on a curve increasing in curvature from its front edge rearwardly, a horizontal top-plate supported by the frame rearwardly to and at a higher level than the apron and having represented thereon a baseball diamond with perforations representing conventional baseball terms, a cutout portion rearwardly of the apron and in front of the top-plate providing a space between apron and plate serving as a hazard and as a means of access to the interior of said frame, a bottom plate supported by the frame and inclined toward the front of the frame, the construction being such that a ball propelled in a longitudinal direction toward the apron will strike the same and be given a steep trajectory in a rearward direction so that it may enter a perforation in the top-plate.

1,783,339. BOBBIN OR SPOOL CAP. JOHN R. MITCHELL, Trenton, N. J. Filed Oct. 9, 1928. Serial No. 311,316. 2 Claims. (Cl. 242—161.)



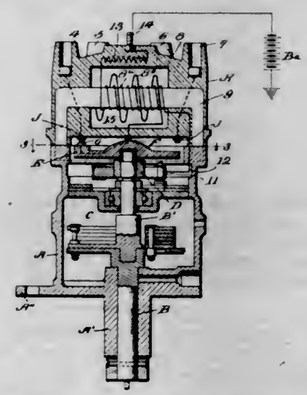
1. As an article of manufacture a cap for covering the heads of bobbins or the like, said cap being integrally formed of vitreous material and having on one side a recess, a ledge surrounding said recess and having a flat surface, the material of said cap around said recess being thickened to form said ledge, whereby warping of the cap during manufacture is prevented, and a flange surrounding said ledge.

1,783,340. GEAR DRIVE FOR CINEMATOGRAPHIC PROJECTORS. ELWYN E. OLIVER, Cleveland, Ohio. Filed July 2, 1927. Serial No. 203,041. 6 Claims. (Cl. 74—26.)



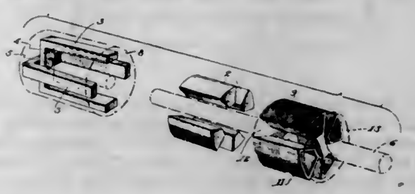
1. A variable speed drive for a cinematographic projector, comprising: a driven shaft, connected to said projector to operate said projector; a driving shaft, parallel to said driven shaft and movable toward and from said driven shaft; an intermediate disc, carried by one of said shafts; a sleeve, rotatable with the other of said shafts but reciprocable longitudinally thereon; and a pair of cooperating discs, rotatable with said sleeve but movable toward and from each other, and provided with inner faces adapted to cooperate with the two faces of said intermediate disc at a distance from the axis of one of said shafts variable and depending upon the then distance by which said shafts are separated.

1,783,341. SYSTEM OF FILTRATION. JOHN PUGLIESE, South Manchester, Conn. Filed Aug. 31, 1929. Serial No. 389,759. 5 Claims. (Cl. 210—5.)



1. A filtering apparatus comprising an upper tank, partitions dividing the tank into a plurality of chambers, each chamber discharging into the next chamber over an interposed partition, each of said partitions having an opening adjacent to the bottom of the tank, a valve closing each of said openings, said partitions having additional openings spaced above the bottom of the tank, valves for closing said second named openings, a trough into which the tank discharges, and a filtering medium within the trough.

1,783,342. LOCKING PLUG FOR ELECTRIC CIRCUITS. FREDERICK E. REINHOLD, Van Nuys, Calif. Filed May 8, 1928. Serial No. 276,172. 1 Claim. (Cl. 173—356.)



In combination, an electric socket having a screw shell, and a one part screw plug having a circular head secured in said shell, the periphery of said head being deformed and of slightly less diameter than the internal diameter of said shell and adapted to be engaged by a circular socket tool whose inner periphery is deformed similar to the periphery of the plug for removing the same from the shell, the head of said plug being disposed below the rim of the screw shell when the plug is secured therein to prevent unauthorized removal.

1,783,343. BATTERY IGNITION SYSTEM. CURT FREDERICK REIS, Chicago, Ill., assignor to Excel Magneto Co., Chicago, Ill. Filed Mar. 26, 1929. Serial No. 350,039. 6 Claims. (Cl. 123—148.)

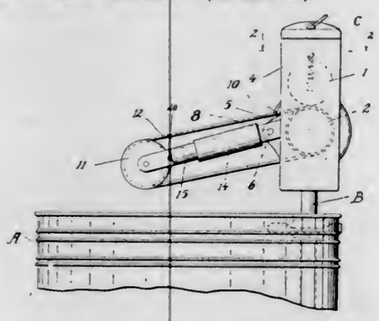
1. A distributor head comprising a body of molded insulating material having embedded therein an induction coil, said coil being provided with an angular core the two ends of which are exposed at spaced points on the flat bottom face of said distributor head.

1,783,344. ROTOR FOR MAGNETOS. CURT FREDERICK REIS, Chicago, Ill., assignor to Excel Magneto Company, Chicago, Ill. Filed Sept. 17, 1929. Serial No. 393,245. 6 Claims. (Cl. 171—206.)

1. A rotor for magnetos including a plurality of separate U-shaped members of magnetic material, and pole pieces each having one end in intimate contact with one of the arms of said U-shaped members.

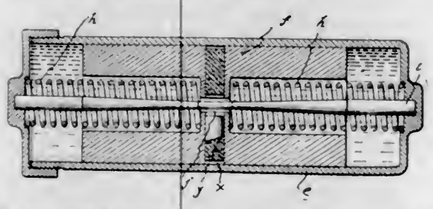
1,783,345. STEREOTYPE-PLATE-COOLING APPARATUS. OSCAR CHARLES ROESEN, Brooklyn, N. Y., assignor to Wood Newspaper Machinery Corporation, New York, N. Y., a Corporation of Virginia. Filed Mar. 5, 1927. Serial No. 173,159. 8 Claims. (Cl. 62—1.)

1. In a device of the character described, the combination with a conveyor and tracks for supporting the



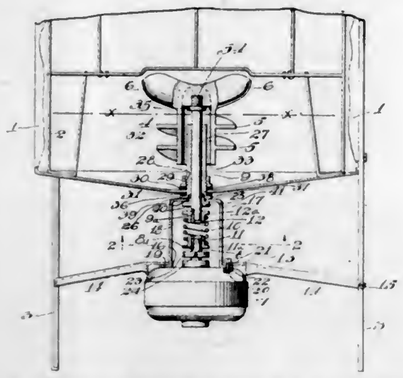
straight edges of stereotype printing plates, the conveyor being arranged to move the plates along the tracks, of means located adjacent to the tracks for subjecting the plates to the action of a cooling medium as they pass along under the influence of the conveyor.

1,783,346. HANDLE FOR TOOLS. JOHN T. SCULLY, New York, N. Y. Filed Dec. 6, 1927. Serial No. 238,120. 3 Claims. (Cl. 7—16.)



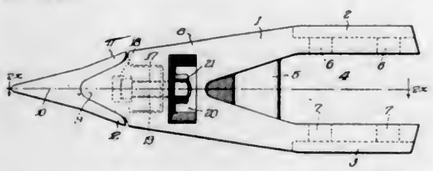
1. A handle for tools including a longitudinal body having a longitudinal bore therein, and, formed in the marginal wall of said bore, at least one longitudinally disposed tool receiving slot having its inner wall disposed at right angles or substantially so to radii of said bore.

1,783,347. FEED APRON FOR WRINGERS. FRED W. SIGSBEY, Willoughby, Ohio. Filed Apr. 3, 1928. Serial No. 266,960. 4 Claims. (Cl. 68—32.)



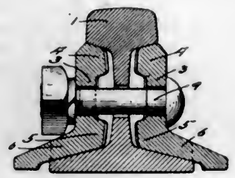
1. Mechanism for use with wringing apparatus comprising a carrier belt, a roller supporting means therefor, and tensioning means associated with said supporting means for said carrier belt and the roller comprising telescopic arms, and expanding means for expanding the same.

1,783,348. SHIMMYING DAMPENER. CECIL HAMELIN TAYLOR, Detroit, Mich. Filed Mar. 27, 1925. Serial No. 18,798. 7 Claims. (Cl. 280—90.)



3. An inertia member, comprising a cylinder, a free piston slidable therein, said cylinder and piston provided with a dashpot opening from one side of the piston to the other and the cylinder arranged to contain a fluid, and means for varying the area of the dashpot opening.

1,783,349. DISHWASHING MACHINE. ELIHU D. WATT, La Grange, and GEORGE W. CONOVER, Chicago, Ill., assignors to The Conover Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 20, 1926. Serial No. 136,712. 6 Claims. (Cl. 141—9.)



1. A dishwashing machine including a vertical receptacle for dishes elevated from the floor, supporting legs therefor resting upon the floor, a rotary water propelling device disposed within said receptacle, a motor inferiorly and centrally disposed in respect to the receptacle having an upwardly extending shaft for driving said propelling device, a supporting spider for said motor, from the central part of which the motor is suspended and which is provided with outwardly and downwardly extending arms, the outer ends of said arms being attached to the supporting legs of the receptacle, and a rigid one-piece centralizing member for said shaft disposed between said motor and said receptacle and connected to the central portion of said spider, to the central portion of the bottom of said receptacle and to the central portion of the top of said motor and embracing said upwardly extending shaft.

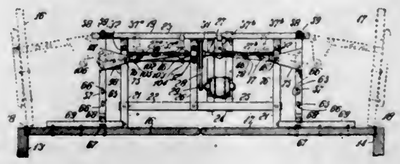
1,783,350. DIPPER TOOTH. JAMES RALPH WATTS, New Castle, Del., assignor to American Manganese Steel Company, Chicago, Ill., a Corporation of Maine. Filed Dec. 17, 1928. Serial No. 326,466. 2 Claims. (Cl. 37—142.)

1. In excavating apparatus, a digging tooth comprising a tooth base having inclined upper and lower faces and vertical side walls said side walls forwardly extending beyond said upper and lower faces to form tapered noses, said base having a rectangular socket opening inwardly from between the side walls, said base also having a transverse pocket opening into said base from one side wall and a bolt receiving opening connecting said socket and said pocket, a tooth point designed to be mounted on said tooth base and including a shank to be received in said socket, diverging jaws rearwardly extending from said point having inclined upper and lower faces to cooperate with the upper and lower faces of said base, said shank having a substantially T-shaped slot opening transversely into the side of said shank, a bolt connecting said shank to said base and adapted to fit into said T-shaped slot and a securing nut for said bolt adapted to be inserted through the lateral pocket of said base and to be threaded to the end of said bolt.

1,783,351. SPLICE BAR OR FISHPLATE. LAWRENCE S. WILBUR, Evanston, Ill. Filed June 24, 1929. Serial No. 373,286. 13 Claims. (Cl. 238—243.)

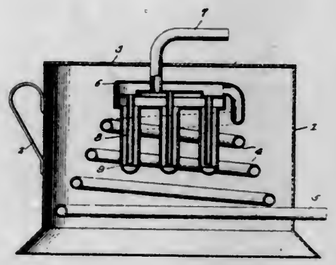
1. In a rail joint, a splice bar or fish plate having an inwardly curved middle portion, and having straight end portions in alignment with each other, said middle portion being humped or crowned.

1,783,352. SPLICE BAR OR FISHPLATE. LAWRENCE S. WILBUR, Evanston, Ill. Filed June 24, 1929. Serial No. 373,287. 7 Claims. (Cl. 238—243.)



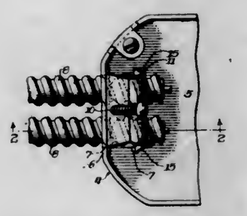
1. A splice bar or fish plate comprising an inwardly curved or bulged middle portion disposed between two straight end portions, said end portions being disposed at an angle to each other, whereby these end portions extend away from the sides of the rails when the splice bar or fish plate is in use on a rail joint.

1,783,353. SPLICE BAR OR FISHPLATE. LAWRENCE S. WILBUR, Evanston, Ill. Filed June 28, 1929. Serial No. 374,369. 6 Claims. (Cl. 238—243.)



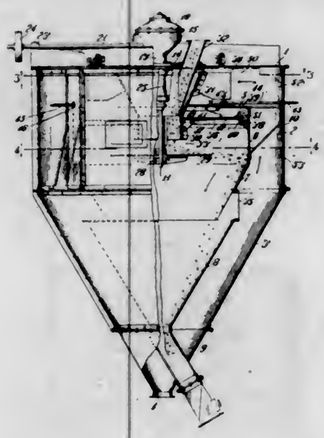
1. A splice bar or fish plate for rail joints, comprising an inwardly bulged or curved middle portion disposed between end portions which are straight and disposed at an angle to each other, said middle portion being humped or crowned, whereby the bar is of greater fishing height at its middle than at the ends thereof, whereby said end portions extend away from the rails.

1,783,354. DOOR-OPERATING MECHANISM. HARRY G. AINSWORTH, Aurora, Ill. Filed July 20, 1928. Serial No. 294,159. 18 Claims. (Cl. 268—63.)



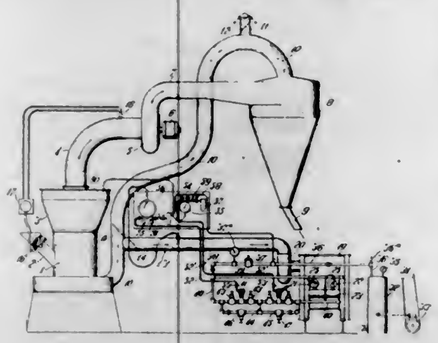
1. In door operating mechanism, the combination with a doorway and a door mounted to swing into and out of said doorway, of a door operator comprising an electric motor, motion transmitting mechanism driven by said motor comprising a lever pivotally mounted to swing about a fixed axis and operative to swing said door to both its open and closed positions, and yieldable means opposing the operation of said motion transmitting mechanism as said door approaches one of its extreme positions.

1,783,355. PORTABLE HEAT-EXCHANGING APPARATUS. JEAN BAPTISTE DOMINIQUE LÉON CHABBARD, Paris, France, assignor to Risler Corporation of America, Kansas City, Mo., a Corporation of Delaware. Filed July 28, 1927, Serial No. 209,117, and in France July 28, 1926. 3 Claims. (Cl. 257—229.)



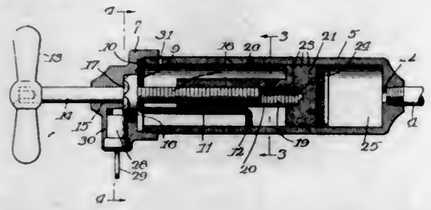
2. Heat exchanging apparatus including a coil, an intake manifold connected with the coil, an outlet manifold having a discharge conduit, primary tubes leading from the intake manifold, secondary tubes housing the primary tubes and communicating with the outlet manifold, and a heat confining case enclosing the coil, the manifolds and said tubes.

1,783,356. CONDUIT CLAMP FOR AN OUTLET BOX. HERBERT RAY COOK, Chicago, Ill., assignor to Jefferson Electric Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 9, 1928. Serial No. 268,405. 7 Claims. (Cl. 247—25.)



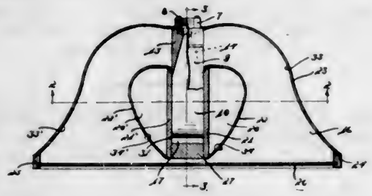
1. The combination with an outlet box having side and bottom walls with knockout holes therein adjacent their point of joining, a headed anchoring screw engaging the intersection of said walls from within said box and positioned so as substantially to bisect the angle between said walls, a clamping member loosely positioned on said screw and shiftable to permit insertion of a conduit into said box through either of said knockout holes, and engaging portions on said member at the opposite edges thereof positioned so that when said anchoring screw is tightened one of said portions will engage such a conduit near its end to clamp it against the adjacent wall while the other of said portions will engage the conduit adjacent the hole through which it extends so as more completely to close said hole and clamp the conduit against the opposite edge of said hole.

1,783,357. MECHANICAL SEPARATOR. WALTER M. COOK, Ludlow, Vt., assignor to International Combustion Engineering Corporation, New York, N. Y., a Corporation of Delaware. Filed Dec. 23, 1929. Serial No. 416,050. 21 Claims. (Cl. 209—144.)



2. In a separator comprising a casing, a rotary distributing member therein, and means for causing an upward air flow in the casing, a rotary deflector positioned above the distributor, and an annular stationary deflector carried by the casing and overlapping the circumferential portion of the rotary deflector.

1,783,358. AUTOMATIC TEMPERATURE CONTROL IN PULVERIZING MILLS. JOE CRITES and WALTER A. KOREN, Evanston, Ill., assignors to the Raymond Brothers Impact Pulverizer Co., Chicago, Ill., a Corporation of Illinois. Filed Jan. 11, 1929. Serial No. 331,729. 23 Claims. (Cl. 83—44.)

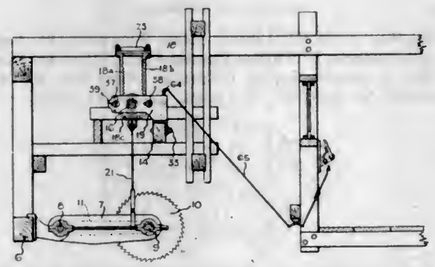


11. In a pulverizing and drying apparatus, a pulverizing mill including means for feeding thereinto material to be pulverized, means for circulating heated air through the mill including a conduit for withdrawing air and pulverized material suspended therein from the mill, a separator for removing the pulverized material, and a return conduit for returning a portion of the air to the mill, a supply conduit leading into the return conduit, means including a heater for delivering preheated air to the supply conduit, and means responsive to the temperature in the mill for controlling the heater.

1,783,359. SLACK-TAKE-UP DEVICE. RAY H. FLOYD, Chicago, Ill., assignor to Unique Spark Plug Cleaner Co., Chicago, Ill., a Corporation of Illinois. Filed Feb. 14, 1927. Serial No. 168,174. 4 Claims. (Cl. 60.5—4.6.)

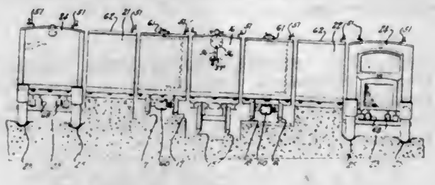
1. In a hydraulic controller, the combination of a cylinder, a cylindrical plunger in said cylinder, a rotary handle, means forming a fixed bearing holding said handle against axial movement, the handle and cylinder being axially aligned, screw threaded adjusting connection between said handle and said plunger, operative to cause back and forth movement of said plunger by the rotation of said handle, and means separate from the cylinder and enclosed therein to hold said plunger against rotation, said bearing and cylinder being rigidly but separably connected, and means to mount the bearing in fixed position to support the cylinder in fixed position.

1,783,360. SOUND AMPLIFIER. CHARLES C. FLYNN, Detroit, Mich. Filed Mar. 19, 1928. Serial No. 262,616. 4 Claims. (Cl. 181—27.)



1. A device of the class described, comprising: a housing; a pair of passage forming oppositely disposed walls spaced apart; a pair of oppositely disposed wedges co-operating with said walls and enclosing a passage, the inner surfaces of said wedges being inclined to their longitudinal axis, the inner surfaces of said wall forming members throughout the major portion of said wedges being parallel and throughout the rest of their length being flared outwardly from each other on harmonic curves.

1,783,361. MUSIC-INSTRUCTION DEVICE. GEORGE HERBERT DWIGHT GIBSON, Ottawa, Ontario, Canada. Filed May 12, 1927, Serial No. 190,914, and in Canada Apr. 4, 1927. 4 Claims. (Cl. 84—473.)



2. A music instruction device of the character described, comprising a member bearing musical staves and perforations on the lines and spaces of each said staff disposed in two inclined but parallel rows, and a slidable element bearing musical indicia adapted to be exposed through the said perforations, characterized in that on one or more staves for "sharp" keys the perforations are arranged in a regularly ascending but staggered progression on the lines and spaces corresponding to the notes F C G D A E B, while on one or more staves for "flat" keys the perforations are arranged in a regularly descending but staggered progresson on the lines and spaces corresponding to the notes: B E A D G C F.

1,783,362. TRIM-SAW LIFT UNIT. JACK L. GOODSPEED, Seattle, Wash., assignor to Prescott Iron Works, Seattle, Wash. Filed Oct. 29, 1928. Serial No. 315,812. 7 Claims. (Cl. 143—41.)

1. In a trim saw lift unit, a vertically disposed saw suspending yoke comprising vertical, spaced racks, a driven gear disposed within the yoke, a releasable means normally supporting the yoke in raised position, means for actuating said supporting means to release the yoke for downward travel and permit one of said racks to engage the gear for a controlled lowering of the saw, means for limiting downward travel of the yoke after the gear has left the rack, manually controlled means for shifting the yoke when in lowered position to engage the other of said racks with the gear for raising the saw.

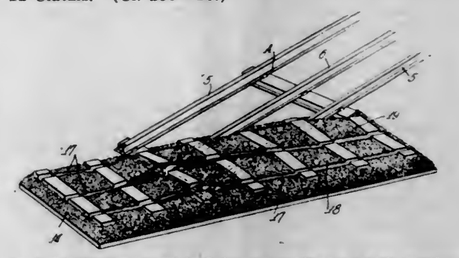
1,783,363. SYSTEM FOR HANDLING FREIGHT AND APPARATUS THEREFOR. ARMIN R. GROB, Milwaukee, Wis. Filed Apr. 16, 1928. Serial No. 270,408. 18 Claims. (Cl. 105—366.)

1. In an apparatus for handling freight, the combination of a laterally inclined foundation, a vehicle positioned on said foundation, receiving means positioned on the foundation adjacent the vehicle, a movable container, and means on said vehicle and receiving means for releasably holding the container, said container, when released, being movable by the force of gravity from the vehicle to the receiving means.

2. In an apparatus for handling freight, the combination of a laterally inclined foundation, a vehicle positioned on said foundation, container supporting means positioned on said foundation adjacent the vehicle, a movable container, and means on the container supporting means and on the vehicle for releasably holding said container, said container, when released, being movable by the force of gravity from the container supporting means to the vehicle.

1,783,364. COATING COMPOSITION. ROY H. KIENLE and LESTER V. ADAMS, Schenectady, N. Y., assignors to General Electric Company, a Corporation of New York. Filed Jan. 29, 1927, Serial No. 164,661. Renewed Apr. 9, 1930. 4 Claims. (Cl. 134—26.)

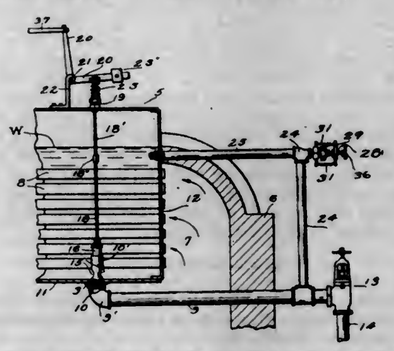
1. The process of treating an alkyd resin which consists in dissolving said resin in an organic liquid solvent, bringing the resulting solution into contact with an alkali in solid, granular form, removing the products of the resulting reaction together with uncombined alkali and suspending basic mineral matter in the neutral solution thus obtained.



1,783,365. DISPERSION AND METHOD OF MAKING THE SAME. RICHARD W. LEWIS, Monclair, N. J. Filed Feb. 28, 1927. Serial No. 171,726. 5 Claims. (Cl. 134—1.)

1. A dispersion of bitumen in water in which the dispersing agent is Portland cement.

1,783,366. DISPERSION AND METHOD OF MAKING THE SAME. RICHARD W. LEWIS, Montclair, N. J. Filed Apr. 12, 1928. Serial No. 269,612. 10 Claims. (Cl. 134—1.)



1. The method of dispersing bitumen in water, comprising mixing bitumen, aluminum hydroxide paste, clay and the water.

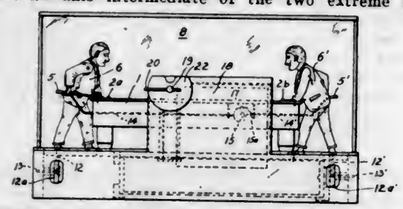
1,783,367. ROADBED CONSTRUCTION FOR TOY RAILWAYS. CLARENCE R. PETERSON, Jr., Pelham Manor, N. Y. Filed Jan. 30, 1930. Serial No. 424,532. 12 Claims. (Cl. 238—10.)

1. An imitation road-bed for toy railway track sections comprising two members adapted to receive a toy railway track section therebetween, one of said members having slits through which the rails of a track section may protrude, the other member forming a cushion for said track section.

1,783,368. SAFETY BLOW-OFF FOR BOILERS. LOUIS D. ROWLAND, Seattle, Wash. Filed Aug. 10, 1926. Serial No. 128,480. 1 Claim. (Cl. 122—504.)

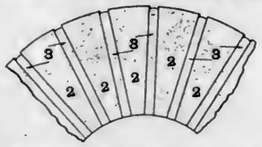
In combination with a boiler shell, an external circulating pipe connected at its upper and lower ends to the in-

terior of said shell below the normal water level therein, and normally in free communication therewith and subject to pressures therein, a valve within the boiler controlling communication with the upper end of the circulating pipe, and normally open, a second valve within the boiler controlling communication with the lower end of the circulating pipe, and a valve rod connected to said second valve and extending through the boiler shell, the upper and lower surfaces of said second valve being normally exposed to and acted upon by forces originating in the downward and upward components, respectively, of the pressure in the boiler, whereby said second valve is normally held raised by an upwardly acting force which is the resultant of the said downwardly acting force on the area of the upper surface of the valve, less the area of the valve rod, and the said upwardly acting force on the whole area of the lower surface of the valve, and said second valve being otherwise unsupported.



1,783,369. CONDENSER. PHILIP B. SADTLER, Chicago, Ill., assignor to Swenson Evaporator Company, Harvey, Ill., a Corporation of Illinois. Filed Oct. 1, 1928. Serial No. 309,393. 8 Claims. (Cl. 257—231.)

1. A condenser unit for a still comprising, a tubular body for mounting vertically upon the still evaporator and having a bottom inlet for communication with the vapor chamber of the evaporator, a vapor stack rising from the bottom inlet to a point in the upper region of the tubular body, superposed cooling medium distributing and discharge drums mounted on the top of the body and two sets of cooling medium tubes supported by the drums in the space in the body about the vapor stack, the tubes of one set communicating with the chamber of one of the drums and the tubes of the other set surrounding those of the first set and communcating with the chamber of the other drum, the inner tubes extending almost to the bottom of and there opening into the outer tubes and the outer tubes being closed at their lower ends.

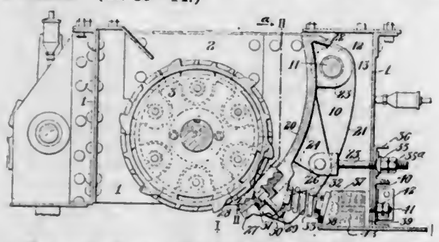


1,783,370. GAME APPARATUS. VERNON D. SALTER, Oakland, Calif. Filed Apr. 2, 1928. Serial No. 266,550. 4 Claims. (Cl. 273—85.)

1. In a game apparatus, a table having at least three holes therein through which balls may be passed, a tiltable receptacle underlying all of said holes and pivoted about an axis intermediate of the two extreme holes,

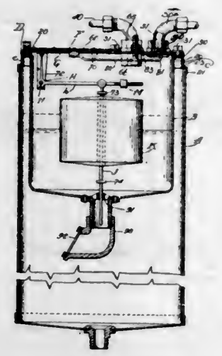
whereby a ball dropping through a hole may be elevated through either of said extreme holes to the surface of said table.

1,783,371. COMMUTATOR. HANS WEICHSEL, St. Louis, Mo., assignor to Wagner Electric Corporation, St. Louis, Mo., a Corporation of Delaware. Filed Oct. 9, 1929. Serial No. 398,500. 3 Claims. (Cl. 171—32.)



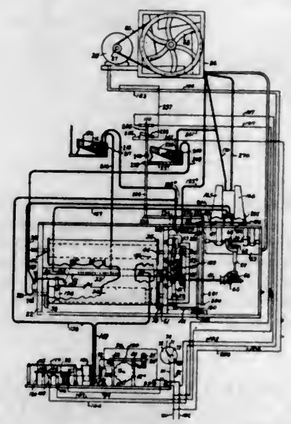
1. A commutator for dynamo electric machines comprising conducting segments separated adjacent their brush contacting ends by insulating material the entire thickness of which is subject, during commutator wear in operation, to such progressive disintegration under the influence of the electrical effects of the interaction of the commutator and brushes as will cause the outer limit of the undisintegrated portion to be lowered upon the wearing down of the brush contacting surface of the commutator.

1,783,372. DETONATOR AND PROCESS OF MAKING. CLIFFORD A. WOODBURY, Media, Pa., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed May 3, 1928. Serial No. 274,964. 7 Claims. (Cl. 86—20.)



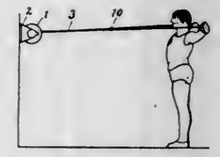
1. A process of loading detonator tubes which comprises charging the tubes with a mixture of at least two explosives, at least one of which melts at a temperature below 100° C., subjecting the charge to sufficient heat to melt the low melting constituent, and then solidifying the charge by cooling.

1,783,373. SINGLE-ROLL CRUSHER. GEORGE W. BORTON, Philadelphia, Pa., assignor to Pennsylvania Crusher Company, New York, N. Y., a Corporation of New York. Filed May 9, 1924. Serial No. 711,949. 4 Claims. (Cl. 83—14.)



1. The combination, in a single roll crusher having an open hopper and an unobstructed delivery space and a toothed crushing-roll rotatably mounted in the throat of the hopper, of a breaker plate cooperating with said roll and disposed in relatively fixed position with respect thereto and out of contact therewith; said breaker plate comprising a plurality of interchangeable sections, a common support for each of said breaker plate sections, individually adjustable and yieldable supports for said breaker plate sections, common supporting means for said individually yielding supports, and tension means for each breaker plate section disposed above said yieldable supports.

1,783,374. FUEL-FEEDING DEVICE. CHARLES S. BURTON, Oak Park, Ill. Filed Oct. 20, 1928. Serial No. 313,708. 13 Claims. (Cl. 103—236.)

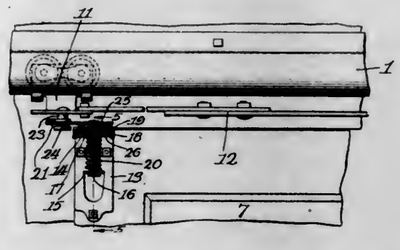


1. In a structure for the purpose indicated in combination with a chamber arranged to be connected with a source of suction for producing partial vacuum in said chamber and having a liquid supply connection and an atmosphere inlet port, an inwardly opening valve which controls the atmosphere inlet port arranged also for sliding on its seat for opening and closing, and having associated with it a spring stressing it on its seat adapted to yield to permit the valve to be eased on its seat by the suction for venting the vacuum in the chamber upon the vacuum passing a predetermined degree, a float in the chamber and means positioned for being actuated by the float at a predetermined high level of the liquid in the chamber, and operating connections from said means for giving the valve sliding opening movement.

1,783,375. PROGRAM DEVICE FOR PLAYER MUSICAL INSTRUMENTS AND PROGRAM STRIP THEREFOR. WILLARD J. BUTLER, Cincinnati, Ohio. Filed Nov. 12, 1928. Serial No. 318,923. 21 Claims. (Cl. 84—115.)

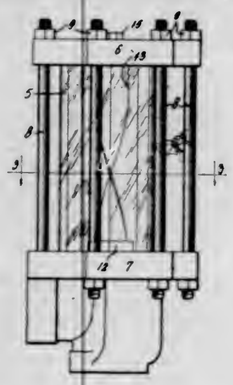
1. In combination, a musical instrument comprising pneumatics for note production, a barometer, and a program roll complemental to said pneumatics, said program roll provided with note perforations for producing music complemental to time by said horometer.

1,783,376. EXERCISING MACHINE. CHARLES L. DUFF, Columbus, Ohio. Filed Feb. 2, 1929. Serial No. 336,936. 4 Claims. (Cl. 272—79.)



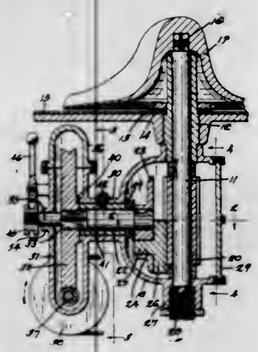
1. An exercising machine of the class described having in combination a supporting frame, a rotatable spindle having its ends journalled in bearings formed in said frame, a relatively heavy member connected to said spindle adjacent each end thereof, a flexible member, and yieldable means connecting the flexible member externally to the spindle, whereby to eliminate the shock produced by the sudden rewinding of the flexible member on the spindle.

1,783,377. PROCESS OF MAKING DISINFECTANT COMPOSITIONS. MAX ENGELMANN, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Feb. 27, 1928. Serial No. 257,544. 16 Claims. (Cl. 167—19.)



4. A process of making dust-like disinfectant compositions containing mercury, which comprises effecting a reaction by intimate contact between a mercuric salt and an alkyl derivative of tetra valent lead, in the absence of a liquid diluent.

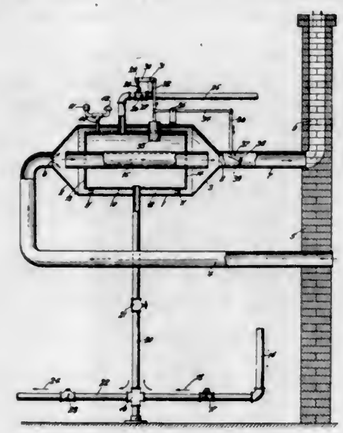
1,783,378. GARAGE-DOOR CONSTRUCTION. WILLIAM D. FERRIS, Sterling, Ill., assignor to Frantz Manufacturing Co., Sterling, Ill., a Corporation of Illinois. Filed Sept. 27, 1929. Serial No. 395,503. 4 Claims. (Cl. 20—20.)



1. In sliding and swinging door construction, the combination of a plurality of door sections hinged together to swing relatively about vertical axes, an overhead track comprising two straight portions connected by a rounded corner portion, hangers supporting the door sections on said track, an additional hanger allotted to an end section of the door structure, and mechanism on this end door section for automatically engaging and disengaging said addition hanger, when this end section is opened or closed, providing a support for said end section while the door structure as a whole is being moved around into open position, or back into closed position, preventing said end section from swinging around or getting in the way or striking the side wall of the building.

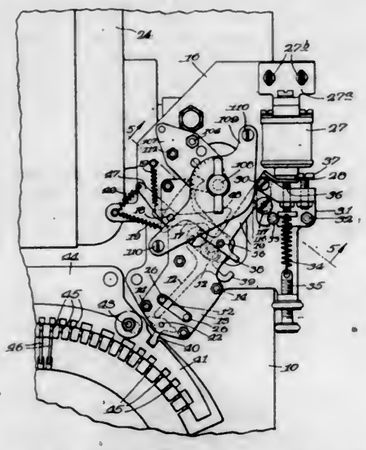
1,783,379. LIQUID-DISPENSING APPARATUS. HERMAN ADOLPH JACOB, Holyoke, Mass., assignor to Gilbert & Barker Manufacturing Company, West Springfield, Mass., a Corporation of Massachusetts. Filed Jan. 16, 1930. Serial No. 421,300. 3 Claims. (Cl. 116—117.)

1. In a flow indicator, a casing comprising a tubular member of transparent material held between two end caps, one of which has inlet and outlet passages for the liquid and the other of which is normally entirely closed, one of said passages having a part which opens into the interior of said casing and has its axis disposed substantially parallel with that of said member, and an indicator rotatably supported within said casing and visible through the transparent member thereof, said indicator having a portion extending into said part of the last named passage and so formed as to be rotated by the liquid passing therethrough.



1,783,380. MECHANICAL MOVEMENT. JAMES B. KIRBY, West Richfield, Ohio. Filed Mar. 31, 1928. Serial No. 266,192. 11 Claims. (Cl. 74—14.)

1. In a reversing mechanism, a driven shaft, a driving shaft perpendicular thereto, an elongated pinion carried by said driven shaft and extending past the end of said driving shaft, a crank carried by the end of said driving shaft, and a rack pivoted to said crank intermediate its length and slidable lengthwise of said pinion while meshing therewith.

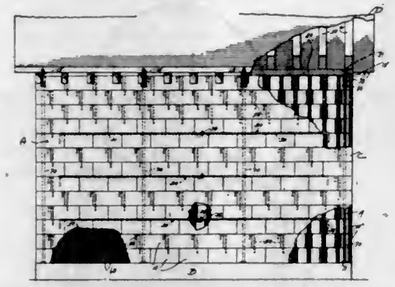


1,783,381. BOILER RETURN AND VACUUM TRAP. STANLEY C. KNEFEL, St. Louis, Mo. Filed Mar. 3, 1930. Serial No. 432,628. 14 Claims. (Cl. 236—56.)

1. A device of the character described, comprising a condenser, a vacuum trap supported in the condenser, means for admitting water into the trap, a pipe for admitting steam into the trap, means for causing a circulation of air through the condenser and about the trap,

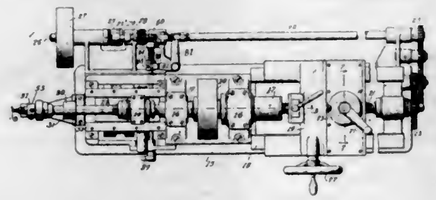
a valve for opening and closing said pipe, and automatic means for opening said valve to admit steam to the trap when the trap becomes filled with water.

1,783,382. ELECTRIC SELECTOR MECHANISM. HOWARD L. KRUM, Chicago, Ill., assignor to Teletype Corporation, Chicago, Ill., a Corporation of Delaware. Filed July 16, 1926, Serial No. 122,808. Renewed June 20, 1929. 22 Claims. (Cl. 178—27.)



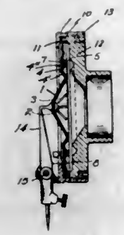
1. In an electric selecting mechanism, a set of selectors adapted to be conditioned in different combinations, a member common to all of said selectors and electro-magnetically vibrated in response to received signals to control the setting of the selectors, and intermittently acting locking means for holding said member against vibratory movement at definitely spaced intervals during the setting cycle.

1,783,383. BUILDING CONSTRUCTION. JAMES V. MONTRIEF, Bridgeport, Tex. Filed June 19, 1928. Serial No. 286,556. 15 Claims. (Cl. 72—42.)



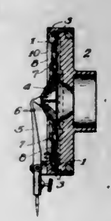
3. In a building construction the combination of a plurality of superposed building blocks defining a wall,

certain of said building blocks at the ends of the wall having vertical openings therein, and a tie rod construction for horizontally tieing and reinforcing the blocks in the wall comprising a pair of relatively movable sections



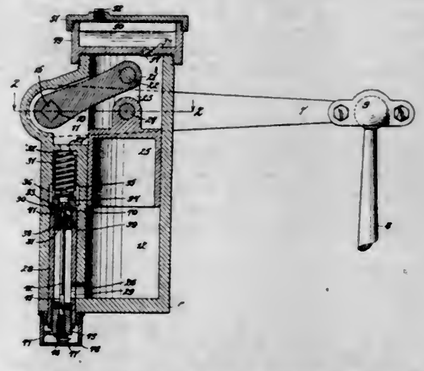
having the remote ends thereof provided with downturned anchors projecting into the openings of the end blocks of the wall, said rod sections at their adjacent ends having means to clamp the same in a definitely adjusted relation.

1,783,384. TUBE-TAPERING APPARATUS. FRIEDERICH MÜLLER, Elizabeth, N. J. Filed Nov. 20, 1926, Serial No. 149,664. Renewed Feb. 8, 1930. 27 Claims. (Cl. 80—12.)



1. Apparatus for varying the diameter of a tube, comprising, in combination, a draw-head adapted to grip the tube, a die having a variable orifice, means for moving the draw-head relatively to the die to draw the tube through the die, said means including replaceable elements for adjusting the rate of movement of the draw-head, a cam, and means controlled by the cam for varying the orifice in timed relation to the movement of the draw-head.

1,783,385. SOUND-REPRODUCING DEVICE. MARTIN NYSTROM, Chicago, Ill., assignor, by mesne assignments, to United Research Corporation, Long Island City, N. Y., a Corporation of Delaware. Filed Apr. 12, 1926. Serial No. 101,439. 13 Claims. (Cl. 181—32.)

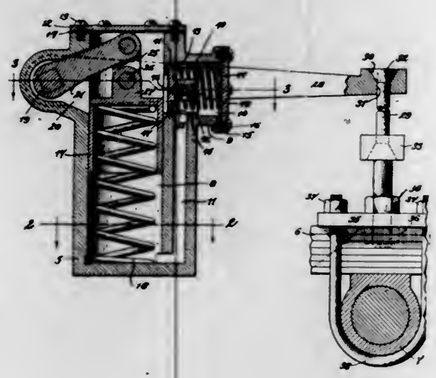


1. A diaphragm comprising an annular portion having an inner edge and approximately .002" in thickness, said annular portion being deformed to facilitate flexure thereof, and a central portion approximately .004" in thickness, deformed to prevent flexure thereof, said central portion having jaws gripping the inner edge of the other portion therebetween, said jaws being in facing relation so that a plane perpendicular to the face of the diaphragm and within the periphery thereof will run through both jaws and the portion gripped therebetween, said portions being composed of a light metallic substance substantially as light in weight as aluminum.

1,783,386. METHOD OF MAKING DIAPHRAGMS. MARTIN NYSTROM, Chicago, Ill., assignor, by mesne assignments, to United Research Corporation, Long Island City, N. Y., a Corporation of Delaware. Filed July 2, 1926, Serial No. 120,161. Renewed Mar. 12, 1930. 9 Claims. (Cl. 29—169.5.)

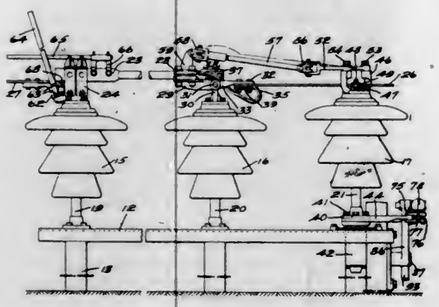
1. The process of making an acoustic diaphragm which consists in drawing the outer portion of an extremely thin metallic blank to reduce its thickness and deforming said outer portion to increase its flexibility.

1,783,387. SHOCK ABSORBER. VINCENT PATRICOLO, Buffalo, N. Y. Filed Apr. 8, 1929. Serial No. 353,592. 12 Claims. (Cl. 188—88.)



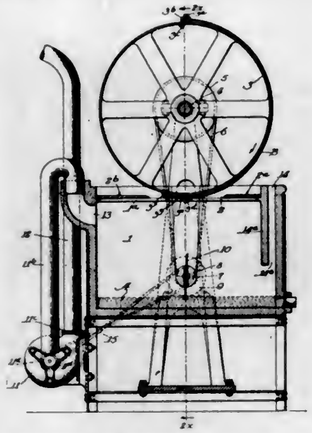
1. A hydraulic shock absorber, including a housing having a cylinder and a by-pass between the ends of said cylinder, a piston in said cylinder, means for reciprocating said piston through motion derived from the vehicle spring, said by-pass being formed to provide a seat, a movable valve member arranged in said by-pass and movable by liquid pressure toward and from said seat, said valve member being provided with a passage extending therethrough, valve means arranged in said passage, a stem for regulating said valve-means and projecting outwardly from said valve member, and means for adjustably limiting the movement of said stem to limit the movement of said valve member away from said seat.

1,783,388. SHOCK ABSORBER. VINCENT PATRICOLO, Buffalo, N. Y. Filed Mar. 2, 1928. Serial No. 258,570. 6 Claims. (Cl. 267—8.)



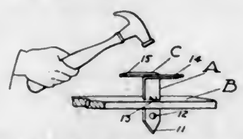
5. A hydraulic shock absorber including an enclosed housing having a main cylinder, a secondary cylinder

extending outwardly from the upper end of said main cylinder, and a by-pass communicating with the lower end of said main cylinder and said secondary cylinder, a piston in said main cylinder, means for reciprocating said piston through motion derived from the vehicle spring, a plunger in said secondary cylinder, a spring yieldingly holding said plunger in its inward position, said plunger comprising a cylindrical wall, a head at the inner end of said wall and an internally threaded stem



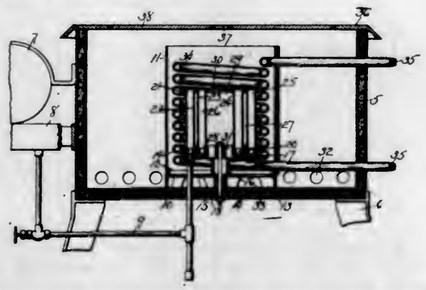
on said head, said stem being provided with a port between the interior of said plunger and said main cylinder, and said cylindrical wall being provided with a port registering with said by-pass in the inward position of said plunger, a screw plug in said stem and adjustably controlling the effective size of said first named port, said plunger being movable outwardly by a corresponding fluid pressure to permit a direct flow of fluid from said main cylinder through said by-pass.

1,783,389. ELECTRICAL SWITCH. JAMES C. REA, San Francisco, Calif., assignor to Pacific Electric Manufacturing Corporation, San Francisco, Calif., a Corporation of California. Filed Feb. 19, 1930. Serial No. 429,623. 6 Claims. (Cl. 200—48.)



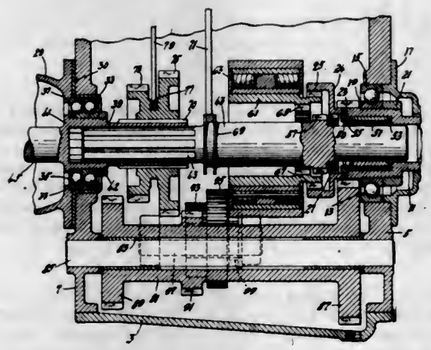
1. In a switching apparatus, a switch provided with a blade adapted to be rotated in an arc, a bus bar electrically connected with said blade, a rotatable yoke embracing said bus bar between its arms, means for rotating said yoke and means connecting said yoke and said blade whereby they are simultaneously rotated.

1,783,390. ETCHING MACHINE. ROBERT R. ROBERTSON, Evanston, Ill. Filed Oct. 8, 1929. Serial No. 398,117. 10 Claims. (Cl. 41—9.)



1. In apparatus of substantially the character described, means defining an exposure opening, means for delivering a fluid at said opening, and a plate carriage mounted for movement and adapted to present portions of a plate successively to said exposure opening.

1,783,391. INSERT. PAUL C. SCHORR and LOUIS H. SYRING, St. Paul, Minn., assignors to The Commonwealth Electric Company, St. Paul, Minn., a Corporation of Delaware. Filed Oct. 30, 1926. Serial No. 145,266. 8 Claims. (Cl. 72—101.)



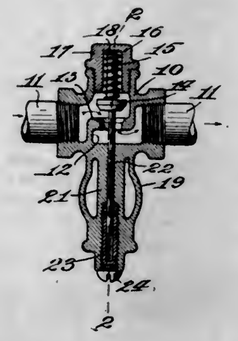
7. An insert adapted to be used in concrete construction including, a body portion, a piercing end formed on one end thereof, a shoulder remote from said end adapted to limit the driving of the piercing end through a form, and a driving head adapted to form anchoring means embedded in the concrete when the form is removed.

1,783,392. OIL STOVE. RALLSTON M. SHERMAN, Glastonbury, Conn., assignor to The Silent Glow Oil Burner Corporation, Hartford, Conn., a Corporation of Connecticut. Filed June 30, 1928. Serial No. 289,359. 6 Claims. (Cl. 126—53.)

1. A heater comprising a jacket with a cooking top on which cooking utensils are adapted to be placed, a shell within the jacket, a burner within the shell comprising annular flue walls, means for supplying fuel to the burner, a coil surrounding said burner and disposed outwardly of the flue walls and within the shell and having means for supply of liquid to and discharge of liquid from said coil, said top having an opening overlying said shell and burner, and means for closing said opening.

1,783,393. OVERSPEED TRANSMISSION. CLAUDE H. STERLING, Detroit, Mich., assignor to General Motors Research Corporation, Detroit, Mich., a Corporation of Delaware. Filed Dec. 24, 1926. Serial No. 156,871. 2 Claims. (Cl. 74—58.)

1. Aligned driving and driven members, the latter composed of telescopic parts and a countershaft, gearing between the countershaft and the outmost of said telescopic parts, the inner part of the driven member being axially movable into clutched engagement with the driving shaft, a gear ring eccentrically surrounding the common axis of said aligned members, drive mechanism between said driving shaft and eccentric gear ring and between said driving shaft and said countershaft, gear elements on said eccentric ring and the inner driven member to be engaged upon a movement of the axially movable member to a predetermined position.

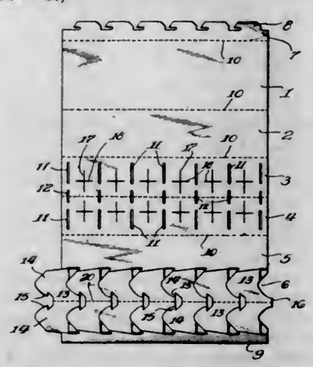


1,783,394. STEEL-PLATE SPRING SHACKLE. SAMUEL A. STRANAHAN, Flint, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Sept. 4, 1926. Serial No. 133,675. 7 Claims. (Cl. 267—30.)

1. In a road vehicle, the combination with a frame and a spring, of a connection for suspending the frame upon the spring including, a flat metallic spring blade, clamp plates rigidly connecting the ends of the blade to the frame and spring respectively, and angular lips on the blade bearing upon frame and spring to supplement the clamping action of the plates and insure a positive connection.

1,783,395. AUTOMATIC GAS-CONTROL VALVE. ALSTON D. TAYLOR, Los Angeles, Calif. Filed July 25, 1928. Serial No. 295,195. 7 Claims. (Cl. 137—162.)

1. The combination with a valve housing having separate gas and water passageways, and a valve located in that portion of the housing having the gas passageway, of a tubular member extending through said water passageway, a two-part telescopic stem removably seated in said tubular member, which stem when positioned in said tubular member in extended position, holds the gas flow

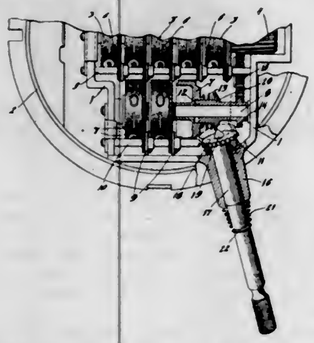


control valve in open position and the two parts of said stem being secured in extended position by readily fusible metal.

1,783,396. MINERAL ADSORBENT AND PROCESS OF MANUFACTURING SAME. JOHN T. TRAVERS, Columbus, CHARLES H. LEWIS, Harpster, and OLIVER M. URBAIN, Columbus, Ohio, assignors to The Ohio Sanitary Engineering Corporation, Columbus, Ohio, a Corporation of Ohio. Filed Oct. 20, 1928. Serial No. 313,928. 28 Claims. (Cl. 252—2.)

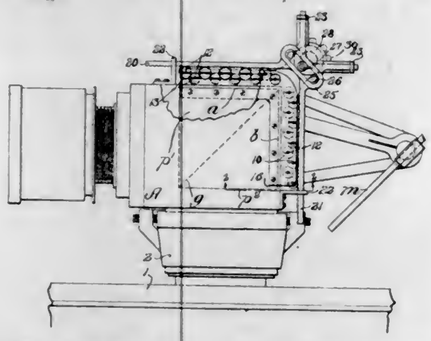
1. A process for producing an improved adsorbent, comprising mixing a salt of a condensed ortho-silicic acid and a trivalent metal with a carbonaceous material, adding to the mixture a solution of a silicate of an alkali metal, incorporating in the mass a dilute solution of a strong acid, drying the resultant mass and thereafter subjecting the mass to ignition to drive off the volatile constituents of the carbonaceous content thereof and free the same from combined moisture.

5. A method for improving the adsorptive qualities of a salt of a condensed ortho-silicic acid and a trivalent metal, comprising treating the same with a solution of a silicate of an alkali metal and a dilute solution of a strong acid and thereafter drying the resultant mass and subjecting the same to ignition.



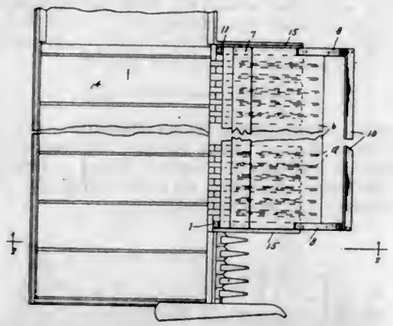
1,783,397. CUSHIONED CARTON. FELIX TROYK, Chicago, Ill., assignor to Self-Locking Carton Company, a Corporation of Illinois. Filed Jan. 28, 1929, Serial No. 335,547, and in Canada Nov. 15, 1928. 1 Claim. (Cl. 229—29.)

A carton having a continuous bottom wall built into the form of an inverted V whose ridge or apex lies a con-



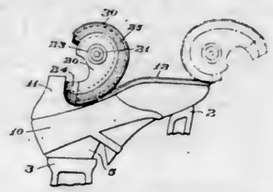
siderable distance below the top of the carton, and forked partitions secured at their upper ends to the adjacent side walls of the carton, said bottom wall having transverse slots in the slopes and through the ridge registering with the said partitions when the latter are swung down, the prongs of said partitions having hook elements extending through said slots in the slopes when the partitions are swung down, and the parts of the partitions connecting the prongs entering the slots in the ridge when the partitions are swung down.

1,783,398. RESET MECHANISM FOR ODOMETERS. JOSEPH ZUBATY, Flint, Mich., assignor to A C Spark Plug Company, Flint, Mich., a Company of Michigan. Filed Sept. 16, 1927. Serial No. 219,973. 2 Claims. (Cl. 235—96.)



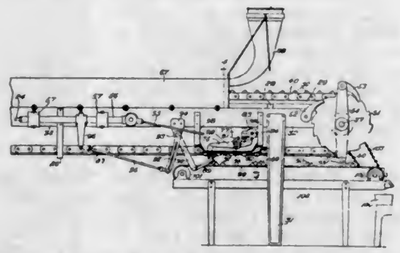
1. In odometer mechanism of the class described, a bearing for a resetting member; a rotatable resetting member slidable in said bearing, and the outer part of which member is of substantially uniform diameter beyond the outer extremity of said bearing and to its outer end; a coil spring surrounding said resetting member and acting between said bearing and an abutment upon said member to hold said member outward and in a normally inoperative position; and a resetting gear carried by the inner end of said resetting member.

1,783,399. ART OF AND APPARATUS FOR MOTION-PICTURE PHOTOGRAPHY. ADELBERT AMES, Jr., Tewksbury, Mass. Filed Oct. 25, 1921. Serial No. 510,286. 16 Claims. (Cl. 88—166.)



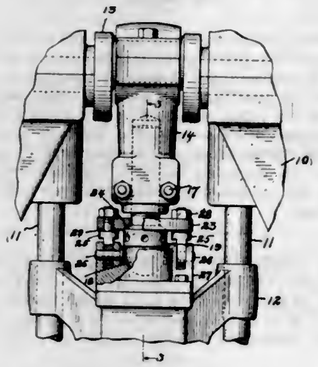
1. The art of making motion picture photographs comprising forming images from different points of view, exposing successively different parts of a sensitive surface during separate exposures following each other at intervals within the time of the persistence of vision to each of these images severally, and thereafter exposing other successively different parts of the sensitive surface to the images simultaneously.

1,783,400. GRAIN SAVER. VIRGIL JEWELL BOCKWITZ, Humboldt, Minn. Filed Nov. 19, 1929. Serial No. 408,840. 6 Claims. (Cl. 56—364.)



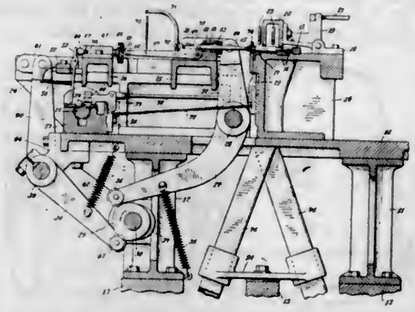
1. An attachment of the class described comprising a pair of spaced parallel coextensive side plates, a hood sheet across the side plates, the forward edges of the side plates being curved forwardly and downwardly and the sheet conforming thereto, straps secured to said sheet above the curved edges and extending below the bottom edges of the plate, and a cross bar on the extremities of the straps.

1,783,401. METHOD OF AND APPARATUS FOR FINISHING THE BOTTOMS OF BOOTS AND SHOES. CHARLES P. BROOKS, Jr., and SAMUEL KOVNER, Brockton, Mass., assignors to Standard Modern Printing Co., Inc., Brockton, Mass., a Corporation of Massachusetts. Filed Sept. 6, 1929. Serial No. 390,730. 2 Claims. (Cl. 101—35.)



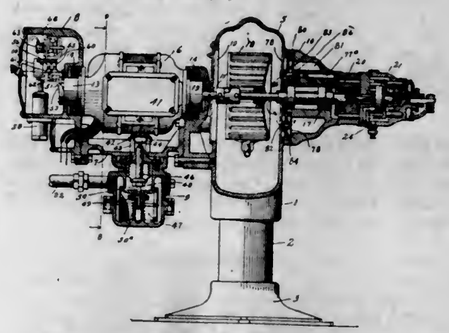
1. The improved method of finishing boot and shoe bottoms which consists in providing a finishing roll of contour to facilitate contact with the shank and sole portions of a shoe, applying a desired design to be printed on said roll, and inking said roll and thereupon effecting a rolling action between the inked surface and the shoe bottom.

1,783,402. CHOCOLATE-MOLDING MACHINE. EDWARD E. CAHOON, Racine, Wis., assignor to Racine Confectioners' Machinery Company, Racine, Wis., a Corporation of Wisconsin. Filed Apr. 22, 1924. Serial No. 708,278. 12 Claims. (Cl. 107—8.)



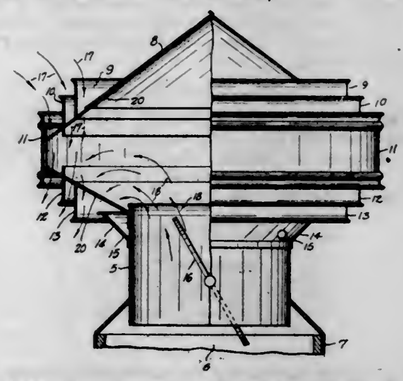
1. In a machine of the character described, in combination, means for depositing plastic material in predetermined quantities, an endless conveyor including upper and lower reaches, and a series of separable individual members for receiving said material as they are successively brought beneath said depositor on the upper reach of said conveyor, means for moving said conveyor intermittently between successive depositing operations, means for warming said members prior to the deposit of material thereon, a cooling or drying chamber through which said upper reach of the conveyor passes beyond said depositor, and means located beyond said chamber for freeing said members of the cooled or dried deposits.

1,783,403. CONNECTION. ZENAS P. CANDEE, Waterbury, Conn., assignor to The Waterbury Farrel Foundry and Machine Company, Waterbury, Conn., a Corporation of Connecticut. Filed Jan. 24, 1929. Serial No. 334,844. 3 Claims. (Cl. 287—87.)



2. In a power transmitting device, an element having a rounded socket, a connecting member having a rounded end movably engaged in said socket, and having a rounded shoulder spaced from said rounded end, means to hold the rounded end in said socket, engaged about said member and having a correspondingly rounded seat engaged with said rounded shoulder whereby to allow the member and holding means to automatically adjust themselves with varying angular relation of the holding means relative to the longitudinal axis of the member, and means to pivotally connect the holding means to the element.

1,783,404. GAUGING MECHANISM. ZENAS P CANDEE, Waterbury, Conn., assignor to The Waterbury Farrel Foundry and Machine Company, Waterbury, Conn., a Corporation of Connecticut. Filed Apr. 6, 1928. Serial No. 267,989. 17 Claims. (Cl. 209—88.)

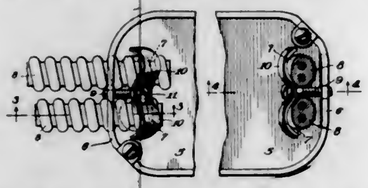


1. Means for gauging an article, comprising an inspector mechanism, the position of which is determined by the article; and a second inspector mechanism having a substantially right line movement toward and away from the first inspector mechanism, the extent of such movement being determined by the position of the first mentioned inspector mechanism if the latter is not in a predetermined position or allowable variations therefrom.

1,783,405. LIQUID-FUEL-BURNING DEVICE FOR DOMESTIC PURPOSES. PHILIP A. CELANDER, Bloomington, Ill., assignor to Williams Oil-O-Matic Heating Corporation, Bloomington, Ill., a Corporation of Illinois. Filed July 13, 1929. Serial No. 378,053. 10 Claims. (Cl. 158—28.)

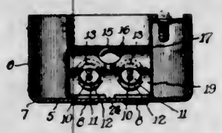
1. In an electrically operated liquid fuel burning device, a motor therefor having a rotor mounted in a casing upon trunnions, a normally closed fuel valve therefor, and means actuated by rotation of the casing to open said fuel valve caused by energization of the motor.

1,783,406. VENTILATOR. STEPHEN E. CIBULAS, Bridgeport, Conn. Filed Jan. 24, 1928. Serial No. 249,036. 2 Claims. (Cl. 98—84.)



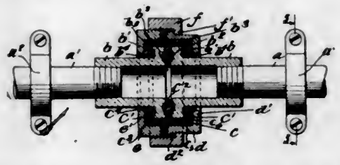
1. A ventilator comprising an upright conduit, a hood over the top of the conduit and spaced therefrom, a plurality of spaced upright ring vanes arranged with the inner one enclosing and extending above and below the upper end of the conduit and spaced therefrom and the next outer vane enclosing and extending above and below the upper edge of the next inner vane, a plurality of similar spaced upright ring vanes arranged with the inner one enclosing and extending above and below the lower edge of the hood and spaced therefrom and the next outer vane enclosing and extending above and below the lower edge of the next inner vane, the upper vanes being flared outwardly at their upper ends and the lower vanes being flared outwardly at their lower ends, and an upright outer ring baffle spaced from and enclosing the adjacent edges of the outer vanes.

1,783,407. MACHINE FOR CLEANING JOURNAL-BOX WASTE. IRVIN M. CONWAY and THOMAS M. LAWSON, Indianapolis, Ind., assignors to Journal-Box Servicing Corporation, Indianapolis, Ind., a Corporation of Indiana. Filed Apr. 28, 1927. Serial No. 187,318. 16 Claims. (Cl. 141—5.)



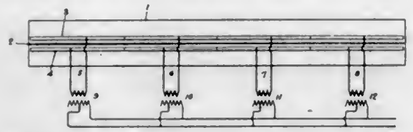
1. In a machine for cleaning waste over a floor in the presence of oil, a waste stirring and picking device having a plurality of pairs of picker rods, means for rocking the rods whereby one of the rods in each pair will swing past the other rod in that pair, and means for elevating and lowering said picker rods over the floor in timed relation to the rocking of said rods.

1,783,408. UNIVERSAL CLAMP FOR OUTLET BOXES. HERBERT RAY COOK, Chicago, Ill., assignor to Jefferson Electric Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 11, 1926. Serial No. 134,799. 10 Claims. (Cl. 247—25.)



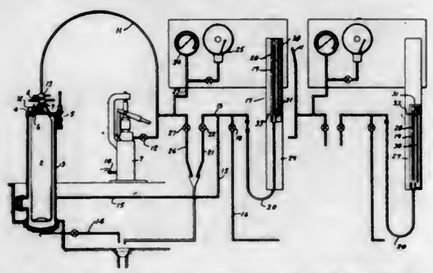
1. An outlet box comprising, in combination, a base and a side wall secured thereto, said base and wall each having therein a pair of knockout holes, and a clamp mounted in said outlet box at the intersection of said base and wall, said clamp occupying a position in said box substantially bisecting the angle of intersection of said base and wall whereby said clamp is adapted to engage with equal facility a conduit entering either of said pairs of knockout holes.

1,783,409. COMBINED CONDUIT CLAMPING AND BUSHING DEVICE. HERBERT RAY COOK, Chicago, Ill., assignor to Jefferson Electric Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 23, 1929. Serial No. 342,122. 12 Claims. (Cl. 247—25.)



1. An outlet box having, in combination, a base wall and an intersecting side wall, each of said walls having a pair of knock-out holes formed therein adjacent to their intersection and to each other, and a unitary device positioned within said box for clamping a pair of conduits entering the box through either of said pairs of knockout holes and for bushing the ends of such a pair of conduits, said device comprising a substantially rigid member extending parallel to said intersection and formed from sheet metal to provide an apertured web with a clamping flange at one edge and a bushing flange at the other edge, said flanges being substantially parallel to each other, said clamping flange having spaced notches formed at its edges to engage the sides of a pair of conduits and said bushing flange having spaced apertures formed therein through which wires may pass from said conduits into the center of the box, and a screw for holding said member in said box and for applying clamping pressure to said clamping flange, said screw extending through the aperture in said web and engaging said box at an angle of substantially 45° to said walls.

1,783,410. SHOCK INSULATED UNION AND PIPE STRAP. ROBERT F. COWELL, Teaneck, N. J., assignor to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed Oct. 2, 1928. Serial No. 309,726. 1 Claim. (Cl. 285—90.)

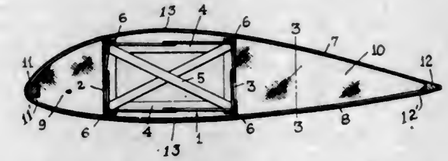


A resilient cushioning coupling for connecting pipe sections comprising juxtaposed flanges carried by the pipe sections, spaced annular grooves in the flanges, an annular block of yielding non-metallic material, annular grooves on the inner periphery of the block for receiving the juxtaposed flanges, clamping sections receiving the block to secure the block and flanges together, and means to secure the clamping sections together comprising a retaining nut surrounding and operatively engaging the two sections.

1,783,411. METHOD OF ELECTRICALLY WELDING TUBULAR ARTICLES. WILLIAM E. CRAWFORD, Wauwatosa, Wis., assignor to A. O. Smith Corporation, Milwaukee, Wis., a Corporation of New York. Filed May 8, 1929. Serial No. 361,433. 3 Claims. (Cl. 219—10.)

1. The method of electrically welding a single longitudinal seam to form a tubular article, which comprises distributing the welding current along the edges to be welded and employing a higher initial voltage at the ends of the work than in the center to thereby effect a uniform and simultaneous heating of the edges to welding temperature, and pressing the edges together to weld the same throughout the length thereof.

1,783,412. METHOD AND APPARATUS FOR TESTING CYLINDERS. JOHN J. CROWE, Westfield, N. J., assignor to Air Reduction Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Feb. 24, 1930. Serial No. 430,478. 5 Claims. (Cl. 73—51.)



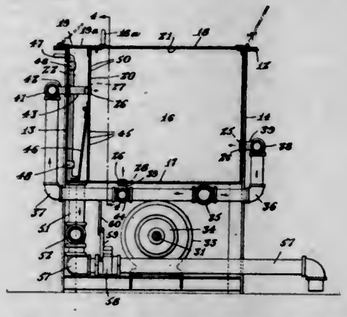
1. The method of testing cylinders in which the cylinder to be tested is enclosed in a water-jacket the interior

of which is connected with an expansion indicator, and predetermined pressure is applied to the interior of the cylinder and afterwards released, total and permanent expansion readings being taken on the indicator before and after such release of pressure, characterized in that the top of the column of water in the expansion indicator is leveled to the same zero level for each reading.

2. Apparatus for testing cylinders, comprising a tight water-jacket to receive a cylinder to be tested, means for applying pressure to and releasing pressure from the interior of the cylinder, an open expansion indicator connected with the interior of said water-jacket, and means for leveling the top of the column of water in said indicator to the same zero level before and after pressure is released from the cylinder.

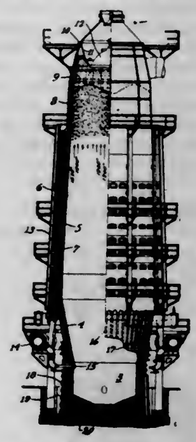
1,783,413. AEROFOIL CONSTRUCTION. NELSON W. DALTON, Bath, N. Y., assignor of three-fourths to Pequod Realty Corporation, New York, N. Y. Filed May 3, 1930. Serial No. 449,382. 10 Claims. (Cl. 244—31.)

1. An aerofoil construction for aircraft including a central spar construction, fore and aft extending flexible contour members passing over the upper and lower sides of said central structure and fore and aft fabric webs attached to said contour members and holding the same to the desired aerofoil curvature.



1,783,414. DISPENSING DEVICE. JOSEPH S. DANIELS, Rhinelander, Wis., assignor to Daniels Manufacturing Company, Rhinelander, Wis., a Corporation of Wisconsin. Filed June 18, 1928. Serial No. 286,088. 5 Claims. (Cl. 312—61.)

1. A napkin dispensing device comprising a container having side walls and an open top serving as a filling opening, dispensing openings in opposite side walls of said container, a closure for said open top, a support secured to and depending from said closure and positioned centrally of said container and spring means secured on opposite sides of said support and arranged to urge contained napkins toward said dispensing openings.



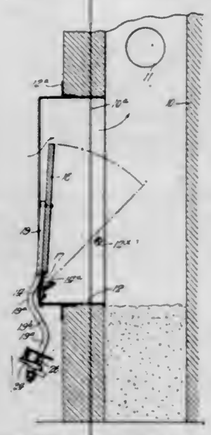
1,783,415. WASHING MACHINE. OTTO T. DEHLE, Watertown, Mass., assignor to Multi-Hydro Washing Machine Company, Boston, Mass., a Corporation of Massachusetts. Filed Apr. 18, 1930. Serial No. 445,322. 5 Claims. (Cl. 259—95.)

1. A clothes washing machine comprising a receptacle adapted to receive a cleansing liquid and the articles to be cleaned, means for forcing said liquid to said receptacle and receiving it again, said receptacle having a port at the bottom for the introduction of a stream upwardly, a port at one side for the introduction of a stream horizontally, and another port at the opposite side for the introduction of another stream horizontally, said ports being so located relative to each other that said articles are caused to be moved by the streams entering through said ports in a substantially regular

course in said receptacle and are brought in close proximity to each of said ports during each complete movement about the receptacle, said receptacle having provision for the escape of said liquid to said means.

1,783,416. BLAST FURNACE. JAMES P. DOVEL, Birmingham, Ala., assignor to G. P. Dovel. Original application filed July 28, 1927, Serial No. 209,074. Divided and this application filed Jan. 7, 1929. Serial No. 330,894. 3 Claims. (Cl. 266—27.)

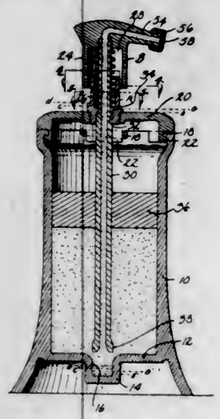
1. In a blast furnace stack, the combination of a metallic jacket for the stack, an agglomerate refractory stack lining, water cooled elements mounted to project through the jacket in a position to agglomerate particles of stock to form the refractory stack lining, and a charging bell having an area at the base substantially one third that of the stack at its normal upper level in the furnace stack whereby to discharge the stock into the stack so as to provide relatively large void areas immediately adjacent to the stack lining.



1,783,417. WHITE ANHYDROUS CALCIUM SULPHATE AND METHOD FOR PRODUCING SAME. CHARLES B. DURGIN and ARTHUR B. GERBER, Anniston, Ala., and PAUL LOGUE, St. Louis, Mo., assignors, by mesne assignments, to Swann Research, Inc., Birmingham, Ala., a Corporation of Alabama. Filed Jan. 21, 1926. Serial No. 82,877. 9 Claims. (Cl. 23—5.)

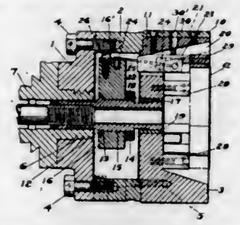
3. A method for the production of white anhydrous calcium sulphate, which consists in adding calcium phos-

phate to hydrated calcium sulphate, and heating the mixture to approximately 1400° F. to produce anhydrous calcium sulphate, substantially as described.



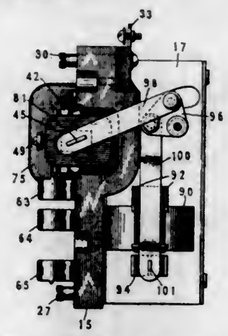
7. As a new article of manufacture, a white anhydrous calcium sulphate containing calcium phosphate not substantially in excess of 5% of the mixture.

1,783,418. DRAFT STABILIZER. EDWARD A. FIELD and EDWARD A. FIELD, Jr., Chicago, Ill. Filed May 16, 1928. Serial No. 278,253. 13 Claims. (Cl. 236—45.)



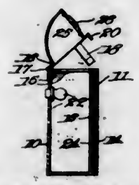
1. A draft stabilizer comprising in combination a pivotally mounted plate movable to and from closing position, a supporting bar attached to said plate, a counterweight carried by said bar and underlying said plate, said counterweight being adjustable on said bar and about said bar to shift its center of gravity with respect to the plane of said plate along an inclined plane.

1,783,419. DISPERSER CHARGE-REGULATING DEVICE. FRED W. FITCH, Des Moines, Iowa. Filed Apr. 30, 1929. Serial No. 359,273. 3 Claims. Cl. 221—103.)



1. In a dispensing device, means for controlling the amount of material dispensed, said means including an angular flat sided fitting and a second fitting of tubular shape adapted to rotate over the first fitting and engage the corners thereof, an inwardly extending flange on the second fitting engaging a side of the first fitting for preventing such rotation, and means to allow rotation comprising an annular groove in the first fitting adapted to receive said flange.

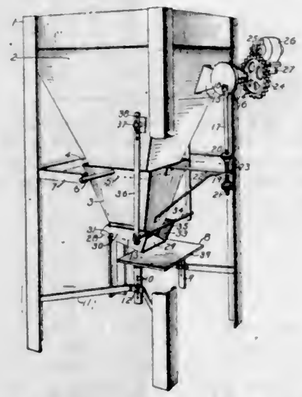
1,783,420. CHUCK. GEORGE E. GARNO, Worcester, Mass., assignor to The Heald Machine Company, Worcester, Mass., a Corporation of Massachusetts. Filed Dec. 27, 1926. Serial No. 157,175. 4 Claims. (Cl. 279—106.)



1. In a chuck, a member slidably mounted in said chuck, work gripping paws, inclined plane means to force said jaws together, flat springs attached to said member and therefore movable with it, and blocks pivotally carried by said jaws, one end of said flat springs being fastened to said blocks whereby said jaws may be drawn into said chuck by movement of said slidable member transmitted through tensile pull of said flat springs, but flexure of said flat springs allowing elements on said jaws to remain parallel to the surface of the work piece to be engaged.

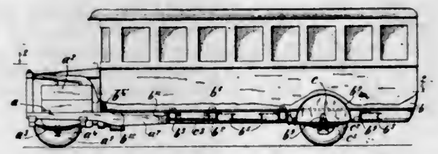
1,783,421. ELECTRIC SWITCH. BENJAMIN E. GETCHELL, Plainville, Conn., assignor to The Trumbull Electric Manufacturing Company, Plainville, Conn., a Corporation of Connecticut. Original application filed Sept. 22, 1927, Serial No. 221,215. Divided and this application filed Dec. 27, 1927. Serial No. 242,560. 7 Claims. (Cl. 200—87.)

1. In a switch, an insulating base, switch mechanism mounted at the front thereof and including a cross bar, side plates secured to said base and extending rearwardly therefrom, an electro-magnet mounted at the rear of the base and having a core and an armature supported between said side plates, levers pivoted to said side plates, links connecting said cross bar with said levers and links connecting said levers with said armature.



1,783,422. AUTOMOBILE SIGNAL. HENRY GROB, Piqua, Ohio. Filed Dec. 31, 1925. Serial No. 78,602. 1 Claim. (Cl. 40—132.)

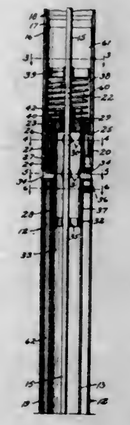
A device of the class described comprising an illuminable signal casing having inwardly extending flanges



at the top of the side and rear walls, said flanges of the side walls terminating short of the front wall, sign holders on the front walls forwardly of the flanges of said side walls, an upwardly removable sign in said sign holders, a displaceable closure resting on said flanges, an auxiliary casing rising from the closure and spaced inwardly on its sides and ends, said auxiliary casing being open at the front and having a downwardly and rearwardly curving wall, said closure being unobstructed other than by said flanges at the top so that a sign may be inserted and removed and the auxiliary casing will be illuminated from the first casing.

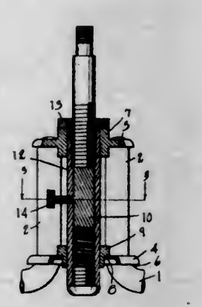
1,783,423. CHEMICAL-FEED MACHINE. ELMER E. HARPER, Kansas City, Mo. Filed Apr. 9, 1928. Serial No. 268,516. 17 Claims. (Cl. 221—118.)

1. In a material feeding machine, a bin, a pivoted hopper for receiving material from the bin, and means for upheaving material contained in the hopper including means for pivotally moving said hopper.



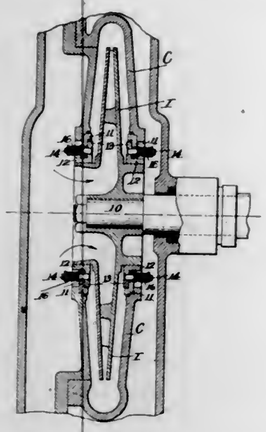
1,783,424. BUS BODY. EDWARD R. HEWITT, Midvale, N. J., assignor to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed June 29, 1928. Serial No. 289,113. 1 Claim. (Cl. 180—73.)

In a motor vehicle composed of two sections, a load carrying section mounted upon the driving wheels and having cross frame members spaced in a fore and aft relation, a second section comprising steering wheels, parallel frame members carried thereon, an engine on said frame members, connections for rigidly securing said second section detachably to the after cross frame member of the load carrying section at points lying in the planes of the frame members, means to secure the forward cross frame member to the tops of the parallel frame members, and detachable means extending through the after cross frame member for transmitting power from the engine to the driving wheels.



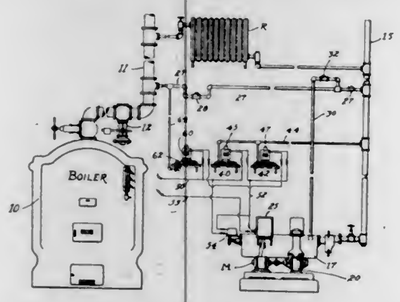
1,783,425. DOUBLE-ACTING PUMP. JOHN S. HUNTER, Coalinga, Calif. Filed Sept. 24, 1928. Serial No. 307,946. 8 Claims. (Cl. 103—156.)

2. In a double acting pump, the combination of: an outer barrel adapted for attachment to a well-tubing and provided at its lower end with downwardly closing valve means; an inner barrel fixed within said outer barrel, and communicating with said outer barrel by orifices at its lower end, said outer barrel being extended above said inner barrel to form a fluid delivery passage for delivering pumped fluid to said well-tubing; downwardly closing valve means comprising a collar slidably fitting on said inner barrel and adapted to control communication between a space formed by said inner and outer barrels



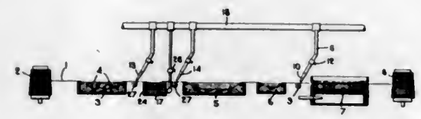
and said fluid delivery passage; downwardly closing valve means comprising a sleeve member slidably fitting in said inner barrel and adapted to control communication between the interior of said inner barrel and said fluid delivery passage, and also adapted to control communication between the interior of said inner barrel and the space outside the outer barrel by means of a duct; spring means rigidly associated with said outer barrel and adapted to engage said slidably fitting collar; and piston means adapted to be reciprocated within said inner barrel.

1,783,426. ADJUSTABLE CHAIR. REGINALD C. HUNTLEY, Sturgis, Mich., assignor to Sturgis Posture Chair Company, Sturgis, Mich. Filed Dec. 11, 1929. Serial No. 413,197. 4 Claims. (Cl. 155—93.)



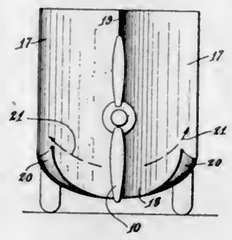
4. In a chair, the combination of legs having upper end portions disposed in parallel looped relation, a head having a central bearing therein mounted on the upper ends of said legs, a supporting plate mounted on said legs in spaced relation to said head and provided with a central opening, a shouldered bearing arranged in said opening, a seat provided with a threaded spindle, and a tubular internally threaded spindle supporting sleeve rotatably mounted in said bearing in said head and said bearing in said tie plate and having a bearing collar resting upon the bearing of said head member.

1,783,427. SEALING DEVICE FOR CENTRIFUGAL PUMPS. IRVING C. JENNINGS, South Norwalk, Conn. Filed Aug. 11, 1924. Serial No. 731,287. 2 Claims. (Cl. 286—7.)



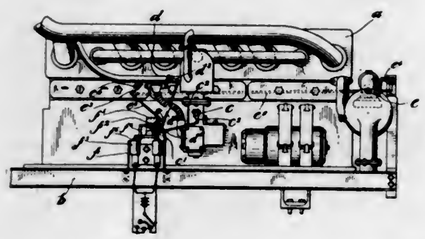
1. In a centrifugal pump, the combination of a casing, an impeller running therein and a sealing device between the impeller and casing, said sealing device comprising a flanged bearing ring removably secured to a wall of said casing adjacent the hub of the impeller and a flanged sealing ring mounted on the hub of the impeller and slidable axially thereon, the flange of the sealing ring engaging the flange of the bearing ring in a plane perpendicular to the axis of the impeller and having radial clearances relative thereto permitting radial play or adjustment of said sealing ring thereon, and said sealing ring being exposed to the pressure generated by the impeller in said casing so that such pressure will force the sealing ring axially into tight surface engagement with the flange of the bearing ring.

1,783,428. PRESSURE-CONTROL MECHANISM FOR VACUUM HEATING SYSTEMS. IRVING C. JENNINGS, South Norwalk, Conn. Filed Apr. 30, 1929. Serial No. 359,315. 4 Claims. (Cl. 103—25.)



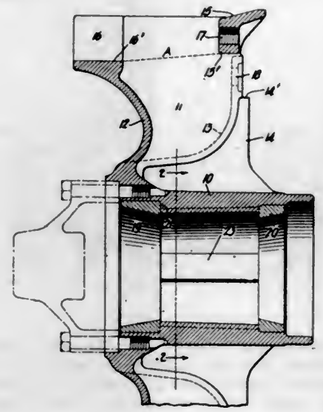
1. In a vacuum heating system having a supply side, a return side, and a vacuum pump connected to the return side, in combination, a starting mechanism for said pump, a vacuum-controlled circuit-closing device for said starting mechanism, a second vacuum-controlled circuit-closing device for said starting mechanism, said devices being adapted to operate between different vacuum ranges in the return side of the system, and a control switch effective, to render one of said devices operative or inoperative, in response to the degree of vacum maintained in the supply side of the system.

1,783,429. APPARATUS FOR COATING WIRE. CHARLES D. JOHNSON, Worcester, Mass., assignor to Johnson Steel & Wire Company, Inc., Worcester, Mass., a Corporation of Massachusetts. Filed June 22, 1929. Serial No. 372,962. 2 Claims. (Cl. 91—12.5.)



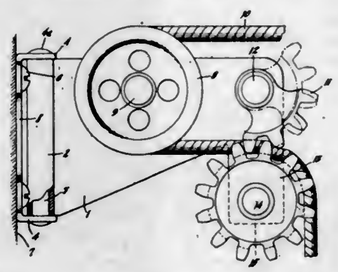
1. An apparatus for coating wire comprising an acid bath, a coating bath, a washing bath, means for drawing the wire through the baths successively, a roll over which the wire passes as it leaves the washing bath, and means to direct an air jet against the wire in the direction of the roll just as it leaves the latter, whereby the air will be deflected from the surface of the roll against the roll-engaging surface of the wire.

1,783,430. METHOD OF AND APPARATUS FOR TREATING FRUIT TREES. THOMAS W. JOHNSON, Mountain View, Calif., assignor to Victor H. Owen, Oakland, Calif. Filed Apr. 2, 1929. Serial No. 351,894. 4 Claims. (Cl. 47—1.)



1. A method of treating fruit trees to increase the productivity thereof, including the step of removing the calyx rings from young fruit by subjecting the fruit to an artificial current of air.

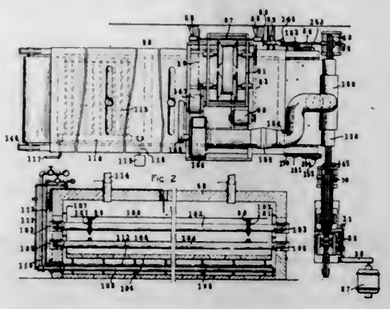
1,783,431. THROTTLE-CONTROLLING MEANS FOR INTERNAL-COMBUSTION ENGINES. WILLIAM B. JUPP, Brooklyn, N. Y., assignor to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed Aug. 19, 1927. Serial No. 214,126. 3 Claims. (Cl. 123—99.)



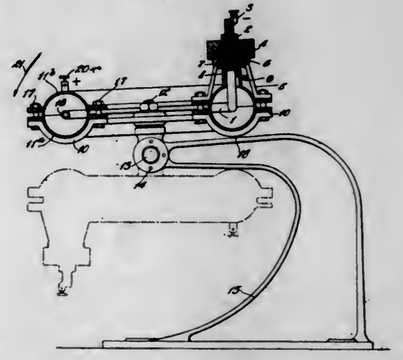
1. In a controlling mechanism for the throttle, heat and spark of an internal combustion engine, a pair of actuating means, a U-shaped bracket secured to the engine structure, means to secure the actuating means to the bridge of the U-shaped bracket, an arm connected between the actuating means, an extension to the bracket forming opposed sides, means to journal a rock shaft in the sides, a crank on the shaft, means connecting the crank with the arm at a point nearer one of the actuating means than the other, a plurality of operating cranks on the shaft, means connecting the cranks to the throttle, heat and spark controls respectively, and means to effect the actuation of the actuating means in a desired order.

1,783,432. VEHICLE WHEEL-HUB CONSTRUCTION. CHARLES G. KELLER, Poughkeepsie, N. Y. Filed Mar. 29, 1928. Serial No. 265,575. 7 Claims. (Cl. 308—236.)

1. A cast metal hub for vehicle wheels, having opposed annular seats therein for a pair of bearing race rings, and a plurality of ribs extending lengthwise along the inner surface, the ends of said ribs being in the same transverse planes as said seats.



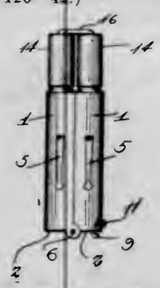
1,783,433. CLOTHESLINE SUPPORT. JAMES L. KELLER, Ferndale, Mich. Filed Apr. 12, 1929. Serial No. 354,500. 9 Claims. (Cl. 68—3.)



3. A line clamp comprising two pivoted members formed with intermeshing teeth adapted to clamp a line upon rotation in one direction, means to provide for the passage of a line between the two members comprising a notch in the face of at least the leading tooth of one member, and means to clamp the cable against the other pivoted member upon further rotation in said direction comprising the face of at least one of the teeth following said leading tooth on said first mentioned member.

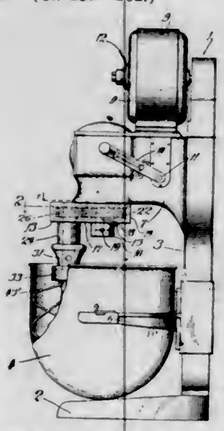
1,783,434. COMBINATION TOASTING AND SHREDDING OVEN. JOHN LEONARD KELLOGG, Battle Creek, Mich., assignor to Kellogg Company, Battle Creek, Mich., a Corporation of Delaware. Filed Nov. 9, 1922. Serial No. 599,878. 43 Claims. (Cl. 107—2.)

1. In a machine of the class described, in combination, shredding mechanism, moving means to receive the shredded material and mold it into biscuits comprising upper and lower mold sections cooperating with each other to mold said material by pressure, the pressure being applied solely by said sections, an oven, a conveyor for transporting the biscuits through the oven, and means for transferring the biscuits from the molding means intermediate the ends of the range of travel of said moving means to the conveyor.



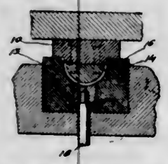
1,783,435. MANUFACTURE OF RUBBER GOODS FROM RUBBER DISPERSIONS. PAUL KLEIN, Budapest, Hungary, and ANDREW SZEGVARI, Akron, Ohio, assignors to American Anode Inc., Akron, Ohio, a Corporation of Delaware. Filed Apr. 13, 1927, Serial No. 183,606, and in Hungary and Germany Apr. 14, 1926. 11 Claims. (Cl. 204—1.)

5. The steps in the process of making hollow rubber articles by electrodeposition from aqueous rubber dispersions with an exterior mold-formed surface which comprises confining a quantity of aqueous dispersion in contact with surface capable of producing the exterior contour of the hollow article, depositing by an electric current traversing the said dispersion through the intermediary of a cathode immersed therein a layer of rubber upon said surface, and oxidizing the gases formed at the cathode to inhibit their entrainment in the rubber layer deposited, whereby gases normally liberated at the cathode are reacted with said agent and inhibited from entrainment with the deposited rubber layer.



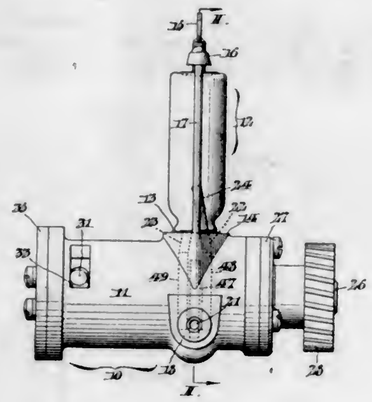
6. Apparatus for the manufacture of hollow articles comprising a mold adapted to contain an aqueous dispersion of rubber, and having an interior anodic surface upon which a layer of rubber is adapted to be deposited by electrophoresis, a cathode disposed within said mold, and means associated with the cathode for preventing the liberation of gases formed at the cathode, whereby gases normally liberated at the cathode are inhibited from entrainment with the deposited rubber layer.

1,783,436. FOUNTAIN PEN. EMANUEL KRATOCHVIL, Chicago, Ill. Filed May 23, 1929. Serial No. 365,338. 1 Claim. (Cl. 120—42.)



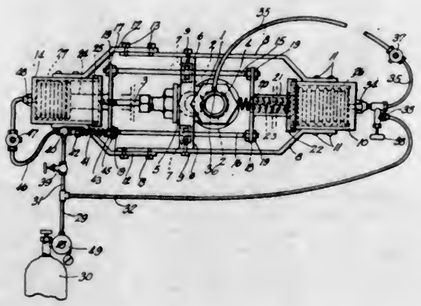
A closure cap for the barrel ends of double barreled fountain pens including cap sections, a U-shaped rod having the cap sections swivelled thereon, one cap section being frictionally engaged with one barrel and the other cap section having threaded engagement with the other barrel.

1,783,437. WHIPPER AND MIXER. WILLIAM L. LAIB, Oak Park, Ill. Filed Sept. 23, 1929. Serial No. 394,708. 12 Claims. (Cl. 259—102.)



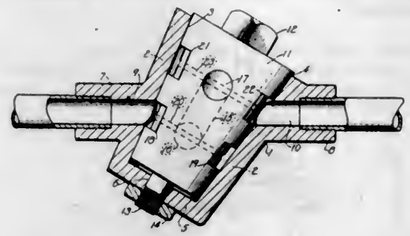
1. In a device of the class described, a whipper comprising a plurality of upwardly and downwardly extending peripheral frame portions spaced apart circumferentially and adapted to rotate upon a vertical axis, and an inclined peripheral whipper member mounted in engagement with and extending outside of and in oblique relation to said spaced-apart peripheral frame portions and adapted to rotate around the said axis.

1,783,438. PROCESS OF MAKING BEARINGS. CHARLES H. LANDERS, Lansing, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Jan. 16, 1926. Serial No. 81,766. 15 Claims. (Cl. 29—149.5.)



1. The process of making bearings which consists in forming blanks to the shape of a bearing segment, arranging the blanks to form a tubular member, babbitting the blanks while so held and severing the segments.

1,783,439. PUMPING UNIT FOR ARTIFICIAL-SILK SPINNING MACHINES. CHARLES W. LAWSER, Bala, Pa., assignor to The Wicaco Machine Corporation, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Mar. 8, 1929. Serial No. 345,263. 5 Claims. (Cl. 103—162.)

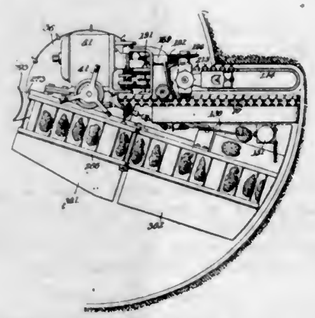


1. In a pumping unit of the character described, a casing having main intake and discharge ports at circumferentially spaced points, a pair of auxiliary efflux and influx ports at an intermediate point leading into and out of an associated pressure bottle, and at its interior a series of spaced circumferential grooves, and a rotor having a series of piston accommodating bores adapted to govern said ports and grooves so that as a charge of fluid is drawn in during the suction period of rotor action, and subsequently injected through the auxiliary efflux port into the pressure bottle, a corresponding quantity of the fluid is concurrently displaced from said bottle for delivery through the main discharge port of the pump after circulating through the bottle.

1,783,440. AUTOMATIC SAFETY VALVE. CARL M. LIEBER, Oklahoma City, Okla. Filed Dec 26, 1929. Serial No. 416,614. 9 Claims. (Cl. 137—34.3.)

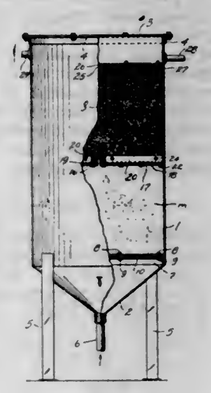
1. A device, as described, embodying a gate valve, a yoke rigidly disposed upon the body of said valve, a pair of sylphons each operably supported on opposite ends of said yoke, a frame slidably mounted on said body and connected at each end to one of said sylphons, said frame rigidly attached to the stem of said gate valve and adapted to be actuated by said sylphons for opening and closing said gate valve, and fluid pressure means for automatically actuating said sylphons when a fire occurs adjacent a part of said actuating means.

1,783,441. VALVE. JAMES O. LEWIS, Tulsa, Okla. Filed July 8, 1929. Serial No. 376,664. 5 Claims. (Cl. 251—98.)



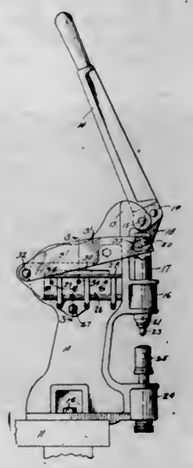
1. A valve of the character described including a housing having opposite flow inlet and outlet, a plug rotatable in said housing having a channel extending diagonally through the plug and adapted for providing direct communication between the inlet and outlet of the housing, one of said members having a recess and adapted for communication with said inlet when the valve is closed and having a diametrically opposite recess, the plug member having a passageway connecting said recesses.

1,783,442. RECORDING PAPER. CHARLES W. MAYER and EVERETT F. SILLER, Rochester, N. Y. Filed Feb. 4, 1928. Serial No. 251,998. 5 Claims. (Cl. 282—28.)



1. A recording paper consisting of a deeply colored stock, covered with a waxy crystallized coating of contrasting color and an outer layer of inert powder.

1,783,443. MINING AND LOADING MACHINE. EDMUND C. MORGAN, Richmond Hill, N. Y.; Olive Eugenie Morgan executrix of said Edmund C. Morgan, deceased. Filed May 9, 1917. Serial No. 167,467. 87 Claims. (Cl. 262—9.)

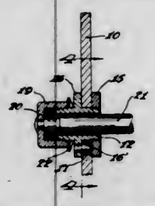


1. In a machine for undercutting, breaking down and loading coal, the combination of a frame movable in a curved path substantially parallel to a curved coal face, a low-down laterally projecting horizontal kerf cutter on said frame in position to undercut the coil to be removed, means for engaging the frame and causing it to move in a fixed arcuate path, an upright curved kerf cutter extending upwardly from the inner end of said horizontal kerf cutter, means for breaking down the coal and means for removing the broken down coal, said breaking down and removing means performing their respective functions as the said kerf cutters are advanced to form the floor kerf and the next curved coal face.

1,783,444. FILTER FOR CLEANING FLUIDS. PAUL W. MORGAN, St. Louis, Mo., assignor to Morgan Dry Cleaners Equipment Co., St. Louis, Mo., a Corporation of Missouri. Filed Aug. 9, 1929. Serial No. 384,771. 1 Claim. (Cl. 210—134.)

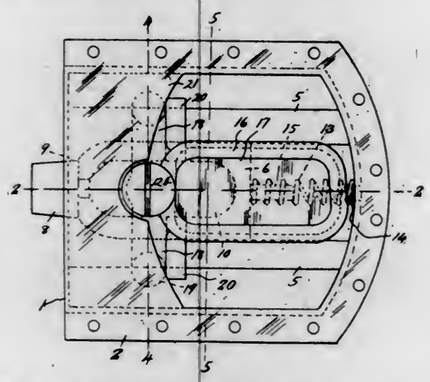
A filter comprising a tank having an inlet at one end and an outlet at the opposite end, a bed of filter material in said tank, a pervious support therefor, a mass of inert material over said filter bed, and a partition screen between the filter bed and inert material, said partition screen comprising a plurality of sections in loosely connected relation.

1,783,445. SHEARING AND RIVETING MACHINE. CARL A. OLSON, FREDERICK L. BUCH, and THOMAS E. BROOKS, Clarinda, Iowa, assignors to The Lisle Manufacturing Company, Clarinda, Iowa, a Corporation of Iowa. Original application filed Sept. 12, 1927, Serial No. 218,983. Divided and this application filed Aug. 6, 1928. Serial No. 297,622. 2 Claims. (Cl. 29—34.)



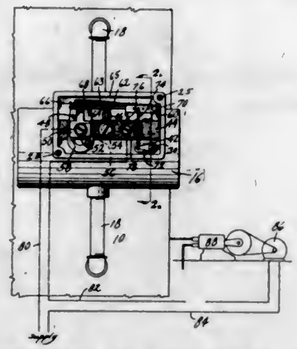
1. A machine of the class described, comprising a frame, a lever fulcrumed at its lower end on said frame, a tool-carrying sleeve arranged for vertical sliding movement in said frame, a link pivoted to said lever at a point forwardly of its fulcrum, a pivot pin carried by the upper end of said sleeve and engaging said link, a stationary shear blade carried by said frame, and a movable shear blade pivoted at one end to said frame and

adapted to cooperate with the stationary blade, said movable blade having at its opposite end a slot receving said pivot pin of the link to the sleeve, whereby the tool-carrying sleeve and movable blade are conjunctively operated when the lever is moved through an arc.



2. A machine of the character described, comprising a frame, a tool-carrying sleeve arranged for sliding movement therein, a pin carried by said sleeve, a lever of substantially bell-crank type fulcrumed on said frame substantially in alignment with said sleeve a, link pivoted on said pin and pivotally connected to said lever at a point spaced laterally from its fulcrum, a stationary shear blade on said frame, and a movable shear blade pivoted on the frame and formed with a slot having pivotal and slidable engagement with said pin.

1,783,446. ATTACHMENT FOR CALCULATING MACHINES. AUSTIN A. OVERBURY, West Orange, N. J., assignor to Monroe Calculating Machine Company, Orange, N. J., a Corporation of Delaware. Filed Apr. 9, 1929. Serial No. 353,725. 5 Claims. (Cl. 308—15.)

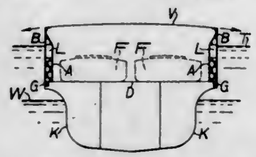


1. The combination of a frame formed with a main slot and a secondary slot leading into said main slot, a bearing adapted to be seated in the first said slot and carrying a locking element adapted to engage the second said slot and to coact therewith for forcing said bearing to its seat in the first said slot, and means for securing said bearing to said frame.

1,783,447. WASHING-MACHINE-COVER LATCH. ALFRED PARTLOW, Lincoln Park, Mich., assignor to Vorclone Corporation, Milwaukee, Wis., a Corporation of Delaware. Filed Aug. 30, 1928. Serial No. 303,064. 4 Claims. (Cl. 292—173.)

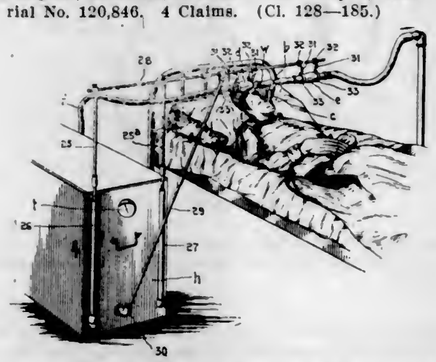
1. A latch comprising a casing open at one side thereof, and formed with a longitudinal slideway, a bolt slidable in said slideway formed with a head projecting from said casing, and having a pair of oppositely projecting lugs, an actuating member pivoted in said casing, having opposite lateral projections engaging said lugs for retracting the bolt, and formed rearwardly of its pivot with a pocket opening toward the open side of the casing for receiving actuating means, and a spring normally projecting said bolt.

1,783,448. FLOAT-OPERATED SWITCH. ALBERT PENN, Des Moines, Iowa, assignor to Penn Electric Switch Co., Des Moines, Iowa, a Corporation of Iowa. Filed May 21, 1928. Serial No. 279,328. 5 Claims. (Cl. 200—84.)



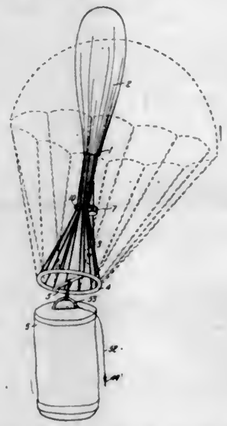
1. An automatic water level controlling structure comprising a float housing, a rock shaft extending therefrom, a float within said housing and secured to said rock shaft, a switch mounted on said housing and including a switch arm, means constantly tending to maintain said switch arm in "on" position and an operative connection between said rock shaft and said switch arm whereby the switch arm may be resiliently moved against the action of said means.

1,783,449. THREAD-EXTRACTING NEEDLE. STANISLAS PICARD, Providence, R. I., assignor to B. B. & R. Knight Corporation, Providence, R. I., a Corporation of Rhode Island. Filed Mar. 20, 1929. Serial No. 348,512. 2 Claims. (Cl. 112—78.)



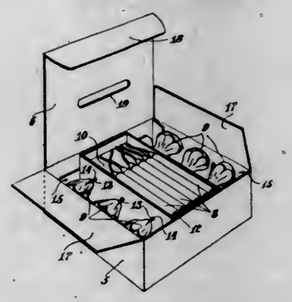
1. A thread extracting needle having a tapered fabric engaging end portion, two diametrically opposite thread engaging edges having spaced notches therein, and diametrically opposite smooth thread engaging edges positioned between the said notched edges.

1,783,450. DOCK SHIP FOR CONVEYING RIVER BOATS ACROSS THE SEA. OTTO POPPER, Vienna, Austria. Filed Mar. 29, 1929, Serial No. 350,897, and in Germany Nov. 5, 1928. 4 Claims. (Cl. 114—72.)



1. In a dock ship for conveying river boats across the sea, the combination of a dock platform arranged above the water level with walls provided at the board sides of the ship, air compartments arranged in said walls, and means pivotally connecting the said walls with the hull of the dock ship.

1,783,451. APPARATUS FOR DIAGNOSING HUMAN AILMENTS. ISRAEL MORDECAI RABINOWITCH, Montreal, Quebec, Canada, assignor to The Montreal General Hospital, Montreal, Canada. Filed July 6, 1926. Serial No. 120,846. 4 Claims. (Cl. 128—185.)

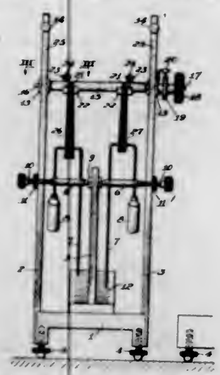


1. An article of commerce consisting of a portable case with carrying handle and containing a respiration member, a pair of chambers, a Wheatstone bridge the arms of which are located in the respective chambers, a galvanometer within the electric circuit of the bridge, a rheostat for adjusting the electric circuit, a battery for energizing the circuit, a chamber in the case for containing an inhaler consisting of a mouth piece having a pair of oppositely extended branches, an outside air inhaler and containing a check valve allowing freedom of flow towards the inhaler, a tube means detachably connecting the other branch of the inhaler to the respiration member and containing a one-way valve allowing freedom of flow from the mouth piece to the respiration member; a second chamber containing a knock-down means for supporting the inhaler and the devices intimately connected thereto in position for use in the treatment of a subject.

1,783,452. PARACHUTE-CORD RETAINER. ANDREW H. REED, Kansas City, Mo., assignor of one-third to Charles W. Turner and one-third to S. M. Coffman, Kansas City, Mo. Filed Feb. 23, 1928. Serial No. 256,269. 12 Claims. (Cl. 244—21.)

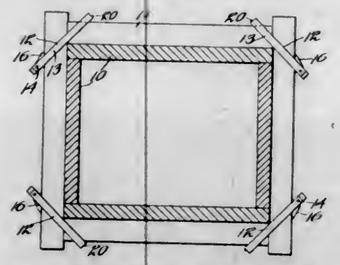
1. In a parachute opening timing device, a case, a cord bundle-retaining member having an arm movable into and out of the case, means engaged within the case releasably engaging said member, and resilient means for moving the member from the case upon release of the same by said engaging means.

1,783,453. COMBINATION PACKAGE. MATHIAS REISERT, Brooklyn, N. Y., assignor, by direct and mesne assignments, of one-half to Cypress Novelty Corporation, Brooklyn, N. Y., a Corporation of New York, and one-half to N. D. Q. Specialty Corporation, a Corporation of New York. Filed Aug. 11, 1928. Serial No. 299,068. 4 Claims. (Cl. 206—47.)



3. A combination package comprising a box having a bottom, walls, and a cover, and a carrier mounted in the box, a candle tray within the carrier said carrier being spaced from opposite walls of the box on at least two sides and on each of said sides being provided with means intermediate the cover and bottom to receive a plurality of stems, each stem and said carrier constituting a cantilever support for a fragile bulbous article on the side of the carrier for keeping the weight of said articles off the bottom or cover of the box.

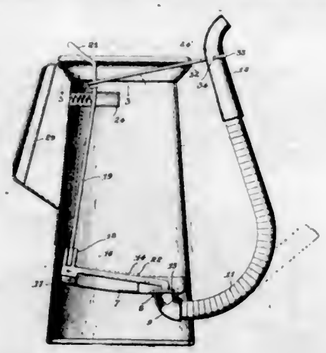
1,783,454. IMITATION PLASTER. ROBERT S. SCHMIEDER, Milwaukee, Wis., assignor, by mesne assignments, to Milcor Steel Company, Milwaukee, Wis., a Corporation of Delaware. Filed Apr. 6, 1928. Serial No. 267,947. 4 Claims. (Cl. 189—85.)



4. A section for use in a covering for ceilings, walls, and the like, comprising a sheet of sheet metal having an irregular relief and intaglio design formed on the external surface thereof to represent rough texture plaster, the design on the sheet being distributed entirely thereover, and continuing to and through the edges of the sheet, said sheet having certain of its edges in the mean plane of the body portion of the sheet and the other of its edges offset rearwardly from said plane to overlap and be overlapped respectively by the corresponding edges of other sheets used in connection therewith.

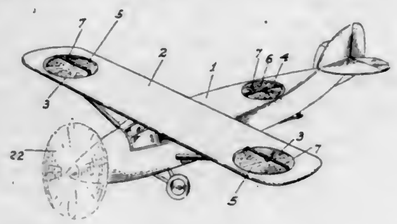
1,783,455. BRISTLE TESTER. FREDERICK W. SCHNEIDER, Baltimore, Md., assignor to Pittsburgh Plate Glass Company, a Corporation of Pennsylvania. Filed Mar. 30, 1929. Serial No. 351,259. 5 Claims. (Cl. 73—51.)

5. In combination in a bristle tester, a frame, a pair of similar pointer members mounted in the frame for swinging movement with their axes of rotation in the horizontal position and in alinement with each other, gravity means for holding the two pointer members at zero position, a bar in parallel with said axes and mounted for rotary adjustment in the frame above the pointer members, and means for clamping one end of each of two bunches of bristles in the bar so that the bunches project away from the axis of the bar and the free end of one bunch is adapted to engage one pointer member and the free end of the other bunch is adapted to engage the other pointer member, said bar also being mounted for vertical adjustment in the frame.



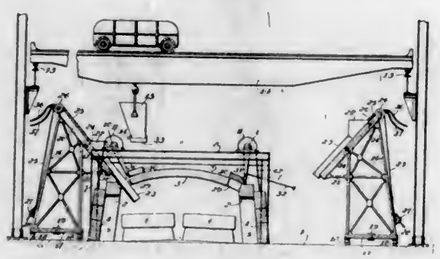
1,783,456. CORNER CLAMP. ELMER L. WILSON, Indianapolis, Ind. Filed July 14, 1928. Serial No. 292,785. 3 Claims. (Cl. 144—291.)

1. A corner clamp adapted to be applied diagonally across the intersecting extremities of re-enforcing members of a concrete column form comprising a U-shaped clamp, a pivot connecting the extremities of the U-shaped clamp, an operating member rotatably mounted on said pivot and adapted to receive a lever for rotating the operating member, and a shoe pivotally carried by the operating member and having impaling teeth for piercing the member upon which it is supported for binding the parts tightly together, substantially as set forth.



1,783,457. LIQUID MEASURING AND DISPENSING CAN. ROBERT G. WILSON, Wayne, and RONALD M. WILSON, Upper Darby, Pa., assignors to The Huffman Manufacturing Company, Dayton, Ohio, a Corporation of Ohio. Filed June 13, 1929. Serial No. 370,600. 11 Claims. (Cl. 221—16.)

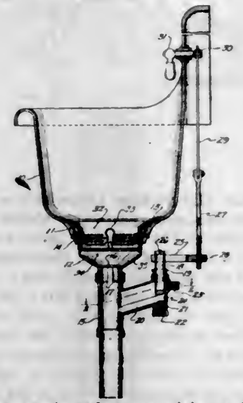
1. In a liquid dispensing can provided with a flexible tube communicating with a port in the bottom of the can and a valve normally closing the port and opened by operating means at the top of the can, movable means



connected with said operating means for holding said tube in an upright position and available only when said valve is closed.

1,783,458. VERTICAL-LIFT AIRPLANE. GEORGE W. WINDSOR, Sacramento, Calif., assignor of one-third to Albert E. Grimm, Sacramento, Calif. Filed Feb. 25, 1929. Serial No. 342,531. 8 Claims. (Cl. 244—15.)

1. In an airplane, having openings through a wing thereof to the sides of the fuselage, and a similar opening through the fuselage rearwardly of said wing; propellers mounted within said openings on vertical axes, a common drive means for all said propellers, and a common means for altering the effectiveness of said propellers relative to the rear propeller independently or simultaneously, selectively, without altering the speed of the drive means.

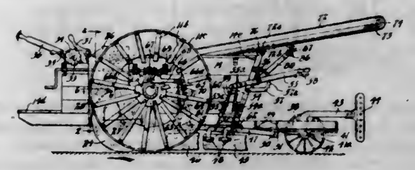


1,783,459. GLASS-POT-FILLING APPARATUS. WILLIAM E. BARNES, Tarentum, Pa., assignor to Pittsburgh Plate Glass Company, a Corporation of Pennsylvania. Filed Mar. 14, 1927. Serial No. 175,049. 2 Claims. (Cl. 214—18.)

1. The combination in apparatus for charging a glass pot furnace having a series of openings through its crown,

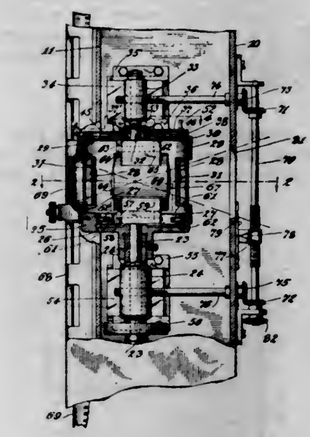
of a framework mounted for movement upon the floor in front of the furnace longitudinally thereof and provided with a filling means consisting of a hopper and a chute lying above the furnace and supported so that it may be moved up and down upon said framework at an inclination such that the chute will pass through any one of said openings when lowered, and means for supplying batch to said hopper, said framework being mounted for swinging movement about a vertical axis so that the angle at which the chute enters the furnace may be shifted to permit it to discharge to either one of two pots in the furnace.

1,783,460. POP-UP WASTE. FRANK G. BROTZ, Kohler, Wis., assignor to Kohler Company, Kohler, Wis., a Corporation of Wisconsin. Filed Aug. 6, 1926. Serial No. 127,635. 4 Claims. (Cl. 4—203.)



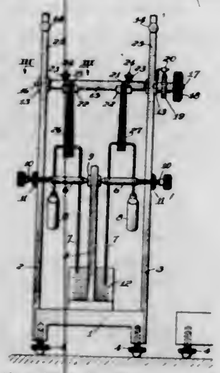
1. A pop-up waste valve comprising a housing forming spaced vertical guides with a narrow inclined connection between them, a waste plug having a tubular stem fitting in one guide of the housing and a plunger rod fitting in the other guide of the housing, a connecting rod secured to the plunger rod and engaging in an opening of the stem of the waste plug, a valve seat for the waste plug connected with the housing, and means for lifting the plunger rod to lift the waste plug, the stem of said waste plug being of sufficient length to avoid uncovering the connection between the guides in the open position of the waste plug.

1,783,461. OPTICAL INSTRUMENT. WILLIAM J. CAMERON, Chicago, Ill. Filed Dec. 28, 1927. Serial No. 243,162. 12 Claims. (Cl. 88—20.)



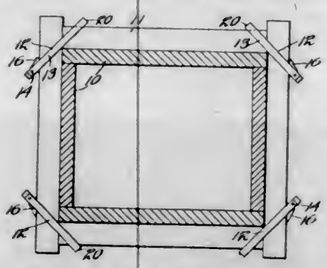
1. A device of the kind described comprising a suitable instrument having a tubular member thereon, a lens at one end of said tube, a hollow barrel coacting with the opposite open end of said tube, a stem reciprocable longitudinally in said barrel, a lamp on the end of said stem nearest said lens, means exterior to said structure for moving the stem longitudinally to vary the distance between the lamp and lens, and other means movable independently of the first means for rotating said lamp.

1,783,462. EXCAVATING, ELEVATING, AND LOADING MACHINE. HARRY K. CLEMONS, St. Paul, Minn. Filed Aug. 3, 1927. Serial No. 210,306. 9 Claims. (Cl. 37—9.)



1. In a machine of the class described, a vehicle having a body adapted to be drawn along the ground, a pair of wheels supporting said body, one of said wheels being constructed and arranged to form an elevating means, an axle supported by said body to which said last mentioned wheel is secured, the other of said pair of wheels being journaled on said axle, and means for connecting and disconnecting said last mentioned wheel to said axle.

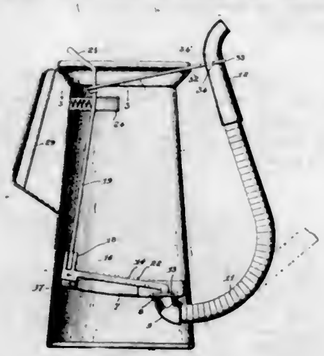
1,783,463. MOTION-PICTURE CAMERA. JOHN D. ELMS, St. George, N. Y., assignor, by mesne assignments, to Felms Revo Corporation, New York, N. Y., a Corporation of New York. Filed Apr. 10, 1928. Serial No. 268,904. 16 Claims. (Cl. 88—16.)



1. In a motion picture camera, in combination, a revoluble double-ended lens of non-coincident nodal points, means for revolving said lens and means for bringing each said nodal point into the axis of revolution during each revolution of said lens.

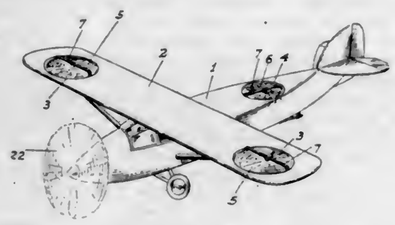
1,783,455. BRISTLE TESTER. FREDERICK W. SCHNEIDER, Baltimore, Md., assignor to Pittsburgh Plate Glass Company, a Corporation of Pennsylvania. Filed Mar. 30, 1929. Serial No. 351,259. 5 Claims. (Cl. 73—51.)

5. In combination in a bristle tester, a frame, a pair of similar pointer members mounted in the frame for swinging movement with their axes of rotation in the horizontal position and in alinement with each other, gravity means for holding the two pointer members at zero position, a bar in parallel with said axes and mounted for rotary adjustment in the frame above the pointer members, and means for clamping one end of each of two bunches of bristles in the bar so that the bunches project away from the axis of the bar and the free end of one bunch is adapted to engage one pointer member and the free end of the other bunch is adapted to engage the other pointer member, said bar also being mounted for vertical adjustment in the frame.



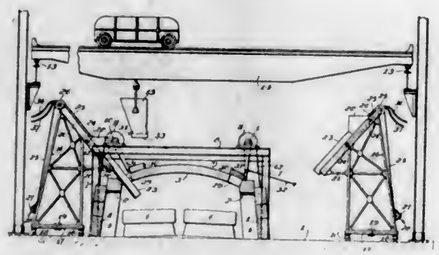
1,783,456. CORNER CLAMP. ELMER L. WILSON, Indianapolis, Ind. Filed July 14, 1928. Serial No. 292,785. 3 Claims. (Cl. 144—291.)

1. A corner clamp adapted to be applied diagonally across the intersecting extremities of re-enforcing members of a concrete column form comprising a U-shaped clamp, a pivot connecting the extremities of the U-shaped clamp, an operating member rotatably mounted on said pivot and adapted to receive a lever for rotating the operating member, and a shoe pivotally carried by the operating member and having impaling teeth for piercing the member upon which it is supported for binding the parts tightly together, substantially as set forth.



1,783,457. LIQUID MEASURING AND DISPENSING CAN. ROBERT G. WILSON, Wayne, and RONALD M. WILSON, Upper Darby, Pa., assignors to The Huffman Manufacturing Company, Dayton, Ohio, a Corporation of Ohio. Filed June 13, 1929. Serial No. 370,600. 11 Claims. (Cl. 221—16.)

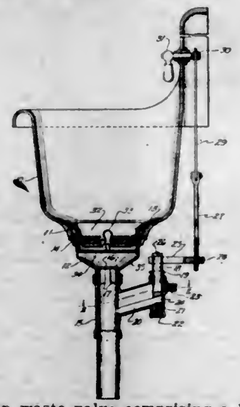
1. In a liquid dispensing can provided with a flexible tube communicating with a port in the bottom of the can and a valve normally closing the port and opened by operating means at the top of the can, movable means



connected with said operating means for holding said tube in an upright position and available only when said valve is closed.

1,783,458. VERTICAL-LIFT AIRPLANE. GEORGE W. WINDSOR, Sacramento, Calif., assignor of one-third to Albert E. Grimm, Sacramento, Calif. Filed Feb. 25, 1929. Serial No. 342,531. 8 Claims. (Cl. 244—15.)

1. In an airplane, having openings through a wing thereof to the sides of the fuselage, and a similar opening through the fuselage rearwardly of said wing; propellers mounted within said openings on vertical axes, a common drive means for all said propellers, and a common means for altering the effectiveness of said propellers relative to the rear propeller independently or simultaneously, selectively, without altering the speed of the drive means.

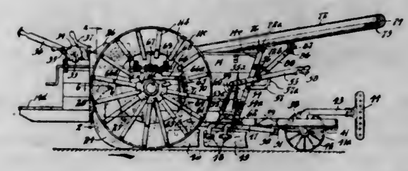


1,783,459. GLASS-POT-FILLING APPARATUS. WILLIAM E. BARNES, Tarentum, Pa., assignor to Pittsburgh Plate Glass Company, a Corporation of Pennsylvania. Filed Mar. 14, 1927. Serial No. 175,049. 2 Claims. (Cl. 214—18.)

1. The combination in apparatus for charging a glass pot furnace having a series of openings through its crown,

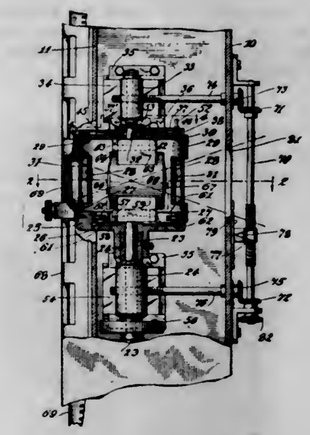
of a framework mounted for movement upon the floor in front of the furnace longitudinally thereof and provided with a filling means consisting of a hopper and a chute lying above the furnace and supported so that it may be moved up and down upon said framework at an inclination such that the chute will pass through any one of said openings when lowered, and means for supplying batch to said hopper, said framework being mounted for swinging movement about a vertical axis so that the angle at which the chute enters the furnace may be shifted to permit it to discharge to either one of two pots in the furnace.

1,783,460. POP-UP WASTE. FRANK G. BROTZ, Kohler, Wis., assignor to Kohler Company, Kohler, Wis., a Corporation of Wisconsin. Filed Aug. 6, 1926. Serial No. 127,635. 4 Claims. (Cl. 4—203.)



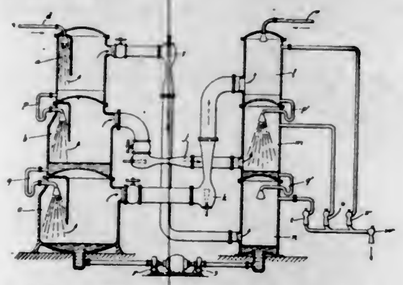
1. A pop-up waste valve comprising a housing forming spaced vertical guides with a narrow inclined connection between them, a waste plug having a tubular stem fitting in one guide of the housing and a plunger rod fitting in the other guide of the housing, a connecting rod secured to the plunger rod and engaging in an opening of the stem of the waste plug, a valve seat for the waste plug connected with the housing, and means for lifting the plunger rod to lift the waste plug, the stem of said waste plug being of sufficient length to avoid uncovering the connection between the guides in the open position of the waste plug.

1,783,461. OPTICAL INSTRUMENT. WILLIAM J. CAMERON, Chicago, Ill. Filed Dec. 28, 1927. Serial No. 243,162. 12 Claims. (Cl. 88—20.)



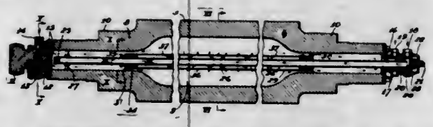
1. A device of the kind described comprising a suitable instrument having a tubular member thereon, a lens at one end of said tube, a hollow barrel coacting with the opposite open end of said tube, a stem reciprocable longitudinally in said barrel, a lamp on the end of said stem nearest said lens, means exterior to said structure for moving the stem longitudinally to vary the distance between the lamp and lens, and other means movable independently of the first means for rotating said lamp.

1,783,462. EXCAVATING, ELEVATING, AND LOADING MACHINE. HARRY K. CLEMONS, St. Paul, Minn. Filed Aug. 3, 1927. Serial No. 210,306. 9 Claims. (Cl. 37—9.)



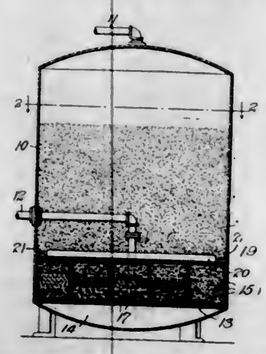
1. In a machine of the class described, a vehicle having a body adapted to be drawn along the ground, a pair of wheels supporting said body, one of said wheels being constructed and arranged to form an elevating means, an axle supported by said body to which said last mentioned wheel is secured, the other of said pair of wheels being journaled on said axle, and means for connecting and disconnecting said last mentioned wheel to said axle.

1,783,463. MOTION-PICTURE CAMERA. JOHN D. ELMS, St. George, N. Y., assignor, by mesne assignments, to Felms Revo Corporation, New York, N. Y., a Corporation of New York. Filed Apr. 10, 1928. Serial No. 268,904. 16 Claims. (Cl. 88—16.)



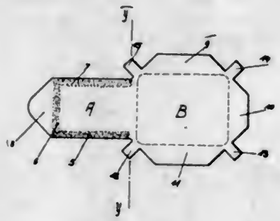
1. In a motion picture camera, in combination, a revoluble double-ended lens of non-coincident nodal points, means for revolving said lens and means for bringing each said nodal point into the axis of revolution during each revolution of said lens.

1,783,464. REFRIGERATING MACHINE. RAOUL FERDINAND FOLLAIN, Colombes, France, assignor to Société Anonyme pour l'Exploitation des Procédés Maurice Leblanc-Vickers, Paris, France. Filed June 30, 1926, Serial No. 119,599, and in France Oct. 14, 1925. 5 Claims. (Cl. 62—152.)



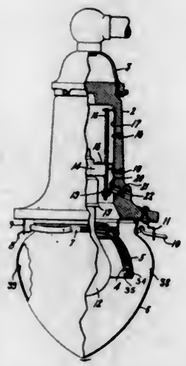
1. In a refrigeration machine, a plurality of evaporators, a plurality of superposed condensers, direct series connection of said condensers so that the condensate and cooling water will flow from one to the other by gravity, liquid seals between said connections for providing individuality of vacuum between said condensers.

1,783,465. FLUID-COOLED ROLL. JOHN H. FOX, Pittsburgh, Pa., assignor to Pittsburgh Plate Glass Company, a Corporation of Pennsylvania. Filed Sept. 30, 1927. Serial No. 223,034. 8 Claims. (Cl. 257—95.)



5. In combination in a roll, an outer cylindrical casing, a liquid supply tube extending through the casing and discharging through the central portion thereof, a second tube surrounding said supply tube and concentric therewith provided with a series of perforations along its central portion, means for supplying a cooling fluid under pressure to the supply tube, means for withdrawing the fluid from the ends of the casing, and means for supporting the tubes so that they are free to expand and contract independently of said casing.

1,783,466. CONSTRUCTION OF ZEOLITE WATER SOFTENERS. ROBERT O. FRIEND, Chicago, Ill. Filed June 11, 1928. Serial No. 284,631. 2 Claims. (Cl. 210—24.)

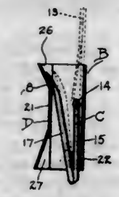


1. Means for preventing disrupting of the gravel bed in a zeolite water softener comprising: a series of relatively flat plates intersecting each other said plates being notched at the intersecting points so as to pass into each other and maintain themselves upright; and means for maintaining the series of plates in said bed comprising: a cross member arranged to rest upon the upper edges thereof.

1,783,467. X-RAY DENTAL FILM PACKAGE. PAUL GOLDACKER and MAX SCHMIDT, Dessau in Anhalt, Germany, assignors, by mesne assignments, to Agfa Ansco Corporation, Binghamton, N. Y., a Corporation of New York. Filed Sept. 24, 1926. Serial No. 137,587. 1 Claim. (Cl. 250—34.)

An X-ray dental film package comprising a film coated with silver halide emulsion, protective sheets of substantially the same size as the film and lying upon opposite sides of the film, a frame of pliable, form-retaining material lying around the edges of the film and a single wrapping sheet of material pervious to X-rays but impervious to visible light rays of greater size than the film and folded up into two portions covering the front and the rear side respectively of the assembly comprising the aforesaid elements, one of the said portions, the wrapping portion, having a protuberance at each of its four corners and margin areas projecting over the edges of the said assembly and being bent upward and inward on the latter whereas the other of the said portions being the sealing portion and having substantially the same breadth as the said assembly is bent on that side of the latter, where the margin areas of the wrapping portion have been bent on, and is attached thereto as to form a light tight envelope for the whole by strips of a suitable waterproof adhesive extending at the free margins of the said sealing portion.

1,783,468. LAMP. CROMWELL A. B. HALVORSON, Lynn, Mass., assignor to General Electric Company, a Corporation of New York. Filed Nov. 17, 1928. Serial No. 320,139. 3 Claims. (Cl. 240—78.)



1. In a lighting unit, in combination, a light source and light diffusing elements comprising a pair of refractors and a globe, a hood for supporting said elements in proper relation, said globe enclosing said refractors, one of said refractors being located inside the other and said light source being located under said refractors, transparent means on each of said light diffusing elements on both sides of the light source, all of said transparent means being located in alinement along a given axis, one of said transparent means on each side of the light source being provided with sighting means thereon, the sighting means on each side of the light source being visible from the opposite side of the light source and from the outside of the unit through said transparent means along said line whereby the filament of the light source may be properly alined with respect to the sighting means on both sides of the light source.

1,783,469. RESILIENT DISK WHEEL. SCHUYLER C. HATFIELD, Baltimore, Md. Filed May 31, 1922, Serial No. 564,893. Renewed Apr. 24, 1930. 1 Claim. (Cl. 152—41.)

An elastic wheel consisting of a hub section and an outer section, spaced from the hub section to provide play in a radial direction, means for confining the play to a radial plane, a pneumatic pad between the sections, the outer section consisting of an inner ring having projecting lugs and a rim having inwardly projecting lugs, and a pair of annular plates, one on each side of the wheel bearing on the rim lugs and on the ring lugs and bolts passing through the lugs and through both plates parallel to the axis securing the plates to the lugs.

1,783,470. LINGERIE SUSPENDER. MARGARET L. HELMBOLD and FRANK T. O'MALLEY, St. Paul, Minn. Filed Aug. 15, 1927. Serial No. 212,890. 11 Claims. (Cl. 24—158.)

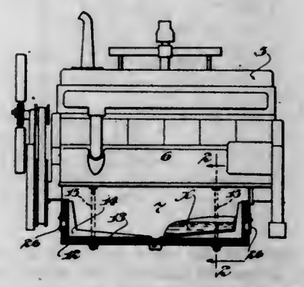
1. In an article of the class described, a clasp comprising an attaching member constructed of a single strand of wire and formed with a transverse bar, hook shanks depending from said bar and terminating in inturned crooks at their lowermost extremities, pin portions extending upwardly from said crooks, and a sheath for enveloping said attaching member, said shanks being kinked adjacent said crooks, and inwardly extending humps formed on said sheath adapted to engage the hollows formed by said kinks for holding said sheath locked upon said attaching member.

1,783,471. METHOD OF TREATING COLLOIDS. ABRAHAM M. HERBSMAN, Huntington Park, Calif. Filed Apr. 15, 1929. Serial No. 355,363. 9 Claims. (Cl. (Cl. 252—6.)

1. A process of separating a disperse chemical system into its constituent phases, which includes the step of subjecting said system to the action of rays of short wave-length.

2. A process of separating a disperse chemical system into its constituent phases, which includes the steps of: subjecting said system to the action of rays of short wave-length; and utilizing the difference in density of said phases for separating said phases.

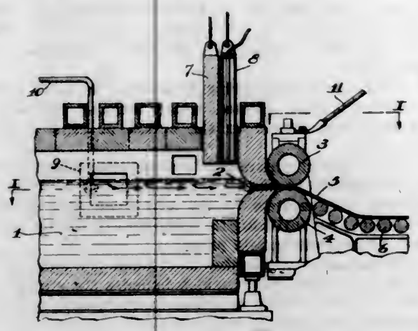
3. A process of separating a disperse chemical system into its constituent parts, which includes the step of subjecting a stream of the substance forming said system to the action of rays of short wave-length.



4. A process of separating a disperse chemical system into its constituent parts, which includes the steps of: subjecting a stream of the substance forming said system to the action of rays of short wave-length; removing said stream of said substance from the influence of said rays; and gravitationally separating said phases.

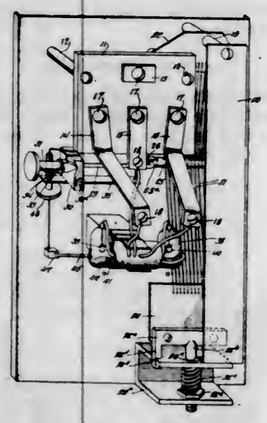
5. A process of separating the phases of a petroleum emulsion, which includes the steps of: subjecting said emulsion to the action of rays of short wave-length; and separating said phases.

6. The method of separating disperse systems into their component phases which comprises irradiating such systems for a substantial length of time under conditions favoring the passage of the rays through the system, the irradiating rays being of wave lengths comprised between the extremes of wave lengths of the kinds emitted from ordinary X-ray tubes, quartz mercury-vapor lamps and known radioactive elements, and then allowing the phases to separate on standing.



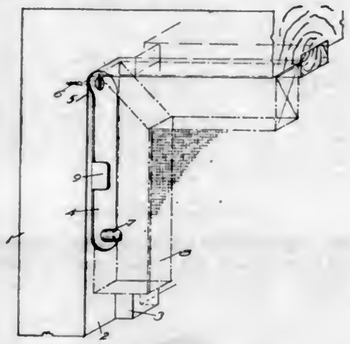
7. A method according to claim 6 in which the disperse system is an emulsion.

1,783,472. OIL-BASE INSULATING PAN FOR INTERNAL-COMBUSTION ENGINES. KARL H. HINRICHS, Winnetka, Ill. Filed Nov. 19, 1928. Serial No. 320,385. 12 Claims. (Cl. 184—104.)



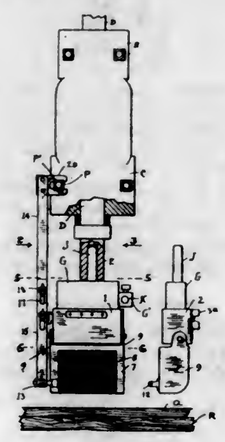
5. The combination with an internal combustion engine having an oil base, of a closed pan surrounding the sides and bottom of the oil base but spaced therefrom to afford a dead air chamber therebetween, doors for the passageways arranged to close under the action of gravity, and thermally actuated means for opening the doors and for controlling the closing thereof.

1,783,473. PROCESS AND APPARATUS FOR REGULATING THE TEMPERATURE OF GLASS WITHDRAWN FROM A TANK. HARRY F. HITNER, Oakmont, Pa., assignor to Pittsburgh Plate Glass Company, a Corporation of Pennsylvania. Filed Feb. 4, 1929. Serial No. 337,296. 2 Claims. (Cl. 49—33.)



2. The combination with a tank having an outlet opening and a pair of sizing rolls in opposition to said opening, of means for heating the stream of glass passing to the rolls, comprising means for causing a flow of electric current from the rolls through the stream of glass, said means including a connection from a supply of current to the rolls, an electrode making contact with the body of molten glass in the tank, and a second connection from said supply of current to the electrode.

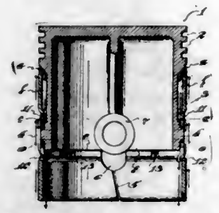
1,783,474. SIGN FLASHER. CLIFFORD HOTCHKISS, Milwaukee, Wis., assignor, by mesne assignments, to Time-O-Stat Controls Company, a Corporation of Maryland. Filed Nov. 4, 1925. Serial No. 66,701. 21 Claims. (Cl. 200—113.)



1. In a device of the class described, an electric circuit, switch means for opening and closing said circuit a predetermined number of times per minute, said means being also controlled to regulate the ratio between the open and closed periods of said circuit, thermal means for actuating said switch, the latter being biased to move upon the operation of said thermal means, means for altering the degree of said bias to vary the period of closed circuit condition as compared to the open circuit condition, and means comprising a variable spring actuator for said switch to regulate the frequency of operation thereof.

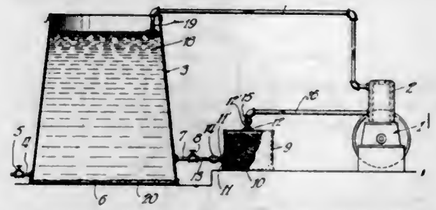
1,783,475. HINGE. THEODORE JOHNSON, Erie, and PAUL G. JOHNSON, Wesleyville, Pa., assignors to Johnson Metal Products Company, Erie, Pa., a Corporation of Pennsylvania. Filed Apr. 28, 1927. Serial No. 187,167. 4 Claims. (Cl. 16—149.)

1. A hinge comprising a resilient plate having means at one end for pivotally securing it to a support; means at the opposite end for securing it to a device to be supported, said means being sufficiently remote from each other to permit the flexing of the intervening plate to detach the plate from the device supported; and a lip at one edge adapted to overlie the face of the device supported.



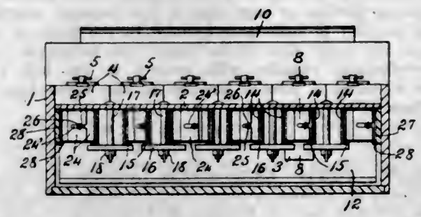
1,783,476. SAFETY ATTACHMENT FOR MACHINE TOOLS. ORMON L. KLUGH and THOMAS E. HAVERSTICK, Muncie, Ind. Filed Jan. 16, 1930. Serial No. 421,265. 3 Claims. (Cl. 144—251.)

1. An attachment for machine tools, comprising a yoke adapted to be secured to the movable head member of a machine tool, a shield member U shaped in cross section, the frontal portion thereof being of transparent material, and the sides thereof being pivotally connected at their upper portions to said yoke, and a connecting member having its lower end pivotally connected to the lower portion of the shield and its upper end being adapted to be secured to a fixed part of the machine tool.



1,783,477. PISTON. SAMUEL J. MANSFIELD, Dallas, Tex. Filed Dec. 13, 1928. Serial No. 325,819. 4 Claims. (Cl. 74—108.)

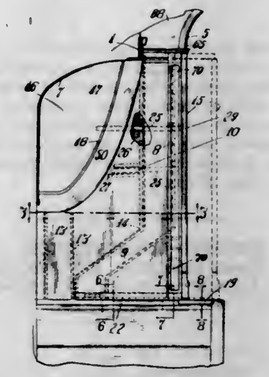
1. In a piston, a head, a guide secured to the head, there being an annular space between the upper end of the guide and the head which opens outwardly, said guide having openings which communicate with the lower part of said space and having an annular space on its exterior adjacent to said openings and further having other open-



ings at the lower part of the external annular space, and fixed lips overhanging the said other openings and formed to deflect oil splashed into the piston along the interior thereof.

1,783,478. METHOD AND MEANS FOR REMOVING SCALE FROM WATER JACKETS OF INTERNAL-COMBUSTION ENGINES. WALTER N. MOORE, Kansas City, Mo., assignor to Three-M Manufacturing Company, Kansas City, Mo., a Corporation of Missouri. Filed Oct. 12, 1926. Serial No. 141,231. 6 Claims. (Cl. 123—170.)

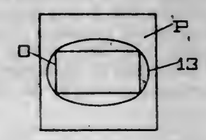
1. A device of the character described comprising a cooling medium reservoir, a reagent container, means spaced from the bottom of said reservoir for conducting the cooling medium from said reservoir to said container, an internal combustion engine having a water jacket, means for conducting said cooling medium from the upper portion of said container directly into said water jacket to produce an upward flow thereof through said reagent and means for conducting said cooling medium from said water jacket into said reservoir.



1,783,479. PACKAGE-DISPENSING MACHINE. HAROLD E. NAGLE, Kansas City, Mo. Filed Aug. 5, 1929. Serial No. 383,521. 7 Claims. (Cl. 312—67.)

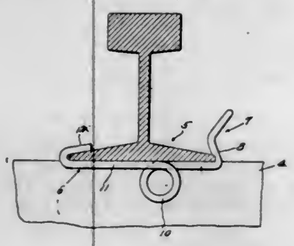
1. In a package dispensing machine, a weight adapted to rest on a pile of packages for forcing the packages downwardly as they are fed one at a time from the bottom of the pile, comprising two members adjustable transversely of each other to vary the length of the weight, and means for fastening said members together in the position to which they may be adjusted.

3. In a package dispensing machine, the combination with means for supporting packages in a pile and means for ejecting the packages one at a time from the bottom of the pile, of a front package guiding member, two bolts mounted on the said front member and extending rearwardly therefrom, two side package guiding members between said bolts and adjustable one toward and from the other and bearing at their front longitudinal edges against the rear side of said front member, two clamping members respectively mounted on said bolts and respectively bearing against the rear of said side members, and two nuts mounted respectively on said bolts and bearing respectively against said clamping members.



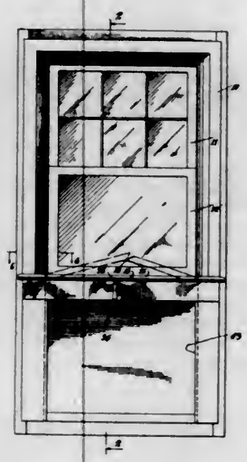
1,783,480. SLEEPING CAR. CHARLES W. PFLAGER, Evanston, Ill., assignor to The Pullman Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 26, 1927. Serial No. 221,999. 13 Claims. (Cl. 105—323.)

1. The combination with the seats and bunks of a sleeping car and the like, of a collapsible partition comprising a pair of plates spaced apart and extending upwardly from said seats, bunk supporting and latching elements mounted between said plates, a slidable extension supported by said seats and movable between said plates, and embossments formed in said plates for housing said bunk supporting and latching elements.



2. The combination with the transverse roof transoms and lower deck of a sleeping car, of a plurality of partitions fixed transversely of the car and severally comprising connected pairs of plates spaced apart and secured to the respective car sides and transoms, embossment plates forming bulged extensions of said partitions, and bunks secured to said partitions and disposed between respectively adjacent embossments.

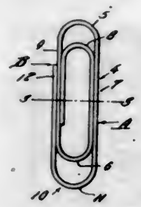
1,783,481. CONDENSING LENS SYSTEM. WILBUR B. RAYTON, Rochester, N. Y., assignor to Bausch & Lomb Optical Company, Rochester, N. Y., a Corporation of New York. Filed Nov. 30, 1929. Serial No. 410,755. 5 Claims. (Cl. 88—24.)



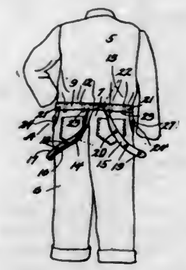
1. A condensing lens system for illuminating a relatively long, narrow aperture, said system comprising two spaced lens elements, one of said elements having an aspheric surface of revolution, the other of said elements having a cylindrical surface.

1,783,482. ANTICREEPER FOR RAILWAY RAILS. JAMES RICHARDS and NICHOLAS CORTESE, Arnold, Pa. Filed Mar. 10, 1930. Serial No. 434,703. 3 Claims. (Cl. 238—330.)

1. As a new product of manufacture, an anti-creeper of the class described comprising a substantially U-shaped member formed from a single length of sturdy wire bent between its ends to form spaced converging leg portions having spring coils intermediate their ends, and retaining means at opposite ends of said leg portions, said retaining means being detachably engaged with the edge portions of the base flange of a rail.



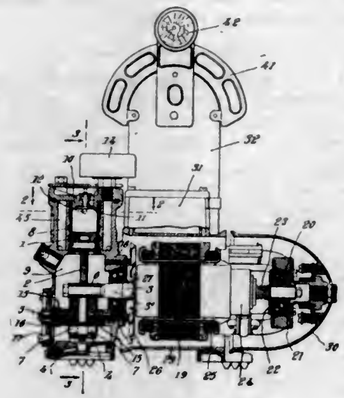
1,783,483. WINDOW CONSTRUCTION. WALTER M. RICHTER, Staten Island, N. Y. Filed Jan. 8, 1930. Serial No. 419,224. 4 Claims. (Cl. 20—52.1.)



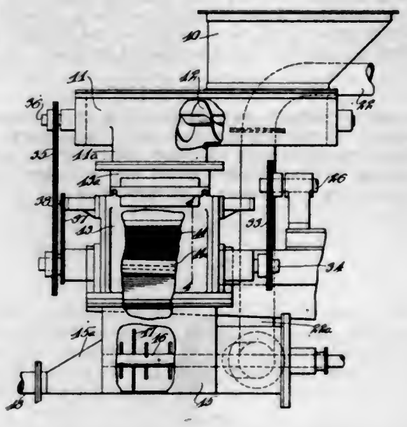
1. A window construction comprising a frame, a pit formed at the lower part thereof, window sashes adapted to be lowered into said pit, a bi-partite cover for said pit constituting the window sill, hinges connecting both parts of the cover, plates on the underside of said cover parts, a system of spring controlled locking arms normally arranged on said parts, and an operating lever to operate said arms for allowing a folding of the cover parts about their hinge.

1,783,484. PAPER CLIP. MARTIN ROSS, Evansville, Ind., assignor of one-half to Ruby Ross, Evansville, Ind. Filed Apr. 17, 1930. Serial No. 445,021. 3 Claims. (Cl. 24—261.)

1. As a new product of manufacture, a paperclip formed from a single length of wire bent upon itself to form a plurality of U-shaped portions defining distinguishable convolutions for acting in mechanical coacting relationship to provide a clip having substantially duplicate grips at its opposite ends, the convolutions of wire forming the complete clip all occupying the same normal plane, whereby to dispose the distinguishable portions of the wire in flat nested relationship.



1,783,485. GARMENT. THOMAS EDWARD SHAW, Atlanta, Ga., assignor of three-fourths to The W. E. Floding Company, Atlanta, Ga. Filed May 12, 1928. Serial No. 277,253. 1 Claim. (Cl. 2—79.)

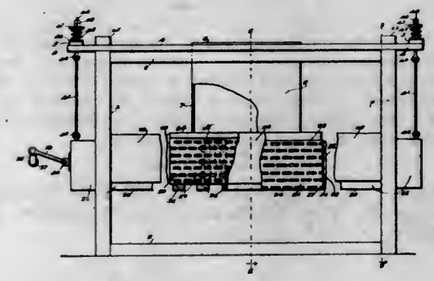


A garment comprising jacket and trousers portions united to form a one-piece garment, said trousers portion formed at the rear with a drop seat adapted for detachable connection with the jacket portion and provided along its upper edge with a series of spaced loops, a belt secured intermediate its length and centrally to the inner surface of the back portion of the jacket, the free ends adapted for insertion in said loops to effect a flexible connection between the jacket and trouser portions, and means secured to the belt adapted for engagement with means positioned at each opposite lower corner of the jacket portion at each side of the garment, whereby when the belt is adjustably secured to the body of the wearer the lower edge of the jacket will be drawn taut in overlapping relation with respect to the belt and loops to effect a smooth surface at the waist line at the back of the garment.

1,783,486. PUMP. RENÉ ALFRED LAURENT VOLET, La Vareune St. Hilaire, France. Filed Apr. 8, 1929, Serial No. 353,400, and in Belgium May 9, 1928. 1 Claim. (Cl. 172—36.)

In combination, an electric motor having a rotatable shaft and a rotor, a pinion keyed to said shaft, a pair of pinions meshing with said first named pinion and having an axis of rotation positioned below that of the motor shaft, a pitman connected eccentrically to each of said pair of second pinions said pitman presenting a bent portion adapted to clear said first named pinion, and a casing, adapted to contain lubricating fluid, extending around all of the aforesaid pinions, said casing having a wall extending between the rotor of the motor and the pinion mounted on the shaft of the latter, whereby lubricating fluid contained in said casing and immersing a portion of said pair of pinions is prevented from coming in contact with said rotor.

1,783,487. MATERIAL-TRANSFER APPARATUS. HARRY H. WEISS, Chicago, Ill. Filed Dec. 9, 1929. Serial No. 412,823. 3 Claims. (Cl. 302—36.)

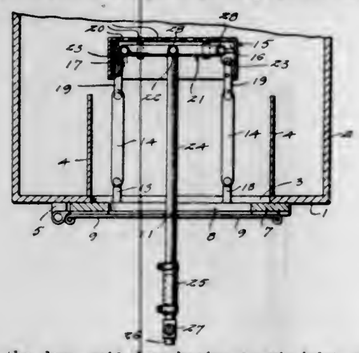


1. A remote delivery apparatus for loose material, comprising a hopper, a forward screw-feed at the bottom of the hopper, a rotary-wing downward feeder leading from the screw feed, a picker agitator below the feeder, a housing for the agitator, a blower conduit leading into the housing, and a delivery conduit leading out of the same.

1,783,488. CLOTHES DRIER. LELAND G. YOUNG, Muscatine, Iowa. Filed Dec. 27, 1929. Serial No. 416,976. 2 Claims. (Cl. 211—172.)

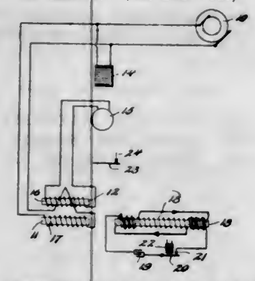
2. A clothes drier comprising a tubular body portion, a head at the uper end of the body portion, a disk at the lower end of the body portion, a rod connected with the head and extending through the disk, said disk having a bearing, a base having an opening to receive the bearing, a nut on the lower end of the rod for securing the head and disk to the body portion, arms extending from the upper end of the body portion, and supporting legs for the body portion.

1,783,489. PEA OR LIKE MATERIAL SPLITTING MECHANISM. JOSEPH ZEB, Spokane, Wash. Filed May 20, 1929. Serial No. 364,469. 10 Claims. (Cl. 130—30.)



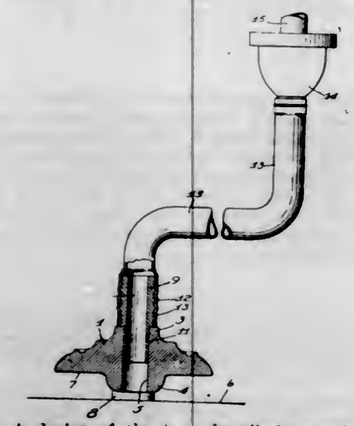
1. In a pea or like material splitting mechanism, companion members having inwardly facing splitting surfaces, an intermediate member between said companion members having outwardly facing splitting surfaces in splitting spaced relation to said inwardly facing surfaces, means for discharging material to be split into the spaces between said members, and means for causing relative and variable movement of said members to split the interposed material.

1,783,490. FURNACE-DOOR-CARRIED FUEL BURNER. GUY FRANKLIN BECKHAM and CONNIE DUNCAN MORGAN, Crosbyton, Tex. Filed Oct. 1, 1929. Serial No. 396,539. 6 Claims. (Cl. 158—7.)



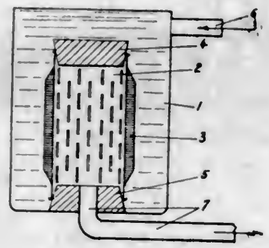
1. In a furnace structure, a fire chamber having a door opening, a door hingedly mounted before said opening, a fuel burner, supporting arms each hingedly attached to

the inner face of the door and having hinge connection with said burner, means for conducting fuel to the burner



through the door, said door having an air inlet opening therethrough, and draft control doors hingedly connected to the first mentioned door for closing said opening.

1,783,491. TRAIN-CONTROL SYSTEM. THEODORE BODDE, Niagara Falls, N. Y., assignor to The Regan Safety Devices Company, Inc., New York, N. Y., a Corporation of New York. Filed Oct. 30, 1926. Serial No. 145,191. 22 Claims. (Cl. 246—63.)



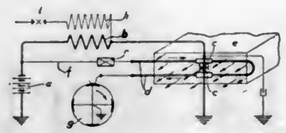
1. A roadside tripping apparatus for an induction train control system comprising an element of magnetic material, a winding on said element, a circuit devoid of an energy source of said winding, means for opening and closing said circuit, and an auxiliary compensating or shading winding on an end of said element.

1,783,492. BATH FIXTURE. GEORGE PAUL BOEHM, Chicago, Ill. Filed May 20, 1929. Serial No. 364,590. 3 Claims. (Cl. 137—111.)

1. A device of the type described comprising a body portion provided with legs, said body portion being provided with a boss upon the underneath side and an opening passing through the body portion and the boss, liquid-conveying means connected with said body portion and communicating with the opening therein, and means associated with said liquid-conveying means and adapted to be removably attached to a faucet.

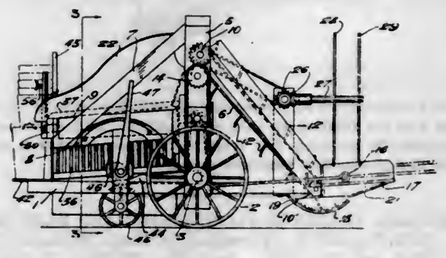
1,783,493. METHOD OF WASHING YARN OR THREADS WOUND UPON SPOOLS. BENNO BORZYKOWSKI, Paris, France. Filed July 16, 1925, Serial No. 44,079, and in Germany Sept. 2, 1924. 2 Claims. (Cl. 18—54.)

2. A process for rapidly washing artificial fibers, wound upon perforated bobbins or the like and disposed in a tank, which consists in first, causing the liquid residues of the coagulating bath or the like to be drawn inwardly through the wound fibers and the perforations of the bobbins by suction produced within the bobbins; and secondly; filling the tank with washing liquid and causing the washing liquid to pass once only through the wound fibers and the perforations of the bobbins by a continuation of the suction within the bobbins.



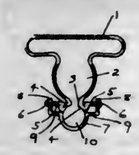
1,783,494. FISHING REEL. HALVOR S. BROADWELL and SAMUEL T. THORPE, Bristol, Conn., assignors to The Horton Manufacturing Company, Bristol, Conn., a Corporation of Connecticut. Filed Feb. 7, 1929. Serial No. 338,171. 11 Claims. (Cl. 242—84.4.)

1. In a fishing reel, a frame, a spool, a traversing shaft, a line guide carriage, a pawl in said carriage, and a retaining bar normally supporting said carriage in position with said pawl engaging said shaft, said bar being movable laterally toward and from said shaft.



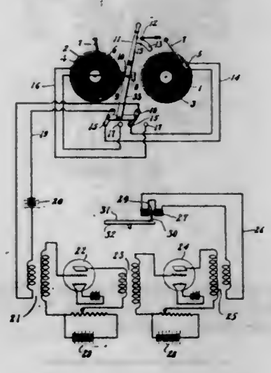
1,783,495. CIRCUIT BREAKER FOR IGNITION INSTALLATIONS OF INTERNAL-COMBUSTION ENGINES. HANS BURKAS, Tubingen, Germany, assignor to Robert Bosch Aktiengesellschaft, Stuttgart, Germany. Filed Mar. 9, 1927, Serial No. 174,080, and in Germany Apr. 19, 1926. 8 Claims. (Cl. 200—19.)

2. An electrically operated circuit-breaker for ignition installations of internal combustion engines, comprising in combination, a current-carrying conductor consisting of a wire forming a plurality of loops, two contacts attached mechanically to the two sides of said loops, and magnet



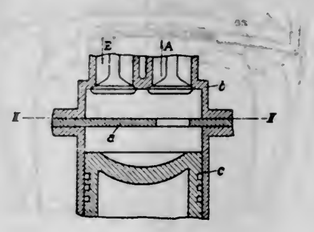
fields, the arrangement of said magnet-fields and the said loops relative to each other being such that the loops can be moved by the said field, substantially as set forth.

1,783,496. POTATO-GRADING MACHINE. JAMES D. COX, Cape May, N. J. Filed May 4, 1926. Serial No. 106,692. 6 Claims. (Cl. 209—107.)



1. In a potato gathering and grading machine, a vehicle, cooperating rollers carried longitudinally thereof having their axes in a plane inclined downwardly toward the rear of said vehicle, of frusto-conical formation to form intervening spaces between the rollers diverging toward the discharge end of the rollers for passage of potatoes, means for variably adjusting the relative angularity of the axes of said rollers to increase or decrease the divergency of said passage, means for altering the inclination of their axes and means for cutting off at will at selected points the flow of potatoes over the ends of said rollers, said means including an upright support and tail gates both of which are pivoted at their adjacent ends to said upright support.

1,783,497. BUTTON LOOP. JOHN H. DOMKEE, West Haven, Conn., assignor to The Wire Novelty Manufacturing Co., West Haven, Conn., a Corporation of Connecticut. Filed Feb. 15, 1929. Serial No. 340,245. 3 Claims. (Cl. 24—224.)

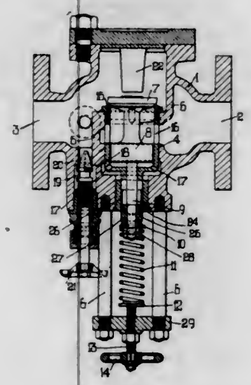


3. A two-piece button loop comprising a button receiving member having a contracted throat to which the shank of a button may be urged by expanding the loop; a second member providing the lower portion of a button retaining loop; portions provided by the lowermost parts of the button receiving member and cooperating with the lower portion of the second member to provide a button retaining member; aligned terminals provided by the first member above its lowermost parts; and means provided by the aligned terminals and the second member for pivotally assembling the members.

1,783,498. METHOD OF MAKING PHONOGRAGH RECORDS. FRANK L. DYER, New York, N. Y. Original application filed Oct. 19, 1927, Serial No. 227,191. Patent No. 1,726,546, dated Sept. 3, 1929. Divided and this application filed June 28, 1929. Serial No. 374,314. 7 Claims. (Cl. 179—100.4.)

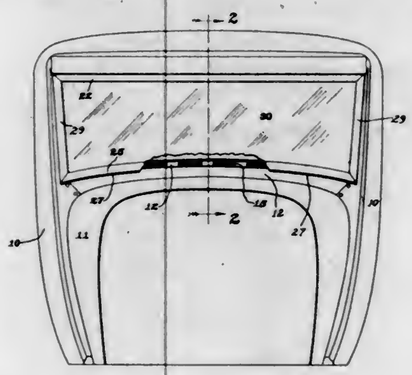
1. The method of recording sounds of long duration which consists in making successive records, each representing a fraction of the sounds to be recorded and in electrically transferring the recorded sounds from the successive records to a micro-blank turning at slower speed than the original records, substantially as set forth.

1,783,499. INTERNAL-COMBUSTION ENGINE. HERMANN ELLERBUSCH, Dortmund-Eving, Germany. Filed Dec. 27, 1929, Serial No. 416,919, and in Germany Dec. 27, 1928. 3 Claims. (Cl. 123—191.)



2. An internal combustion engine with a deflecting surface disposed between cylinder and cylinder head to abstract the heat to the cooling water by means of protruding plates, the deflecting surface being provided with an opening for the passage of the gas mixture.

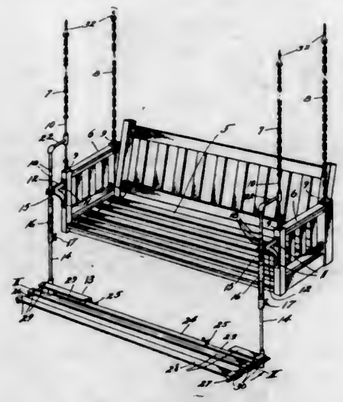
1,783,500. PRESSURE-REDUCING VALVE. JOSEPH RILEY EYRE, Hull, England. Filed June 21, 1928, Serial No. 287,100, and in Great Britain Nov. 3, 1927. 6 Claims. (Cl. 50—35.)



1. A pressure reducing valve consisting of a lift valve, a leaky piston, a spindle interrupted over a portion of its length on which said lift valve and leaky piston are mounted, a spring extending over said interrupted portion of said spindle, a lift valve seat, means to displace said lift valve from off its seat, an auxiliary valve and an independent control for said auxiliary valve, the desired

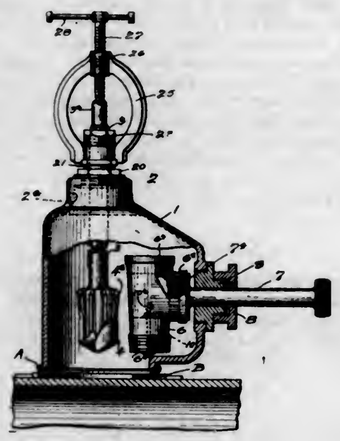
pressure on the working side of the reducing valve being obtained by displacement of the lift valve from off

its seat until half the desired pressure is obtained, whereupon the auxiliary valve is removed from its seat until the working pressure is reached.



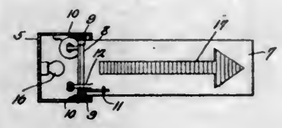
1,783,501. AUTOMOBILE VENTILATING CONSTRUCTION. HENRY FORD, Dearborn, Mich., assignor to Ford Motor Company, Dearborn, Mich., a Corporation of Delaware. Filed Nov. 26, 1928. Serial No. 321,796. 7 Claims. (Cl. 296—94.)

6. In a device of the character described, a cowl member, a windshield pivoted to swing above said cowl member, a stop member associated with said cowl against which said windshield co-acts when in its closed position, a strip arranged to deflect downwardly air entering between said stop and windshield, and telescopic members associated with said deflecting strip and windshield in position so that when the windshield is slightly opened a substantial seal will be maintained between the upper portion of the deflecting strip and the windshield for the purpose described.



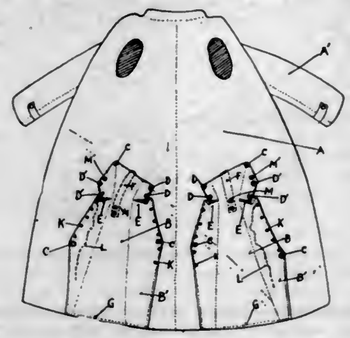
1,783,502. ATTACHMENT FOR PORCH SWINGS. WILLIAM H. FRY, Kansas City, Mo. Filed July 2, 1928. Serial No. 289,876. 1 Claim. (Cl. 155—65.)

A porch swing comprising a seat member, a front and rear pair of suspension members for said seat member, a swing propulsion foot rest pivotally carried by said seat member and having a pair of arms extending above the pivot points and engaging the front pair of suspension members and adapted to flex one pair of suspension mem-



bers forwardly and rearwardly as said foot rest is moved to and fro relative to said seat member, said arms being adjustable to vary the relative movement between said flexible suspension members and foot rest.

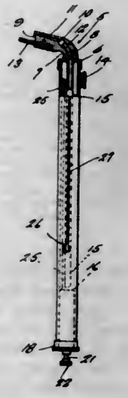
1,783,503. COMBINED PIPE-TAPPING AND PLUG-SETTING MACHINE. FREDERICK B. HALL, Richmond, Va. Filed Oct. 14, 1929. Serial No. 399,599. 3 Claims. (Cl. 77—39.)



1. In an enclosed drill tap and fixture setting device for pipes and mains, a casing, a plug threaded into one side of the casing, a rod having a threaded head for engaging a side of the fixture, the rod passing through said plug, a combined drill and tap having a shank passing through the casing wall, both the drill tap and fixture carrying rod operable exteriorally of the casing and being movable in intersecting paths, the combined drill and tap being adapted to drill and tap an aperture in the main for inserting therein an externally threaded end of the fixture, and further so arranged as to engage an internally threaded portion of the fixture for operatively inserting said externally threaded end into the main.

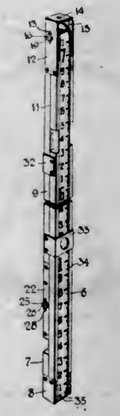
1,783,504. SIGNAL. JOSEPH B. HAMILTON, South Pasadena, Calif. Filed Jan. 10, 1928. Serial No. 245,764. 2 Claims. (Cl. 177—339.)

1. In a signaling device, a body portion having an open side, a pair of aligned side members normally closing the open side, means for pivotally connecting the inner ends of the side members to the body portion, said side members having cut out portions defining arrows pointing in a common direction, and means for operating the side members to move them to their indicating positions.



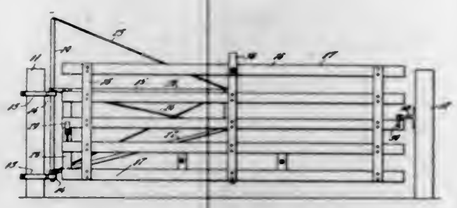
1,783,505. WEARING APPAREL. JAMES J. HAYES, Louisville, Ky. Filed Apr. 13, 1927. Serial No. 183,538. 2 Claims. (Cl. 2—86.)

1. Wearing apparel consisting of the combination of a weather coat extending below the knee of the wearer and gaiter-like extension parts each fastened in a straight attachment line on either side along the bottom inside of said coat and adapted when fastened up inside said coat to be spread out fully for invisible carriage, right angular vamp-peaks on the gaiter parts, means for spreading said gaiter-like extension parts out at full length and width and fastening them up inside the coat consisting of means for detachably fastening the apices of the rectangular vamp-peaks uppermost vertically above said attachment lines to prevent the appearance of side-sagging in the skirt of the coat, said arrangement being adapted to allow the outer edges of said gaiter-like extension parts to rest fixed at acute angles with natural vertical undulations of said coat while on the wearer, as desired.



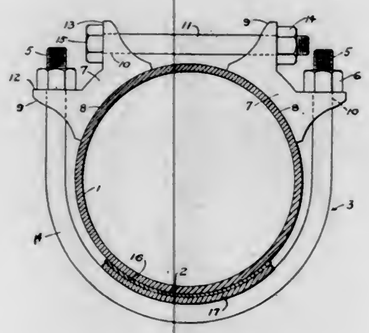
1,783,506. GLASS-CLEANING DEVICE. THOMAS C. HOMILLER, Washington, D. C. Filed Nov. 14, 1929. Serial No. 407,230. 4 Claims. (Cl. 15—126.)

1. In a cleaning device of the class described, an apertured delivering and distributing head, and a hollow elongated handle carried by said head, said handle being a water container communicating with said head having a force feed means including an air passage incorporated in



its lower end to eject the water, a regulating valve in said head, and an operating lever on said handle and an operating connection between said lever and valve.

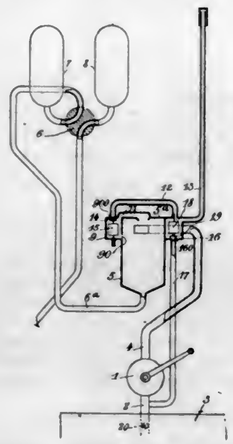
1,783,507. SURVEYOR'S ROD. ROBERT E. KAPPS, Troy, N. Y., assignor to W. & L. E. Gurley, Troy, N. Y., a Corporation of New York. Filed June 1, 1929. Serial No. 367,719. 9 Claims. (Cl. 33—74.)



1. A surveyor's rod of the extensible type, comprising in combination, an extensible frame structure including two members, one longitudinally slidable on the other; a pair of guide pulleys mounted on one of said members adjacent the ends thereof; a tape connected at its ends with the other member and free of connection with said frame structure intermediate said points of connection, said tape extending from one point of connection over the entire length of the front face of said frame structure, thence around one pulley, thence along the back of the frame structure to and around the other pulley to the other point of connection; and means for placing said tape under substantially constant tensile stress.

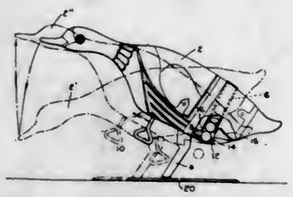
1,783,508. FARM GATE. TROY J. KNIGHT, Golden, Ill. Filed Apr. 15, 1930. Serial No. 444,470. 2 Claims. (Cl. 39—11.)

1. In a structure of the class described, in combination, a fixedly mounted post, hinge means on said post, a swingable frame embodying a vertical standard pivotally connected with the hinge means, a pair of upper and lower spaced rails and bracing means, said rails terminating in vertically spaced bearings at their free swingable ends, a pair of complemental struts fastened to opposite sides of the frame adjacent the hinge connection, adjustable retaining keepers associated with said struts, a gate having a central spindle mounted in said bearings, said gate being swingable into overlapping relationship with either side of the frame and said keepers functioning to hold the gate in either of these positions.



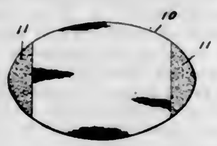
1,783,509. PIPE CLAMP. WILLIAM EDWARD LAHEY, Lima, Ohio. Filed June 3, 1927. Serial No. 196,233. 14 Claims. (Cl. 137—99.)

1. A clamp comprising a U-shaped member adapted to embrace a pipe and hold leak-stopping means thereagainst, blocks with perforated ears receiving the ends of said member, a connecting bolt extending in the plane of the U-shaped member through other perforated ears on said blocks, the ends of said bolt and member being threadably engaged by nuts for tightly pressing the leak-stopping means against said pipe.



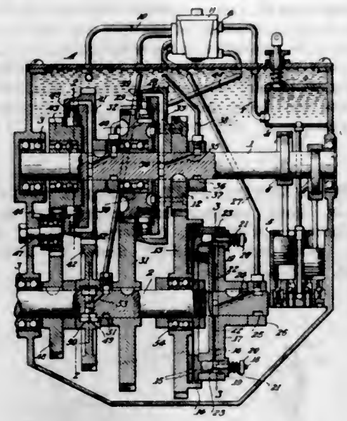
1,783,510. LIQUID-MEASURING APPARATUS. ALFRED LANSER, Corseaux-Vevey, Switzerland. Filed Nov. 16, 1928, Serial No. 319,759, and in France Nov. 2, 1928. 4 Claims. (Cl. 183—2.5.)

4. An apparatus of the class described comprising a supply reservoir, a gas and liquid separator having a gas discharge port and a liquid discharge port, means for passing the liquid from the supply reservoir to said gas and liquid separator, a stand pipe for separating the liquid from the gas passing through said gas discharge port, said



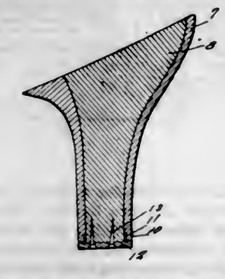
pipe communicating with the latter and with the atmosphere, and a liquid recovery chamber communicating with said pipe.

1,783,511. TOY. LOUIS MARX, New York, N. Y. Filed Mar. 15, 1929. Serial No. 347,385. 16 Claims. (Cl. 46—40.)



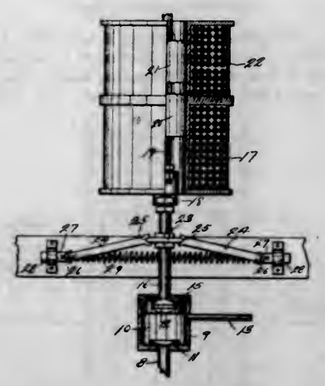
1. A readily movable toy fowl comprising a storage magazine for holding toy eggs, a spring driven motor in said fowl, and means driven thereby for causing the successive and single ejection of the eggs from the magazine at spaced intervals of time, in representation of the laying of eggs by the fowl.

1,783,512. PROTECTOR. MILDRED C. MATHER, Minneapolis, Minn. Filed July 14, 1928. Serial No. 292,807. 2 Claims. (Cl. 2—42.)



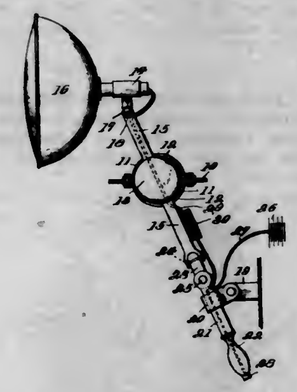
2. A breast covering comprising a thin fabric sheet of general oblong shape and adapted to extend over the nipple of the breast and portions at opposite sides thereof, adhesive material only adjacent the ends of said sheet for engaging the skin at each side of the nipple to hold the device in place, the portion over the nipple being free of adhesive and adapted to hold the end of the nipple in the line of a circle touching the breast at each side thereof.

1,783,513. TRANSMISSION. DONALD D. MAURER, Walnut Creek, Calif. Filed Sept. 6, 1929. Serial No. 390,801. 1 Claim. (Cl. 74—59.)



A transmission of the class described comprising a drive shaft, a driven shaft, a small gear keyed to the drive shaft, a large gear rotatably arranged on the driven shaft and meshing with the small gear, fluid operated means for connecting the rotatably arranged gear with its shaft, such means including clutch disks, a second gear keyed to the driven shaft, a gear rotatably arranged on the drive shaft and meshing therewith, a piston carrying member connected with the first gear on the drive shaft and the rotatably arranged gear on the drive shaft having recesses in a part thereof for receiving the pistons, fluid pressure means for causing the pistons to engage the recesses to lock the two gears together, a second piston carrying member keyed to the drive shaft and having teeth thereon, a gear rotatably arranged on the driven shaft and having its teeth meshing with the teeth on said member, fluid pressure means for connecting the last mentioned gear on the driven shaft with said shaft, a gear rotatably arranged on the drive shaft and having a part thereof frictionally receiving the pistons of the toothed member, fluid pressure means for causing said pistons to engage said part, a reverse gear keyed on the driven shaft and an idler gear meshing therewith and with the gear associated with the toothed member on the drive shaft.

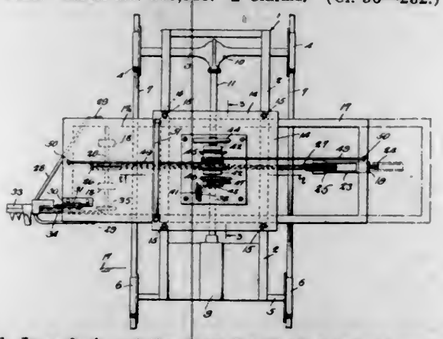
1,783,514. HEEL STRUCTURE FOR SHOES. ELMER MILLER, Boonton, N. J. Filed Sept. 7, 1929. Serial No. 390,960. 3 Claims. (Cl. 36—34.)



1. A heel structure for shoes comprising an outer shell, a core within said shell, said shell and core adapted for attachment with a shoe at the upper ends, a rim disposed over the lower edges of the shell, an upstanding flange on the rim disposed between the lower side margins of the shell and the core, and a tread disposed over the core and the flange.

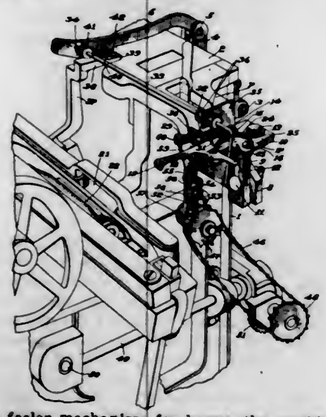
1,783,515. VALVE ACTUATION FOR A BURGLAR-REPELLING DEVICE. HARRY W. MONTGOMERY, Omaha, Nebr. Filed May 18, 1927. Serial No. 192,355. 1 Claim. (Cl. 137—139.)

A valve actuating mechanism comprising a valve stem, means for reciprocating the valve stem, a valve carried by the stem and cooperating with a valve seat when moved in one direction, means for limiting the movement of the valve in the other direction, said mechanism also including axially disposed slide bars at opposite sides of the valve stem and at a right angle thereto, arms hingedly connected to the slide bars and extending inwardly, a round disc carried by the valve stem, bifurcations in the inner ends of the arms and in which the disc engages and a contractible coiled spring connecting the slide bars.



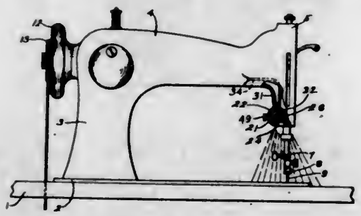
1,783,516. SPOTLIGHT ATTACHMENT. HENRY H. MORETON, Stony Point, N. Y. Filed Jan. 10, 1928. Serial No. 245,696. 4 Claims. (Cl. 240—61.)

1. A spotlight attachment comprising a movable joint member, a lamp supporting rod projecting therefrom in one direction and an operating member projecting from said universal joint member in an approximately opposite direction, a normally fixed support having a seat complemental to said movable joint member and cooperating therewith to provide a universal joint member so that said lamp supporting rod and said operating member are capable of simultaneous and corresponding angular and rotative adjustments, a handle and a joint member pivotally connected with said handle and said operating mem-



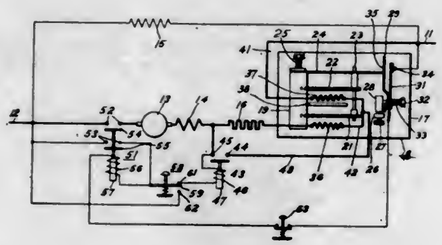
ber respectively on axes at right angles to each other, so that angular movements may be imparted to said operating rod by rectilinear movements imparted to the handle and relative rotation of the handle and said operating rod is prevented.

1,783,517. RAILROAD MOWING MACHINE. CARL MORRIS and WILLIAM H. BUCK, Thornton, Iowa, assignors of one-third to Orie Infelt, Thornton, Iowa. Filed Oct. 18, 1928. Serial No. 313,343. 2 Claims. (Cl. 56—232.)



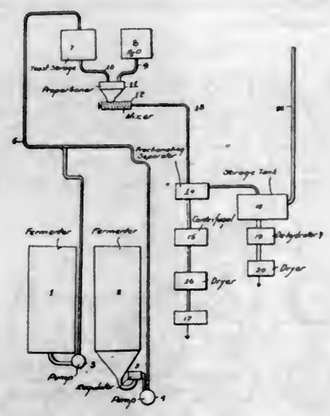
1. In a device of the class described, a vehicle including a main frame, a main platform disposed above the main frame, and connections between the main frame and the main platform; a rectangular frame slidable between the main frame and the main platform and held by contact therewith, against vertical tilting movement, the rectangular frame being slidable between the connections and being held by contact therewith against horizontal swinging movement, means for mounting the vehicle for movement along a railroad track, a shaft journaled on the rectangular frame, at one end thereof, outwardly of one side of the track, a tightener carried by the opposite end of the rectangular frame, outwardly of the opposite side of the track, sprocket wheels on the shaft and on the tightener, a sprocket chain engaging the sprocket wheels, means for driving the sprocket chain, mechanism on the first specified end of the rectangular frame for working on the right of way at the first specified side of the track, and means for connecting said mechanism operatively with the shaft.

1,783,518. FEELER MECHANISM FOR LOOMS. PATRICK F. O'BRIEN, Franklin, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Nov. 26, 1929. Serial No. 409,969. 10 Claims. (Cl. 139—270.)



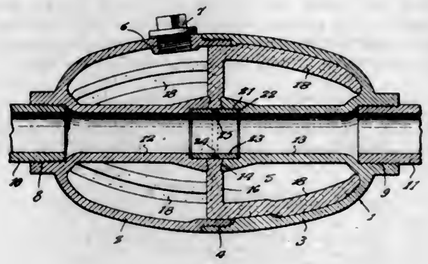
1. In a feeler mechanism for looms, the combination of a feeler stand, a side slipping filling feeler having at its front portion a laterally extending portion, a link pivotally mounted on the feeler stand at one side of the longitudinal axis of the feeler and pivotally connected to the laterally extending portion of the feeler at the other side of its longitudinal axis, a spring connected to the feeler between the pivotal points of the link and exerting a rearward pull upon the feeler to move both the link and feeler to rearward feeling position and swing the feeler laterally about its pivotal connection with the link, and a stop to prevent the feeler being moved laterally beyond its feeling position by the spring.

1,783,519. LIGHTING UNIT. LEWIS C. PACKER, Long Meadow, Mass., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 11, 1929. Serial No. 354,287. 2 Claims. (Cl. 240—2.)



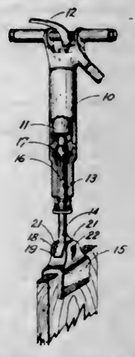
1. The combination with a sewing-machine goose neck including a horizontal arm and a sewing head disposed to provide a laterally extending recess at its lower portion and the lower wall of the head being further disposed to provide an opening communicating between the recess and the outside of the head, and a lighting unit disposed within the recess and a removable cap at one end of the recess in the wall of the head to permit insertion of the lighting unit.

1,783,520. THERMAL CONTROL SYSTEM. GEORGE C. PEARCE, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 6, 1928. Serial No. 310,713. 1 Claim. (Cl. 172—288.)



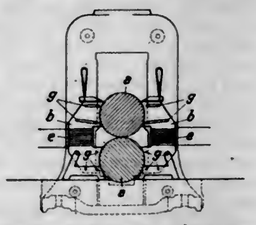
A thermal control system for a motor circuit including a starting resistance and two heating elements in series circuit with each other and with the motor, an electromagnetic circuit controller for the motor circuit, means for short circuiting the starting resistance and one of said heating elements and an auxiliary normally-closed switch for controlling the electromagnetic circuit controller, a pair of thermally-actuable elements individually energized by the two heating elements for causing opening of the auxiliary switch under predetermined abnormal conditions during starting and during running of the motor respectively.

1,783,521. PURIFYING YEAST. GUSTAVE T. REICH, Drexel Hill, Pa. Filed Mar. 8, 1929. Serial No. 345,277. 25 Claims. (Cl. 195—20.)



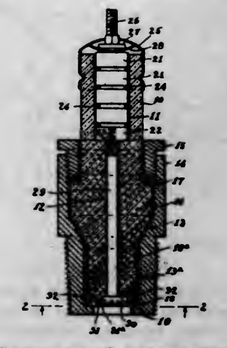
9. The art of refining yeast that had been contaminated by its use in producing the fermentation of saccharine materials, comprising diluting this contaminated yeast, separating the same by sedimentation into an upper portion containing yeast of higher protein value and a lower portion containing yeast of a lower protein value and also the impurities collected in the contaminated yeast during said fermentation, and separately collecting and de-hydrating said portions.

1,783,522. AIR-LINE OILER. JOHN E. RENFER, Cleveland, Ohio, assignor to The Cleveland Rock Drill Company, Cleveland, Ohio. Filed Dec. 14, 1928. Serial No. 326,059. 8 Claims. (Cl. 184—55.)



3. An air line oiler comprising a casing constituting a reservoir, tubes extending from the ends of the reservoir for passage of pressure fluid through the reservoir, the opposed ends of said tubes having annular recesses therein, a sleeve having its ends fitted in the recesses, said sleeve having an annular groove formed therein and a port communicating with the groove, and a fabric body engaged between the tubes and surrounding the sleeve for conducting oil, by capillary attraction from the reservoir to the port for discharge into the sleeve.

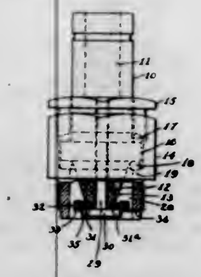
1,783,523. PILE-DRIVING TOOL. LED L. RICHARDSON, Cleveland, Ohio, assignor to The Cleveland Rock Drill Company. Filed Oct. 26, 1928. Serial No. 315,215. 4 Claims. (Cl. 61—76.)



1. A pile driving tool comprising an arm and an anvil, an arcuate bearing face in said arm and a complemental bearing seat in said anvil and pivotal means co-ordinated with said arm and anvil to permit the engagement of the said bearing face with the said bearing seat.

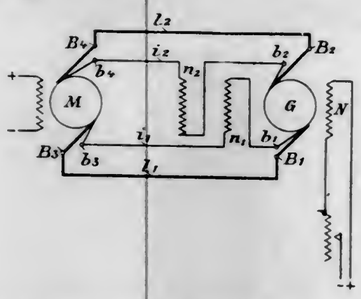
1,783,524. METHOD OF HEATING ROLLS. WILHELM SCHÖTTELDREIER, Nachrodt in Westfalen, Germany, assignor to Vereinigte Stahlwerke A. G. Dusseldorf, a Firm. Filed Aug. 5, 1927, Serial No. 210,884, and in Germany Aug. 7, 1926. 3 Claims. (Cl. 80—41.)

1. An apparatus for pre-heating the rolls of a sheet rolling mill, comprising U-shaped electro-magnets extending on opposites of said rolls, having the opposite poles of the same magnet adjacent different rolls so that on opposite sides of each roll is a pole of different character in a different magnet.



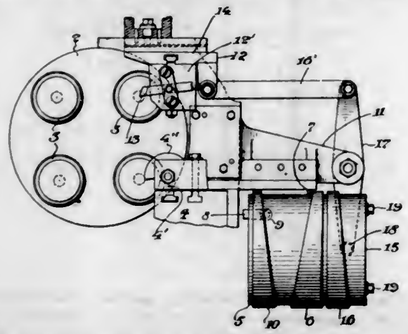
1,783,525. ANTIFOULING SPARK PLUG. PATTERSON O. STEWART, New York, N. Y. Filed Dec. 6, 1926. Serial No. 152,925. 3 Claims. (Cl. 123—169.)

1. In combination, a body of insulating material having an axial bore therethrough enlarged at its upper portion



to form a chamber; a frequency changer comprising spaced metallic disks disposed in said chamber, a terminal stem connected to the topmost disk; an electrode stem in said bore connected to the lower disk and provided at its outer end with a disk shaped sparking electrode head formed with an annular sparking part spaced from said insulator; and an electrode co-operating with said part to form a spark gap.

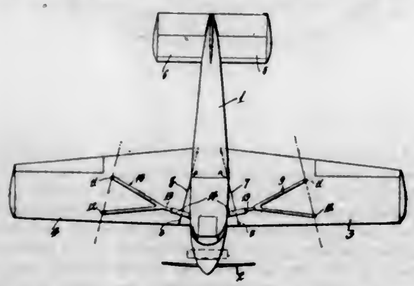
1,783,526. SPARK PLUG. PATTERSON O. STEWART, New York, N. Y. Filed Jan. 18, 1930. Serial No. 421,745. 2 Claims. (Cl. 123—169.)



1. In combination, an insulator, an electrode stem in said insulator, provided at its outer end with a circular electrode head, having thereon an outer circular sparking edge, spaced from said insulator and of greater diameter than the inner edge of the head, and an annular metal ferrule at the lower end of said insulator and spaced from the periphery of said head, said ferrule having thereon an annular electrode portion, having its outer edge in the plane of said sparking edge to form therewith an annular sparking gap the distance between said electrode portion and head being minutely greater at the edge of said head, adjacent to the insulator, than at said sparking edge; whereby said electrodes when in use are separated by a very narrow annular space, which is at all parts only minutely wider than the sparking width at the lower end thereof.

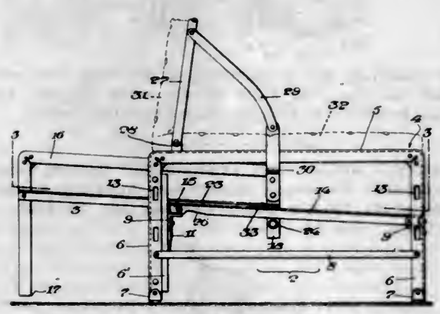
1,783,527. COMPENSATOR FOR BRUSH-RESISTANCE VOLTAGE DROP IN MOTOR-CONTROL SYSTEMS. HERMANN SUNDHAUSSEN, Dusseldorf-Rath, Germany, assignor to Rheinische Metallwaaren- und Maschinenfabrik, Dusseldorf-Derendorf, Germany. Filed Apr. 5, 1928, Serial No. 267,534, and in Germany Apr. 12, 1927. 2 Claims. (Cl. 172—239.)

1. In an electric plant a generator and a continuous current motor adapted to be driven by it according to the Ward Leonard system, auxiliary regulating circuits between the terminals of said generator and said motor, said circuits including auxiliary brushes on the commutators of said generator and said motor, the brushes of like polarity being connected to the same auxiliary regulating circuit while brushes of opposite polarity are connected with different auxiliary regulating circuits, and means included in said auxiliary circuits for regulating the voltage supplied to said motor in accordance with the varying brush contact resistances of both the said motor and said generator.



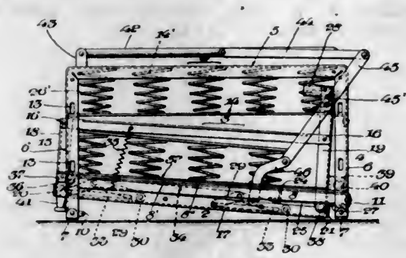
1,783,528. CROSS-TOOL SLIDE FOR MULTIPLE-SPINDLE AUTOMATIC SCREW MACHINES. OLOF ENOCH TROBECK, Berlin, Germany, assignor to The National Acme Company, Cleveland, Ohio, a Corporation of Ohio. Filed July 21, 1928, Serial No. 294,355, and in Germany Apr. 30, 1928. 17 Claims. (Cl. 29—37.)

1. In an automatic multiple spindle screw machine having a work carrier provided with a plurality of work spindles and a sliding tool carrier relatively indexable and reciprocal, the combination of a sliding bottom cross tool slide, a sliding top cross tool slide supported independently of said bottom slide, and cam means located transversely of the machine for shifting both of said slides independently of each other.



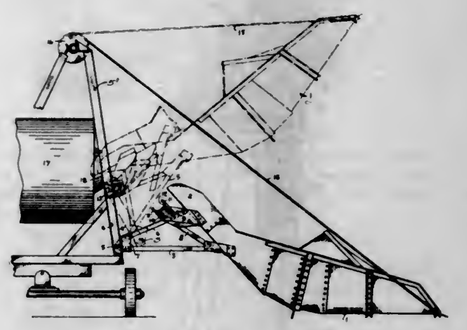
7. In a metal working machine having a work spindle housing, the combination of a pair of cross tool slides located one above the other for shiftable movement in a horizontal plane toward and from the work, a bracket bolted to the side of the work spindle housing for suspending the upper slide and extending laterally of the machine, a cam drum located transversely of the machine under said bracket and having cams thereon for shifting both of said slides, an arm pivoted to said bracket with its lower end in position to engage some of said cams, and a link connecting the upper end of said arm with the upper slide for shifting it independently of the lower slide.

1,783,529. AEROPLANE CONTROL. WALDO D. WATERMAN, Santa Monica Canyon, Calif. Filed Oct. 13, 1928. Serial No. 312,242. 7 Claims. (Cl. 244—29.)



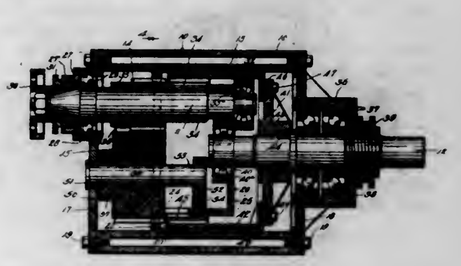
1. In an aeroplane, the combination of a body, wings, means for pivotally connecting the wings to the body at an angle to the line of flight of the aeroplane, means interconnecting the said wings so that a change in position of one wing automatically brings about a corresponding change in the position of the opposed wing in the opposed direction, and a landing gear connected to said wings so that upon landing the positions of said wings will be automatically changed to reduce the lifting qualities of said wings.

1,783,530. SLIDING COUCH. PERCIVAL P. BERRY, Hyde Park, Boston, Mass., assignor to Englander Spring Bed Company, New York, N. Y., a Corporation of New York. Filed Feb. 14, 1929. Serial No. 339,820. 5 Claims. (Cl. 5—18.)



1. In a sliding couch bed, the combination of a pair of bed sections, one sliding relatively to the other and each having co-operating track bars and rolls, one carried by each section, the track bars of the main section having inclination in the direction of their length and provided with notches at their forward ends, whereby the sliding section is maintained away from the floor during the sliding movement and permitted to engage the floor when the bed is fully extended, rolls of the sliding section entering the notches of said inclined track bar thereby to permit the sliding section to swing downward to engage the floor.

1,783,531. SLIDING SPIRAL-SPRING BED. PERCIVAL P. BERRY, Hyde Park, Mass., assignor to Englander Spring Bed Company, New York, N. Y., a Corporation of New York. Filed Feb. 27, 1929. Serial No. 343,201. 7 Claims. (Cl. 5—21.)

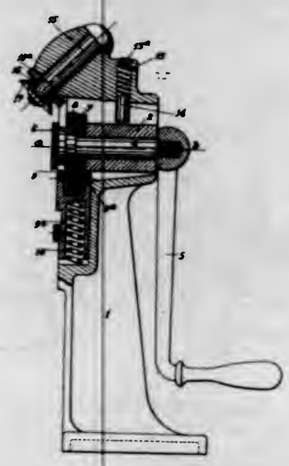


1. In a sliding couch bed, the combination of a main section, a sliding section, and a spring-supporting frame carried by said sliding section and shiftable relatively thereto, and means carried by said sections for maintaining the sliding section off the floor during the sliding movement thereof and effective to permit the sliding section to engage the floor when it is fully extended, said means including a pair of tracks carried by the sections and inclined in opposite directions.

1,783,532. LOADING DEVICE FOR CONCRETE MIXERS. JAMES E. BUSHNELL, North Plainfield, N. J., assignor to Ransome Concrete Machinery Company, Plainfield, N. J., a Corporation of New Jersey. Filed Mar. 16, 1927. Serial No. 175,653. 4 Claims. (Cl. 214—130.)

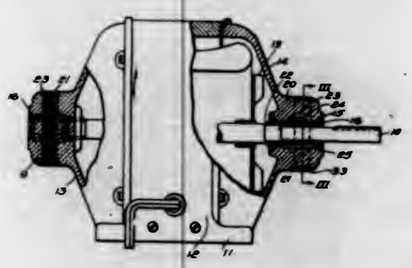
4. The combination with a frame and a charging hopper having upper and lower pivots for swinging said hopper about plural axes, of a member movable with said hopper for engaging said upper pivot, and a resilient element for said upper pivot and the hopper, said element being positioned for cooperating with said member substantially along the discharging axis of said hopper.

1,783,533. POWER TRANSMISSION. SAMUEL C. CARTER, Los Angeles, Calif., assignor of thirty-five per cent to Robert F. Belcher, Los Angeles, Calif., twenty per cent to William H. Maxwell, Beverly Hills, Calif., and ten per cent to D. M. Callis, Long Beach, Calif. Continuation of application Serial No. 350,273, filed Mar. 27, 1929. This application filed Jan. 29, 1930. Serial No. 424,335. 14 Claims. (Cl. 74—58.)



1. A power transmission including, a drive shaft having a fixed axis, a driven shaft having a fixed axis, an internal driven gear on the driven shaft, a drive gear slidably mounted on the drive shaft adapted to be shifted into engagement with the driven gear, and a shiftably mounted reversing gear adapted to be shifted into engagement with the driven gear, the drive gear being operable to a position where it is free of the driven gear and engages the reversing gear when the reversing gear is in engagement with the driven gear, the drive shaft terminating within the driven gear.

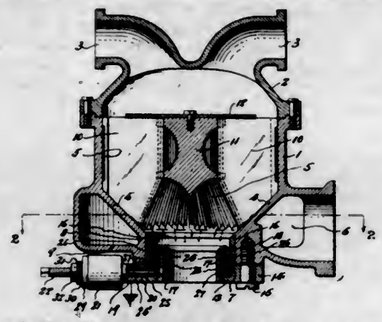
1,783,534. MACHINE FOR OPENING TINS OF CANNED GOODS. ETIENNE DARQUÉ, Clichy, France. Filed May 21, 1928, Serial No. 279,312, and in France June 1, 1927. 12 Claims. (Cl. 30—3.)



1. In a can-opening machine, a first rotatable gripping roller, a second rotatable gripping roller resiliently

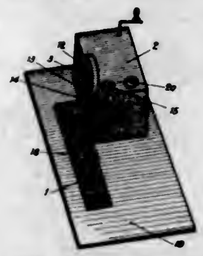
mounted, said first and second rollers being adapted to coact with one another so as to grip the edge of a can, cutting means positioned adjacent one of said rollers

and adapted to cut into the surface of a can held between said rollers, said cutting means and rollers having a fixed relative position laterally of each other and means for rotating one of said rollers.



1,783,535. LUBRICATING DEVICE. RALPH EHRENFELD, Springfield, Mass., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 5, 1929. Serial No. 330,569. 8 Claims. (Cl. 308—125.)

1. In an oiling means for a shaft bearing comprising a bearing housing having a shaft opening therein, in combination, an opening extending through the housing and communicating with the shaft opening, an oil-retaining wick in said last named opening, means at each end of said last named opening for sealing it and other means for protecting the sealing means against mechanical injury.

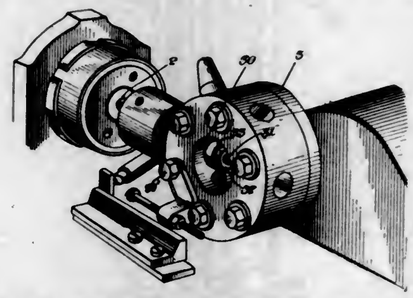


1,783,536. AUXILIARY HEATER AND VAPORIZER. ERNEST R. GODWARD, New York, N. Y., assignor to The Eclipse Petrol Economiser System Company, Limited, Christchurch, New Zealand, a Corporation of New Zealand. Filed Mar. 22, 1929. Serial No. 349,234. 4 Claims. (Cl. 48—180.)

3. A combined catch-chamber and heater coil for disposition contiguous to the walls of a fuel mixture passage serving to deliver a carbureted fuel to a place of use, comprising an upwardly open annular cup aligned with the passage walls, to catch wet fuel gravitating on said walls, an electric heater coil within said cup, means

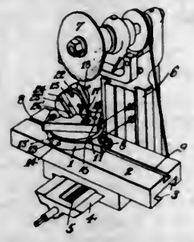
for insulating the convolutions of said coil from each other and from the walls of said catch chamber, and means to connect said heater coil in an electric circuit.

1,783,537. MUSIC TIME INDICATOR. MAURITS JONAS GOUDSMIT, The Hague, Netherlands. Filed Aug. 2, 1928, Serial No. 296,972, and in Germany Apr. 10, 1928. 8 Claims. (Cl. 84—484.)



5. A musical time-indicator comprising, in combination, means for imparting accenting impulses to the person, including a plurality of members respectively provided with a selected number of accenting elements, a pulsating member cooperating with said accenting elements, and means for timing the accenting impulses, including a scale, and a pointer adjustable over said scale and operatively connected with said laterally movable members.

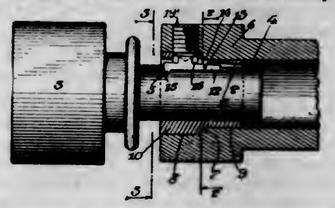
1,783,538. OVERALLS. JOSEPH HERSKOWITZ, Woodhaven, N. Y., assignor to Adolf Herskowitz & Son, Inc., Brooklyn, N. Y. Filed June 21, 1929. Serial No. 372,678. 1 Claim. (Cl. 2—79.)



A garment of the class described comprising an upper body portion, bottom leg portions, a semi-circular drop seat and a slide fastener for closing said drop seat extending from side to side, the peak of the drop seat being on a line with the waist line of the garment.

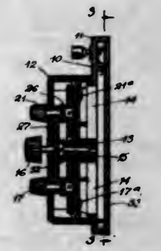
1,783,539. THREADING DIE. WILLIAM J. HOGG, Cleveland, Ohio, assignor to The National Acme Company, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 20, 1928. Serial No. 263,013. 2 Claims. (Cl. 10—89.)

1. In a metal working machine, the combination of a tool turret having a centrally-located bore and a radial opening communicating with said bore, a threading die having an adjustable shank located in said radial opening with the end thereof projecting into said central bore, said shank comprising a reduced portion forming a shoulder, a bushing fitting the reduced portion of the shank with the inner end terminating at and in position to engage the shank shoulder, means located at the end of the shank and accessible through the central bore of the turret for adjusting the shank, means between said last means and bushing whereby one part of the shank has a floating movement relative to the other, means carried by the turret for clamping the bushing of the shank in the turret, and said bushing and shank having means for preventing the rotation of one relatively to the other.



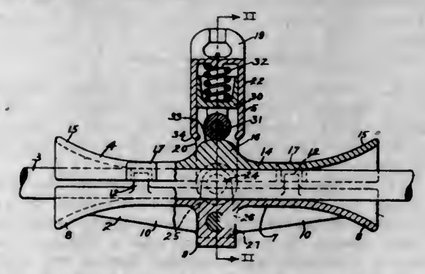
1,783,540. DIE-CHASER-GRINDING FIXTURE. WILLIAM J. HOGG and FREDERICK NEUMANN, Cleveland, Ohio, assignors to The National Acme Company, Cleveland, Ohio, a Corporation of Ohio. Filed Jan. 7, 1928. Serial No. 245,098. 20 Claims. (Cl. 51—218.)

1. A universally adjustable grinding fixture for grinding die chasers or cutters comprising a chaser holder having a pair of chaser-holding recesses located in transverse faces of the holder and both extending in the same direction and pivotally supported for indexable movement in a vertical plane and for indexable movement in a horizontal plane.



1,783,541. TOOL HOLDER. WILLIAM J. HOGG and FREDERICK NEUMANN, Cleveland, Ohio, assignors to The National Acme Company, Cleveland, Ohio, a Corporation of Ohio. Filed Apr. 28, 1928. Serial No. 273,516. 10 Claims. (Cl. 279—77.)

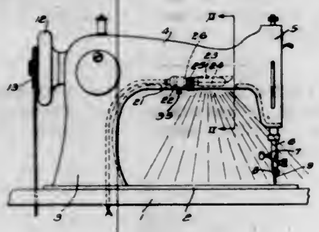
10. The combination with a bored tool spindle for the reception of a tool shank and having an opening into the bore thereof and in communication with a longitudinally-extending slot, of a tool-holding device comprising a pivoted key located in said slot interiorly of said



bored tool spindle to engage the tool shank, and a screw carried in the opening of the spindle for engaging said key thereby to cause the key to grip the tool shank within the spindle.

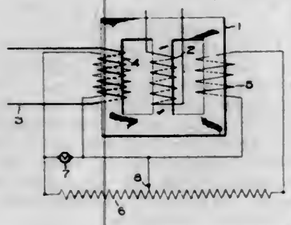
1,783,542. VOLTAGE CONTROLLING AND REGULATING DEVICE. GEORGE MERLE, Sr., Brooklyn, N. Y. Filed Aug. 24, 1928. Serial No. 301,866. 6 Claims. (Cl. 201—48.)

2. A multiple circuit voltage divider of the class described comprising a casing, a plurality of shafts spaced circumferentially of the casing, spring contact devices supported on the inner ends of said shafts, knobs on the exterior of said shafts by means of which said devices may be actuated, a resistance body supported in the casing and in the path of said contact devices, said body being divided into a plurality of resistance units in connection with which said contact devices operate, said contact devices being independently adjustable through the operation of said knobs, pinions on said shafts within the casing, another shaft arranged centrally with respect to the first named shafts and provided with a gear adapted to mesh with the pinions on the first named shafts, and means externally of the casing for rotating said shaft to collectively operate all of said contact devices, and means for normally holding said gear out of engagement with said pinions.



1,783,543. SUSPENSION CLAMP. FREDERIC H. MILLER, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 7, 1927. Serial No. 231,525. 13 Claims. (Cl. 248—31.)

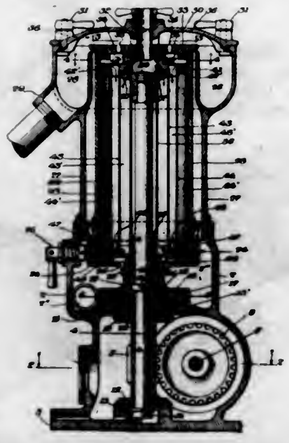
9. A transmission-line clamp comprising a conductor-clamping member, a yoke having its legs pivotally con-



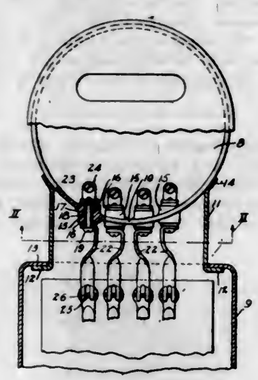
nected thereto at opposite sides thereof, a cooperating clamping member and means for exerting clamping forces between the clamping members including a spring between said co-operating clamping member and the yoke for transmitting the clamping forces between said co-operating clamping member and the yoke.

1,783,544. SEWING-MACHINE LIGHTING UNIT. LEWIS C. PACKER, Long Meadow, Mass., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 12, 1929. Serial No. 346,470. 8 Claims. (Cl. 240—2.)

1. The combination with a hollow sewing-machine goose neck having an opening in the inner wall thereof, of a lighting unit located entirely within the said opening.



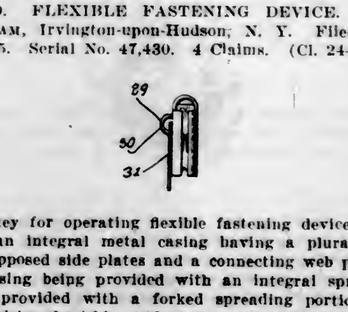
1,783,545. VARIABLE-VOLTAGE TRANSFORMER. JOHN F. PETERS and ALBERT J. MASLIN, Edgewood, Pa., assignors to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 20, 1926. Serial No. 89,775. 9 Claims. (Cl. 171—119.)



1. In a transformer, a core member comprising a plurality of legs, primary and secondary windings associated with said core member, auxiliary windings on a plurality of core legs, and a variable translating device connected to the auxiliary windings for controlling the flux distribution between the several legs associated with the auxiliary windings.

1,783,546. CENTRIFUGE. GUSTAV B. PETSCHE and ALFRED E. DRISSNER, Cleveland, Ohio, assignors to The National Acme Company, Cleveland, Ohio, a Corporation of Ohio. Filed Sept. 7, 1929. Serial No. 390,975. 15 Claims. (Cl. 233—31.)

1. In a centrifuge, the combination of a rotatable spindle, means for rotating it, and a bowl carried by the spindle and having nesting cylinder-forming chambers, said bowl having an inlet nozzle and a chamber communicating therewith, said chamber having exit ports located at its extreme radius thereby to give the fluid when leaving the chamber approximately the same speed as the inner cylinder, said chambers having communicating ports so located as to pass the fluid from the innermost chamber to the outermost chamber and from there toward the center of rotation through an adjacent chamber.



1,783,547. METER HOUSING. ARGYLE R. RUTTER, East Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 21, 1922. Serial No. 608,361. 2 Claims. (Cl. 247—2.)

2. In combination with an encased electrical measuring instrument and a casing for association therewith having contacts secured therein for electrical connection with an electrical circuit of substantial rigid contact means secured to, and projecting through, a wall of the casing of said measuring instrument and disposed to cooperate with the terminals in said associated casing, and means for maintaining said measuring instrument and associated casing in operative relation.

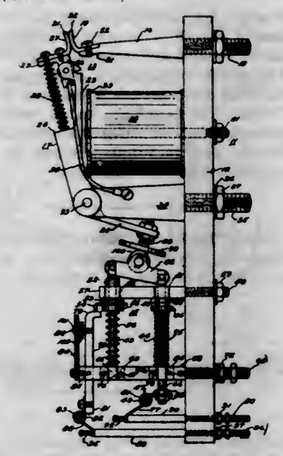
1,783,548. POWER SYSTEM AND APPARATUS THEREFOR. MAURICE L. SINDEBAND, New York, N. Y., and OTHMAR K. MARTI, Haddonfield, N. J., assignors to American Brown Boveri Electric Corporation, New York, N. Y., a Corporation of New York. Filed Apr. 24, 1929. Serial No. 357,839. 5 Claims. (Cl. 175—361.)

1. In a power system, an alternating-current supply line, a hollow insulating member interposed between said line and ground, a grounded metallic base associated with the ground-end of said member, a cover associated with the line-end of said member and connected to said line,

and transformer apparatus disposed within said member and including a winding connected between said line and ground.

1,783,549. HAT. CHARLES SOLOMON, Yonkers, N. Y., assignor, by mesne assignments, to Superior Hat Company, St. Louis, Mo., a Corporation of Missouri. Filed Nov. 8, 1928. Serial No. 317,905. 1 Claim. (Cl. 2—175.)

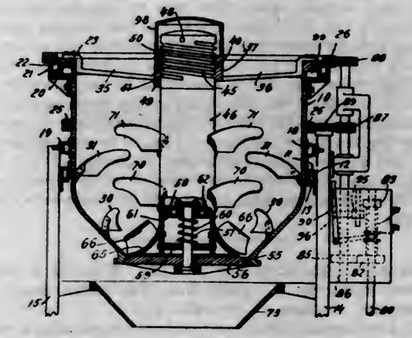
A hat including a crown and a brim, said brim having a major portion of opaque fabric material and a binder strip secured to its outer edge, and a front transparent brim section of crescent shape form extending across the entire width of the brim, said transparent section having an outer continuously curved edge, and a binder strip secured thereto and within the binding strip on the edge of the hat brim and also secured at the opposite side edges of the transparent section to the material of the hat brim, and a binder strip secured to the inner curved edge of said transparent brim section and to the lower edge of the hat crown.



1,783,550. FLEXIBLE FASTENING DEVICE. NOEL STATHAM, Irvington-upon-Hudson, N. Y. Filed Aug. 1, 1925. Serial No. 47,430. 4 Claims. (Cl. 24—205.)

1. A key for operating flexible fastening devices comprising an integral metal casing having a plurality of spaced opposed side plates and a connecting web portion, said casing being provided with an integral spreading member provided with a forked spreading portion and being positioned within said casing and serving to retain and position said side plates in proper spaced relation, said spreading member being provided with a lateral portion passing through a slot in one of said side plates for providing a loop for attachment to an operating member and being provided with an additional lateral portion passing through a slot in the remaining side plate for attachment thereto.

1,783,551. METHOD OF TREATING SACCHARINE FLUIDS. LEONARD WICKENDEN, Flushing, N. Y., assignor to John J. Naugle, Rye, N. Y. Original application filed Nov. 6, 1925, Serial No. 67,463. Divided and this application filed May 3, 1927. Serial No. 188,612. 12 Claims. (Cl. 127—41.)



1. The method of inverting sucrose-containing fluids, which comprises the step of adding thereto a mono-saccharide sugar containing syrup containing invertase therein.

1,783,552. PROTECTIVE RELAY. HAROLD E. WHITE, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 3, 1926. Serial No. 152,405. 2 Claims. (Cl. 175—294.)

1. The combination with a switch for controlling a motor, a magnet coil for actuating the switch, a starting and a holding circuit for said magnet coil, each circuit including relatively movable and stationary contact members, means for effecting yielding engagement of the contact members of the holding circuit by closing movement of the switch, means including a current-traversed bimetallic element in electric circuit with the motor for effecting engagement of the contact members of the starting circuit, and means including a latch actuated by the bimetallic element for effecting disengagement of the contact members of the holding circuit upon predetermined overload conditions in the motor.

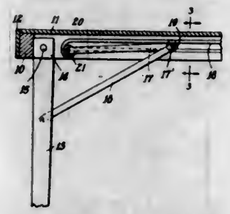
1,783,553. MIXER. KEMPTON ADAMS, Redding Ridge, Conn. Filed June 21, 1928, Serial No. 287,181. Renewed Jan. 6, 1930. 24 Claims. (Cl. 259—85.)

1. A mixer comprising a rotary receptacle, means for rotating said receptacle, means therein rotatable inde-

pendently thereof and movable axially thereof, means for rotating said rotatable and axially moving means and a closure for the receptacle carried by said means.

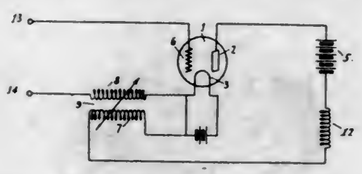
1,783,554. ELECTRIC HEATING DEVICE. CHRISTIAN B. BACKER, Brooklyn, N. Y. Filed July 17, 1926. Serial No. 123,220. 2 Claims. (Cl. 201—67.)

2. In a terminal for sheathed, insulated electric conductors comprising a sheath, a conductor in said sheath, and insulating material disposed between the conductor and sheath, said terminal comprising a hollow member having a portion extending into the sheath, one end of said resistor extending through the terminal, and a wedging member extending through the terminal and co-extensive with the resistor, whereby the terminal member is held firmly in intimate contact with the conductor.



1,783,555. TUBE-TRANSPORTING DEVICE. OTTO BAMBERGER, Duisburg, Germany. Filed Mar. 31, 1927. Serial No. 179,849. 9 Claims. (Cl. 80—44.)

1. In a tube-mill transporting apparatus, in combination: conveying means for conveying tubes from the tube-forming mill at one end of said conveying means to a tube-cutting machine at the other end of said conveying means; and a framework for said conveying means; said conveying means being of a length substantially that of the distance between said tube-forming mill and said tube-cutting machine and also substantially the length of the longest tube adapted to be formed by said mill; and said conveying means being constituted of a plurality of end-to-end sections whereof one end-section extends directly from the tube-forming mill and the other end-section extends directly to said tube-cutting machine, said end-sections being respectively provided with power-means for raising and lowering them either simultaneously or successively and in such sequence that a formed tube may be lifted and advanced by both said sections, and then further advanced by the farther end-section before said tube-cutting machine while the other end-section lowers to make way for a second tube issuing from the tube-forming mill, and so that said farther end-section may be lowered just as it discharges the first tube before said tube-cutting machine and in time to make way for the advancing end of the said second tube that is passing over the said other previously lowered end-section of the conveying means; whereby the over-all length of the conveying means between the tube-forming mill and said tube-cutting machine may be substantially the length of the longest tube to be formed and cut, and yet substantially continuous operation of the tube-forming mill need not be interrupted by the operation of said tube-cutting machine to cut said first tube into shorter lengths.

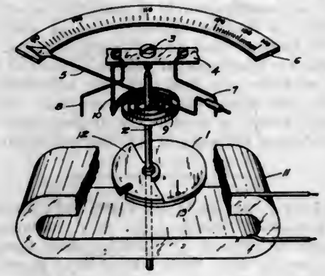


1,783,556. COLLAPSIBLE TABLE. WILLIAM J. BAUER, New York, N. Y. Filed Feb. 16, 1929. Serial No. 340,549. 4 Claims. (Cl. 45—11.)

3. A collapsiole article of furniture, comprising a top or platform element, a plurality of supporting legs pivotally attached thereto, braces pivotally attached at their one end to the respective legs, arms pivoted to the other ends of said braces, a roller carried by each of said arms, and trackways mounted beneath the table top and in which

the respective rollers are designed to ride, the respective tracks at their inner ends having depressed portions or notches into which a roller drops when a corresponding leg is fully extended.

1,783,557. COMPENSATING SYSTEM FOR AMPLIFIERS. JOSEPH BETHENOD, Paris, France. Filed Jan. 9, 1926, Serial No. 80,140, and in France Apr. 2, 1925. 9 Claims. (Cl. 179—171.)



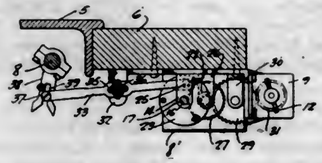
1. A low frequency circuit arrangement for obtaining amplification without distortion, including a thermionic amplifier having input and output circuits, sound responsive means connected in the output circuit normally giving rise to distortion in said output circuit, the distortion being due to non-linear relation between output current and input voltage, and variable coupling means between the output and input circuits whereby sufficient energy is transferred to the latter circuit to accurately compensate for said distortion.

1,783,558. FOLDING SUPPORT. WILLIAM E. BROWN, Los Angeles, Calif. Filed Apr. 22, 1927. Serial No. 185,768. 11 Claims. (Cl. 45—117.)

1. A device of the character described comprising a support having a radially projecting shoulder at its end, said shoulder having openings therethrough, rods adapted for projection through said openings so that the outer ends of the rods flare outwardly beyond said shoulder, the said support having openings therein adapted to removably receive the inner ends of the rods when the latter are in projected position to retain said rods in said projected position, and a locking member mounted on the shoulder and having wedging surfaces, said locking member being adapted for sliding adjustment so as to engage the projected rods by said wedging surfaces for gradually wedging the rods in projected position.

1,783,559. ELECTRICAL MEASURING INSTRUMENT. JAMES H. CONE, Rosiland, N. J., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 15, 1928. Serial No. 261,829. 4 Claims. (Cl. 171—95.)

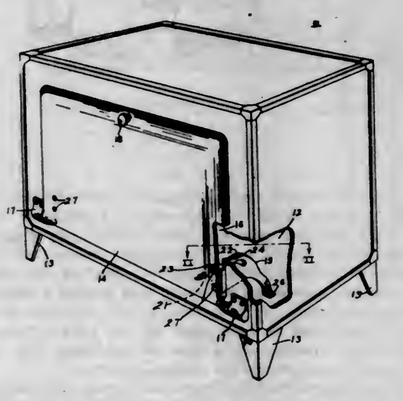
2. In a meter, the combination with a winding, a shaft, and a disc of magnetizable material eccentrically mounted on said shaft to be influenced by the flux field of said winding, of an auxiliary magnetizable segment mounted for movement with said disc, and means for initially biasing said shaft whereby said disc is not moved by the flux field of said winding until the same has been energized to a predetermined degree, said disc thereafter moving said shaft in substantially uniform increments in accordance with the degree of energization of said winding.



1,783,560. MAGNETIC CORE. KARL EISENMANN, Ludwigshafen-on-the-Rhine, and FRIEDRICH BERGMANN, Mannheim, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany, a Corporation of Germany. Filed Mar. 18, 1929, Serial No. 348,127, and in Germany Mar. 30, 1928. 3 Claims. Cl. 175—21.)

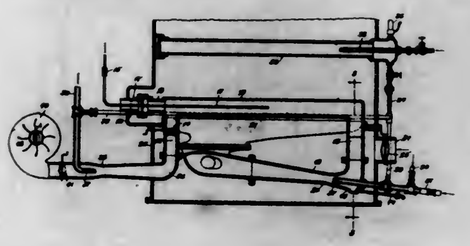
3. As new articles of manufacture, magnetic cores comprising iron powder obtained from iron carbonyl and a Montan wax.

1,783,561. PRODUCTION OF IMPROVED MAGNETIC CORES. KARL EISENMANN, Ludwigshafen-on-the-Rhine, and FRIEDRICH BERGMANN, Mannheim, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany, a Corporation of Germany. Filed Mar. 18, 1929. Serial No. 348,125, and in Germany Mar. 30, 1928. 3 Claims. (Cl. 175—21.)



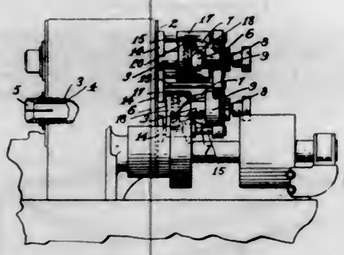
3. As new articles of manufacture, magnetic cores comprising iron powder obtained from iron carbonyl and a resinous condensation product of a urea and formaldehyde.

1,783,562. METER FOR SEWING MACHINES. BESSIE GALLAS FORBSTEIN, Los Angeles, Calif. Filed June 25, 1929. Serial No. 373,553. 4 Claims. (Cl. 235—91.)



1. For a sewing machine having a frame, an oscillating shaft for operating a feed bar; a device adapted to measure stitching comprising an oscillative arm having a slot, a connecting rod having a pin slidably and adjustably mounted in said slot, said connecting rod having a guide slot, a pin mounted in normally stationary relation to said frame and slidably cooperating with said guide slot, a progressive engagement one-way clutch having a drive member and a driven member, a crank pin on said drive member secured to said connecting rod, and a register positively connected to said driven member.

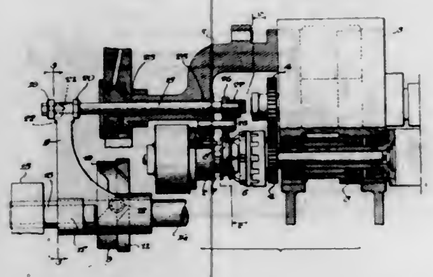
1,783,563. DOOR CATCH. FRANK F. FORSHEE, Mansfield, Ohio, assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 23, 1929. Serial No. 334,412. 1 Claim. (Cl. 292—76.)



In combination with a casing and a door therefor hinged thereto, a flat metal member, of substantially arcuate shape, having one end secured to the inside of the door adjacent to the hinge and having a resilient tongue portion adjacent to the secured end of the metal member bent out of the plane thereof to yieldingly engage the edge of the casing to oppose a closing movement of the door near its closed position and to hold it closed, the rear end portion of the flat metal member being bent out of the plane thereof to yieldingly oppose an opening movement of the door near its open position and having an integral lug extending away from the plane of the metal member to limit the opening movement of the door.

1,783,564. GAS GENERATING AND BURNING APPARATUS. EDMUND A. GARRETT, Brightwaters, N. Y., assignor of one-half to Francis C. Schwab, Mount Vernon, N. Y. Filed Dec. 10, 1924. Serial No. 754,911. 23 Claims. (Cl. 158—56.)

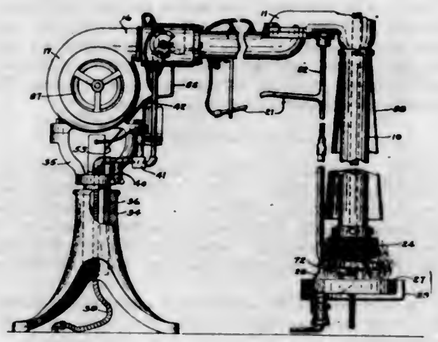
1. A gas generator including a plurality of passages arranged in parallel, means for heating said passages, means for delivering air through all of said passages, and means for delivering a liquid fuel to the interior of one or more of said passages.



1,783,565. CHUCK-OPERATING MECHANISM FOR AUTOMATIC SPINDLE-SCREW MACHINES. CHARLES Q. GAREY, Windsor, Vt., assignor to The National Acme Company, Cleveland, Ohio, a Corporation of Ohio. Filed Feb. 6, 1928. Serial No. 252,144. 17 Claims. (Cl. 29—37.)

1. In an automatic multiple spindle screw machine having an indexible work carrier carrying a plurality of rotary work spindles provided with chucks and finger-operating clutch spools for shifting said chucks, the combination of a spider-formed frame secured to the carrier for indexable movement therewith and having a plurality of branching arms, each having a pair of rods carried thereby supported at both ends by the spider frame, a sliding shoe mounted on a pair of adjoining rods of a pair of arms, and means for sliding said shoe.

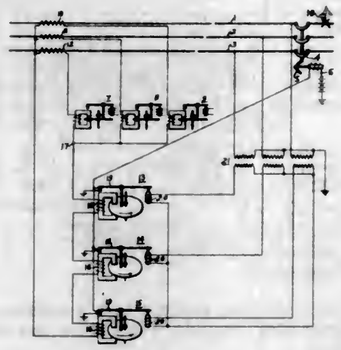
17. In a metal working machine having an indexable work carrier provided with work spindles and a cam shaft located under the spindles, a spider-formed frame secured to the rear of the carrier for indexible movement therewith, said frame having a plurality of sets of spaced rods supported at both ends by the spider frame, a sliding shoe extending under each spindle and having its ends mounted on a pair of adjoining rods of opposite sets, and means carried by the cam shaft for engaging the shoes at the under sides thereof, each of said shoes having a yoke adapted to engage about 75% of the surface of the member to be operated from the under side of said members.



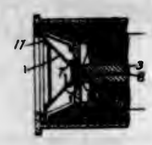
1,783,566. SPINDLE-STOPPING MECHANISM FOR METAL-WORKING MACHINES. CHARLES Q. GAREY, Windsor, Vt., assignor to The National Acme Company, Cleveland, Ohio, a Corporation of Ohio. Filed June 19, 1928. Serial No. 286,564. 22 Claims. (Cl. 29—38.)

1. In a metal working machine having a spindle carrier provided with a plurality of rotary spindles and clutch mechanism for stopping and releasing said spindles, including indexable clutch shifters, the combination of means for operating the clutch shifters and settable into different positions to stop the rotation of any one of the spindles.

12. In a spindle stopping mechanism for metal working machines having a spindle carrier having a plurality of spindles, the combination of a plurality of clutches and a plurality of slidable forks engaging said clutches, means for shifting said forks and comprising a sliding arm, means for supporting it, means for sliding it, a shaft shiftable with the arm and rotatably adjustable relatively thereto, and means carried by the shaft for engaging any of the forks or a plurality thereof simultaneously thereby to stop a plurality of spindles at the same time.



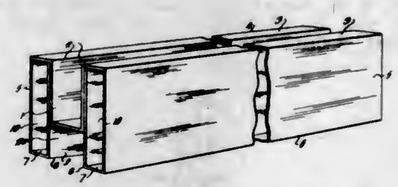
1,783,567. OIL-BURNER CONSTRUCTION. HARRY WILBUR GASTON, New Rochelle, N. Y., assignor to Boyce Automatic Oil Burner Corporation, New York, N. Y., a Corporation of New York. Filed Jan. 4, 1927. Serial No. 158,849. 15 Claims. (Cl. 158—53.)



1. In an oil burner construction, a blower for supplying air to the burner in regulated quantities, a conduit for the air supplied by the blower arranged to extend through the fuel supply door of a furnace, a mixing chamber occupying a downwardly projecting position from the end of the air supply conduit extending into the furnace, a burner head mounted on the lower extremity of the mixing chamber, a closed ended vaporizing tube occupying a vertically extending position adjacent the mixing chamber such that said tube is subject to a progressively higher temperature along the length thereof, and means for supplying a regulated quantity of oil by gravity to the upper portion of the vaporizing tube, said vaporizing tube opening at its upper end into the end portion of the air supply conduit adjacent the mixing chamber, whereby oil vapor will enter the air stream and pass through the mixing chamber therewith to produce a gaseous mixture which will burn with a blue flame, said gaseous mixture passing from the supply chamber to the burner head for combustion.

1,783,568. ALTERNATING-CURRENT RELAY. SHIRLEY L. GOLDSBOROUGH, East Orange, N. J., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 30, 1928. Serial No. 302,972. 11 Claims. (Cl. 175—294.)

1. The combination with a polyphase circuit having circuit interrupters associated with the phase conductors thereof, of means energized only upon the occurrence of a ground fault on said circuit for actuating said interrupters, and means for restraining said actuating means selectively in accordance with the potential on the respective phase conductors.



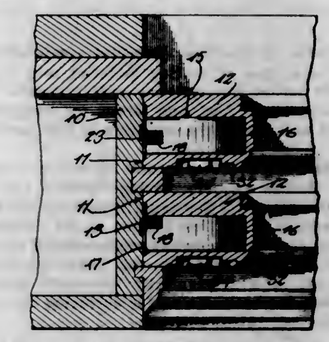
1,783,569. ELECTRODYNAMIC SIGNAL DEVICE. CLINTON R. HANNA, Edgewood, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Original application filed Aug. 25, 1925, Serial No. 52,268. Divided and this application filed July 11, 1928. Serial No. 291,895. 14 Claims. (Cl. 179—121.)

1. In a microphone, a magnetic circuit having an air gap, a coil mounted to move in said air gap, means for moving said coil in accordance with the sound and a conductive plating constituting a short-circuited secondary for said coil.

1,783,570. PACKING CUSHION. HARRY L. HILL, Buffalo, N. Y., assignor to Rodwell Sign Company, Buffalo, N. Y., a Corporation of New York. Filed Feb. 11, 1929. Serial No. 339,206. 2 Claims. (Cl. 229—14.)

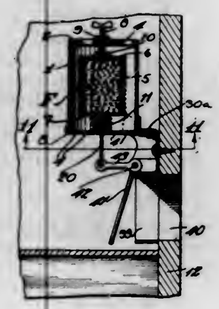
1. A cushion formed from a unitary piece of material for use in packing fragile articles in a container, and comprising a central part bent to form a channel member, portions extending at substantially right angles from the edges thereof to the side walls of the container, further portions of substantially U shaped cross section and of greater depth than the depth of the channel extending from the outer edges of the first portions at right angles thereto and forming a pair of hollow rectangular members positioned upon the sides of the channel member and extending therebelow.

1,783,571. METHOD OF MAKING ELECTRICALLY-WELDED TUBING. JOHN W. HOLT, Cleveland Heights, Ohio. Filed Apr. 18, 1927. Serial No. 184,460. 4 Claims. (Cl. 219—10.)



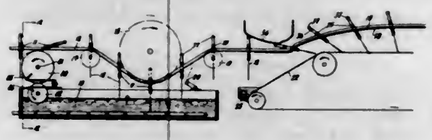
1. A method of electric welding, which comprises deforming an edge of a sheet metal strip into a series of spaced tapering points with corresponding lateral pockets at their bases, placing such edge against the other portion of metal to which it is to be welded, passing a welding current through such seam, and applying pressure while the metal is soft.

1,783,572. GRAMENT. MINNIE PAULINE JOHNSON, Long Beach, Calif. Filed Mar. 12, 1930. Serial No. 435,225. 2 Claims. (Cl. 2—72.)



1. A garment comprising a waist portion, a nether portion, the nether portion being slit at the front and rear, fastening means adjacent the edges provided by the slits, the respective edges of the front and rear slits adapted to be secured together by said fastening means to provide a skirt, the opposing edges of the front and rear slits adapted to be secured together by said fastening means to provide a pair of leg portions, the opposite parts of the nether portion defined by said front and rear slits being foldable upwardly on themselves, and other fastening means for securing said parts in folded position to provide a short skirt.

1,783,573. SASH BALANCE. RUDOLPH LANZILLOTTA, Columbus, Ohio. Filed Dec. 31, 1928. Serial No. 329,493. 4 Claims. (Cl. 16—201.)

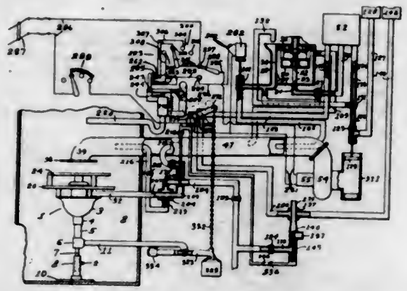


1. In a spring sash balance, a housing having a slot in one edge, a main spring in said housing, and a multiplying gear train connected to said main spring and including a gear mounted to move to project through the slot and to be retracted from projected position whereby to engage with and disengage from a frame supported rack.

1,783,574. THERMOSTAT. JAMES J. LAWLER, Mount Vernon, N. Y. Filed Jan. 31, 1929. Serial No. 336,555. 2 Claims. (Cl. 297—8.)

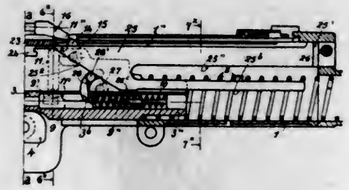
1. A thermostat of the character and for the purposes described, comprising a casing, a pair of spaced disks, one of which is rigid and the other movable, a bellows like tube connecting the two disks, a swivelled screw threaded through one end of the casing and attached to the rigid disk, a spring located in said casing between the movable disk and the end of the casing, and a link attached to the movable disk and projecting from the casing, said link passing axially through the spring.

1,783,575. APPARATUS FOR COATING ROOFING UNITS. CHESTER R. MACDONALD, Rutherford, N. J., assignor, by mesne assignments, to The Patent and Licensing Corporation, Boston, Mass., a Corporation of Massachusetts. Original application filed Mar. 13, 1926, Serial No. 94,377. Divided and this application filed Oct. 24, 1927. Serial No. 228,130. 37 Claims. (Cl. 91—46.)



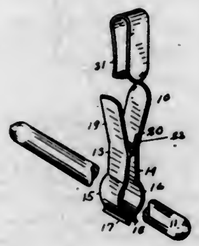
7. Apparatus of the class described, comprising means for applying stripes of coating material to a face of a roofing unit, means for applying coating material to the butt portion of said face, and means for swingably suspending the unit during the operation of both said coating means.

16. Apparatus of the character described, comprising means for forcibly gripping roofing elements and conveying them through a coating tank in position for applying coating material to the butt portion of the elements, said means being arranged to permit excess coating material to drain from the faces of the element, means for positioning said elements in a substantially horizontal plane after removal from the bath, means for surfacing the elements while in the last named position.



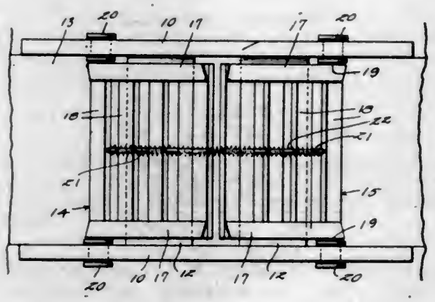
1,783,576. HEATING APPARATUS. WALTER L. MAJORS, St. Louis, Mo. Filed Nov. 30, 1925. Serial No. 72,199. 2 Claims. (Cl. 158—28.)

2. A heater having a burner, a conduit leading from an oil supply to said burner, means for regulating the flow of oil to said burner under control of the overflowing oil therefrom and a subsidiary mixture supply means in-



cluding a main air feed provided with a subsidiary fuel feed for discharging component parts of the fuel into the main air feed.

1,783,577. DEVICE FOR FEEDING CARTRIDGES AND FOR COCKING THE STRIKER IN AUTOMATIC FIREARMS. GIUSEPPE MASCARUCCI, Turin, Italy, assignor to Safat Società Anonima Fabbrica Armi-Torino, Turin, Italy, a Society of Italy. Filed July 11, 1928, Serial No. 291,709, and in Italy July 16, 1927. 6 Claims. (Cl. 89—3.)

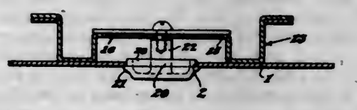


1. In a fire-arm, a casing, a barrel in the latter, means for feeding cartridges to the casing beside the barrel, a longitudinally extending blade fixed in the casing having an oblique front edge portion, a recoil operated obturator in the casing slidable longitudinally of the blade, and means on the front end of the obturator adapted to hold a cartridge against said oblique edge of the obturator whereby a cartridge is moved along said edge from the axis of said feeding means to the axis of the barrel during the recoil of the obturator.

1,783,578. LAUNDRY HANGER. JAMES MANDY, New York, N. Y., assignor of one-half to Mathilda Ecker, New York, N. Y. Filed Oct. 25, 1928. Serial No. 314,884. 1 Claim. (Cl. 24—84.)

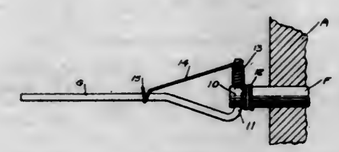
A laundry hanger adaptable for holding a transverse rod in suspension from an adjacent line, the said hanger comprising opposed clamp elements hingedly connected to each and provided with a spring which bears against the said elements, legs extending downward from the hinge joint, and the said legs having gripping portions consisting of opposed curved members, which curved members have flared extremities spreading outward with respect to each other.

1,783,579. AUTOMOBILE GATE. PATRICK J. MCGRATH, Mill Iron, Mont. Filed Aug. 6, 1929. Serial No. 383,910. 2 Claims. (Cl. 39—5.)



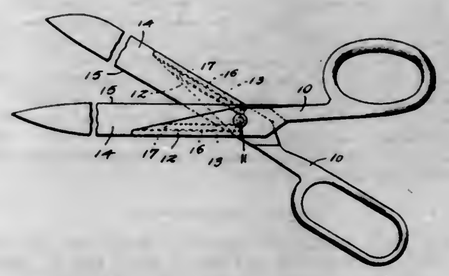
1. A gate comprising side members having longitudinally slotted ends, a gate proper formed of two hingedly connected sections, each section at its outer end having laterally projecting rollers engaging in the slots of the side members, and a spring connecting the remote ends of the two sections of the gate and urging the two sections of the gate to an upwardly convergent position.

1,783,580. DRILL BIT. JESSE P. MILLER, Houma, La., assignor of one-half to J. H. Thatcher. Filed Nov. 18, 1927. Serial No. 234,185. 13 Claims. (Cl. 255—75.)



1. A drill apparatus comprising, in combination, a hollow drill stem; a bit head; a U-shaped fork having spring arms slidably mounted within the head; lugs on the fork; bit blades carried by the fork; a barrel secured to the drill stem and having seats for the blades; means associated with the lugs to aline the blades with the seats; and means integral with the bit head to expand and hold the blades in the seats.

1,783,581. LOCK-REPLACING UNIT. ENOCH OHNSTRAND, Kenmore, N. Y., assignor to Remington Rand Inc., Tonawanda, N. Y. Filed Nov. 15, 1927. Serial No. 233,434. 5 Claims. (Cl. 70—16.)

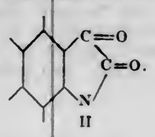


1. In combination, a drawer for furniture formed with a lock receiving opening in the front wall, a lock supporting member mounted inside of said drawer and having a portion in the rear of said opening spaced from the front wall, a filler member removably mounted in said opening and formed with an annular flange engaging the marginal portion of the front wall adjacent said opening, a plate member having the ends engaging said lock supporting member, and means adjustably connecting the plate member and filler member for retaining said filler member in said opening.

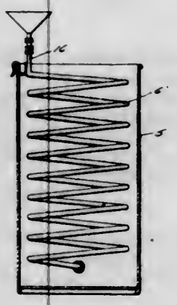
1,783,582. WINDSHIELD CLEANER. JOHN R. OISHEI, HENRY HUEBER, and WILLIAM PAULUS, Buffalo, and ERWIN C. HORTON, Hamburg, N. Y., assignors to Trico Products Corporation, Buffalo, N. Y. Filed Mar. 11, 1925. Serial No. 14,755. 10 Claims. (Cl. 15—255.)

3. In a windshield cleaner, a wiper carrying arm, an actuating member therefor, one of said elements having a transverse opening and the other of said elements having a laterally bent part pivotally engaging in the transverse opening, and a spring coiled about one of said elements and having its two ends secured respectively to the arm and actuating member.

1,783,583. DETACHABLE BLADED SCISSORS. FRANK L. RALSTON, La Grande, Oreg. Filed Dec. 8, 1927. Serial No. 238,646. 1 Claim. (Cl. 30—13.)



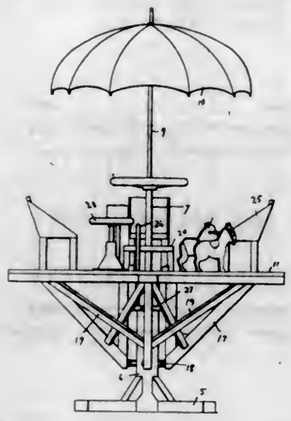
Scissors or shears comprising handle portions having their inner faces arranged in contact, a pivot extending



through the forward ends of the handle portions, blade supports extending forwardly from the handle portions and having their entire inner faces relatively spaced and provided in said faces thereof with longitudinally extending dovetail grooves, the blade supports decreasing in width in the direction of their front ends and having inclined edges extending diagonally across the front ends of said grooves to permit the outer walls thereof to be sprung outwardly, the forward ends of said outer walls being provided with depressions, blades provided on their outer faces with longitudinally extending dovetail ribs fitting in said grooves, and tits formed on the outer faces of said ribs near the front ends thereof and fitting in said depressions, the distance between the inner faces of the blade supports being equal to the combined thickness of the blades.

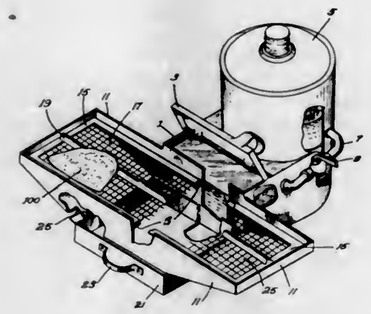
1,783,584. MANUFACTURE OF AROMATIC HYDROXYALDEHYDES. GUSTAV REDDELIEN, Leipzig, and HANS LANGE and HUGO PFANNENSTIEL, Dessau in Anhalt, Germany, assignors to Winthrop Chemical Company, Inc., New York, N. Y., a Corporation of New York. Filed June 27, 1928, Serial No. 288,802, and in Germany July 30, 1927. 8 Claims. (Cl. 260—137.)

1. A process of manufacturing aromatic hydroxyaldehydes by treating hydroxyaralkylamines with a compound containing the general nucleus:



1,783,585. CREAM COOLER. ALFRED M. SAMUELSON, Henning, Minn. Filed Aug. 27, 1929. Serial No. 388,759. 1 Claim. (Cl. 257—205.)

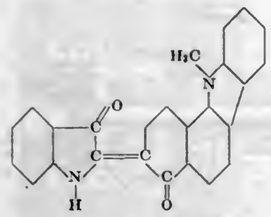
In an apparatus of the class described, a receptacle, a pipe coil in the receptacle, the lower end of the pipe coil having an outwardly radiating extension, a nipple connected with said extension and disposed through an opening in the side of the receptacle, a downwardly inclined outlet pipe extension directly engaged on the nipple, a riser on the upper end of the pipe coil, a funnel, means for detachably connecting the funnel with the riser, a clip fastened to the riser and adapted for engagement over the upper edge of the receptacle.



1,783,586. MERRY-GO-ROUND. ROAL DOS SANTOS, Honolulu, Territory of Hawaii. Filed May 22, 1929. Serial No. 365,110. 5 Claims. (Cl. 272—33.)

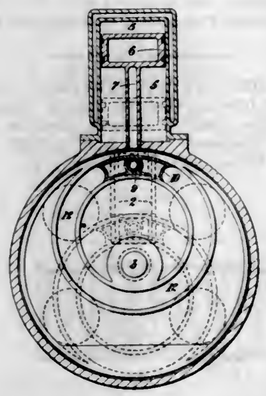
1. In a merry-go-round of the class described, a vertical standard, means for supporting the standard, a horizontal circular platform, radiating bars under the platform, anti-friction means between the inner ends of the radiating bars and the upper ends of the standards, a rod rising from the upper end of the standard to a central opening in the platform, a wheel on the upper end of the rod, vertical bars depending from the inner portions of the radiating bars, diagonal bars extending inwardly and downwardly from the outer portion of the radiating bars

to the lower end of the vertical bars, casters at the lower ends of the diagonal bars bearing against the standard, a lever pivotally mounted on one of the radiating bars and extending through a slot in the platform, a strap engaged with the lower end of the lever and extending around the standard and anchored to one of the vertical bars.



1,783,587. DEVICE FOR SOFTENING STIFFENERS FOR BOOTS AND SHOES. HAROLD L. SAWYER, Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Apr. 19, 1927. Serial No. 184,990. 4 Claims. (Cl. 91—46.)

2. A device for softening stiffeners having in combination a receptacle for softening liquid into which a stiffener may be dipped, a closed reservoir for a supply of said liquid, a conduit leading from the reservoir to the receptacle, and a screen upon which the stiffener, after having been dipped, may be placed to drain, said screen being located outside of said reservoir.

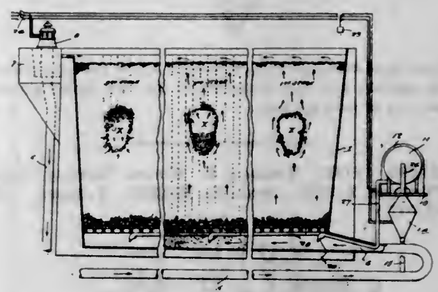


1,783,588. ISATIN-CARBAZOLE COMPOUND VAT DYESTUFF. MAXIMILIAN PAUL SCHMIDT, Wiesbaden, and OTTO LIMPACH, Biebrich, Germany, assignors to General Aniline Works, Inc., New York, N. Y., a Corporation of Delaware. Filed July 8, 1929, Serial No. 376,843, and in Germany July 21, 1928. 1 Claim. (Cl. 260—48.)

As a new product, the dyestuff of the following formula:

being a bluish-black crystalline powder, yielding with an aqueous alkali and hydrosulfite a yellow vat dyeing cotton and wool a yellow tint which turns deep black on exposure to the air.

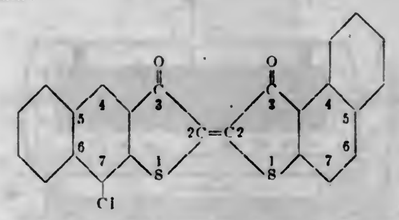
1,783,589. MEANS FOR CONVERTING ROTARY INTO RECIPROCATING MOTION AND VICE VERSA. ALBAN FRANCIS SHEPARD, Richmond, England. Filed June 14, 1928, Serial No. 285,474, and in Great Britain June 17, 1927. 4 Claims. (Cl. 74—14.)



1. An engine, pump or the like, consisting of an assembly of symmetrical structure relative to a middle plane at right angles to the axis of rotation of the rotary parts and comprising in combination a pair of disc-like members each having an eccentric circular guideway therein, a reactionary member incorporating a straight guideway disposed in between said disc-like members, said disc-like members and said reactionary member being arranged for relative rotation, a cross head restrained in the said straight guideway and an arcuate slipper disposed in each eccentric circular guideway and pivoted to said cross head.

1,783,590. AIRPLANE. HENRY HERBERT SIMON, Greenville, S. C. Filed Aug. 14, 1928. Serial No. 299,475. 3 Claims. (Cl. 244—31.)

1. Means for heating the forward edges of airplane wings comprising a conduit for conveying a heating medium, the conduit being constructed in sections the adjacent ends of which are interconnected and secured to the frame members of the wings so as to reinforce the entire wing structure at the forward edge thereof.

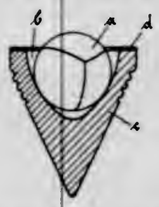


1,783,591. APPARATUS FOR LEACHING AND WASHING ORES BY THE USE OF GAS. ALBERT B. STEVENS, Inspiration, Ariz. Filed Jan. 26, 1929. Serial No. 335,259. 2 Claims. (Cl. 23—271.)

1. A leaching apparatus of the class described comprising in combination, a leaching tank, a perforated false bottom in the tank providing a chamber in the lower end of a leaching liquor supply pipe having communication with the chamber at one end thereof, a gas supply pipe a mixing chamber into which one end of the gas supply pipe extends, a branch pipe affording communication between the leaching liquor pipe and the bottom of the mixing chamber, a discharge pipe extending from the mixing chamber through which the mixture of gas and leaching liquor flows, a delivery pipe having communication with said discharge pipe disposed within the chamber of the leaching tank, said delivery pipe being provided with rearwardly and downwardly directed discharge nozzles at spaced intervals for discharging the mixture of leaching liquor and gas into the chamber in a direction substantially reverse to the direction of flow of the incoming leaching liquor in a manner to thoroughly mix same.

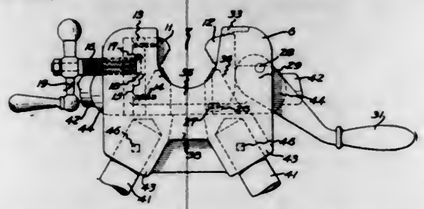
1,783,592. VAT DYESTUFF OF THE BENZOTHIONAPHTHENE SERIES. KARL THIESS and ERNST FISCHER, Frankfort-on-the-Main-Hochst, Germany, assignors to General Aniline Works, Inc., New York, N. Y., a Corporation of Delaware. Filed Jan. 5, 1929, Serial No. 330,610, and in Germany Jan. 26, 1928. 1 Claim. (Cl. 260—53.)

As a new product, the vat dyestuff of the following formula:



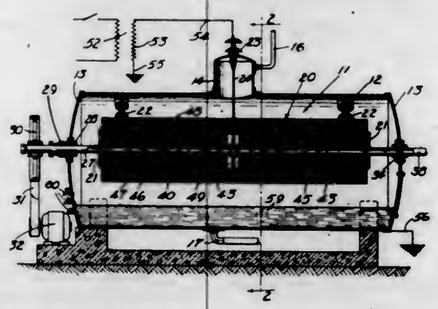
forming a reddish-brown powder, soluble in sulfuric acid to a blue solution and dyeing cotton from orange brown vat corinth tints.

1,783,593. WHIPPING TOP. HEINRICH VOLLHARDT, Frankfort-on-the-Main, Germany. Filed Jan. 3, 1929. Serial No. 329,975, and in Germany Oct. 3, 1928. 4 Claims. (Cl. 46—32.)



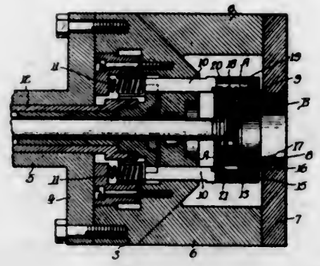
1. A top having a chamber in its upper portion and an opening in its upper side communicating with and of less

diameter than the extreme diameter of the chamber and a ball freely placed in said chamber and carried loosely by



the top, said ball projecting upwardly above the top through said opening and the diameter of the ball being greater than that of said opening.

1,783,594. VISE. THOMAS R. WOODS, Redding, Calif. Filed Apr. 2, 1927. Serial No. 180,353. 2 Claims. (Cl. 81—17.)



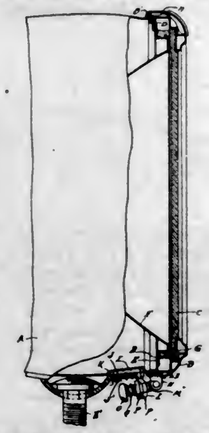
1. A pipe and rod vise comprising a frame, a housing mounted on the frame and having a groove in the top thereof adapted to receive and position a pipe, a jaw mounted in one side of said housing and slidable therein to project into said groove, means for adjustably positioning said jaw, an opposing jaw slidably and pivotally mounted in the other side of the housing, and a cam lever for operating said second jaw mounted in said housing and bearing against said second jaw, said housing being vertically apertured between said jaws to form an unobstructed passage.

1,783,595. DEHYDRATOR HAVING HORIZONTAL REVOLVING ELECTRODES. JOHN T. WORTHINGTON, Long Beach, Calif., assignor to Petroleum Rectifying Company of California, Los Angeles, Calif., a Corporation of California. Filed Nov. 11, 1926. Serial No. 147,737. 13 Claims. (Cl. 204—24.)

10. In a dehydrator, the combination of: an outer drum electrode; an inner perforated drum electrode, said inner electrode defining a central space; means for setting up a field between said electrodes; means for rotating said inner electrode; and means for introducing emulsions into said central space, said emulsion passing outward through the perforations of said inner electrode and into said electric field.

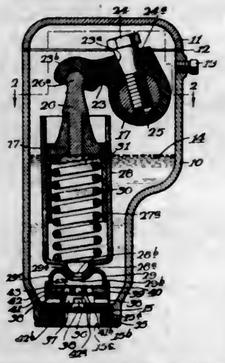
1,783,596. WORK HOLDER. RAYMOND M. WOYTYCH, Fond du Lac, Wis., assignor, by mesne assignments, to The Heald Machine Company, Worcester, Mass., a Corporation of Massachusetts. Filed Jan. 16, 1925. Serial No. 2,756. 4 Claims. (Cl. 279—1.)

1. In apparatus of the class described, in combination, a body adapted to receive a ratchet wheel, a front plate closing one end of said body, said plate having a central opening and a centering pilot concentric with said opening, a plurality of pins rigidly secured in the inner periphery of said body and extending longitudinally thereof, said pins being adapted to fit over certain of the ratchet teeth, and means for rotating said wheel to move the backs of said teeth into clamping engagement with the said pins.



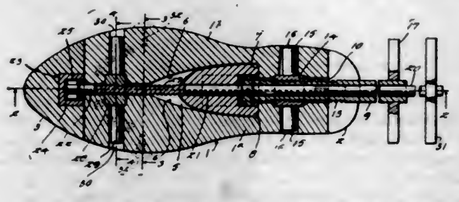
1,783,597. SHEET-METAL CULVERT. WILLIAM ELWOOD BABE, Oshawa, Ontario, Canada, assignor to The Pedlar People Limited, Oshawa, Ontario, Canada, a Joint-Stock Company. Filed Apr. 2, 1929. Serial No. 351,953. 1 Claim. (Cl. 285—185.)

A pair of corrugated sheet metal pipes inserted at their ends one within the other so that the end corrugations interengage, and a semi-cylindrical tie-plate adapted to fit the engaging corrugations and to be riveted at one side to one pipe end at the one side of the engaging corrugations and at the other side to the other pipe end at the other side of the engaging corrugations.



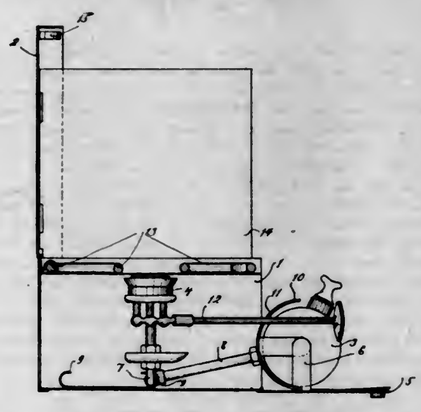
1,783,598. LAMP CATCH. FRANK L. BAMFORD, Detroit, Mich., assignor to C. M. Hall Lamp Company, Detroit, Mich., a Corporation of Michigan. Filed Sept. 30, 1925. Serial No. 59,658. 6 Claims. (Cl. 292—67.)

1. In a lamp fastener, a catch for holding a lens holding ring in engagement with a lamp casing comprising a shank pivotally attached to the ring, a cross bar sleeved on said shank, a spring also sleeved on said shank having its rear end engaging a shoulder thereon and its forward end bearing against said cross bar, the said shank projecting on opposite sides of the cross bar to provide a free end for facilitating the pressing of the cross bar against the spring, and a flange projecting outward from said casing forming a bearing for engagement of said cross



bar slotted to permit the passage of said shank, the said catch being releasable without increase of the force acting to hold said ring in engagement with said casing.

1,783,599. SHOCK ABSORBER. DENNIS B. D. BLAKE, Danville, Ill., assignor of one-half to Donald E. Willard, Danville, Ill. Filed Apr. 9, 1928. Serial No. 268,546. 10 Claims. (Cl. 267—8.)

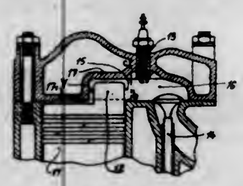


2. The combination in a shock absorber of a valve comprising a member having a plurality of openings therethrough, a valve disk having a flap adapted to close a part of said openings against the flow in one direction, and another valve member having a flap adapted to close the remainder of said openings against flow in the opposite direction.

1,783,600. SHOE STRETCHER OR ADJUSTER. CHARLES R. BOYD, Marshalltown, Iowa, assignor of forty per cent to Alfred Batty, Marshalltown, Iowa. Filed Aug. 13, 1929. Serial No. 385,586. 6 Claims. (Cl. 12—128.3.)

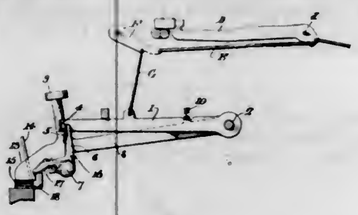
1. A shoe stretcher or adjuster, comprising a body consisting of longitudinal sections pivotally connected at their rear ends, a heel block detachably secured to the body, a toe block, means for moving the body sections laterally outward with respect to each other, and means for moving the toe block forwardly and rearwardly with respect to the body and free of engagement with said first means, said means being selectively operable from the rear end of the body to permit the shoe to be stretched laterally or longitudinally.

1,783,601. COOKING APPARATUS. CARL VICTOR CARLSSON, Upplands-Vasby, Sweden. Filed Oct. 24, 1927, Serial No. 228,358, and in Sweden Sept. 28, 1927. 2 Claims. (Cl. 126—38.)



1. Cooking apparatus comprising a box, a member forming one side of the box, hinged thereto and arranged to be opened and closed, a receptacle for liquid fuel mounted on said hinged member and movable therewith into and out of the box, a burner arranged in the box, a fuel pipe whereby said burner is connected to and movable with and by said receptacle, and a protector plate also mounted on said box member and arranged at the side of the receptacle nearest the box.

1,783,602. VAGINAL SPECULUM. MILTON H. DAMRON, Long Beach, Calif. Filed Oct. 29, 1928. Serial No. 315,842. 4 Claims. (Cl. 128—3.)

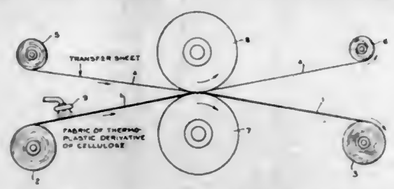


1. In a vaginal speculum, a body member having a guard formed with an aperture to cover the flesh at all points around the vaginal orifice, a lip extending in one direction from the base of the aperture, and a weight forming arm depending from the guard.

1,783,603. ANTIEXPLOSIVE MEANS WITH GREAT TURBULENCE FOR EXPLOSION MOTORS. ALBERT ALEXANDRE AUGUSTIN DARCHE, Algiers, Algeria. Filed Apr. 13, 1928, Serial No. 269,839, and in France Apr. 16, 1927. 1 Claim. (Cl. 123—191.)

In an internal combustion engine, a cylinder having a head provided with an ignition and valve chamber, the major portion of which is out of line with and extends laterally from one side of the cylinder and which chamber has an extension part way across and in communication with the cylinder, and a piston in the cylinder having at one side, at its inner end, a projection adapted to enter and nearly fill said extension of said chamber and hence force combustion gases from said extension into the major portion of said chamber at the end of the instroke of the piston, the length and width of said projection being slightly less than the corresponding dimensions of said chamber extension and the opposing localized surfaces of said projection and the said chamber extension being substantially parallel, so that at complete instroke position of the piston a narrow tortuous passage is formed between the cylinder and the chamber to cause turbulent agitation of the gases at the instant of ignition.

1,783,604. TYPEWRITING MACHINE. GUSTAVE O. DEGENER, Brooklyn, N. Y., assignor to Royal Typewriter Company, Inc., New York, N. Y., a Corporation of New York. Filed Feb. 11, 1928. Serial No. 253,673. 3 Claims. (Cl. 197—29.)



2. In a type action, a type bar, a sub-lever, a front link, connections between the type bar and the front link and between the sub-lever and the front link, a key lever, a latch movably mounted on one lever for normally connecting both levers, and means engageable by said latch during the depression of the key lever for moving said latch to disconnect said levers.

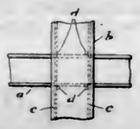
1,783,605. PIPE. ERNEST DELLA, Rochester, N. Y., assignor to Walter J. McGuigan, Rochester, N. Y. Filed July 13, 1928. Serial No. 292,461. 4 Claims. (Cl. 137—75.)

1. A pipe having between its ends two hub portions facing each other, a weakened portion surrounding the pipe and connecting the facing hub portions.

1,783,606. PROCESS OF PRINTING FABRICS. CAMILLE DREYFUS, New York, N. Y. Filed June 30, 1927. Serial No. 202,746. 13 Claims. (Cl. 41—33.)

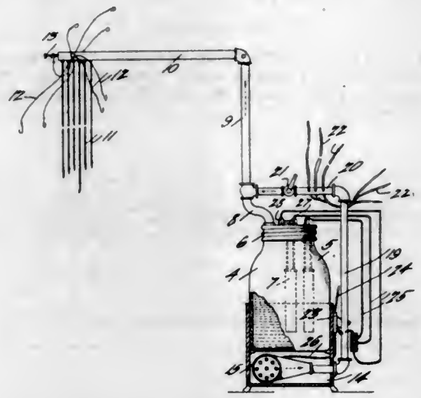
1. A process of printing fabrics which comprises spraying the fabric to be printed with a solvent for the dye on a transfer medium, applying the wetted fabric to a transfer medium, having a dye that is capable of dyeing the fabric to be printed under pressure, whereby the dye on those portions of the transfer medium, which come into intimate contact with the wetted fabric, will be dissolved and will combine with the fabric to color the latter.

1,783,607. COLORATION OF MATERIALS MADE OF OR CONTAINING CELLULOSE DERIVATIVES. HENRY DREYFUS, London, England. Original application filed Jan. 22, 1927, Serial No. 162,937, and in Great Britain Nov. 23, 1926. Divided and this application filed Dec. 27, 1927. Serial No. 242,976. 14 Claims. (Cl. 8—5.)



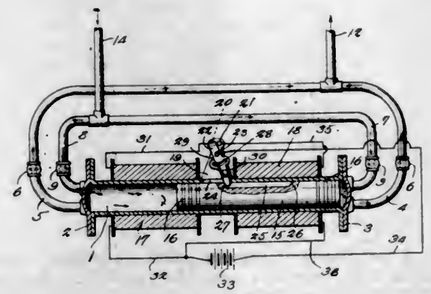
1. Process for dyeing material comprising an organic substitution derivative of cellulose, comprising dyeing the material with a coloring compound which comprises at least one aliphatic hydroxy thio-ether grouping.

1,783,608. TREATMENT OF FABRICS. GEORGE HOLLAND ELLIS, HENRY CHARLES OLPIN, and ERIC EATON WALKER, Spondon, near Derby, England, assignors to Celanese Corporation of America, a Corporation of Delaware. Filed Mar. 15, 1928, Serial No. 262,033, and in Great Britain Sept. 12, 1927. 9 Claims. (Cl. 41—41.)



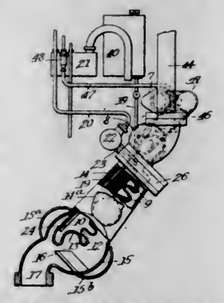
1. A process for treating pile fabrics having a pile comprising filaments of a cellulose derivative and a back of a material other than a cellulose derivative which comprises softening and weakening, in selected areas of the fabric, the loops of the pile filaments composed of the cellulose derivative, and afterwards mechanically removing the weakened pile filaments from the treated parts of the fabric while they are in a substantially undissolved state and in filament form.

1,783,609. CARCASS FOR BUILDINGS. CARL FORSSELL, Stockholm, Sweden. Filed Mar. 14, 1923, Serial No. 624,893, and in Sweden Mar. 15, 1922. 3 Claims. (Cl. 72—15.)



3. In a carcass for buildings, a column of concrete having internal longitudinal reenforcing irons, a beam of steel extending through said column, the concrete of the column being cast around the beam so as to be firmly connected to and wholly support the same and thereby form a joint capable of withstanding bending stresses, and transverse reenforcing irons embedded in said column at the crossing point of the beam therewith.

1,783,610. HAIR-TREATING MACHINE. PAUL EDMUND GAIRE, New York, N. Y. Filed Apr. 30, 1930. Serial No. 448,697. 8 Claims. (Cl. 132—36.)

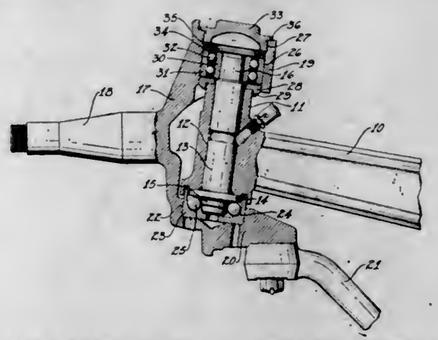


8. A hair treating machine comprising a rectangular box-like casing of comparatively small dimensions, a glass container removably fitted within and supported by the casing, a blower arranged between the bottom of the container and the bottom of the casing, a pipe communicating with the blower and leading through the casing and extending vertically thereof beyond the wall of the casing, the upper end of the pipe overlying the container, a cap removably secured to the container, electric heaters carried by the cap and depending within the container, a vapor pipe supported by the cap and communicating with the air pipe above the cap, a common pipe extending beyond said communication between the air and vapor pipes and leading to a point of use, and a switch carried by the casing and controlling the blower and electric heaters.

1,783,611. PUMP. HERMAN C. GOHRING, Estacada, Oreg. Filed Sept. 29, 1928. Serial No. 309,304. 1 Claim. (Cl. 230—55.)

A pump comprising a fixed standard, a barrel provided at each end with a conduit and having a longitudinal slot, solenoid magnets on the barrel and located on opposite sides of the slot, a combined piston and core mounted to reciprocate in the barrel and responsive to the magnets, the piston and core having a longitudinal slot defining shoulders, and an operating member movable with respect to the piston and core, the movable operating member being a lever, means for fulcruming the lever on the standard, the movable operating member extending through the slot in the barrel and into the slot in the piston and core, the shoulders engaging the movable operating member as the piston reaches the ends of its strokes in opposite directions, the movable operating member constituting means for holding the piston and core against rotation, and the barrel reinforcing the movable operating member against lateral bending, and binding against the standard, when the movable operating member is resisting the rotation of the piston and core.

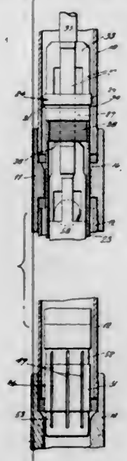
1,783,612. CARBURATION OF HYDROCARBON FUEL FOR INTERNAL-COMBUSTION ENGINES. GEORGE HAMILTON-GRAPES, Murrumbeena, Australia. Original application filed Mar. 11, 1926, Serial No. 93,999, and in Australia May 7, 1925. Divided and this application filed Sept. 10, 1928. Serial No. 305,119. 7 Claims. (Cl. 48—180.)



3. The method of treating a stream of carburetted fuel mixture, which comprises separating condensed liquid fuel particles from such stream, passing the particles through an increasing temperature gradient against a current of air, returning the vaporized particles into said stream at the point of separation thereof, and supplying to the particles another charge ingredient.

1,783,613. METHOD OF MAKING CEMENT-COATED WIRE. J BIRCHARD GREEN, Chicago, Ill., assignor to Chicago Steel and Wire Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 23, 1927. Serial No. 235,402. 8 Claims. (Cl. 91—68.)

1. The method of coating a wire, which consists in applying to the wire in coil form the coating material in a liquid form, and drying the wire while suspended on a rotating support upon which it is constantly changing its position thereon.

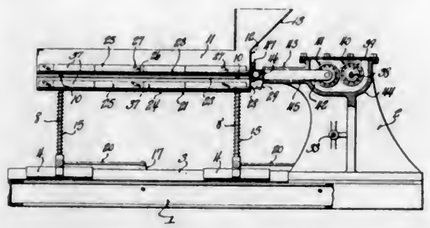


1,783,614. MOTOR VEHICLE. WALTER R. GRISWOLD, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed June 13, 1927. Serial No. 198,683. 7 Claims. (Cl. 280—96.1.)

1. In a steering knuckle, the combination with the axle member and the spindle member, of separated ball bearings

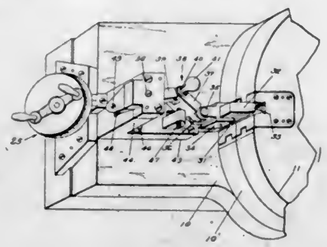
between the members, each adapted to take thrust as well as radial load, and means acting through the bearings to clamp the axle member between separated rigid parts of the spindle member comprising a nut and spring means, substantially as described.

1,783,615. PUMP. ROBERT W. GUNN and WILLSIE A. S. THOMPSON, Los Angeles, Calif., assignors, by mesne assignments, to Emsco Derrick & Equipment Company, Los Angeles, Calif., a Corporation of California. Filed Apr. 26, 1927. Serial No. 186,681. 2 Claims. (Cl. 103—181.)



1. In combination: a well tubing; a tubular shoe on said well tubing having a bore of lesser diameter than said tubing, said bore having plain uninterrupted side walls defining its portion of minimum diameter; a pump barrel; a gripping member on said barrel adapted to be forced with friction-tight fit into said bore, said member having a radially resilient portion engaging the plain side walls of said bore, said member having a longitudinal passage therethrough and adapted to receive in said passage a gas anchor, said gas anchor being connected with said member at its upper end so as to form a recess between said member and said gas anchor; and supporting means provided above said shoe to support said barrel within said well tubing.

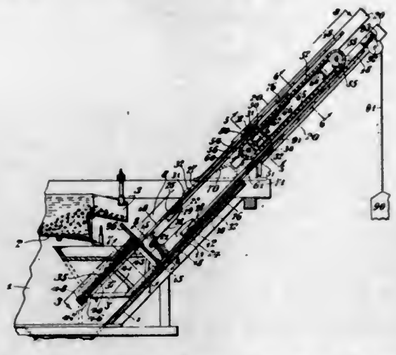
1,783,616. STEPLADDER. HENRY C. HACHMUTH, Comstock Park, Mich. Filed Jan. 21, 1929. Serial No. 338,792. 5 Claims. (Cl. 228—29.)



1. A step ladder comprising a front leg structure, a rear leg structure, a supporting plate pivotally connected to the upper end of the front leg structure to swing on a horizontal axis and means for mounting the rear leg structure on said supporting plate to turn on an axis substantially perpendicular to the support on which the leg structures of the step ladder rest.

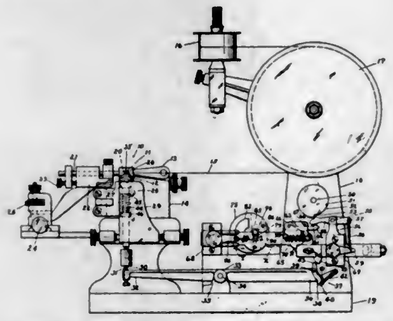
1,783,617. VIBRATORY SCREEN. FREDERICK H. HASELOW and CHARLES REDIG, Milwaukee, Wis. Filed Aug. 25, 1928. Serial No. 302,010. 2 Claims. (Cl. 209—403.)

1. A vibratory screen comprising an open bottom rectangular member having an open rear end and a closed forward end, said member having inturned flanges, a screen resting upon said flanges, locking strips positioned above the edges of said screen and binding said screen against said flanges, said locking strips having cam means for forcing such strips into contact with said screen when said strips are moved forwardly, a base, means extending from said base and pivotally supporting said member, a head extending upwardly from said base, spring means interposed between said head and said strips and urging said strip toward locking position and urging said vibratory member towards said head, and eccentric means carried by said head for rapidly oscillating said member.



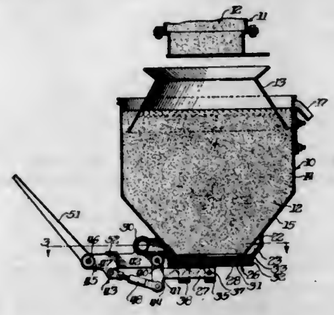
1,783,618. LOCKING DEVICE FOR LAPPING MACHINES. MILTON A. HOYT, East Orange, N. J., assignor to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed Nov. 10, 1927. Serial No. 232,260. 10 Claims. (Cl. 29—48.)

1. A machine for making a wheel for lapping a wear resisting body comprising means for supporting a tool rod, a rotatable tool holder having a plurality of tools, means for movably supporting said tool holder to successively apply said tools to said tool rod, a toggle joint, a locking member, pivoted means having the axis thereof disposed in a plane at right angles to the axis of rotation of said holder, said means connecting said locking member with said toggle, and means for moving said toggle to engage said member with said tool holder and retain the same in position during an operation of a tool.



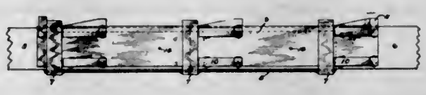
10. A metal working mechanism comprising a base member, a tool holder movably mounted on said base member, a plurality of tools projecting from said tool holder, said tool holder having a slot adjacent to each of said tools, said base member having a slot in a predetermined position, said last mentioned slot being arranged for successive alignment with one of the slots in said tool holder, a locking device comprising a toggle joint, a link pivotally attached to a free arm of said toggle, a locking member pivotally attached to said link, means for actuating said toggle to move said locking member into a slot in said base and into a slot in said tool holder to align the slots and retain the tool holder in position during an operation of one of said tools, means for limiting the motion of said toggle and means for changing the degree of movement of said locking member toward said slots.

1,783,619. COAL-HANDLING APPARATUS. HENRY HOWELL ISRAEL, Lansford, and GEORGE TRUSSA, Nesquehoning, Pa. Filed Nov. 26, 1927. Serial No. 235,787. 10 Claims. (Cl. 198—226.)



1. In apparatus for removing coal from a jigging machine, the combination of a plunger, a guide-way for the said plunger having an open top through which coal is delivered from the jigging device of said machine into said guide-way in front of said plunger, means for causing reciprocating movements of said plunger, and means independent of and actuated by the said plunger for closing the open top of said guide-way when the said plunger is moved outwardly to cause discharge of coal from said guide-way.

1,783,620. WIRE-CUTTING MECHANISM. ALLAN WILLIAM JOHNSON, Newark, N. J., assignor to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed Mar. 30, 1929. Serial No. 351,394. 12 Claims. (Cl. 140—140.)

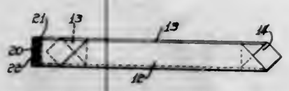


1. In combination with a wire coiling machine having means for moving a wire, a measuring drum movable through frictional engagement with said wire, wire cutting mechanism, means independent of said drum for storing energy to actuate said cutting mechanism and means cooperating with said drum for releasing said energy to actuate said cutting mechanism.

1,783,621. VALVE. CHARLES S. JOHNSON, Champaign, Ill. Filed Jan. 3, 1928. Serial No. 244,862. 6 Claims. (Cl. 251—10.)

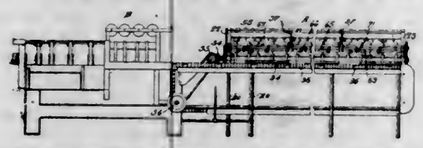
2. A valve device for a batch hopper having a discharge opening, said device comprising a body member having a valve seat, a valve member, a lever pivoted adjacent the valve seat and having one end connected to said valve member, and means for swinging said lever to move said valve member to and from valve closing position, said means comprising a bracket stationarily supported relative to said body member, a bell crank lever pivoted on said bracket, one arm of said bell crank forming an operating handle and the other arm forming one link of a toggle, a link completing said toggle having one end pivoted to the toggle arm of said bell crank and its other end pivotally connected to the lever supporting said valve member.

1,783,622. TIMBER SPLICER. CHARLES M. MARKHAM, Toledo, Ohio. Filed Aug. 30, 1929. Serial No. 389,525. 6 Claims. (Cl. 20—92.)



1. A timber splicer having transversely opposed timber clamping members, which members are of a cross-sectional shape to form timber receiving cavities which face each other and extending across the joint of timbers to be spliced, retaining means encircling said members and permitting relative transverse and longitudinal movements of the members, and means on one of the members operable to cooperate with the retaining means when the associated member has lengthwise movement in one direction to force the two members to have clamping coaction with any interposed timbers.

1,783,623. SUPPORT CONSTRUCTION FOR LARGE FILAMENT LAMPS. ARNOLD CRAWFORD MASSIE, Bloomfield, N. J., assignor to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed Mar. 27, 1929. Serial No. 350,320. 7 Claims. (Cl. 176—39.)

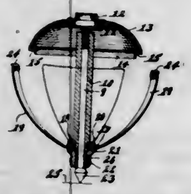


1. A lamp filament retaining bridge member comprising a metal strip portion having a plurality of horizontally adjustable spacer members, guide members integral with said spacer members adapted to receive filament extension members and means on said filament extension members for positioning the member vertically.

1,783,624. SIFTPROOF VALVE BAG. EDWARD W. MENKE, Chicago, and JOHN C. REDINGTON, Geneva, Ill., assignors, by mesne assignments, to St. Regis Paper Company, New York, N. Y., a Corporation of New York. Filed Jan. 28, 1929. Serial No. 335,518. 2 Claims. (Cl. 150—9.)

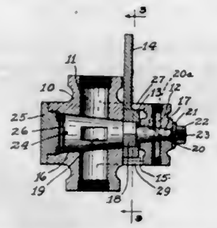
1. A valve bag having a sleeve projecting from its valve, said sleeve having one wall extending farther than the other.

1,783,625. AUTOMATIC BOOK-ASSEMBLY MECHANISM. CHARLES L. MOYER, Chicago, Ill., assignor, by mesne assignments, to Quality Hardware and Machine Corporation, a Corporation of Illinois. Filed May 16, 1928. Serial No. 278,063. 10 Claims. (Cl. 270—55.)



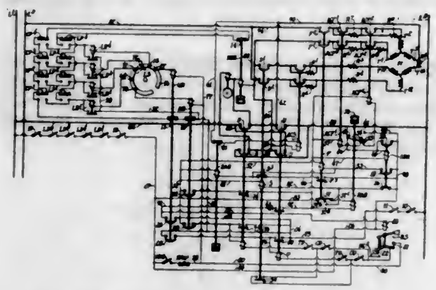
1. An automatic book assembly mechanism comprising a single undivided box for containing piles of signatures arranged with the folded edges at the front of the box, gripper means for withdrawing signatures from the piles, means for reversing the position of the signatures, means for moving the signatures in reversed position, oscillating arms engaging the upper surfaces of said signatures for crimping the signatures to stiffen the upper half thereof as the same are moved by the moving means, gripper means engaging the lower half of said signatures for carrying the same away from the upper half, means for depositing the opened signature on a feeding arm, and means for gathering the opened signatures into book form.

1,783,626. METHOD OF MAKING CRYSTALLINE DEXTROSE. WILLIAM B. NEWKIRK, Riverside, Ill., assignor to International Patents Development Company, Wilmington, Del., a Corporation of Delaware. Original application filed Jan. 17, 1925, Serial No. 3,105. Divided and this application filed June 9, 1926. Serial No. 114,863. 8 Claims. (Cl. 127—30.)



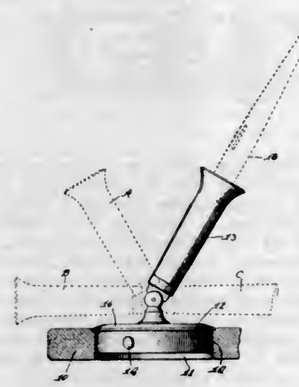
3. Improvement in the method of making anhydrous dextrose from a water dextrose solution which consists in crystallizing normal anhydrous dextrose crystals from a water dextrose solution containing 93% or higher of dextrose without the addition of seed, and maintaining the crystallizing magma at a temperature favorable to the formation of the anhydride and in movement so as to effect a uniform dispersion of the solid phase dextrose throughout the same.

1,783,627. NOVELTY TOP. VITO ORAZIO RAIMONDI, Chicago, Ill. Filed Sept. 13, 1929. Serial No. 392,290. 4 Claims. (Cl. 46—32.)



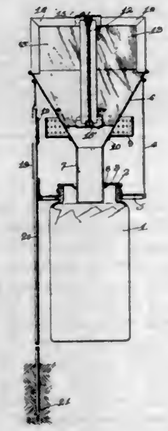
2. A device of the class described comprising a stem having a spinning head, a sleeve member slidably mounted upon said stem, a wing support carried by said sleeve member, a plurality of wings pivotally mounted upon said wing support, and means for engaging said wings to normally maintain same in closed position and adapted to release said wings upon impact of said spinning head with a surface.

1,783,628. CUT-OUT VALVE. FREDERICK SCHIELE, Niles, Mich. Filed Nov. 19, 1928. Serial No. 320,300. 2 Claims. (Cl. 251—104.)



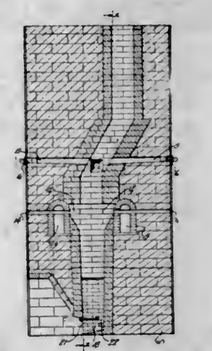
1. In a valve construction, the combination of a cast metal integral housing having two through passageways side by side for fluid flow, a tapered integral valve member crossing said passageways and having ports opening and closing said passageways by turning movement of said valve member, and a handle carried by said valve member for turning it, said passageways having separated adjacent walls in substantially parallel relation, said valve member between said walls having a flat sided conformation, and said handle having a hub portion fitting loosely between said adjacent walls and having an aperture fitting the flat sided portion of said valve member.

1,783,629. PUSH-BUTTON ELEVATOR-CONTROL SYSTEM. EDWIN W. SEEGER, South Milwaukee, Wis., assignor, by mesne assignments, to Cutler-Hammer Inc., Milwaukee, Wis., a Corporation of Delaware. Filed Oct. 27, 1926. Serial No. 144,415. 18 Claims. (Cl. 172—152.)



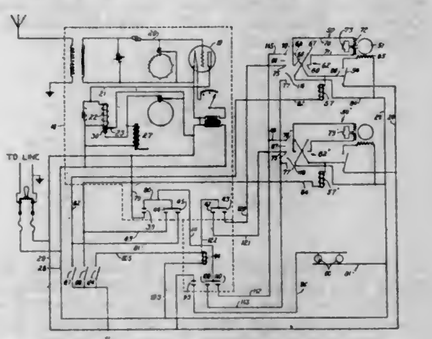
1. In a push button elevator control system, the combination with a variable speed reversible motor for driving the car, of a plurality of push button switches operable selectively to initiate operation of the motor, means comprising a selector switch cooperating with said push button switches to predetermine the direction and the approximate duration of operation of said motor, and means also controlled by said selector switch comprising a retiring switch carried by the car and a cam in the hoistway, said retiring switch being releasable by said selector switch to insure engagement thereof with said cam during approach of the car to a preselected landing, whereby said motor is stopped only when the car is accurately positioned at said landing, said selector switch being also operable to insure low speed circuit connections for said motor prior to arrival of the car at said landing.

1,783,630. FOUNTAIN-PEN DESK STAND. WALTER A. SHEAFFER and WILLIAM R. CUTHBERT, Fort Madison, Iowa; said Cuthbert assignor, by mesne assignments, to Pen Desk Set Company, a Corporation of Illinois. Filed Aug. 26, 1927. Serial No. 215,570. 3 Claims. (Cl. 120—108.)



1. A fountain pen desk stand comprising a flat base adapted to be placed on the top of a desk, supporting means on said base, a receptacle having a projecting portion thereon pivotally mounted on said supporting means, said projecting portion having a scalloped periphery indicative of a plurality of predetermined positions into which said receptacle may be urged, and a spring pressed plunger for seating engagement with said scallops to hold said receptacle fixedly in one of said predetermined positions unless manually forced, said scallops presenting cam surfaces when said receptacle is out of a predetermined position whereby said plunger is urged by its spring to seat in said scallops and thereby to pivot said receptacle into a predetermined position.

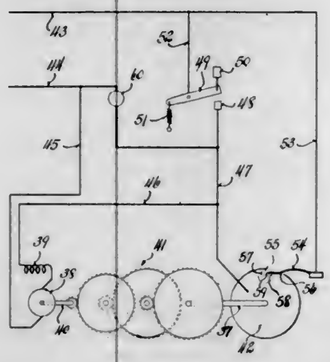
1,783,631. INSECT TRAP. ALEXANDER C. SLADKY, Milwaukee, Wis., assignor to National Enameling and Stamping Company, Milwaukee, Wis. Filed Feb. 25, 1930. Serial No. 431,128. 4 Claims. (Cl. 43—107.)



1. A device of the class described including a receptacle, a housing mounted upon the receptacle, a funnel-shaped member supported by the housing and having its restricted end portion extending into the receptacle, a bait receptacle carried by the funnel member, said funnel member having passageways formed therein above the bait receptacle, and a plurality of transparent obstructions supported at the open mouth of the funnel and extending above the same.

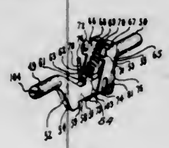
1,783,632. SPALL-BURNING KILN. MARY E. SQUIRE, Manitowoc, Wis. Filed Nov. 25, 1927. Serial No. 235,604. 1 Claim. (Cl. 222—3.)

A kiln comprising a casing having an interior passageway, there being a feed opening and a discharge opening in connection with said passageway, said passageway comprising an upper substantially vertically extending chamber having one pair of opposite walls diverging downwardly, an intermediate chamber of a uniform width equal substantially to the distance between the lower portions of the diverging walls of the upper chamber, said intermediate chamber extending at an angle with respect to the upper chamber, and a lower chamber extending substantially vertically from said intermediate chamber and having one pair of opposite walls converging downwardly.



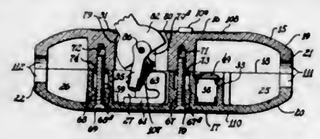
1,783,633. LIGHT-CONTROL SYSTEM. DUNCAN J. STEWART, Rockford, Ill., assignor to Howard D. Colman, Rockford, Ill. Filed Mar. 23, 1927. Serial No. 177,555. 14 Claims. (Cl. 177—353.)

6. A system for controlling the lighting circuit of a building having a door comprising, in combination, an electromagnet, means actuated by successive energizations of said magnet to alternately open and close said circuit, a switch in the energizing circuit of said magnet, and a pair of conductors interposed in parallel relation between said magnet and said switch, one of said conductors including a switch arranged to be open and closed when said door is in open and closed positions re-



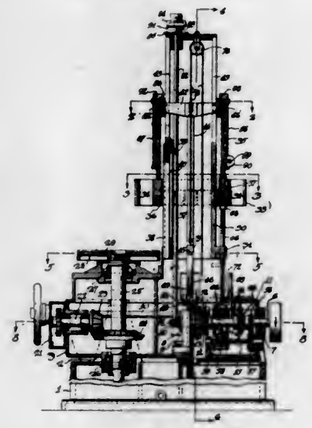
spectively and a second switch which is open when said lighting circuit is closed and closed when said lighting circuit is open, said other conductor including a switch which is open when said door is in closed position and closed when the door is in open position and a switch which is open when said lighting circuit is open and closed when said lighting circuit is closed.

1,783,634. CONTROL MECHANISM FOR ELECTRIC MOTORS. VERNON L. TANNEHILL, Fort Wayne, Ind., assignor to Fort Wayne Engineering and Manufacturing Company, Fort Wayne, Ind. Filed May 2, 1927. Serial No. 188,175. 1 Claim. (Cl. 200—33.)



An electric control for motors including a disc provided with a cut-away part forming a radial shoulder and a flat face at right angles to the shoulder, said disc having an opening adjacent the shoulder and face, an insulating block positioned within the opening, and having a shoulder aligning with the shoulder on the disc, a flat face on said block at right angles to the shoulder and disposed in a plane outwardly of the plane of the flat face on the disc and a second flat face on the block disposed inwardly of the flat face on the disc.

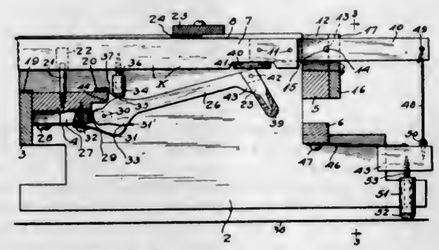
1,783,635. ELECTRIC SNAP SWITCH. WILLIAM C. TREGONING, Milwaukee, Wis., assignor, by mesne assignments, to Cutler-Hammer, Inc., a Corporation of Delaware. Filed Mar. 3, 1928. Serial No. 258,838. 17 Claims. (Cl. 200—72.)



1. In an electric snap switch, in combination, an insulating base, a substantially loop-shaped switching member adapted for oscillating movement, an actuating member extending on each side of said switching member and adapted for rectilinear movement, integral abutments on each of said members, a helical compression spring interposed between said abutments to cause oscillating movement of said switching member upon rectilinear movement of the actuating member, said members having integral interengaging portions to provide for assembly of the same and said spring as a unit prior to attachment thereof to said base, and cooperating means on said base and said switching member to provide a fixed pivotal connection therebetween.

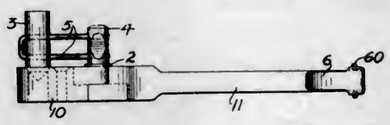
1,783,636. ELECTRIC SNAP SWITCH. WILLIAM C. TREGONING, Wauwatosa, Wis., assignor to Cutler-Hammer, Inc., Milwaukee, Wis., a Corporation of Delaware. Filed Aug. 15, 1929. Serial No. 386,146. 12 Claims. (Cl. 200—67.)

12. In an electric snap switch mechanism of the multiple circuit controlling type, in combination, a sheet metal punching of substantially T-shape, a substantially U-shaped contactor and an actuating lever therefor pivotally supported on each of the horizontal arms of said punching, compression springs interposed between the respective levers and contactors to effect snap movements of the latter independently of each other upon corresponding movements of the former, an insulating casing section having notches to receive said T-shaped punching with a press fit with the aforementioned elements assembled thereon, and a second insulating casing section having a part to engage the vertical arm of said punching to positively retain the latter in assembled relation to the first mentioned casing section.



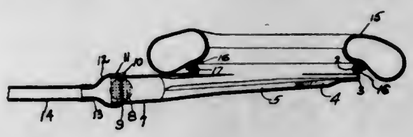
1,783,637. VERTICAL TURRET LATHE. OSCAR G. TWEDDELL, Detroit, Mich., assignor of sixty per cent to Frederich Fiesselmann, Detroit, Mich. Filed Apr. 13, 1929. Serial No. 354,772. 11 Claims. Cl. 29—41.)

1. In a machine of the character described, the combination of a work support rotatable upon a vertical axis, a vertical tubular column positioned laterally of said work support, a turret reciprocable upon said column and rotatable thereon in a horizontal plane, said turret being adapted to carry a plurality of tools, means on said column to engage and hold said turret against rotation during a portion of the reciprocative stroke of said turret, said turret being adapted to move out of engagement with said means to permit rotation of said turret during a portion of said stroke, means for imparting rotation to said work support and simultaneously moving said turret in a downward direction to engage said turret holding means and prevent rotation of said turret on said column during the feeding of the tools to the work, means operated by the downward movement of the turret for stopping the transmission of movement to said work support and turret at the lower end of the stroke of said turret, separate means for imparting upward movement to said turret, and means engaged by said turret at the upward end of its stroke for imparting an indexing movement to said turret.



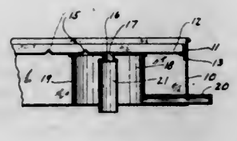
11. In a machine of the character described, the combination of a work support including a vertical shaft, a horizontal power shaft, a horizontal motion transmitting shaft for transmitting motion to said vertical shaft, change speed mechanism for transmitting motion from said power shaft to said horizontal shaft, a hollow vertical column, a horizontally disposed turret reciprocable and rotatable upon column, means for reciprocating said turret extending upwardly in said column, change speed mechanism for transmitting motion to said turret reciprocating means, means operated by downward movement of said turret for effecting a disconnection between said turret reciprocating means and said change speed mechanism at the lower end of the downward movement of said turret, a vertical shaft in said column driven by said power shaft, means at the upper end of said column for rotating said turret with a step by step movement, and a clutch for transmitting motion from said vertical shaft in said column to said turret rotating means, said clutch being controlled in its operation by the upward movement of said turret.

1,783,638. MUSICAL INSTRUMENT. JOSEPH N. VASEY, Brookfield, Ill. Filed Oct. 8, 1926. Serial No. 140,253. 7 Claims. (Cl. 84—323.)



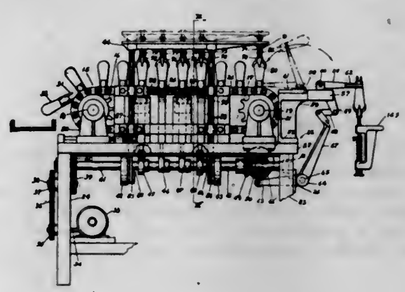
1. In a stringed musical instrument of the class described, the combination of a row of keys, a hinge plate for each key extending rearwardly therefrom in a plane disposed at right angles to the plane of said row of keys, a supporting bar having a row of slots one for each of said hinge plates in which slots said plates are disposed, said bar having a longitudinal groove, a hinge pin extending through said hinge plates and seated in said groove, and means for securing said hinge pin in said groove, said hinge plates and hinge pin hinging said keys to said bar and said slots guiding the movement of said keys.

1,783,639. TUBE-FLANGING WRENCH. JAMES CANNY and HOWARD BLONDEAU, Seattle, Wash. Filed July 1, 1929. Serial No. 375,047. 12 Claims. (Cl. 153—79.)



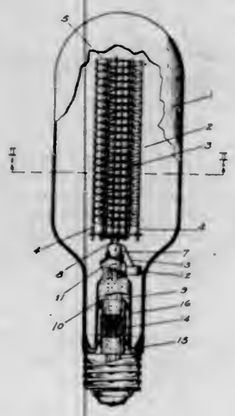
3. A tool for the purpose specified, comprising a complemental pair of gripping dies, a drift pin, and means supporting said drift pin from said dies for movement into and from axial alinement with said die and pipe held therein, and permitting rectilinear axial movement of said drift pin when in alinement with the die.

1,783,640. HOSPITAL APPLIANCE. LAURA A. CHAMBERS, St. Louis, Mo. Filed Nov. 20, 1929. Serial No. 408,629. 12 Claims. (Cl. 4—113.)



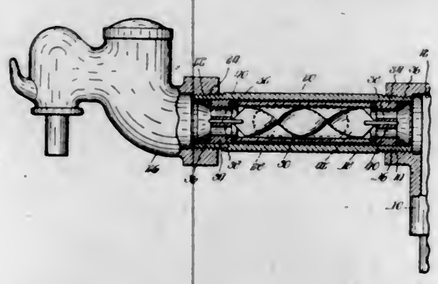
1. In a device of the character described, a pan of relatively rigid material, a cushion overlying the edge of said pan and surrounding said pan so as to rest upon the surface which also supports said pan, and means detachably securing said cushion to the outside of said pan, said pan being removable downwardly from said cushion when said means is detached.

1,783,641. LIQUID COOLER. ANNIE CONLEY, Eau Claire, Wis. Filed Jan. 23, 1929. Serial No. 334,419. 7 Claims. (Cl. 257—188.)



4. A cooler including a pan, an overflow compartment for the pan provided with a drain, a tray adapted to float upon coolant in the pan, a conduit extending from without the pan through the overflow compartment, and an outlet for the tray for delivering the contents of the tray into the conduit, said conduit and said outlet being spaced from the path of coolant overflowing into the outlet compartment.

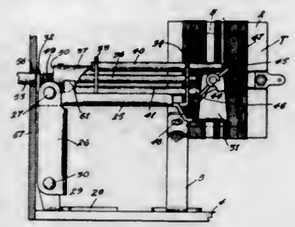
1,783,642. AUTOMATIC SOLDERING MACHINE. JOHN E. FERGUSON, Bloomfield, ROBERT W. CONN, Vauxhall, and WALTER ALVAH HOFFMAN, Bloomfield, N. J., assignors to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed Nov. 2, 1928. Serial No. 316,652. 8 Claims. (Cl. 113—59.)



1. A machine for applying solder to the contact elements of radio tubes or the like comprising a container, molten metal in said container, means for removing the surface layer from said molten metal, a dipper, means for moving said dipper into said molten material after the surface layer thereof has been removed, means for removing said dipper to bring a portion of clean material adjacent to a radio tube and means for moving said tube to insert the ends of the contact elements thereof into the molten material in said dipper.

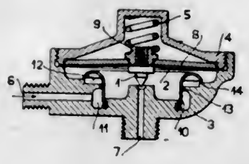
1,783,643. ULTRAVIOLET LAMP. MILAN W. GARRETT, Bloomfield, N. J., assignor to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed July 20, 1927. Serial No. 207,085. 10 Claims. (Cl. 250—35.)

1. A source of ultra-violet radiations comprising an envelope containing electrodes between which a discharge may be passed and a filling of a monatomic gas in said envelope containing an admixture of nitrogen, said envelope being composed of a material transparent to the particular ultra-violet radiations desired.



1,783,644. VISIBLE FLOW INDICATOR. BENJAMIN F. GEYER and ROBERT J. JAUCH, Fort Wayne, Ind., assignors to Wayne Company, Fort Wayne, Ind., a Corporation of Indiana. Filed Oct. 5, 1929. Serial No. 397,593. 7 Claims. (Cl. 116—117.)

1. In a fitting adapted to be associated with a fluid conducting member, the combination of a tubular housing having a window therein, and a spiral member mounted adjacent said window and adapted to be moved by flow of fluid in said housing whereby said spiral member may be viewed from said window.

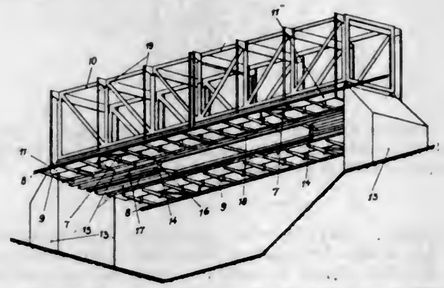


1,783,645. CONTROL DEVICE. MARTIN B. GROUT, Chicago, Ill., assignor to Kellogg Switchboard and Supply Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 4, 1927. Serial No. 172,744. 10 Claims. (Cl. 74—14.)

1. A device of the character described including a shaft adapted to be rotated, a rocking member secured to said shaft, a second shaft mounted at right angles to said first shaft, a supporting bracket for said second shaft, means for pivotally supporting said bracket, a cam member attached to said second shaft, and sliding means lying between said cam and said rocking member and spring pressed into engagement respectively with said cam and

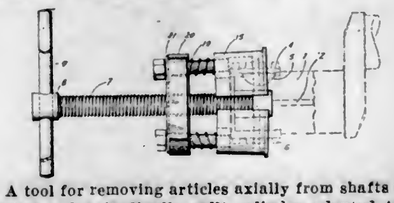
said rocking member for connecting said cam member to said rocking member on said first shaft for rotating the same when said second shaft is rotated.

1,783,646. STOP VALVE. OTTO HAJEK, Vienna, Austria, assignor to the Firm of Alex. Friedmann, Vienna, Austria. Filed Dec. 31, 1926, Serial No. 158,382, and in Austria Apr. 13, 1926. 3 Claims. (Cl. 137—53.)



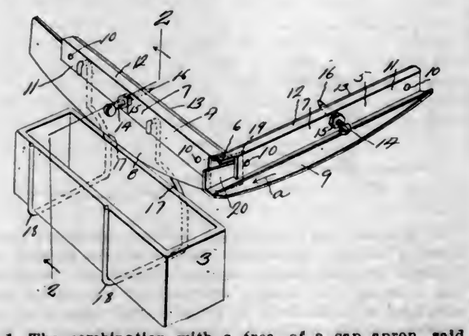
2. A stop valve mechanism for controlling small quantities of fluid comprising a casing, a pressure chamber therein and a flexible diaphragm with a central opening within said casing closing said pressure chamber and firmly clamped at its peripheral edge within said casing, a stop valve clamping the central part surrounding the central opening of said diaphragm, a recess within each of said parts clamping the diaphragm, immediately above the part clamping the diaphragm, a supporting member for said diaphragm having substantially the same shape, covering its entire surface and permanently held against said surface by the recesses in the clamping parts immediately above the diaphragm, said supporting member being inserted with its peripheral and central edges loosely held between the diaphragm and within the recesses of the clamping parts immediately above the diaphragm, so that during movement of the diaphragm the support will follow exactly said movement without leaving the surface of said diaphragm and without impairing the free movement of the same, the supporting member consisting of a plate provided with slots beginning at one of the peripheral edges and dividing said supporting member into sections capable of relative limited movement to provide a limited flexibility of the supportng member and permit deformation of the diaphragm backed by said plate to a given extent but protecting said diaphragm against irregular and excessive deformation.

1,783,647. MANUFACTURE OF METALLIC NITRATES. FRIEDRICH AUGUST HENGLEIN, Cologne-Deutz, Germany, assignor to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany, a Corporation of Germany. Filed Nov. 28, 1927, Serial No. 236,379, and in Germany Dec. 8, 1926. 6 Claims. (Cl. 23—102.)



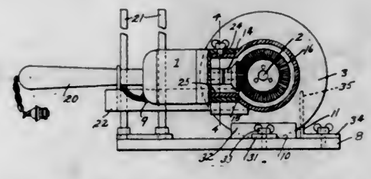
1. In the process of producing metallic nitrates the step which comprises causing oxygen to react upon metallic nitrites in the presence of water at a pressure exceeding one atmosphere and at a temperature exceeding 150° C. in the presence of an alkali metal hydroxide.

1,783,648. RAIL SUPPORTING STRUCTURE FOR LONG SPANS FOR HIGH-SPEED SUSPENDED VEHICLES. FRITZ HEYNER, Hanover, Germany, assignor to Franz Kruckenberg, Hanover, Germany. Filed July 29, 1929, Serial No. 381,956, and in Germany Aug. 25, 1927. 12 Claims. (Cl.104—124.)



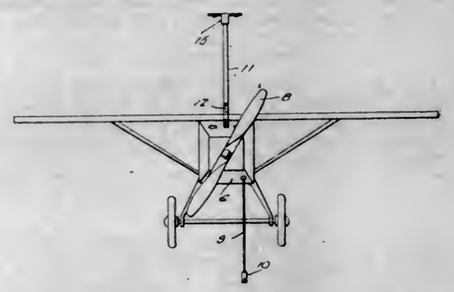
1. In a rail structure, the combination of a main structure, a plurality of auxiliary carriers arranged end to end supported by said main structure and movable longitudinally with respect thereto, and means anchored to the ground for holding one point on each of said auxiliary carriers longitudinally fixed.

1,783,649. AXIAL PULLING TOOL. JAMES W. HOWELL, Cleveland, Ohio. Filed Mar. 8, 1928. Serial No. 259,948. 3 Claims. (Cl. 29—85.)



1. A tool for removing articles axially from shafts which comprises a longitudinally split cylinder adapted to surround a part of an article to be removed, each sector of the cylinder being provided with an inwardly directed flange for engaging projections on the article, a continuous ring slidable on to the exterior surface of said cylinder to retain the halves thereof closely together, longitudinal-pressure-exerting means extendable into the hollow of said cylinder to engage the end of the shaft, a transverse member carried by said pressure-exerting means and longitudinally spaced from said split cylinder, and tension-transmitting connections between said transverse member and each of said segments.

1,783,650. TURPENTINE APRON. JESE O. HUXFORD, Perry, Fla. Filed July 9, 1929. Serial No. 376,952. 3 Claims. (Cl. 47—11.)



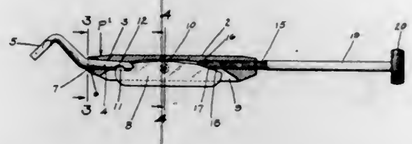
1. The combination with a tree, of a sap apron, said apron comprising hingedly connected sections, said sections having sharpened flanges embedded in the tree for substantially their full length, piercing members carried by the sections and adapted to be embedded in the tree beyond the depth of the bark of the tree, a sap cup carried by one of said sections and sap deflecting means carried by both of said sections and forming means whereby sap is deflected into said cup.

1,783,651. KITCHEN UTENSIL. HOMER R. JOHNSON, Los Angeles, Calif. Filed July 15, 1929. Serial No. 378,200. 10 Claims. (Cl. 259—1.)

1. A kitchen utensil comprising a motor, a tool shaft driven by said motor, means for securing a food tool to said tool shaft and means for turnably adjusting said motor on its axis.

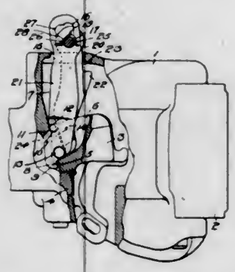
1,783,652. ELECTRIC FAN. PETER N. KARABATSOS, Oak Park, Ill., assignor of one-half to Emanuel Demeur, Oak Park, Ill. Filed Dec. 6, 1928. Serial No. 324,217. 1 Claim. (Cl. 230—254.)

An electric fan comprising in combination a miniature airplane having an electric motor mounted in its forward end, a propeller blade rotatably mounted at the forward end of the airplane and operatively connected with the motor, a tubular member extending upwardly from the airplane, a right angle brace for the lower end of the member to rigidly secure the same and an attaching bracket pivotally carried at the upper end of the member to provide suspension means for the airplane, said tubular member providing a conduit for the circuit wires of the motor.



1,783,653. ADJUSTABLE HOUSING. EDWARD J. KEARNEY, Wauwatosa, Wis., assignor to Kearney & Trecker Corporation, West Allis, Wis. Filed Mar. 8, 1928. Serial No.260,107. 3 Claims. (Cl. 74—56.)

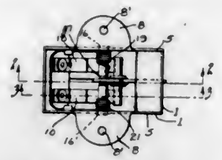
1. The combination for a machine having a frame and a pulley rotatably supported therefrom, of a hollow housing for a belt engaging said pulley, said housing being supported from said frame and including wall members form-



ing a plurality of channels spaced apart, other wall members alternatively movable to different positions relative to said channels and adapted when in one position to form therewith a plurality of closed passageways respectively for oppositely moving belt runs, and when in another position to form with said channels a single closed passageway for both belt runs.

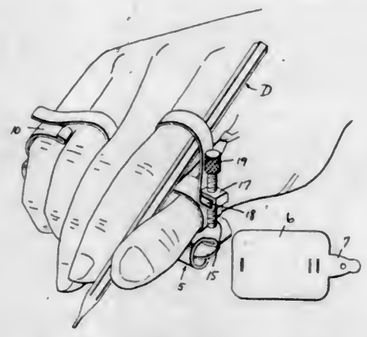
1,783,654. DENTAL INSTRUMENT. WILLIAM A. KELSEY, Minneapolis, Minn. Filed Oct. 10, 1927. Serial No. 225,358. 6 Claims. (Cl. 279—77.)

1. In a dental instrument, the combination of an elongated body shaped to provide a finger grip for the instrument, a tool-receiving socket in one end of said body having its axis disposed at an angle with respect to the axis of said body to prevent relative rotation of the instrument when held in the hand of an operator and lateral pressure is brought to bear thereon, a threaded socket in the opposite end of said body adapted to receive a locking screw, and a locking member mounted in said body and adapted to be engaged by said locking screw whereby said locking member may be moved into locking engagement with the tool shank to secure it to said body.



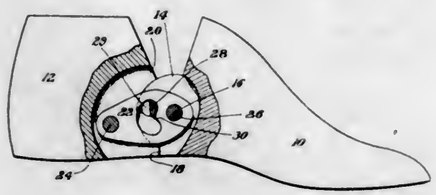
1,783,655. CAR-COUPLER MECHANISM. WILLIAM KELSO, Pittsburgh, Pa., assignor to The McConway & Torley Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Sept. 5, 1928. Serial No. 304,067. 7 Claims. (Cl. 213—127.)

1. In car coupler mechanism, the combination of a coupler head, a rotatable knuckle, a lock for the knuckle, a lock lifter member movably connected to said lock and extending upwardly therefrom through the coupler head, an uncoupling lever device having an upwardly movable inner end portion adapted to actuate said lifter member to cause the latter to move said lock to unlocked position, and means extending through the top wall of the coupler head and adapted to cooperate with said head to prevent accidental uncoupling movement of the said end portion of the uncoupling lever device.



1,783,656. ELECTRIC SWITCH. AUGUST KRASTIN, Cleveland, Ohio. Filed Apr. 4, 1928. Serial No. 267,177. 5 Claims. (Cl. 200—161.)

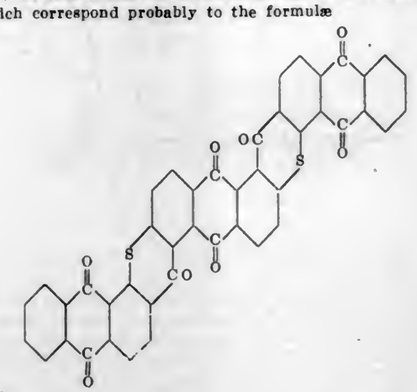
1. In an electric switch, a casing, a pin carried thereby having a reduced portion intermediately of its ends, an arm pivotally mounted upon the pin and having a through opening loosely fitting the pin at the reduced portion, electric conductive means carried by the arm and



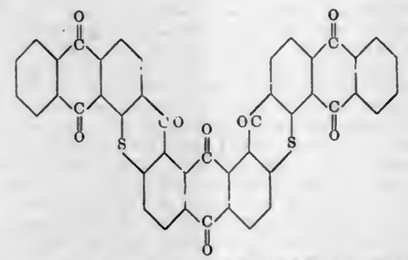
electrically insulated from the arm, and a pair of spring contacts carried by the casing in position to be engaged by said means in one position of the arm.

1,783,657. DEVICE FOR TEACHING PENMANSHIP. ROY ALBERT KUNTZLEMAN, Barberton, Ohio. Filed Apr. 19, 1930. Serial No. 445,715. 3 Claims. (Cl. 35—8.)

1. In a device for teaching penmanship, a metallic strap curved upwardly and inwardly at one end, said strap intermediate its ends provided with an elongated slot, said strap at its opposite end being curved downwardly and inwardly to provide a thumb loop, and said opposite end of the strap passed upwardly through said slot and then bent forwardly upon itself to provide a loop for receiving the index finger of the writing hand, the portion of the strap inclining downwardly from the slot to said first mentioned end adapted to support thereon the remaining three fingers of the writing hand.



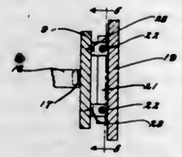
1,783,658. HINGE LAST. HARRY W. LUCAS, Holbrook, Mass., assignor to Fitz-Empire Double Pivot Last Company, Auburn, Me., a Corporation of Maine. Filed Nov. 12, 1921. Serial No. 514,722. 25 Claims. (Cl. 12—136.)



1. A hinged last comprising a forepart, a heel part and r bonding member connecting them relatively movable to collapse the last, and a resilient transversely extending pin engaging the bonding member and constructed and arranged to be distorted by stress exerted upon it by the bonding member in the collapsing movement of the last and thereby resist the collapsing movement.

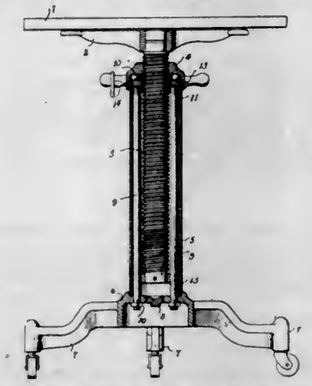
1,783,659. ANTHRAQUINONE-THIOXANTHONE VAT DYESTUFFS. ARTHUR LÜTTRINGHAUS and FILIP KAČER, Mannheim, Germany, assignors to General Aniline Works, Inc., New York, N. Y., a Corporation of Delaware. Filed Mar. 6, 1928, Serial No. 259,603, and in Germany Mar. 10, 1927. 2 Claims. (Cl. 260—53.)

1. As new articles of manufacture the yellow dyestuffs, which correspond probably to the formulæ



and

and dye cotton strong yellow shades and are obtainable by treating with a dehydrating agent a bis-(2'-carboxy-anthroquinonyl-1'-) dimercapto-β-anthraquinone in which the two substituted β-positions are not vicinal.

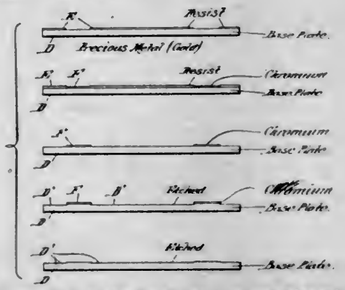


1,783,660. FOLDING TABLE AND BENCH. MICHAEL MAES, Cincinnati, Ohio. Filed Aug. 10, 1928. Serial No. 298,674. 4 Claims. (Cl. 155—83.)

1. In combination with a suitable mounting, a foldable bench comprising a seat member, supports pivoted thereon, a link pivoted to and connecting the supports, perforate bearings fixed upon one of the supports, blocks fixed upon the mounting, one of the blocks being positioned beneath and adjacent an end of said seat member, and rods fixed between the blocks and passing through said perforate bearings.

1,783,661. ADJUSTABLE TYPEWRITER STAND. ALEXANDER MAKOSKI, JOSEPH W. MAKOSKI, and WALTER J. MAKOSKI, Grand Rapids, Mich.; said Alexander Makoski and said Joseph W. Makoski assignors to said Walter J. Makoski. Filed May 16, 1927. Serial No. 191,842. 2 Claims. (Cl. 45—11.)

2. An adjustable typewriter stand comprising a top, a threaded stem depending from the top, a pedestal comprising a base and standard, a ring fitted to the upper end of the standard and having an annular groove formed in its outer edge, tie rods within the standard and forming connecting means between the ring and base, elements projecting from the sides of the threaded stem and engaging the said tie rods to direct the stem in its vertical move-

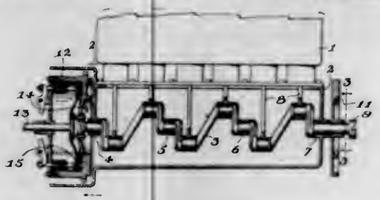


ment and prevent turning thereof, a nut mounted upon the said ring and embracing the same and receiving the threaded stem, ball bearings between the ring and nut and housed by the latter, and screws threaded into a side of the nut and entering the annular groove of the said ring.

1,783,662. HIGHLY-ACTIVE CATALYST. KARL MARX, HERMANN BEHNCKE, and KARL BRODERSEN, Dessau in Anhalt, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany, a Corporation of Germany. Filed Nov. 29, 1927, Serial No. 236,582, and in Germany Dec. 14, 1926. 4 Claims. (Cl. 23—236.)

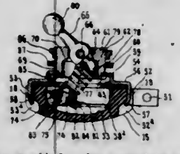
1. The process for manufacturing a catalytically acting metal which comprises acting with a gas containing hydrogen under a pressure of at least 20 atmospheres upon a solution of a salt of the said metal in the presence of a base of the group consisting of ammonia, organic bases and acid amides.

1,783,663. ETCHING PRECIOUS METALS. JAMES C. MCFARLAND, Fort Thomas, Ky., assignor to The Wadsworth Watch Case Co., Dayton, Ky., a Corporation of Kentucky. Filed June 22, 1928. Serial No. 287,538. 3 Claims. (Cl. 42—43.)



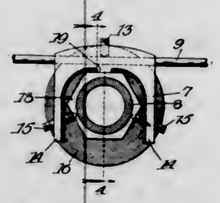
1. The method of eaching precious metals, which comprises: applying to the surface of the metal a chromium plating adapted to serve as a resist to the etching fluid for the precious metal; etching the exposed surface of the precious metal while said plating design serves as a resist; and removing the chromium plating.

1,783,664. SHAFTING FOR ENGINES. PETER F. MCGOVERN, Weehawken, N. J. Filed Mar. 26, 1929. Serial No. 350,038. 1 Claim. (Cl. 74—38.)



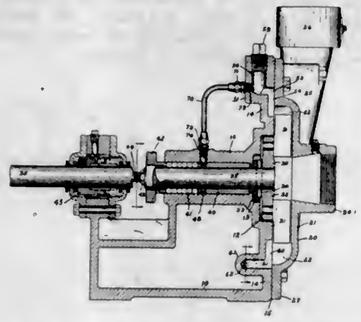
In an automotive engine, a crank shaft, a series of cylinders arranged at one side of said shaft, a series of

piston rods connected to the crank shaft and extending into said cylinders, a fly-wheel rigidly connected to one end of said shaft, a disk of substantially the same diameter as the fly-wheel, fixedly mounted on the other end of



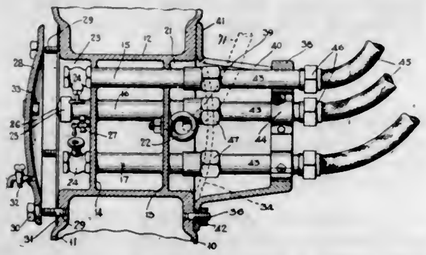
the shaft, and oppositely disposed counter-weights mounted respectively on said fly-wheel and on said disk, each counter-weight being of arc-shape and extending circumferentially substantially 180 degrees only.

1,783,665. ELECTRIC SWITCH. GEORGE J. MEUER, Milwaukee, Wis., assignor, by mesne assignments, to Cutler-Hammer, Inc., a Corporation of Delaware. Filed Nov. 16, 1928. Serial No. 319,943. 23 Claims. (Cl. 200—67.)



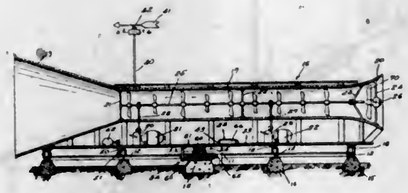
1. In an electric switch, in combination, an insulating base having a recess in one face thereof, a combined stationary contact and terminal member, said member comprising a reflexed metallic strip of equal width throughout its length, the terminal end of said member being seated edgewise upon a ledge within said recess and having its upper edge substantially flush with said face of the base, a metallic cover member secured to said base, an insulating plate interposed between said cover member and said base, an oscillatable and freely rotatable contactor carried by said cover member, and means also carried by said cover member for effecting snap movement of said contactor into and out of engagement with said stationary contact.

1,783,666. SUPPORTING BRACKET. JOHN A. MORTHLAND, Forest Park, Ill. Filed Oct. 12, 1927. Serial No. 225,704. 7 Claims. (Cl. 248—20.)



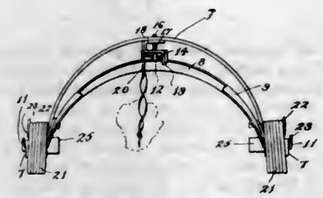
5. A supporting bracket for application to a faucet formed of a yoke-portion having depending spaced apart legs at which the bracket is adapted to straddle the horizontal pipe portion of a faucet and seat at its cross-bar portion upon said faucet, an arm mounted in the upper part of said yoke portion and extending laterally therefrom substantially horizontally and adjustable lengthwise in said yoke-portion, and upwardly converging set screws engaging the legs of said yoke-portion in position to engage the faucet below the center of said pipe portion, said set screws operating to draw the cross-bar portion of said yoke portion down against the faucet, the engagement of said cross-bar portion and said screws with said faucet affording a three-point contact.

1,783,667. CENTRIFUGAL PUMP. ALEXANDER V. MUELLER, Salem, Ohio, assignor to The Deming Company, Salem, Ohio, a Corporation of Ohio. Filed Jan. 28, 1930. Serial No. 423,960. 2 Claims. (Cl. 103—103.)



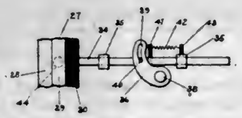
2. In a centrifugal pump, the combination of a pump casing terminating in a substantially vertical plane, a shaft mounted in said casing, an impeller on said shaft, an impeller casing having an internal volute chamber and a surrounding flange, said flange terminating in a substantially vertical face and abutting the vertical plane of the pump casing, there being a central admission passageway and a tangential discharge passageway to and from the impeller chamber, means for holding the impeller casing in various angular positions on the pump casing, a downwardly extending receptacle on the upper portion of the pump casing in communication with a port in the pump casing terminating at said vertical plane, a tubular conduit leading from said receptacle to the bearing for the shaft, a draining passageway located in the lower portion of the pump casing and terminating in a port at said vertical plane, the priming and draining ports being substantially diametrically opposite each other and elongated in a vertical direction and overlapping the impeller chamber.

1,783,668. TRANSMITTING TUBE FOR SUBMARINES AND LIKE VESSELS. CHARLES A. OHMAN and WILLIHARD T. OHMAN, Great Kills, N. Y. Filed Feb. 23, 1928. Serial No. 256,151. 13 Claims. (Cl. 114—16.4.)



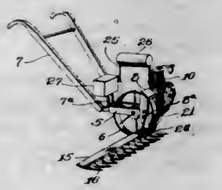
1. The combination with the hull or bulkhead of a vessel, of a passage adapted to place one compartment of a vessel in communication with the exterior of the vessel, the outer end of said passage being contained within the boundaries of the hull, a cover plate normally closing the outer end of said passage, means for closing the inner end of said passage, means involving a flexible tube and a coupling on the end of said tube adapted to be coupled with the ship when said cover has been removed, for placing said flexible tube in communication with said passage, said flexible tube extending to atmosphere whereby when the inner end of said passage is open, devices, elements, and products may be transmitted through said tube and passage into the compartment of the vessel, and means coupled with the exterior of the hull for guiding and reinforcing the flexible tube and the coupling thereof.

1,783,669. AIR MOTOR. DEW R. OLIVER, Los Angeles, Calif. Filed May 18, 1927. Serial No. 192,291. 4 Claims. (Cl. 170—5.)



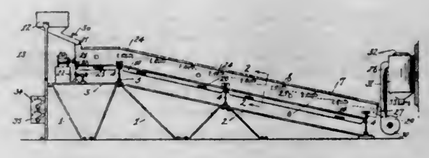
1. A device of the character described comprising an elongated tubular member having a funnel-shaped induction end and a flared eduction end, a central longitudinal shaft mounted in said member, propellers on said shaft and a fan in said flared eduction end of said tubular member, and means for rotating said fan.

1,783,670. TRAP. MARTIN J. PETERSEN, Canyon, Minn. Filed Sept. 23, 1929. Serial No. 394,561. 8 Claims. (Cl. 43—89.)



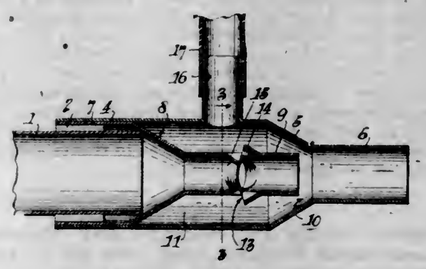
1. A trap comprising a body, jaws pivoted to said body and movable from a closed to an open position, a latch to releasably secure the jaws opened, a keeper having a flange for engagement by said latch increasing in depth toward one side, a trigger to move the latch to a releasing position including a bait holder, means to close the jaws when released, and means to suspend the body from a support with the jaws extending downwardly therefrom.

1,783,671. SELECTOR TUNING DEVICE. JOHN O. PRESCOTT, Glenbrook, Conn., assignor to Columbia Phonograph Company, Inc., Bridgeport, Conn., a Corporation of New York. Filed Nov. 22, 1929. Serial No. 409,007. 27 Claims. (Cl. 116—124.4.)



1. In combination, a movable radio dial, and means associated with the dial to visually indicate thereon the location of a station when a radio set with which the dial is associated has been properly tuned in on said station, said means including a reciprocating marker associated with the dial and movable transversely thereacross.

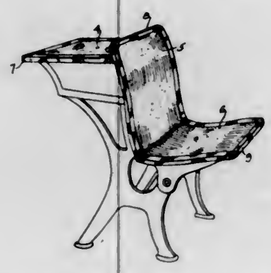
1,783,672. MOWING MACHINE. SILAS E. RAWLS, Streator, Ill., assignor to Rawls Manufacturing Company, a Corporation of Illinois. Filed Feb. 20, 1928. Serial No. 257,951. 11 Claims. (Cl. 56—271.)



1. A mowing machine comprising a medial traction element, a power plant on one side thereof, a mowing implement on the other side, and a handle unit to the rear of said traction element and manageable to control the machine rockably in lateral directions.

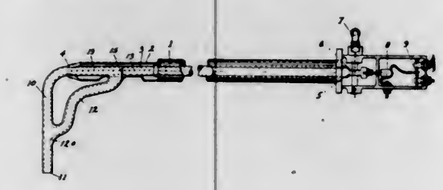
1,783,673. CONTINUOUS COFFEE ROASTER AND STORER. ALBERT K. REHE, San Francisco, Calif., assignor of one-half to Reginald A. Kucich, San Francisco, Calif. Filed Sept. 4, 1929. Serial No. 390,306. 4 Claims. (Cl. 34—38.)

1. A continuous roaster comprising a casing, an inclined conveyor for carrying the articles to be roasted, magnetic means for oscillating the conveyor for causing the articles to move from one end thereof to the exit end, and electric heaters for roasting the articles, said conveyor having steps therein for causing the articles to be turned over as they advance from step to step, said electric heaters being placed in the rises and being inclined for sending heat rays against the tops and bottoms of said steps.



1,783,674. VACUUM-CLEANER ATTACHMENT FOR AUTOMOBILES. WALTON CLARENCE REHWOLD, Beverly Hills, and JAMES GORDON DUFF, Los Angeles, Calif. Filed June 1, 1929. Serial No. 367,817. 4 Claims. (Cl. 230—95.)

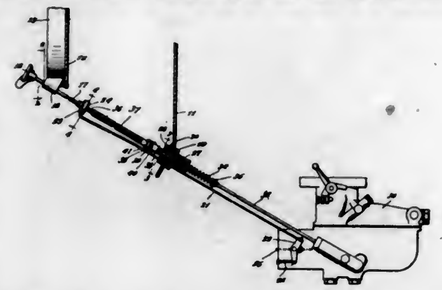
1. A device of the character described comprising a tubular body having an entrant end and a discharge end and having openings therethrough spaced radially about its body intermediately of its ends, said openings being formed by transversely slitting the body and bending the resulting lips nearest the discharge end outwardly and the resulting lips nearest the entrant end inwardly, a sec-



ond body surrounding the first mentioned body to form a surrounding vacuum chamber and having an open end extended beyond the discharge end of the first mentioned body, said extended open end being constricted as it passes said discharge end to provide a reduced diameter discharge extension and a restricted annular throatway surrounding said discharge end and means to removably secure the device upon an exhausting medium.

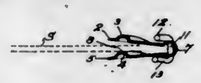
1,783,675. SCHOOL DESK AND SEAT COVER. SAMUEL J. ROBERTS, Scranton, Pa., assignor to John A. Schadt, Scranton, Pa. Filed Jan. 12, 1929. Serial No. 332,223. 6 Claims. (Cl. 155—182.)

1. A removable cover for a school desk part, a U-shaped clamping member of channel cross section adapted to hold the cover and desk part in fixed relationship to each other, notches in the cover for slidably receiving the clamping strip, cooperating interlocking means between the desk part and the clamping member for holding the desk, cover, and clamping member in detachable relationship.



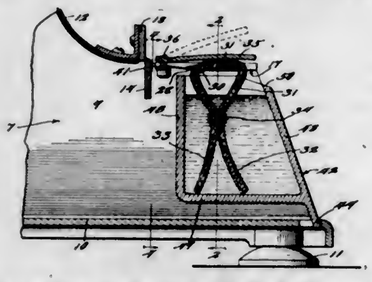
1,783,676. PILOT FOR FURNACES. OTTO H. RODENBERG, Cincinnati, Ohio. Filed July 15, 1929. Serial No. 378,320. 8 Claims. (Cl. 158—115.)

8. In combination in a gas pilot, a shell having an expansion tube therein provided with a series of orifices extending along the tube adjacent the end thereof, a discharge port for the pilot flame, and a branch pipe leading from the tube intermediate the orifices to said discharge port, said branch pipe having discharging means extending from a side wall whereby a feeding flame from the orifices to the discharge port is provided, said discharging means arranged at such a level in said pipe as to receive a supply of gas not consumed in said orifices.



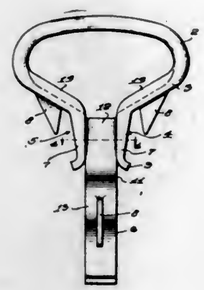
1,783,677. CHOKE AND NEEDLE-VALVE CONTROL. GLENN SELZER, Protection, Kans. Filed Feb. 27, 1930. Serial No. 431,925. 1 Claim. (Cl. 137—139.)

A choke and needle valve control mechanism comprising a bushing adapted to be secured to the dash of an automobile, a rod for manipulating the needle valve of a carbureter passing through said bushing, a spring on said rod bearing against said bushing and holding said rod at its lowest limit of movement through said bushing, a connecting link substantially square in cross section pivotally secured to said rod, a second rod having an extension substantially square in cross section slidably fitting in said connecting link, and terminating at one end in a button, a



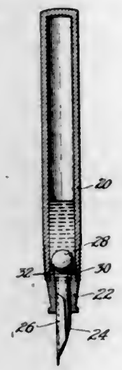
grooved collar on the last named rod, and a wire for manipulating the choke of a carbureter having a laterally disposed eye loosely encircling said grooved chair.

1,783,678. PAPER CLIP OR FASTENER. AI B. SHAW, Santa Monica, Calif., assignor, by direct and mesne assignments, to Dorothy M. Storey, Santa Monica, Calif. Filed Nov. 21, 1928. Serial No. 320,980. 1 Claim. (Cl. 2—250.)



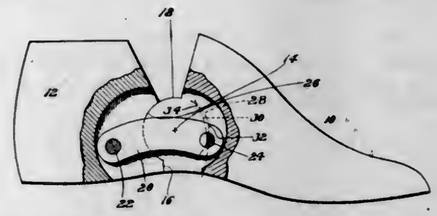
A clip or fastener including opposed gripping leaves connected by a folded, open-ply back-bone bearing forming part, and a vise consisting of a U-shaped wire spring whose cross-bar is straight and which is journaled as a diametrical pivot in the widely spaced plies of the folded back-bone so that maximum bearing length is provided along the pivot bar to secure support for the bar when the arms of the spring are in clamping position; the ends of the gripping leaves being provided with opposed concavo-convex gripping ridges lying in the sweep of the ends of the clamp arms.

1,783,679. MOISTENER FOR GUMMED STRIPS AND THE LIKE. RALPH R. SHAY, Chicago, Ill., assignor, by mesne assignments, to Thomas A. Banning, Jr., Chicago, Ill. Filed Jan. 28, 1928, Serial No. 250,258. Renewed Apr. 12, 1930. 4 Claims. (Cl. 91—54.4.)



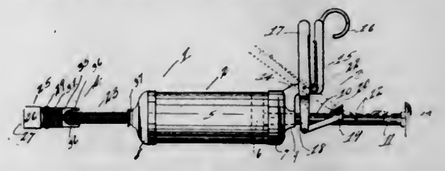
4. In a device of the class described, the combination of a water bath open at its top, and a paper guide and presser plate element above said water bath, the same comprising a lower plate having transversely extending slots across its front and rear portions, a capillary wick extending through said slots and lying across the top face of the plate and having its ends depending into the water bath, together with a presser plate above the wick, and the first mentioned plate, and having its rear portion loosely connected to the rear portion of the first mentioned plate, substantially as described.

1,783,680. COMBINED LIFTING AND CARRYING TOOL. ROBERT A. STEVENSON, Wilmington, Del. Filed May 3, 1930. Serial No. 449,484. 6 Claims. (Cl. 294—26.)



1. In a tool for handling simultaneously a plurality of containers having annular projections adjacent their upper ends, an integral rigid structure comprising a handle and main body portion and a plurality of spaced oppositely disposed jaw members, each jaw including a hook for engaging the annular projections on the containers and a lug spaced from the hook adapted to engage the inner upper surface of the container.

1,783,681. FOUNTAIN-PEN REFILL INDICATOR. OWEN R. TERRY, Detroit, Mich. Filed Jan. 17, 1930. Serial No. 421,455. 4 Claims. (Cl. 120—42.)



1. In a fountain pen, the combination of a comparatively long substantially cylindrical reservoir with at least one rigid wall, and a rigid member of slightly lesser cross-sectional area than the cross-sectional area of said reservoir and confined for free movement within said reservoir, the specific gravity of said member being slightly greater than that of ink, said member having a shallow groove cut in the surface thereof, the clearance between the body of said member and the walls of said reservoir being sufficiently great to permit said member to fall at a comparatively unimpeded rate when air is in said reservoir, and being sufficiently small to cause said member to be materially impeded when falling through ink in said reservoir, and thus by the intensity of its impact against the rigid wall of said reservoir indicate the quantity of ink contained in the reservoir.

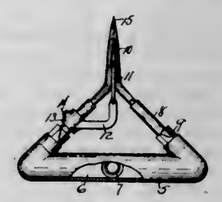
1,783,682. HINGE LAST. GEORGE C. THOMAS, Swampscott, Mass., assignor to Fitz-Empire Double Pivot Last Company, Auburn, Me., a Corporation of Maine. Filed Nov. 18, 1921. Serial No. 516,194. 21 Claims. (Cl. 12—136.)

1. In a collapsible last, a hinge pin, means for exerting a lateral stress on the pin in collapse, the pin having a notch cut in that side toward which the stress of collapse tends to bend the pin.

1,783,683. CRACK FILLER. JULIAN D. TOMLINSON, College Place, Wash. Filed Dec. 8, 1928. Serial No. 324,773. 5 Claims. (Cl. 72—138.)

5. In a crack filler comprising a magazine, a force feeding mechanism in one assembly removably attached to said magazine, and a distributing means consisting of a flexible nozzle and means to render the nozzle non-flexible provided in one assembly and removably attached to said magazine.

1,783,684. TITANIUM ACID SULPHATE AND METHOD OF PRODUCING SAME. FOORD VON BICHOWSKY, Glendale, Calif., assignor to Titania Corporation, Los Angeles, Calif., a Corporation of California. Filed Nov. 20, 1928. Serial No. 320,762. 16 Claims. (Cl. 23—117.)

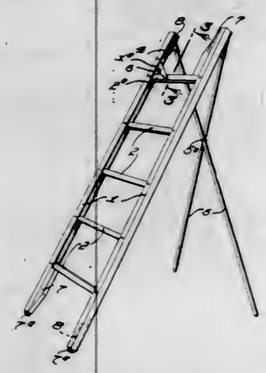


1. As a new composition of matter, the acid sulphates of quadrivalent titanium.

3. As new compounds, the acid sulphates of titanium corresponding to the general formula

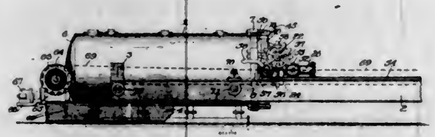
$$R : HSO_4.Ti(SO_4)_2.nH_2O$$

where R is any metal of the alkali group of metals including hydrogen and where n is any number including zero.



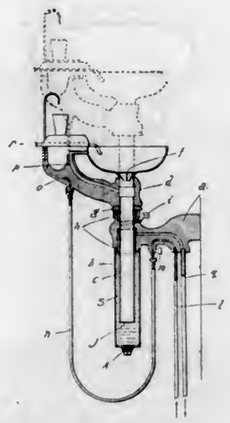
1,783,685. MUFFLER FOR BURNERS. EDGAR E. WAYLES, East Hartford, Conn. Filed Nov. 19, 1928. Serial No. 320,298. 3 Claims. (Cl. 158—113.)

3. A burner including a base having a chamber, an inlet to said chamber, a plurality of burners each having



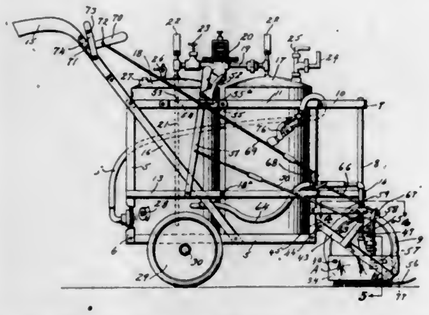
a passage communicating with said chamber and relatively inclined to project jets of fuel in intersecting paths, and a flat vertical baffle passing through the intersection of said paths so that the flames impinge against the flat faces thereof at an inclined angle and unite above the upper edge thereof.

1,783,686. FOLDING LADDER. SAMUEL F. WILLIAMS, San Diego, Calif. Filed Mar. 17, 1928. Serial No. 262,565. 2 Claims. (Cl. 228—37.)



1. In a folding ladder, a pair of channel shaped rails, a plurality of rungs, the ends of said rungs adapted to extend within said channel shaped rails and pivoted thereto, an upper rung of width narrower than said other rungs, a catch member pivotally secured to the upper end of one of said guide rails and adapted to engage a lug positioned intermediate the ends of the upper rung for holding the ladder in open position, said rungs being adapted to be wholly enclosed within said guide rails when the ladder is in its folded position, said upper rung forming with the adjacent channel wall a space for receiving said catch member.

1,783,687. HEAD-LOCKING MECHANISM FOR CONTAINERS. WILLIAM E. WOOD, Alton, and WILLIAM H. BACHELDOR, Wood River, Ill., assignors to Standard Oil Company, Whiting, Ind., a Corporation of Indiana. Filed July 8, 1929. Serial No. 376,767. 16 Claims. (Cl. 220—24.)

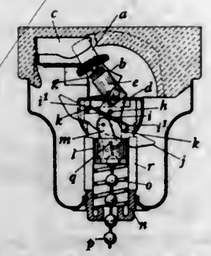


1. In a closed receptacle provided with a removable head for closing one end thereof, the combination of a fixed shaft protruding from the outside of said head, a tubular housing receiving said shaft, rotatable means within said housing and engaging said shaft, said rotatable means being adapted to move itself in a longitudinal direction relative to said shaft upon rotation of said rotatable means, whereby said housing is moved longitudinally relative to said shaft, means for locking said head to said tank, said locking means being operatively connected to said housing, whereby it is moved to locked and unlocked positions by the movement of said housing.

1,783,688. SPITTOON OF VARIABLE HEIGHT FIT FOR DENTISTS OR PHYSICIANS. LUIS WURLOD, Buenos Aires, Argentina. Filed Nov. 20, 1928, Serial No. 320,724, and in Argentina Sept. 25, 1928. 5 Claims. (Cl. 4—263.)

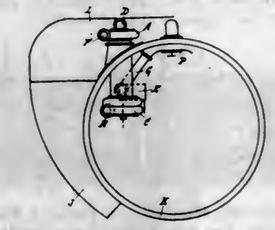
1. A device of the character described including a supporting bracket having a vertical bore in one terminal, a trap depending from the bracket and communicating with the bore, a discharge pipe movable axially and rotatably in said bore and extending into said trap, an arm carried by the upper terminal of said pipe, a spittoon bowl supported on said arm and communicating with said pipe, said bowl and arm being rotatable and movable axially with said pipe.

1,783,689. TRAFFIC-LINE MARKING AND STENCILING MACHINE. CLARENCE V. ANGIER, Jr., Atlanta, Ga. Filed Mar. 5, 1925. Serial No. 13,313. 15 Claims. (Cl. 91—44.)



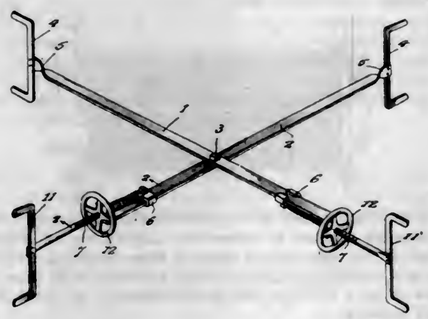
1. In a machine of the class described, the combination of a frame-work, rear wheels, and a forward wheel arranged substantially intermediate the rear wheels for supporting the frame-work, and a paint-applying mechanism arranged substantially along side the forward wheel and substantially in alignment with one of the rear wheels.

1,783,690. ELECTRIC SWITCH. REGINALD HOWARD BAKER and CECIL WILLIAM PARSONS, Aston, Birmingham, England. Filed July 29, 1929, Serial No. 381,859, and in Great Britain Nov. 7, 1928. 2 Claims. (Cl. 200—68.)



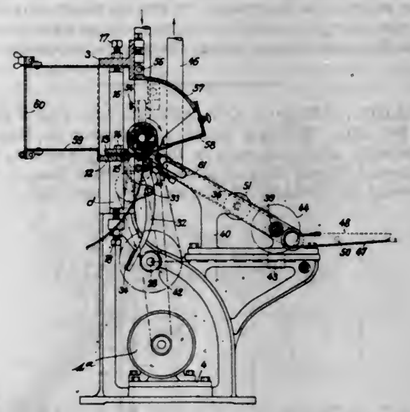
1. In electric switches of the kind specified, the combination comprising a movable contact, a toggle mechanism carrying said contact, a rocking member connected

with the toggle mechanism, a sliding piece, a spring for imparting to the sliding piece a movement in one direction, an operating element cooperating with the rocking member, a link pivotally connecting the operating element



and sliding piece, and means attached to the link for imparting to the sliding piece a movement in the opposite direction to that effected by the spring, said element having two hook-like pieces adapted alternately to engage the ends of the rocking member, substantially as described.

1,783,691. SUBMARINE BOAT. GEORG JOACHIM KARL BEHRMANN, Rijswijk, Netherlands, assignor to Naamlooze Vennootschap Ingenieurs Kantoor voor Scheepsbouw, The Hague, Netherlands. Filed Nov. 21, 1928, Serial No. 320,969, and in Germany Nov. 22, 1927. 5 Claims. (Cl. 114—16.)



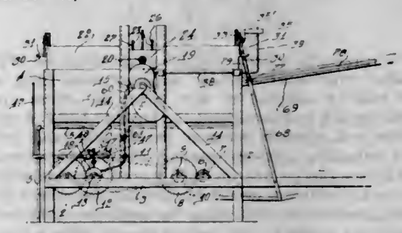
5. In a submarine boat, turbines, impelled by the exhaust gases of Diesel motors, and compressors, of which only the turbines are arranged outboard.

1,783,692. REEL. HARM H. BENSEMA, Gilman, Ill. Filed Aug. 21, 1929. Serial No. 387,440. 4 Claims. (Cl. 242—113.)

3. A reel comprising crossing bars having one end flanged and formed with an opening, a fork at the opposite end, a slide on the flanged end, a screw mounted in the flange and secured to the slide, a coil spring on the screw confined between the flange and slide, a wheel threaded on the screw and engaging the outer side of the flange, and a fork at the outer end of the screw.

1,783,693. METHOD AND DEVICE FOR REMOVING THE HAIRS FROM THE SKIN OF FELLS. MAX BLOCH, Frankfort-on-the-Main, Germany. Filed Apr. 11, 1930, Serial No. 443,539, and in Germany Apr. 16, 1929. 10 Claims. (Cl. 19—2.)

1. Method for severing the hairs from the skin of fells by introducing the fell between the knives of a hair-cutting machine in such a manner that the knives of the cylinder cut off the hairs from the hair-side of the skin and that the hair severed from the skin is blown away by a current of air in a direction opposite to the direction of rotation of the cylinder-knives in order to remove them out of the reach of the knives.

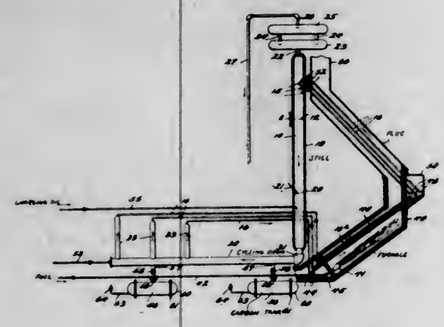


1,783,694. PROCESS OF PRODUCING ORGANIC IRON COMPOUNDS AND THE RESULTING PRODUCT. HENRY BLUMENBERG, Jr., Moapa, Nev., and JOHN H. BLUMENBERG, Huntington Park, Calif. Filed Aug. 31, 1926. Serial No. 132,893. 4 Claims. (Cl. 71—9.)

1. A method of making an organic iron compound suitable as a non-toxic plant stimulant comprising treating comminuted cellulose material with an aqueous solution of iron sulphate, and heating the impregnated cellulose material until the same assumes a dark brown or black color.

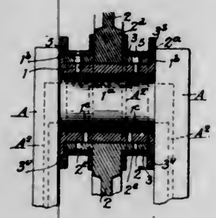
1,783,695. SULPHUR COMPOSITION AND METHOD OF MAKING THE SAME. HENRY BLUMENBERG, Jr., Moapa, Nev. Filed Feb. 14, 1927. Serial No. 168,284. 5 Claims. (Cl. 167—14.)

3. A method of producing sulphur in a finely divided state comprising 90 percent of sulphur with 10 per cent boric acid and heating the same to a temperature of 130 to 300° C. whereby a powdery mixture of sulphur and boric acid is formed.



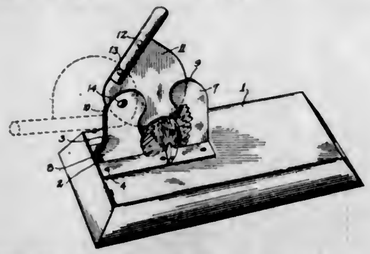
1,783,696. AUTOMATIC DEEP-FRYING MACHINE. ADOLPH BOTHE and ERNEST BOTHE, Lansing, Mich. Filed May 9, 1930. Serial No. 451,180. 10 Claims. (Cl. 53—7.)

1. A deep frying machine comprising the combination with a frame having a grease receiving receptacle formed



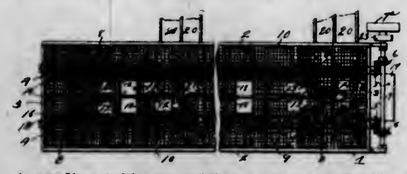
in the upper portion thereof and heating means adapted to maintain said grease at a baking temperature, of a tray supporting basket carried by a pair of cams adapted to lower said basket into and raise it out of said grease, means for intermittently rotating said cams, and a mechanism mounted in said basket for moving dough-nuts placed on said tray to a position whereby the downward movement into said grease causes them to be reversed.

1,783,697. METHOD AND APPARATUS FOR CRACKING OIL. WILLIAM BRINK and GEORGE L. HESS, El Dorado, Ark., assignors to General Oil Products Company, a Corporation of Delaware. Filed Nov. 9, 1927. Serial No. 232,112. 7 Claims. (Cl. 196—59.)



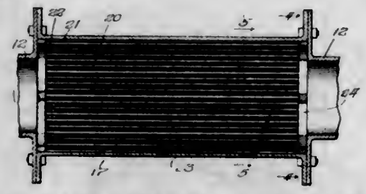
1. The process of cracking oil which consists in delivering small quantities of a heated topped oil to a large body of oil, flowing a portion of the body of oil continuously thru a horizontal lower drum and past carbon settling chambers, then up thru towers of smaller diameter, heating this latter portion of the oil to a cracking temperature, discharging the partially cracked oil at an angle to the larger body of oil so as to create a froth at the oil level and condensing the vapors arising from the main body of oil.

1,783,698. CRANK-PIN BEARING FOR CONNECTING-ROD ASSEMBLIES. HENRY LOWE BROWNBACK, Norristown, Pa. Filed Feb. 28, 1929. Serial No. 343,481. 5 Claims. (Cl. 74—17.)



1. A crank pin bearing for the connecting rod slippers of radial type multi-cylinder engines, comprising a divided bushing adapted to float upon the crank pin; a pair of divided collars around the bushing adapted to confine the rod slippers between the bushing and collars, means extending entirely around the circumference for maintaining the collars in fixed spaced relation with respect to the bushing, means for locking the collars to the bushing; means for lubricating the members of the bearing through the bushing; and means on the collars for contracting the collars around the bushing and the bushing around the crank pin.

1,783,699. POULTRY KILLER. GEORGE C. BUTCHER, Parkersburg, W. Va. Filed Apr. 22, 1929. Serial No. 357,265. 1 Claim. (Cl. 17—12.)

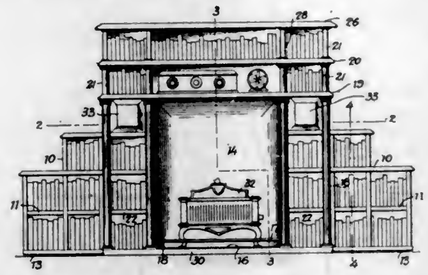


A device for decapitating poultry comprising a main body portion, a block including a pair of plates spaced apart and extending upwardly from the main body portion, said plates being formed with aligned recesses having restricted openings for receiving the neck of the poultry, a knife pivotally mounted between said plates and coacting with one plate to perform a shearing cut, the latter being mounted relative to said main body portion so as to converge slightly toward one another in the direction of said main body portion to wedgingly receive said knife as it descends and place it against the plate with which it coacts.

1,783,700. FRUIT-GRADING TABLE. JAMES AUGUSTUS BYINGTON, Orlando, Fla. Filed July 12, 1929. Serial No. 377,870. 9 Claims. (Cl. 209—123.)

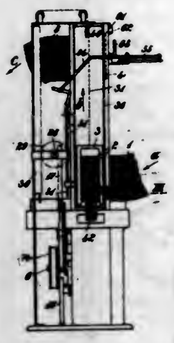
1. A grading table comprising a frame, a flexible apron within said frame and spiral rollers cooperating with the under side of said apron, whereby transverse waves are imparted in said apron and advanced therein.

1,783,701. STORAGE OF OILS. THOMAS SKIDMORE COOKE and JOHN EVANS ROUSE, Casper, Wyo., assignors to Standard Oil Company, Whiting, Ind., a Corporation of Indiana. Filed Mar. 18, 1926. Serial No. 95,596. 3 Claims. (Cl. 220—88.)



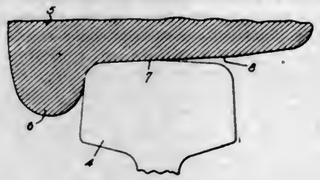
1. In combination with spaced sections of a vapor line, a chamber member therebetween constituting an enlargement of the vapor line, a mass of flame-arresting material in said chamber of greater cross sectional area than the bore of said sections, and means spacing the mass from said sections.

1,783,702. ROOF PAINT. MICHAEL M. CONNOLLY, Sherman, Calif. Filed Dec. 11, 1928. Serial No. 325,394. 1 Claim. (Cl. 134—14.)



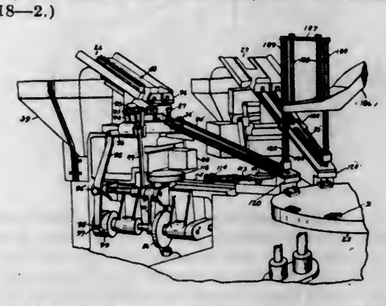
A roof paint consisting of the following ingredients in the proportions stated, by volume, coal tar twenty (20) parts, gasoline five (5) parts, and alcohol one (1) part.

1,783,703. BOOKCASE. SARAH E. CROWELL and GEORGE H. BLAKE, New York, N. Y. Filed May 29, 1929. Serial No. 366,987. 3 Claims. (Cl. 211—134.)



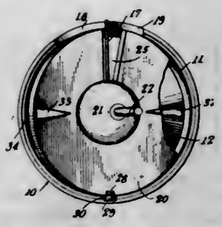
1. In portable bookcases, the combination of a base adapted to support a stove, bookshelves at the ends of the base, a mantel above the base, shelves above the mantel, and wing shelving hinged to the shelves at the ends of the base and supported at their outer ends by rollers.

1,783,704. MATRIX-SETTING AND TYPE-LINE-CASTING MACHINE. JULIUS DORNETH, Berlin-Konradshohe, Germany, assignor to the Firm Typograph-Gesellschaft m. b. H., Berlin, Germany. Filed Nov. 21, 1929, Serial No. 408,892, and in Germany Apr. 29, 1929. 12 Claims. (Cl. 199—4.)



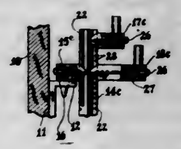
1. In a matrix setting and line casting machine, matrices guided on wires in a cycle, a carriage for raising the line set after the casting to distributer wires, pushing means for pushing the line set on to the distributer wires and members for lifing said carriage and operating said pushing means and adapted to be automatically interconnected so as to operate as a single body and to be again separated so as to act independently of each other at predestined stages of operation.

1,783,705. RAILWAY-CAR WHEEL. GEORGE H. EMERSON and JOHN J. TATUM, Baltimore, Md. Filed Mar. 23, 1929. Serial No. 349,420. 8 Claims. (Cl. 295—34.)



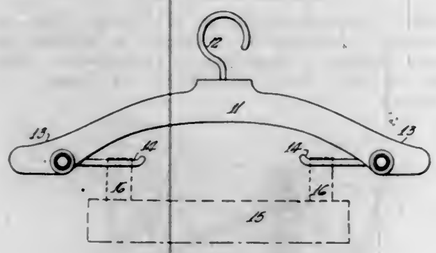
1. As a new article of manufacture, a flanged car wheel having a tread of the same contour at the throat of the flange as the inner rounded corner of the rail head and tapered from said throat at an angle corresponding to the taper of the head of such rail to a point coinciding approximately with the center of the rail head.

1,783,706. BASE-PIN-STAKING MACHINE. JOHN E. FERGUSON, Bloomfield, N. J., assignor to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed May 10, 1929. Serial No. 362,110. 21 Claims. (Cl. 218—2.)



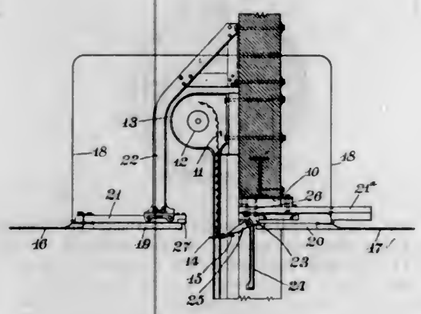
1. A machine of the class described comprising means for holding a plurality of contact pins in given spaced relation, means for feeding bases having apertures in a wall thereof, means for positioning said bases with said contact pins in said apertures, and means for securing said pins in said wall.

1,783,707. WATER METER. ERNEST E. GAMON, Prince Bay, N. Y. Filed Nov. 17, 1927. Serial No. 233,858. 3 Claims. (Cl. 73—98.)



1. In a water meter having a chamber provided with oppositely disposed smooth conical surfaces having a pair of oppositely disposed radial recesses, a plane circular disc within the chamber, a stem extending at right angles from the disc, and oppositely disposed radial ribs on said disc, said ribs and recesses cooperating to affect the movements of the stem in predetermined positions.

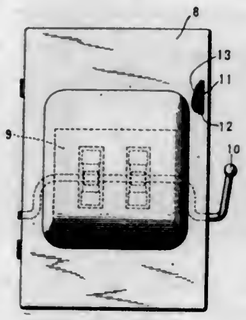
1,783,708. HINGED RACK. GASPAR GARCIA, Habana, Cuba. Filed Apr. 4, 1928. Serial No. 267,243. 1 Claim. (Cl. 248—19.)



A hinged rack, comprising in combination, a plate adapted to be fastened to a wall, a vertical bar, a rear extension member mounted on said bar, spring pressed means for adjusting the position of said member on said bar, said rear extension member being hingedly connected to said wall plate, whereby the vertical bar may be moved horizontally, a front extension member mounted on said vertical bar, and spring pressed means for adjusting the position of said front extension member on said bar.

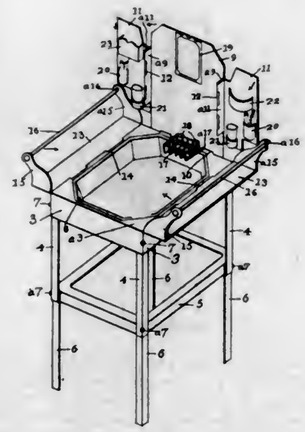
1,783,709. GARMENT HANGER. SIFTON A. GOLDBERG, Brooklyn, N. Y. Filed Mar. 23, 1929. Serial No. 349,442. 3 Claims. (Cl. 223—61.)

1. In a garment support as described, the combination, an arch-shaped body portion with a central hook for supporting a garment, a slot in each end of said body, a member pivotally secured in each slot and projecting inwardly below said body to support a garment having straps, said members turning on their pivots within said slot and having arms engaging said body portion to hold them rigid in a horizontal position.



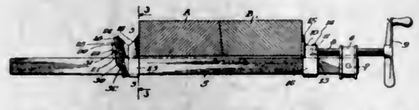
1,783,710. TROLLEY BRIDGE. RALPH H. GREEGOR, Columbus, Ohio, assignor to The Kinnear Manufacturing Company, Columbus, Ohio, a Corporation of Ohio. Filed Dec. 30, 1927. Serial No. 243,740. 3 Claims. (Cl. 191—36.)

1. In combination with a structure having an opening, a door for said opening adapted to be raised and lowered, an electric power line having terminals at each side of the plane of movement of said door, a pivoted nonconducting trolley bridging member between said terminals, means on said door for causing said bridging member to assume trolley-guiding position when the door is raised to normally open position and for removing said bridging member from that position when the door is lowered from normal raised position and a weight operating on the bridging member for holding it in bridging position independently of the door.



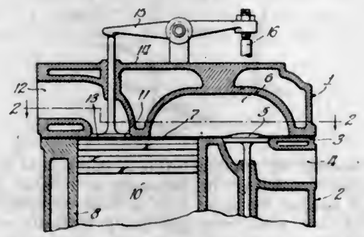
1,783,711. SWITCH-BOX LATCH AND SEAL. CHARLES E. HANNY, Unionville, Conn., assignor to The Trumbull Electric Manufacturing Company, Plainville, Conn., a Corporation of Connecticut. Filed May 14, 1929. Serial No. 362,923. 9 Claims. (Cl. 292—89.)

1. A switch box having a cover hinged to one edge, a latch strip secured to one side wall of the box, the cover having a slot to receive said latch strip, a latch member pivoted to the outer end of said strip and adapted to be rotarily moved so as to engage one edge of said slot to prevent the



opening of the cover, and means for sealing said latch member in said engaging position to prevent release of said cover.

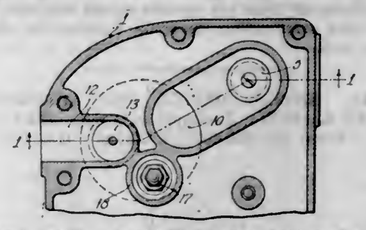
1,783,712. PORTABLE LAVATORY. JESUS G. HERNANDEZ, Seattle, Wash. Filed July 8, 1929. Serial No. 376,596. 1 Claim. (Cl. 45—38.)



In a portable lavatory, the combination of a wash-stand top frame, a wash-stand top fastened to said top frame having an opening therethrough, a leg frame, four separably spliced legs removably fastenable to said top frame, and to said leg frame, a wash bowl mounted in said opening in said stand top, a back board hinged at its bottom edge to the rear edge of said stand top oscillatable only between a position at right angles with the plane of said stand top to a position overlying the same, back-board leaves joined to each side edge of said back board by forwardly offset hinges for oscillation only from a position in the plane of said backboard to a position in front of, parallel with and offset from said back board, toilet-accessories holders fastened to said back board and to said back board leaves, releasable means to retain said backboard in a postion at right angles to said stand top, leaves connected with hinges to each side edge of said stand top for oscillation only from a position in the plane of said stand top to a position overlying the same, arms having aligned holes therethrough fastened to each end of each of said stand-top leaves projected at right angles therefrom disposed to lie alongside of the front and rear of said stand top frame when said stand top leaves overlie said stand top with their ends projected below the lower edge of said stand-top frame, and rods extended through said aligned holes in said arms engageable therewith disposed adjacent the lower edges of said stand-top frame when the said stand-top leaves overlie said stand top.

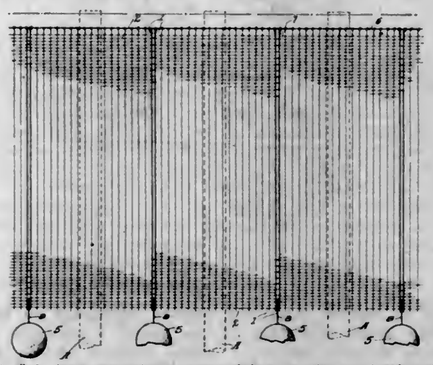
1,783,713. ADJUSTABLE CLAMP. HARRY V. HOLMAN, Chicago, Ill., assignor to Adjustable Clamp Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 22, 1927. Serial No. 214,508. 2 Claims. (Cl. 144—303.)

1. A clamp comprising a rod, a jaw slidable along said rod, and means for preventing movement of said jaw along said rod comprising a plurality of clutch loops having openings therein through which said rod extends, said clutch loops having means thereon engaging said jaw so that when said jaw moves in one direction the clutch loops are tilted to bring the edges of said openings into gripping engagement with said rod and thereby prevent any further substantial movement of said jaw along said rod, each of said clutch loops being relatively thin as compared to the size of its opening, the combined thickness of said clutch loops being sufficiently great to withstand the normal clamping pressure without material permanent distortion, but each individual clutch loop being so weak as to be materially and permanently distorted by normal clamping pressure when used by itself, the distortion of the clutch loops tending to cause each clutch loop to more firmly grip said rod.



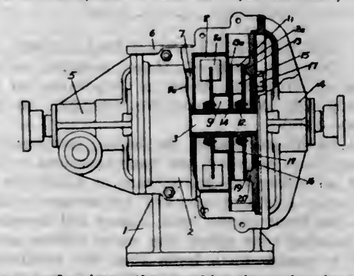
1,783,714. INTERNAL-COMBUSTION ENGINE. HARRY L. HORNING, Waukesha, Wis., assignor to Waukesha Motor Company, Waukesha, Wis., a Corporation of Wisconsin. Filed Aug. 25, 1928. Serial No. 301,989. 7 Claims. (Cl. 123—191.)

1. In an internal combustion engine, a cylinder, a piston reciprocating in the cylinder, said engine having an intake passage lying alongside the cylinder, a head having a pocket overlying said intake and part of said cylinder and having a portion overlying and close to the remainder of the cylinder area, said overlying portion of the head forming with the piston, when in its raised position, a shielded space, the head having an exhaust passage opening through the overlying portion thereof, valves for said passages, and means for igniting the charge in said shielded space.



1,783,715. INTERNAL-COMBUSTION ENGINE. HARRY L. HORNING, Waukesha, Wis., assignor to Waukesha Motor Company, Waukesha, Wis., a Corporation of Wisconsin. Filed Aug. 25, 1928. Serial No. 301,990. 8 Claims. (Cl. 123—191.)

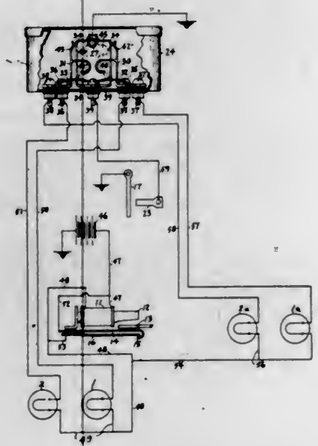
1. In an internal combustion engine, a cylinder, a piston reciprocating in the cylinder said engine having an exhaust passage lying alongside the cylinder, a head having a pocket overlying said exhaust passage and part of said cylinder, the head also having a portion overlying and close to the remainder of the cylinder area, said overlying portion of the head forming with the piston, when in



its raised position, a shielded space, said engine having an intake passage opening through the overlying portion thereof, valves for said passages, and means for initially igniting the charge in said shielded space.

1,783,716. FISH-TRAP STRUCTURE. WILLIAM G. HUMM, Peoria, Ill., assignor to Keystone Steel & Wire Company, Peoria, Ill., a Corporation of Illinois. Filed July 5, 1928. Serial No. 290,546. 1 Claim. (Cl. 43—7.)

A fish trap structure, comprising sections of wire fabric, each section made from a plurality of longitudinal and cross wires joined at their intersections to produce square meshes, the marginal longitudinal wires being sufficiently heavy to provide, when the sections are joined, reinforcing and strengthening ribs for the said structure, means adapted for connection with the lower ends of pairs of marginal wires of adjoining section for weighting down the said sections and to hold the same taut, rings connecting marginal wires of adjoining sections, and a stringer support for the structure to which are connected the longitudinal wires of each section.

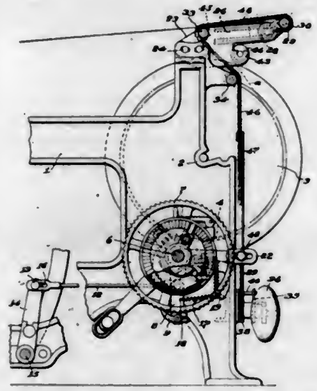


1,783,717. PULVERIZER. GUSTAV H. KAEMMERLING, Erie, Pa., assignor to Erie City Iron Works, Erie, Pa., a Corporation of Pennsylvania. Filed July 16, 1929. Serial No. 378,752. 2 Claims. (Cl. 83—11.)

1. In a pulverizer, the combination of a beater chamber; a fan chamber to which the beater chamber leads, said

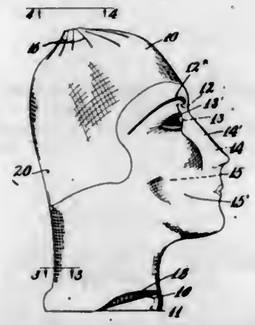
fan chamber having an end wall with supplemental air openings therein; a fan in the chamber having a disc next to and spaced from the end wall, said disc having an opening receiving air from the opening in the end wall; and a closure ring surrounding the space between the disc and the end wall.

1,783,718. SIGNAL DEVICE FOR AUTOMOBILES. HOSAKU KAGEYAMA, Los Angeles, Calif. Filed Apr. 3, 1923. Serial No. 629,652. 3 Claims. (Cl. 177—337.)



2. An electric signal for vehicles comprising an indicating means consisting of two lamps, a manually operated selective switch, a brake operated switch, and conducting means interconnecting each switch and the lamps and also interconnecting the two switches whereby with the manual switch in a neutral position the operation of the brake illuminates both lamps, and whereby operation of the manual switch to a selected position positively illuminates a selected lamp only and renders the brake operated switch ineffective.

3. A signaling device comprising an electric signal lamp to give a visual signal, an electrically operated bell in co-operation with the visual signal to announce the operation of the latter to the operator, a hammer for striking said bell, an armature for operating said hammer and magnetic coils for attracting said armature, said magnetic coils being connected in series circuit with said signal lamp, said armature being adapted to short circuit, said coils, when attracted by the same, thereby permitting said signal lamp to receive electrical current more directly from the source of current.

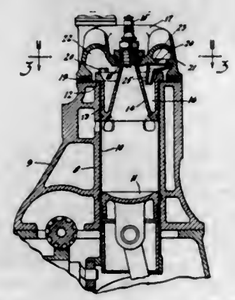


1,783,719. LET-OFF MECHANISM FOR LOOMS. RICHARD A. KEARSLEY, Milford, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Aug. 27, 1929. Serial No. 388,701. 15 Claims. (Cl. 139—110.)

1. In a let-off mechanism for looms, the combination of the warp beam on which the warp is wound, a positive let-off for actuating the warp beam to let-off the warp, a warp tension equalizer mounted for movement towards and from the front of the loom, means for directing the warp in parallel runs about the warp tension equalizer from full to empty warp beam that the equalizer may exert unvarying tension on the warp loop throughout the weaving operation, a weight normally active upon the warp tension equalizer in a direction to maintain uniform tension on the warp throughout the weaving operation, and means governed by movement of the equalizer toward

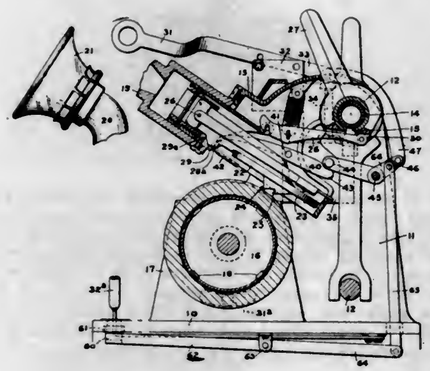
and from the front of the loom to vary the amount of let-off from the warp beam without changing the uniform warp tension.

1,783,720. METHOD OF MAKING TOY FIGURES. VICTOR KENEY, New York, N. Y. Filed Jan. 29, 1930. Serial No. 424,241. 3 Claims. (Cl. 16—40.)



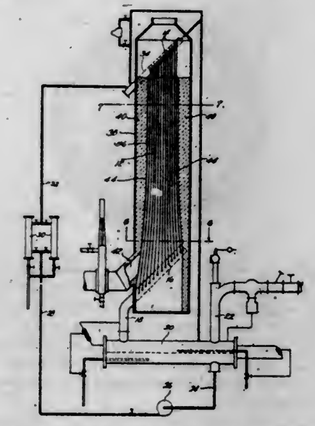
1. A method for manufacturing a doll's head or similar article, consisting in engaging a tubular knitted fabric of smaller diameter than a form and capable of stretching over said form, previously partially covering said form with liquid glue, sewing the opened top of the tubular fabric closed so that it tightly engages the form and applying coloring upon the fabric to form features.

1,783,721. ARTIFICIAL HAIR FOR DOLLS' HEADS. VICTOR KENEY, New York, N. Y. Filed Feb. 17, 1930. Serial No. 429,063. 2 Claims. (Cl. 46—40.)



1. In combination with a scalp member for a doll's head, a plurality of strands of hair on said scalp member, each strand being composed of a small central portion beneath the scalp member and two end portions positioned above said scalp member, said strands arranged in pairs so that the small central portion of each pair cross, and a separate hair strand tied around the four end portions and near the scalp portion of the strands so that each of the strand ends is prevented from pivoting on its central portion by the other strand ends.

1,783,722. SLEEVE-VALVE ENGINE. CLARENCE EVELYN KING, Harpenden, England, assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Aug. 19, 1927. Serial No. 214,081. 14 Claims. (Cl. 123—173.)



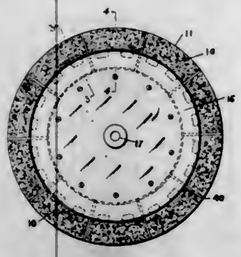
1. In an engine having a cylinder and a cylinder head having a hollow portion projecting into the cylinder, a cover plate for the cylinder head having therein a conduit having means to direct cooling fluid directly to the hollow portion.

1,783,723. PHONOGRAPH. HENRY J. KING, New Haven, Conn., assignor to Dictaphone Corporation, Bridgeport, Conn., a Corporation of New York. Filed Dec. 14, 1923. Serial No. 680,646. 39 Claims. (Cl. 274—17.)

1. In a dictating machine, the combination of a record-support, means for rotating the record-support, manually operable means for making the record-support rotating means operative or inoperative, a stylus, and means for moving the stylus out of record-engaging position and operated concomitantly with the operation of said manually operable means when making the record-support rotating means inoperative.

1,783,724. ART OF EFFECTING HEAT EXCHANGE. WALTER DOUGLAS LA MONT, Larchmont, N. Y., and ALFRED F. ERNST, Passaic, N. J., assignors to La Mont Corporation, New York, N. Y., a Corporation of New York. Filed Oct. 7, 1926. Serial No. 140,099. 4 Claims. (Cl. 122—7.)

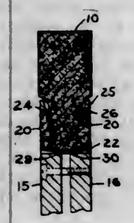
1. Apparatus for the exchange of heat between a gas and a fluid comprising a wall defining a gas passage which tapers from one end toward the other, a set of closely spaced tubes of small diameter extending longitudinally from one end to the other of the passage, which are uniformly distributed throughout the entire cross-section of the passage anywhere in its length, said tubes being more closely spaced at the smaller end of the passage than the other and the dimensions and spacing of the tubes being such that the tubes have a surface area of at least 12 square feet per cubic foot of total volume of the passage whereby under a high velocity of gas flow marked turbulence in the gas is maintained, means for introducing heated gas into the wider end of the passage and means for introducing a fluid into the tubes at the opposite end of the passage, and thereby causing the gas and fluid to flow in counter-flow relation.



1,783,725. RECOVERY OF SULPHUR FROM ALKALI-METAL POLYSULPHIDES. HELLMUTH LANGHEINRICH, Neuroessen, Germany, assignor to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany, a Corporation of Germany. Filed Aug. 5, 1929, Serial No. 383,790, and in Germany Aug. 23, 1928. 3 Claims. (Cl. 23—229.)

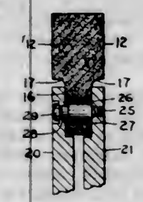
1. The process for the recovery of sulphur from solutions of alkali metal polysulphides which comprises heating such solution to between 150° and 374° C. under its own vapor pressure.

1,783,726. METALLIC APPARATUS FOR CARRYING OUT CHEMICAL AND OTHER PROCESSES. FRANZ LAPPE and EDWIN KOCH, Ludwigshafen-on-the-Rhine, MATHIAS PIER, Heidelberg, and HANS SAUER, Neurossen, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany, a Corporation of Germany. Filed Mar. 23, 1927, Serial No. 177,830, and in Germany Mar. 25, 1926. 3 Claims. (Cl. 23—252.)



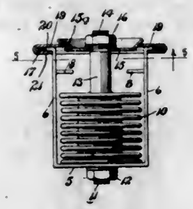
1. Metallic apparatus for carrying out processes in the presence of destroying elements which comprise iron which has been treated at high temperatures and under conditions precluding oxidation, with a gas capable of forming gaseous compounds with the impurities originally contained in the said metal, the said iron on being treated with corroding agents and then subjected to microscopic examination no longer showing the effects of corrosion in the boundaries of the microscopic grains.

1,783,727. SEGMENTAL GRINDING WHEEL. THURE LARSSON, Worcester, Mass., assignor to Norton Company, Worcester, Mass., a Corporation of Massachusetts. Filed May 27, 1927. Serial No. 194,792. 20 Claims. (Cl. 51—207.)



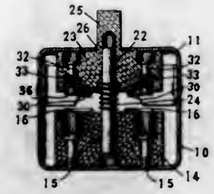
1. A grinding wheel comprising segments of bonded abrasive grains arranged in the form of an annulus which has a peripheral grinding face, side faces, and a reduced inner portion, and means including plates clamping against the reduced inner portion and located substantially within parallel planes passing through said side faces which hold the abrasive segments secured in position for grinding.

1,783,728. GRINDING WHEEL. THURE LARSSON, Worcester, Mass., assignor to Norton Company, Worcester, Mass., a Corporation of Massachusetts. Filed June 30, 1927. Serial No. 202,673. 17 Claims. (Cl. 51—207.)



1. A grinding wheel comprising abrasive segments arranged in the form of an annulus having a peripheral grinding face, a peripheral supporting face and side faces, peripherally spaced abrasive lugs projecting from the side faces which form beveled clamping shoulders, and clamping members arranged on each side of the annulus in engagement with the peripheral supporting face and provided with portions engaging said shoulders which are adapted to adjustably secure the wheel segments in position.

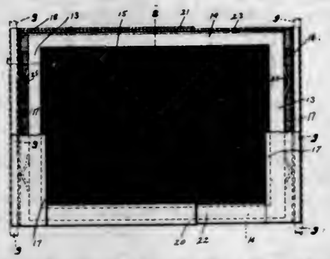
1,783,729. ABRASIVE-WHEEL MOUNT. THURE LARSSON, Worcester, Mass., assignor to Norton Company, Worcester Mass., a Corporation of Massachusetts. Filed June 30, 1927. Serial No. 202,674. 11 Claims. (Cl. 51—207.)



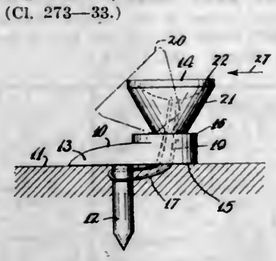
1. A grinding wheel comprising an abrasive body having a series of openings in its side faces and a bushing in each opening having a surface accurately preformed to fit correctly on a supporting member which is removably insertable in said opening, whereby the abrasive body may be mounted on a support located at the side of the wheel.

1,783,730. THERMOSTATIC VALVE. EDGAR J. LEACH, Janesville, Wis., assignor to Time-O-Stat Controls Company, Elkhart, Ind., a Corporation of Maryland. Filed Mar. 28, 1927. Serial No. 178,824. 9 Claims. (Cl. 236—34.)

1. A device of the class described comprising a sheet metal plate having an opening therethrough, a supporting stirrup of U-shape attached to said plate at one side, the ends of the legs of said stirrup being secured to said plate one at each side of the opening, a thermostatically expansible and contractible corrugated sheet metal bellows permanently secured to the base of said stirrup and extending toward the plate, a stem extending from the end of the bellows through said opening in the plate, a valve secured to the end of the stem adapted to close the opening in the plate on contraction of the bellows, and stops carried by and extending inwardly from the legs of said stirrup between the bellows and said valve and terminating short of said stem.



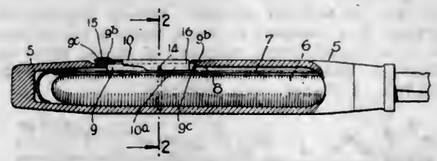
1,783,731. INCLOSED SWITCH. HENRY E. LEPPERT, New Britain, Conn., assignor to The Trumbull Electric Manufacturing Company, Plainville, Conn., a Corporation of Connecticut. Filed Jan. 15, 1930. Serial No. 420,922. 5 Claims. (Cl. 200—159.)



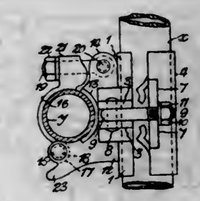
4. In an electric switch, an insulating base having two spaced switch contacts with circuit terminals and a cross plate spaced apart from the ends of said contacts, a movable insulating carrier having two parallel switch plates and means for guiding the carrier so as to cause the movable plates to engage the stationary contacts and the cross plate, said movable plates being mounted on the carrier to permit tilting and spring means coacting with the tilting plates.

1,783,732. WINDOW SCREEN. LOUIS LEVI, Winthrop, Mass. Filed July 31, 1929. Serial No. 382,526. 1 Claim. (Cl. 156—38.)

As an article of manufacture, a window screen engageable as a unit with the fixed vertical screen guides of a window frame, and comprising a single invariable rectangular inner frame, including horizontal bottom and top members, vertical end members, and a filling of screen fabric, and a horizontally variable and vertically invariable rectangular housing frame, composed of two angular channelled sheet metal sections, each open at one end and including channelled horizontal lower and upper members telescopically interengaged to permit horizontal variation of the housing frame, and channelled vertical members connecting said horizontal members in pairs, and provided with screen-guide engaging grooves, the channelled members of the housing frame receiving the members of the inner frame, and springs interposed between the vertical members of the two frames, said springs being rigidly backed by the vertical members of the inner frame, and bearing on the vertical members of the housing frame, to horizontally vary the latter and thereby permit horizontal contraction of the housing frame when the screen is being engaged with the screen guides, and automatically compensate for variations in the distance between the screen guides caused by swelling and shrinking of the window casing.

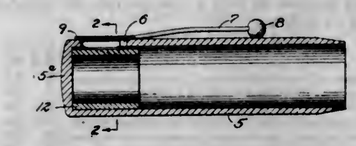


1,783,733. GOLF TEE. GIUSEPPE MANASSERO, New York, N. Y. Filed Feb. 25, 1930. Serial No. 431,148. 5 Claims. (Cl. 273—33.)



1. A golf tee consisting of a combination of a body formed of a single piece, said body having a peg for the insertion into the ground, a spike, a platform supporting a cup, said cup connected to the body, the connection consisting of an elastic strip guided thru apertures in the said platform, and around the peg so as to cause the said cup to return automatically in teeing position in the event of being struck by a golf club.

1,783,734. FOUNTAIN-PEN ATTACHMENT. CLINTON E. MARSHALL, Brooklyn, N. Y. Filed Nov. 24, 1928. Serial No. 321,537. 8 Claims. (Cl. 120—46.)

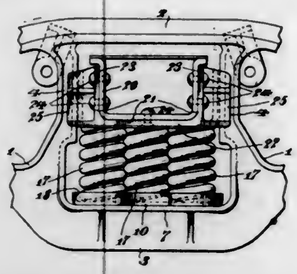


1. The combination with a fountain pen barrel having an elongated aperture therein, of a liner for said aperture, and means involving a member movably coupled with said liner for supporting the same within the aperture of said pen barrel, said means comprising a spring ring.

1,783,735. COUPLING OR CLAMP FOR SCAFFOLDING OR OTHER PURPOSES. ARNOLD CLARENCE MARSHALL, London, England, assignor to The Steel Scaffolding Company Limited, London, England, a Corporation of Great Britain. Filed Mar. 14, 1929, Serial No. 346,930, and in Great Britain July 3, 1928. 7 Claims. (Cl. 304—40.)

1. A clamp for the purpose specified comprising a body having a plane portion of rectangular outline, a pair of projections upon opposite edges of said body disposed at a right angle thereto and projecting in one direction, a pair of projections upon the other opposite edges of said body also projecting at a right angle thereto but in an opposite direction to said first projections, a projection disposed at a right angle to the plane of one of each pair of said projections at the outer end thereof, projections upon and disposed at a right angle to said last projections and having surfaces adapted to bite into the body gripped, a body pivotally mounted upon one of said first projections to engage the bodies to be gripped, a screw for forcing each of said bodies forming parts of said clamp onto the body gripped, and a threaded part on one of said bodies forming parts of said clamp for said screw to be engaged therein.

1,783,736. PEN AND PENCIL CLIP. CLINTON E. MARSHALL, New York, N. Y. Filed Jan. 15, 1930. Serial No. 420,875. 5 Claims. (Cl. 24—11.)



5. The combination with a fountain pen cap of an elongated aperture arranged in the side wall of the cap adjacent the closed end thereof, a clip, one end of which is of substantially the same transverse dimensions as the transverse dimensions of said aperture, said clip including laterally extending side flanges adapted to be arranged to engage the inner surface of the bore of said cap, a plug member inserted into said bore inwardly of said flanges and adapted to firmly clamp said flanges between the same and the wall of said cap to retain the clip against displacement with respect to the cap, said end of the cap including a projecting tongue adapted to overlie the outer wall of the cap at one end of the aperture therein, and the other end of the clip having an enlarged member joined to the first named end of the clip by a spring arm.

1,783,737. CAR TRUCK. MARK H. MARTIN, Reading, Pa., assignor to Birdsboro Steel Foundry & Machine Company, Birdsboro, Pa., a Corporation of Pennsylvania. Filed Dec. 12, 1928. Serial No. 325,494. 7 Claims. (Cl. 105—197.)

1. In a railway car truck the combination of a side frame having a bolster window formed therein, a bolster

extending through the said window, a casting secured to the said bolster which casting comprises a base the said base constituting a spring cap, the ends of the said casting projecting laterally and upwardly with respect to the sides

of the said bolster, the top side of the said base having ribs formed thereon extending transversely of the said bolster, and guide lugs formed on each end of the said casting.

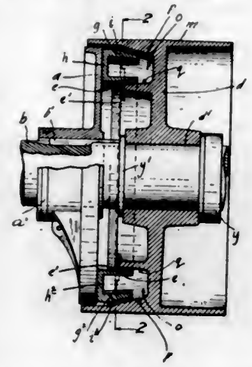
1,783,738. OPACIFIER FOR ENAMELS. THOMAS H. MCKEOWN, Metuchen, N. J., assignor, by mesne assignments, to The Roessler & Hasslacher Chemical Company, a Corporation of Delaware. Filed Jan. 12, 1928. Serial No. 246,397. 7 Claims. (Cl. 106—36.2.)

6. An enamel composition for the production of white enamel containing sodium antimonate and tin oxide in ratios of three to one.

1,783,739. OPACIFIER FOR ENAMELS. THOMAS H. MCKEOWN, Metuchen, N. J., assignor, by mesne assignments, to The Roessler & Hasslacher Chemical Company, a Corporation of Delaware. Filed Jan. 12, 1928. Serial No. 246,398. 4 Claims. (Cl. 106—36.2.)

4. A fired enamel having a composition by weight approximately as follows:

Na_2O	9 to 12.5
K_2O	2.5 to 3
CaO	4 to 8
Al_2O_3	7 to 9
B_2O_3	4 to 5
Sb_2O_3	2 to 6
SiO_2	24 to 28
SnO_2	1 to 3
F_2	2 to 4
PbO	10 to 15
ZnO	3 to 7



wherein sodium antimonate and tin oxide are utilized in the requisite amount in the preparation of the composition for firing and in the ratio to each other of 3 to 1.

1,783,740. OPACIFIER FOR ENAMELS. THOMAS H. MCKEOWN, Metuchen, N. J., assignor, by mesne assignments, to The Roessler & Hasslacher Chemical Company, a Corporation of Delaware. Filed Jan. 12, 1928. Serial No. 246,399. 4 Claims. (Cl. 106—36.2.)

1. An enamel composition comprising the following materials within the range of proportions specified:

	Parts by weight
Feldspar	10 to 14
Flint	7 to 10
Borax	21 to 24
Boric acid	3 to 5
Soda nitre	1 to 3
Cryolite	4 to 8
Fluorspar	3 to 6
Barium carbonate	11 to 13
Red lead	10 to 17
Whiting	3 to 7
Zinc oxide	4 to 7
Antimony-tin opacifier (3:1)	1 to 12

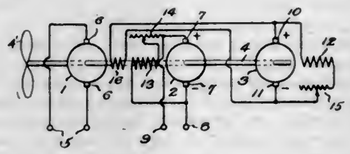
1,783,741. CLUTCH MECHANISM. ARTHUR M. MEARS, Portland, Oreg. Filed Feb. 16, 1927. Serial No. 168,661. 7 Claims. (Cl. 192—35.)

1. In combination, a shaft, two motion transmitting members mounted thereon, one side of one of said members provided with a recess concentric with the axis of the shaft, a friction-band secured at one end to the other member and arranged along one wall of said recess, normally disengaged therefrom, the free end of said friction-band provided with a friction shoe located in said recess for engagement with another wall of said recess, whereby when said friction-shoe is engaged, the friction-band is placed in engagement with the recess wall along which it lies.

1,783,742. VALVE MECHANISM FOR GAS METERS. GEORG MEYER, Mainz, Germany, assignor to Gasmesserfabrik Mainz, Elster & Co., Mainz, Germany. Filed Nov. 26, 1927, Serial No. 235,770, and in Germany Dec. 1, 1926. 5 Claims. (Cl. 73—1.)

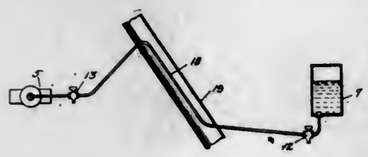
1. In a device of the class described, a casing having a partition dividing it into an upper chamber and a lower chamber, and another partition dividing said upper chamber into an inlet compartment and an outlet compartment, each provided with a port, valves controlling said ports, mechanism, located in one of said compartments, for the direct actuation of the valve thereof, and an operative connection extending from said valve to the other valve, through said lower chamber and clear of the partition which separates said compartments.

1,783,743. BRACELET CLASP. MORRIS MILLER, East Orange, N. J., assignor to Simon Miller & Co., Newark, N. J., a Copartnership composed of Morris Miller and Emanuel Miller. Filed May 3, 1928. Serial No. 274,768. 3 Claims. (Cl. 24—71.)



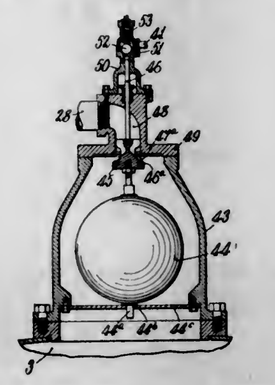
3. In a clasp for a bracelet, a box-like link having a protruding bearing connection at one end with the bracelet, a pair of parallel oppositely disposed strip members embracing at one end the opposite end of the box-like link and pinned thereto for pivotal movement, a housing including parallel oppositely disposed side members having seats in the end edges thereof, an individual pivot connecting the opposite end of each of the strip members with the corresponding side member adjacent the end edge seat thereof, thereby leaving between the strip members an unobstructed space, said strip members being foldable in the housing between the side members and said box-like link being foldable between the strip members to occupy said unobstructed space and permit said bearing connection to to be received in said end edge seats.

1,783,744. MANUFACTURE OF IRON CARBONYL. ALWIN MITTASCH, Ludwigshafen-on-the-Rhine, and CARL MÜLLER, Mannheim, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany, a Corporation of Germany. Filed Mar. 25, 1926, Serial No. 97,466, and in Germany Mar. 30, 1925. 6 Claims. (Cl. 23—203.)



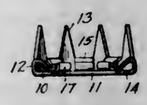
4. The process of manufacturing iron carbonyl which comprises passing over metallic iron having metallic surfaces free from iron oxid a gas containing carbon monoxid under a pressure not exceeding 50 atmospheres and at an elevated temperature and with so great a speed that the iron carbonyl formed is substantially carried away with the gas current.

1,783,745. CONSTANT-VOLTAGE GENERATOR. FRED B. MONAR, Washington, D. C. Filed May 11, 1927. Serial No. 190,562. 3 Claims. (Cl. 171—224.) (Granted under the act of Mar. 3, 1883, as amended Apr. 30, 1928; 370 O. G. 757.)



1. In a radio generator, the combination of a main generator, an exciter generator therefor, said main generator and exciter generator having common field poles that are saturated at normal operating speed, and a supplemental generator, having a field pole that is undersaturated at normal operating speed, the output of said supplemental generator connected to a field winding upon the field pole of the exciter generator, the said field winding being wound upon said field pole of the exciter generator in such a manner that the flux of said winding opposes the field pole flux of the main and exciter generators for maintaining the output voltage of the main generator constant irrespective of increase in speed above normal operating speed.

1,783,746. ATTACHMENT FOR INTERNAL-COMBUSTION ENGINES. LEE H. MORT, Pittsburgh, Pa. Filed July 18, 1927. Serial No. 206,508. 2 Claims. (Cl. 123—25.)



1. In an internal combustion engine, the combination of a carbureter, an exhaust passage, and means for supplying steam to the carbureter, such means comprising a water supply tank, piping arranged within the exhaust passage and in communication with the water supply tank, said piping being of such length and the piping and tank being mutually so arranged that the water rises a relatively short distance in the piping with a relatively great length of the latter above the water level therein and lying within the exhaust passage.

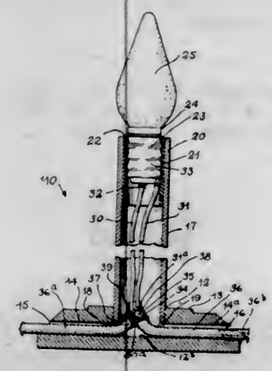
1,783,747. DISPLACEMENT PUMPING SYSTEM. JOHN OLIPHANT, Chicago, Ill., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Apr. 18, 1927. Serial No. 184,785. 8 Claims. (Cl. 103—246.)

1. In a displacement pump, a displacement tank, pumping fluid supply means therefor including means forming a connection opening through the top of the tank, controlling means for said pumping fluid supply means including a main pressure fluid actuated valve, a pilot valve mounted on said tank in alinement with said connection for controlling flow of pressure fluid to actuate said main valve and a float in said tank for controlling said pilot valve, and means controlled by said float to prevent liquid entering said connection.

1,783,748. PRONGED FASTENER. DANIEL I. REITER, New York, N. Y. Filed Apr. 12, 1929. Serial No. 354,499. 13 Claims. (Cl. 24—216.)

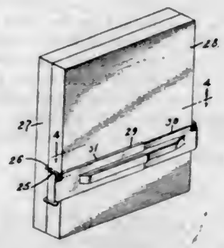
1. A pronged socket comprising an outer wall, spaced prongs integral with an outstanding from the upper end of said wall, a bottom wall portion having an aperture therein for the reception of a stud, bent from the lower edge of said outer wall and substantially perpendicular thereto, and yieldable fingers integral with the upper end of the outer wall and bent inwardly therefrom and extending from said upper end to a point inwardly of the edge of the aperture for engaging said stud.

1,783,749. BAG HOLDER. LOUIS M. ROEHL, Ithaca, N. Y. Filed Feb. 21, 1929. Serial No. 341,747. 3 Claims. (Cl. 88—26.)



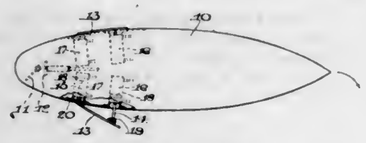
1. In a bag holder, a standard, a block having an opening therein received on the standard and vertically

slidable thereon, a spring support for the block comprising a spring attached at its lower end to the block, a bolt attached to the upper end of the spring and the upper end of the standard having vertically spaced openings therein for selective reception of the bolt to accommodate the mounting of bags of different lengths, bag supporting



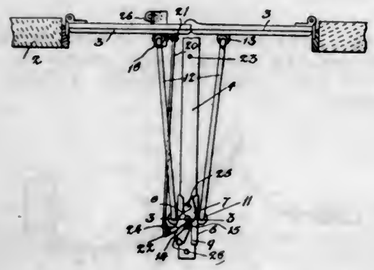
arms slidable through the block, a screw threaded into the block engaging the arms to hold them in adjusted position, the outer ends of the arms being angularly bent and spurs on the bent ends of the arms to engage and support a bag, and a baffle board loosely mounted on the block and movable therewith.

1,783,750. ORNAMENTAL ILLUMINATING DEVICE. ALBERT SADACCA, New York, N. Y., assignor to Noma Electric Corporation, New York, N. Y., a Corporation of New York. Filed Sept. 26, 1928. Serial No. 308,497. 3 Claims. (Cl. 240—52.)



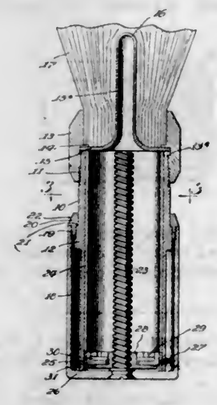
2. In a device of the character described, a base having an opening in the top surface thereof forming a chamber having a bottom wall, aligned passages within said base communicating with said chamber, a tubular member inserted within said opening, the lower end of said member abutting said bottom wall and provided with cut out portions registering with said passages, a lamp socket mounted in said tubular member at the upper end thereof, conductors extending thru said chamber and passages, and leads within said tubular member connecting said socket to said conductors.

1,783,751. MATCH-BOOK HOLDER. HUGO H. SCHUBNELL, New York, N. Y. Filed Feb. 26, 1930. Serial No. 431,615. 2 Claims. (Cl. 24—81.)



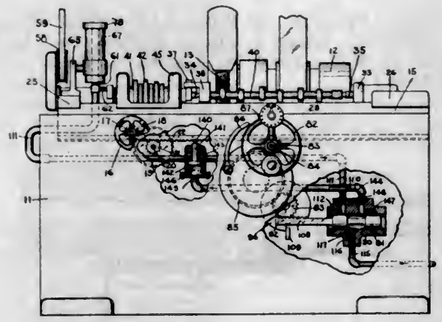
1. A match-book holder comprising a base, said base being made of two sections slidably mounted on one another whereby its length may be varied, means on said base for mounting a match-book thereon, and spring-pressed clamping means on said base for attaching the latter to a receptacle.

1,783,752. SHIP-STEERING DEVICE. CLARENCE F. SELZER, North Milwaukee, Wis. Filed July 30, 1928. Serial No. 296,261. 3 Claims. (Cl. 114—145.)



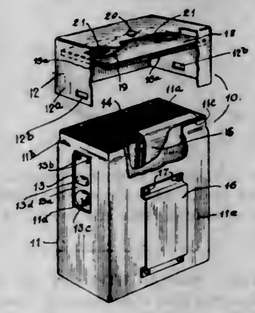
1. The combination with a vessel, of a wing adapted to lie closely adjacent the side of the vessel, and a pair of projectable members disposed one behind the other at the side of the vessel and each having pivotal connections with said wing, the forward of said projectable members on its outward movement from the side of the vessel swinging said wing outwardly about its rearward pivotal mounting to effect a turning movement of the vessel, and the outward movement of said rearward projectable member effecting a spaced disposition of said wing with respect to the side of the vessel to permit the passage of obstructing objects between the wing and the side of the vessel whereby to permit a close retraction of said wing adjacent the side of the vessel.

1,783,753. GATE OPERATING AND LOCKING MECHANISM. JAMES JOSEPH SHIELDS, Guelph, Ontario, Canada. Filed July 15, 1927. Serial No. 205,983. 3 Claims. (Cl. 292—263.)



1. A latching means comprising a carriage adapted to be mounted to slide longitudinally on a horizontal bar; an ear at each side of said carriage; an integrally formed spring-controlled horizontally disposed latch member pivoted to said carriage to normally occupy a position longitudinally thereof and provided with oppositely faced hooks between which is located the pivotal point for said latch, and a stop carried by said latch for engagement with said carriage.

1,783,754. SOAP-DISPENSING SHAVING BRUSH. AUBRY F. STEPELTON, Chicago, Ill., assignor of one-half to Walter R. Kirk, Chicago, Ill. Filed June 12, 1929. Serial No. 370,198. 7 Claims. (Cl. 15—137.)

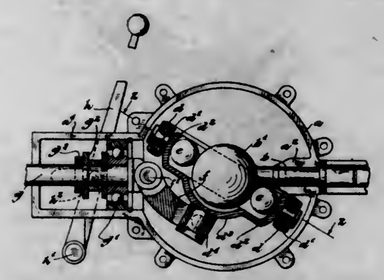


1. In a soap-dispensing brush, in combination, a hollow barrel of circular cross section, a unitary head comprising an annular member and bristles, removably threaded on one end of said barrel, a flexible gasket adapted to be firmly engaged between said barrel and annular member, a flexible nipple integral therewith adapted to discharge into said bristle, a soap cartridge shell in said barrel, a cup-shaped handle member extending substantially the full extent of said barrel and abutting the other end of said barrel and freely rotatable therearound, abutments on the side of said barrel between its ends preventing longitudinal movement of said cup member, a threaded stem rigidly carried by said cup member and extending into said barrel, and a perforated piston interiorly threaded and mounted on said threaded stem, said piston being adapted to engage the inner walls of said shell.

1,783,755. GRINDING MACHINE. CHARLES G. TREFETHEN and ALBERT G. BELDEN, Worcester, Mass., assignors to Norton Company, Worcester Mass., a Corporation of Massachusetts. Filed June 29, 1927. Serial No. 202,183. 22 Claims. (Cl. 51—101.)

1. A grinding machine comprising a rotatable grinding wheel, a support for holding a piece of work in grinding position which is movable towards and from the wheel, mechanism to feed the wheel into the work and means operated in timed relation with said mechanism to move the work to an inoperative position when the wheel is also moved away from the work.

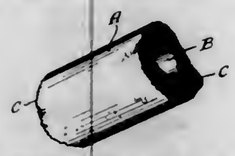
1,783,756. WATER-TIGHT RECEPTACLE. ARTHUR VON FRANKENBERG, New York, N. Y. Filed Nov. 9, 1926. Serial No. 147,208. 6 Claims. (Cl. 206—41.)



1. A device of the character described comprising a container portion having a top opening, the side walls of said portion at said opening being contracted, a cover fitted over said opening to extend beyond the contracted side wall portions, a closure plate adapted to engage the rim edge of said opening, spring means interposed between the cover and said plate for resiliently holding the latter against said edge, and releasable latching means for retaining the cover and plate in effective closed position, said means including a spring finger disposed between said cover and a side wall of said container and secured to said side wall.

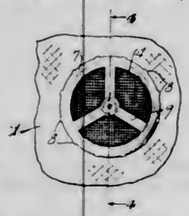
1,783,757. DEHYDRATION OF MOIST FUELS. HANS ADOLF VON STADEN and ANTON HOEHN, Neuroesen, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany, a Corporation of Germany. Filed Oct. 23, 1928, Serial No. 314,535, and in Germany Dec. 14, 1927. 4 Claims. (Cl. 34—34.)

1. The process of dehydrating moist solid fuels, which comprises heating a mixture of raw brown coal and tar to a temperature of about 150° C. under a pressure of about 5 atmospheres and separating the water in the liquid state.



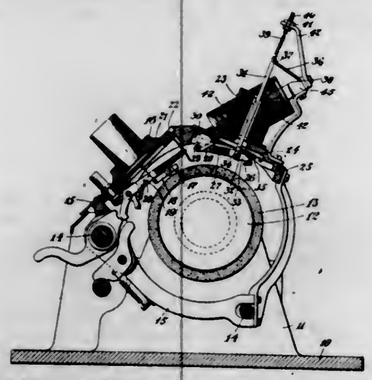
1,783,758. POWER-TRANSMISSION DEVICE. CARL W. WEISS, Brooklyn, N. Y. Filed Mar. 2, 1929. Serial No. 343,945. 3 Claims. (Cl. 74—14.)

1. The combination of a driving shaft, a convex spherical member connected to and supported by the driving



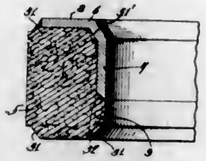
shaft, a driven shaft, a mutor capable of nutation and external to the spherical member, a gripping element supported by the mutor for coaction with the spherical member, and a connection between the mutor and the driven shaft.

1,783,759. FUEL BRIQUETTE. PARK E. WELTON and GEORGE H. WADSWORTH, Akron, Ohio, assignors to The P. E. Welton Engineering Company, Akron, Ohio, a Corporation of Ohio. Filed Nov. 25, 1922. Serial No. 603,169. 3 Claims. (Cl. 44—15.)



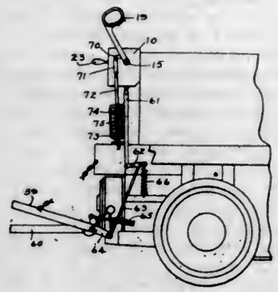
3. A hollow cylindrical briquette formed to have a percentage of void in its wall structure affording a longitudinal porosity extending from end to end of the briquette.

1,783,760. HAT. EDWARD WITTCOFF, St. Louis, Mo., assignor to Superior Hat Company, St. Louis, Mo., a Corporation of Missouri. Filed June 24, 1929. Serial No. 373,270. 2 Claims. (Cl. 2—176.)



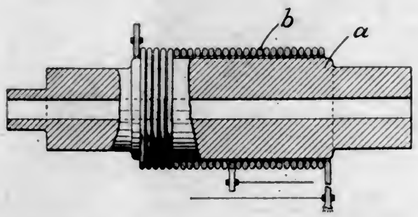
1. A hat ventilator including, in combination, a first ring, a section of mesh-material disposed over the area of and marginally folded about the ring, a second ring, and an annular series of prongs extending from the outer margin of the second ring adapted for projection through the crown of a hat and for clinching engagement about the first ring for securing said rings together and the ventilator to a hat.

1,783,761. PHONOGRAPHIC RECORDING. HOWARD SELLERS WORRELL, Ardmore, Pa., assignor to Dictaphone Corporation, Bridgeport, Conn., a Corporation of New York. Filed Dec. 3, 1925, Serial No. 72,904. Renewed Apr. 17, 1929. 10 Claims. (Cl. 179—100.4.)



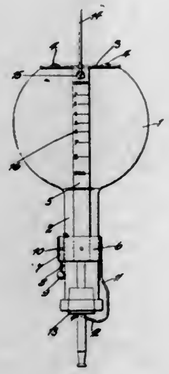
1. A phonographic recording device comprising recording means for engaging a record, and a solenoid connected to said recording means for bringing the recording means to recording position, and to actuate the recording means in its recording position, said solenoid being in circuit with a telephone transmitter and vibrating said recording means in accordance with variations in said circuit caused by said telephone transmitter.

1,783,762. PACKING FOR PLUNGERS. DAVID ROBERT YARNELL and JOSEPH KILDARE, Philadelphia, Pa., assignors to Yarnall-Waring Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Jan. 4, 1927. Serial No. 159,006. 2 Claims. (Cl. 288—1.)



1. A packing ring comprising a molded body of asbestos, graphite and rubber in combination with a nickel alloy protective casing therefor covering one inner edge of the packing.

1,783,763. CONTROLLER. EDWARD J. ABBE, Cleveland, Ohio, assignor to The Elwell-Parker Electric Company, Cleveland, Ohio, a Corporation of Ohio. Filed Oct. 20, 1927. Serial No. 227,509. 11 Claims. (Cl. 200—9.)

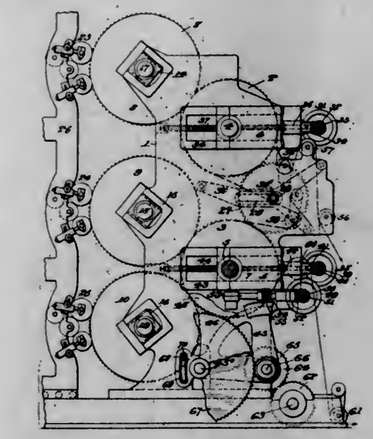


1. The combination of an acceleration control barrel, a member movable therewith, a direction control barrel, a member movable therewith, and an integrally movable interlocker device arranged to operatively contact with both members, to prevent operation of the direction control barrel when the acceleration control barrel is in "on" position.

1,783,764. PROCESS OF ZONE HARDENING STEEL ARTICLES. JAMES R. ADAMS, Hatboro, Pa. Filed June 12, 1929. Serial No. 370,360. 1 Claim. (Cl. 219—10.)

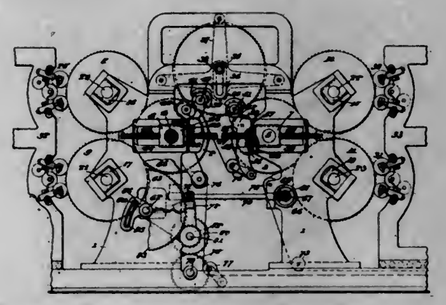
The process of heating steel articles as a step in the operation of zone-hardening, which comprises generating the major portion of the heat within an outer zone of metal by a high frequency electric induced current adapted to heat said zone to a hardening temperature, regulating the speed of the heating operation by the rate of the power input, and regulating the depth of penetration of the hardening heat by the frequency of the current and the rate of power input.

1,783,765. FLASK SUPPORTER. WALTER ANDERSSEN, St. Louis, Mo. Filed June 6, 1927. Serial No. 196,723. 3 Claims. (Cl. 215—100.)



2. The combination with a flask having a neck, and a stopper in the neck, of a support for the flask comprising a pair of arms on diametrically opposite sides of the flask and neck and engaging the bottom of the flask, a ring clasp attached to said arms and engaging the neck of the flask and having its ends detached from each other and capable of being spread apart to permit application of the ring on the neck or removal of the ring from the neck of the flask, a resilient element attached to said clasp and extending to engagement with the end of the stopper and constituting an abutment preventing outward movement of the stopper, and a ball pivoted to said arms near the bottom of the flask and being movable laterally to position to permit said flask to stand upright with the neck extending upwardly.

3. A device for administering of solutions comprising a flask having a neck, and a stopper in the neck, in combination with a frame secured to the flask, a graduated scale on the frame indicating the amount of contents of the flask, a ball pivoted to the frame for supporting the flask inverted and being movable to position to permit the flask to stand upright with the neck of the flask extending upwardly, and a resilient element having one end rigid with said frame and the other end extending to engagement with said stopper to prevent outward movement of said stopper when said flask is inverted.

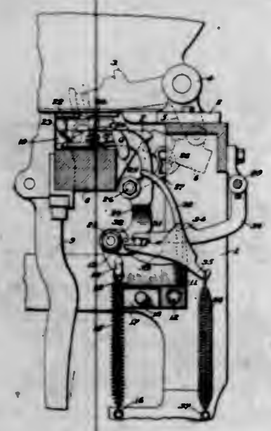


1,783,766. ROTARY WEB-PRINTING PRESS. HOWARD M. BARBER, Pawcatuck, Conn., assignor to C. B. Cottrell & Sons Company, Westerly, R. I., a Corporation of Delaware. Filed Nov. 10, 1928. Serial No. 318,506. 9 Claims. (Cl. 101—178.)

1. In a multi-color rotary web printing press, two impression cylinders adjustable for coaction with change form cylinders of the same diameter selected from change form cylinders of different corresponding diameters, means for moving the impression cylinders into position to coact

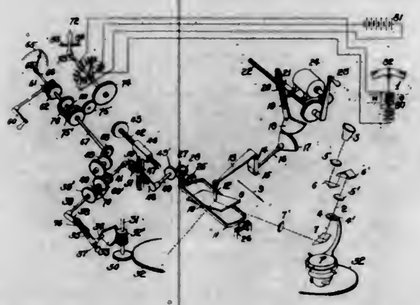
with said selected change form cylinders and adjustable means connecting the impression cylinders for synchronous action.

1,783,767. ROTARY WEB-PRINTING PRESS. HOWARD M. BARBER, Pawcatuck, Conn., assignor to C. B. Cottrell & Sons Company, Westerly, R. I., a Corporation of Delaware. Filed Nov. 10, 1928. Serial No. 318,507. 8 Claims. (Cl. 101—178.)



1. In a multi-color rotary web printing press, two impression cylinders, each adjustable for coaction with change form cylinders of the same diameter selected from change form cylinders of different corresponding diameters, means for moving the impression cylinders in opposite directions into positions to coact with their respective selected change form cylinders and adjustable means connecting the impression cylinders for synchronous action.

1,783,768. SHUTTLE-FEELER MECHANISM FOR LOOMS. EARL ELWOOD BASS, Fort Mill, S. C., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Jan. 29, 1930. Serial No. 424,265. 7 Claims. (Cl. 139—231.)



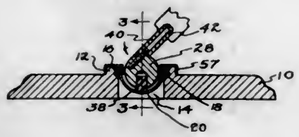
1. In a shuttle feeler mechanism for looms, the combination of a feeler support mounted on the loom frame for movement towards and from the front of the loom, means acting yieldingly upon the support to normally maintain it in rearward position, a shuttle feeler pivotally mounted on the support for movement relative there-

to towards and from the front of the loom, and yielding means connected to the feeler permitting frontward

movement thereof relative to and with said movable support should the feeler encounter the shuttle as the lay moves frontwardly.

1,783,769. BOMB SIGHT. MORTIMER F. BATES, Brooklyn, N. Y., assignor, by mesne assignments, to Sperry Gyroscope Company, Inc., Brooklyn, N. Y., a Corporation of New York. Filed June 1, 1926. Serial No. 112,811. 17 Claims. (Cl. 88—1.)

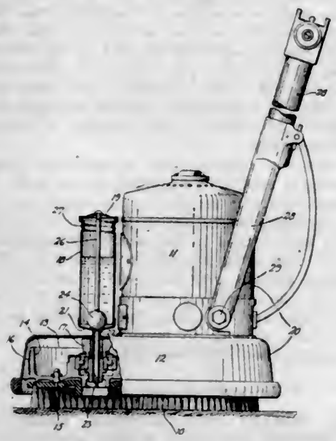
15. In a bomb sight for aircraft, a sight-directing member, means for mounting said member for turning about a vertical axis, means for mounting said member for adjustment about both the fore and aft axis of the sight, and an axis at right angles thereto, and means actuated by the turning of said member about its vertical axis for adjusting said member about said fore and aft axis to give said member the proper offset angle to compensate for the drift.



1,783,770. PROCESS OF IMPROVING THE RESISTANCE TO CORROSION OF ARTICLES OF MAGNESIUM AND MAGNESIUM ALLOYS. ADOLF BECK and GUSTAV SIEBEL, Bitterfeld, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany, a Corporation of Germany. Filed Jan. 30, 1929, Serial No. 336,323, and in Germany Feb. 2, 1928. 3 Claims. (Cl. 148—6.)

1. The process of improving the resistance to corrosion of articles of magnesium and magnesium alloys containing at least about 8% magnesium, which comprises treating same with a boiling aqueous solution of dichromates for about an hour at least.

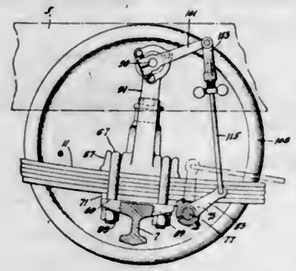
1,783,771. PROCESS OF MAKING CELLULOSE ESTERS OF BOTH NITRIC ACID AND AN ORGANIC ACID. FRANZ BECKER, Dessau in Anhalt, Germany, assignor to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany, a Corporation of Germany. Filed Jan. 7, 1928, Serial No. 245,254, and in Germany Jan. 15, 1927. 3 Claims. (Cl. 260—101.)



1. A process for the manufacture of cellulose esters derived both from nitric acid and an organic acid which comprises treating a cellulose material with an organic esterifying agent in the presence of an acylation catalyst which will not react with nitric acid and in the course of the process, when a partial esterification has been obtained, reacting on the intermediate product with nitric acid.

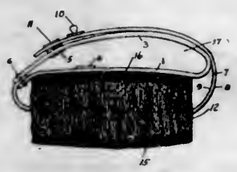
1,783,772. DESK SET. WALTER F. BENSON, St. Paul, Minn. Filed June 13, 1928. Serial No. 285,160½. 4 Claims. (Cl. 120—108.)

1. A desk set including a base having a hollow part formed with an interior annular groove, a cup disposed in said hollow part and having an annular shoulder seated in said groove so as to be rotatable therein, said cup having an elongated slot in its bottom and having an annular seat adjacent its top, a ring in said seat, a ball in the ring, diametrically opposed pins carried by the ring and extending into the ball to pivotally support same, a stop pin carried by the ball and engaged in said slot of the cup and with the end walls defining the slot to limit pivotal movement of the ball, and a pen holder carried by the ball.



1,783,773. SURFACE-TREATING MACHINE. TORD ERIK DANIEL BILDE, Stockholm, Sweden, assignor to Inventia Patent-Verwertungs-Gesellschaft, Schaffhausen, Switzerland, a Corporation of Switzerland. Filed Aug. 21, 1929, Serial No. 387,372, and in Sweden Aug. 18, 1928. 11 Claims. (Cl. 91—39.)

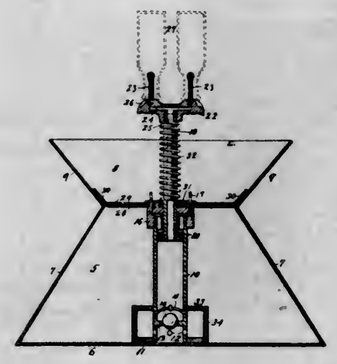
1. A machine for treating floors comprising a casing, one or more rotary surface contact members within said casing, means to rotate said members and means mounted on said casing for feeding fluid to the floor comprising a container having a fluid outlet and means closing said



outlet during idle periods comprising a member having an appreciable mass sufficient to prevent opening of said outlet due to vibration and normal movement of the machine while being movable to uncover said outlet on abnormal movement of the machine such as to provide an inertia greater than that provided by vibration or normal movement of the machine.

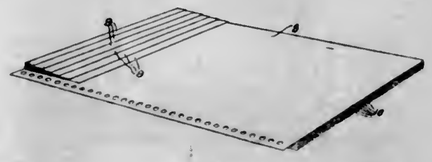
1,783,774. BRAKE CROSS SHAFT MOUNTING. CARL J. BOCK, Pontiac, Mich., assignor to Yellow Truck & Coach Manufacturing Company, Pontiac, Mich., a Corporation of Maine. Filed Aug. 10, 1928. Serial No. 298,830. 3 Claims. (Cl. 188—194.)

1. In brake mechanism for vehicles, an axle, supporting springs, plates positioned between the axle and the springs, said plates having eyes located in alignment, an axle rockshaft journaled in said eyes, means to rotate said axle rockshaft, a block above each spring, means to clamp said block, spring, and plate to the axle, each block having an upwardly directed arm, brake operating shafts journaled in said brackets, and connecting means between said axle rockshaft and said brake operating shafts.



1,783,775. STEEL-WOOL HOLDER WITH PAD. RAYMOND F. BOEHLER, Jr., Springfield, Ohio, assignor to The Williams Company, London, Ohio, a Corporation of Ohio. Filed June 6, 1928. Serial No. 283,273. 4 Claims. (Cl. 15—209.)

4. A cleaning device comprising a strip of flexible material around which a pad of steel wool may be supported, a second strip of flexible material in the form of a closed loop permanently attached to one end of the first strip, and means for detachably attaching the free end of the first strip to the second strip.



1,783,776. BOTTLE-RINSING MACHINE. FREDERICK BOESCHEL, East Rutherford, N. J. Filed Mar. 19, 1928. Serial No. 262,820. 2 Claims. (Cl. 141—7.)

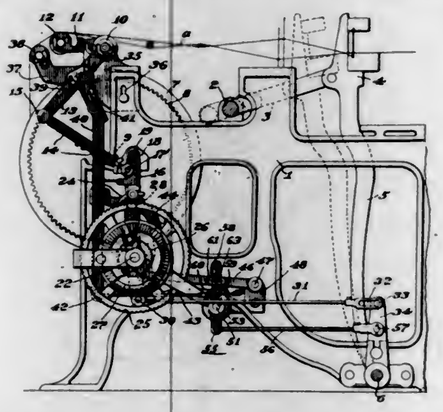
1. In a bottle rinsing device, a fluid receiving tank having at its upper end a hopper provided with outwardly flaring side walls, a pump casing fixed within said tank and having at its lower end a valve controlled inlet, a cap detachably secured at the upper end of said casing, a tubular pump rod slidable in said cap and having at its lower end a piston slidable in said pump casing, a nozzle-head at the upper end of said tubular rod, and a filtering

device detachably secured to said cap and removable therewith, the said filtering device having marginal edges engaging the flaring walls of said hopper.

1,783,777. COMPENSATING DIVISION SHEET. THOMAS E. BREWSTER, Grand Rapids, Mich. Filed June 21, 1929. Serial No. 372,556. 5 Claims. (Cl. 129—1.)

1. A filler for the purposes described comprising, a plurality of lengths of thin sheet material of progressively decreasing widths located one over the other with the widest of said lengths of material at the bottom and the narrowest at the top, one of the edges of all of said lengths of material being cemented together at one end.

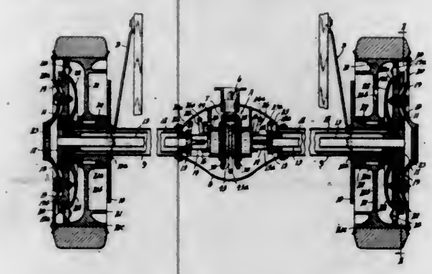
1,783,778. PROCESS OF TREATING BARYTES. CASPER P. DE LORE and BRACK B. MCHAN, St. Louis, Mo.; said McHan assignor to said De Lore. Filed Mar. 7, 1927. Serial No. 173,597. 4 Claims. (Cl. 23—122.)



1. That step in the treatment of acid bleached barytes ore which consists in washing the ore with a wash water containing a sufficient quantity of a reducing agent to prevent oxidation of the metallic salt present with the barytes and to convert insoluble salts into a soluble salt whereby the product may be washed free of impurities.

1,783,779. LET-OFF MECHANISM FOR LOOMS. CLARE H. DRAPER, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed July 16, 1929. Serial No. 378,665. 13 Claims. (Cl. 139—110.)

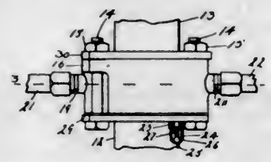
1. In a let-off mechanism for looms, the combination of the warp beam, a yieldingly mounted whip roll, a ratchet and pawl for rotating the warp beam to let-off the warp, a pawl carrier and pawl setter fulcrumed at opposite ends, a radius connection between the pawl carrier and setter, means between the pawl setter and whip roll for



CARNEGIE LIBRARY OF ATLANTA

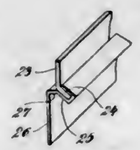
setting the pawl responsive to normal variations in whip roll movement, and means connecting the radius connec-

tion and whip roll for changing the position of the radius connection responsive to abnormal variation in whip roll movement.



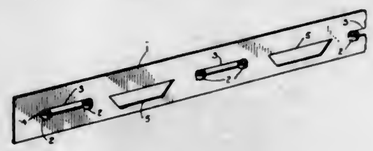
1,783,780. DRIVING-GEAR MECHANISM FOR MOTOR VEHICLES. AMOS J. EVANS, Minneapolis, Minn. Filed May 4, 1927. Serial No. 188,840. 6 Claims. (Cl. 180—70.)

2. In combination with the differential mechanism, axle housing and a traction wheel of a motor vehicle, said wheel having a disc, a tubular driving axle connectable for driving with said differential and carrying a driving element adjacent its outer end, a second driving axle concentrically disposed within said tubular driving axle and adapted to be connected for driving with said differential and also carrying a driving element adjacent its outer end, a plurality of double planetary members mounted on the disc of said wheel, each of said double members having a gear adapted to be connected with the driving element of said first mentioned driving axle and a gear adapted to be engaged with the driving element of said second driving axle.



1,783,781. AIR PREHEATER FOR MANIFOLDS. EDWARD H. FALK, Philadelphia, Pa. Filed Oct. 22, 1929. Serial No. 401,443. 3 Claims. (Cl. 123—122.)

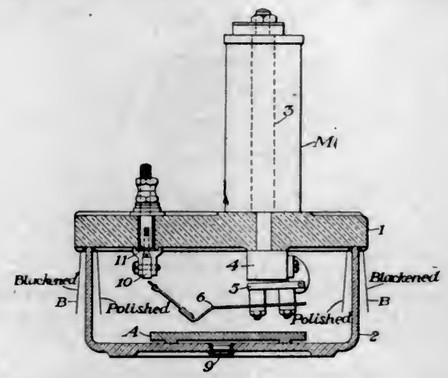
1. In an air preheater for manifolds, a casing having a passageway therethrough, the wall of said passageway forming a chamber within said casing, a pipe coiled within said chamber around the wall of said passageway, said pipe having a horizontal section which passes through said wall and extends across the passageway, said horizontal section having a series of small openings therein for the passage of air, one end of said pipe communicating with the atmosphere through the bottom wall of the casing, a spring actuated check valve for permitting the inflow of air to said pipe but preventing the flow in a reverse direction and means for connecting the interior of the casing with



the lower portion of the water circulating system of an internal combustion engine and the upper portion of said circulating system.

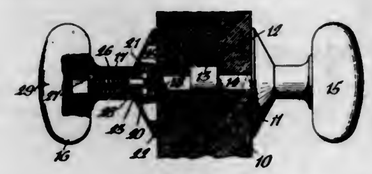
1,783,782. COMPOUND FLOOR STRIP. PASQUALE GALASSI, New York, N. Y. Filed Feb. 8, 1930. Serial No. 426,882. 4 Claims. (Cl. 94—17.)

1. A divider strip for terrazzo floors or the like, comprising upper and lower longitudinal sections, one of said sections having at its inner edge an uninterrupted flange extending laterally of the body on one side only thereof, the other section having at least part of its inner edge embracing said flange so as to connect said sections to each other.



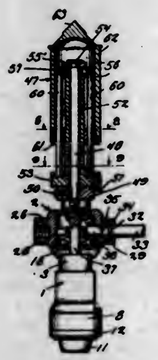
1,783,783. STRIP FOR TERRAZZO FLOORS AND LIKE STRUCTURES. GEORGE P. GRANELL, Long Island City, N. Y. Filed Nov. 21, 1928. Serial No. 320,805. 12 Claims. (Cl. 94—17.)

1. A terrazzo strip, having thereon a plurality of spaced bonding devices of substantially loop-form, and projecting from one side of the strip, the central axis of the opening of each loop-form device extending substantially at right angles to the longitudinal edges of the strip, whereby when in use such central axes are positioned substantially vertical.



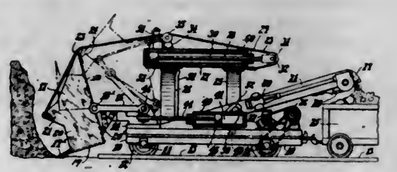
1,783,784. INSTRUMENT INCLOSED IN NONMETALLIC HOUSINGS. LARS O. GRONDAHL, Pittsburgh, and LEMUEL F. HOWARD, Edgewood, Pa., assignors to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Aug. 22, 1929. Serial No. 387,609. 9 Claims. (Cl. 200—168.)

1. In an instrument of the type comprising operating parts enclosed in a non-metallic housing, the combination therewith of a metal member located within the housing but out of contact with the operating parts, the mass of said member being such that while the ambient temperature is rising the temperature of the member will remain below the temperature of the operating parts with



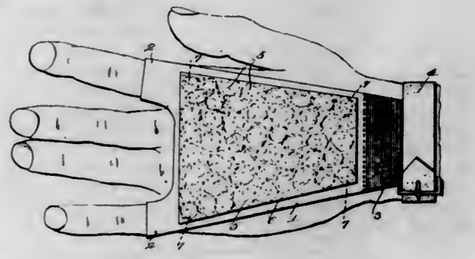
the result that if moisture laden air enters the housing the moisture will condense on the metal member rather than on the operating parts.

1,783,785. DOORLATCH. SIDNEY J. HABICHT, Buffalo, N. Y. Filed July 15, 1929. Serial No. 378,229. 4 Claims. (Cl. 292—359.)



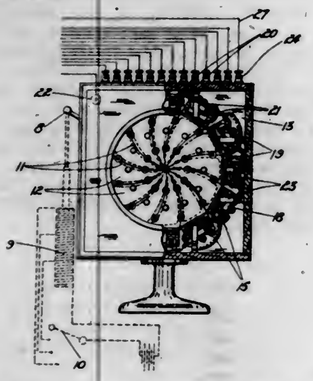
1. A door latch, comprising a bolt-actuating spindle having knobs thereon, one of said knobs being movable relatively to said spindle and having a locking element thereon, and complementary locking means applied to the spindle and to the door, said knob locking element being engageable with one of said locking means in one position of the knob and with both of said locking means in its other position.

1,783,786. COMBINATION BRACE AND BIT DRILL. WADE C. HAMILTON, Vicksburg, Miss. Filed Dec. 21, 1926. Serial No. 156,173. 1 Claim. (Cl. 77—7.)



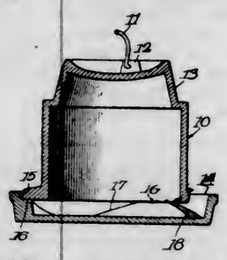
In a drill, a head, a shaft rotatably carried by said head, a chuck on one side of the head secured to the shaft for rotation therewith, means for rotating the shaft, a collar secured to the shaft on the opposite side of the head from said chuck, a laterally projecting pin carried by the periphery of the collar, an elongated exteriorly threaded sleeve surrounding and rotatably mounted upon said shaft beyond said head and collar, a flange formed on the inner end of the sleeve and resting upon said collar, an elongated housing inclosing said sleeve and having threaded connection therewith, a work engaging point formed on the outer end of said housing, said housing being designed to be held against rotary movement when the tool is in use by said work engaging point, a disc having the periphery thereof toothed resting upon said flange, a rigid connection between the disc and housing, a radially extending stub shaft carried by the periphery of the disc, and a toothed gear rotatably mounted on the stub shaft and having the teeth thereof normally meshing with the teeth of said disc, said gear being disposed to have said pin contact therewith at each revolution of the shaft to rotate said sleeve.

1,783,787. EXCAVATING MACHINE. CHARLES C. HANSEN, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Aug. 8, 1928. Serial No. 298,266. 4 Claims. (Cl. 214—90.)



1. In a shoveling and loading machine, the combination of a carriage, a fifth wheel mounted on the carriage for oscillation about a vertical axis, a conveyer, a scoop, a link pivotally connecting the scoop to the fifth wheel and adapted to translate oscillation of the fifth wheel into sidewise movement of the scoop, said scoop being adapted to deliver its contents onto the conveyer, a cylinder pivotally supported on the carriage for oscillation about a vertical axis and having a piston and piston rod, said piston rod being directly connected to the fifth wheel to effect the oscillation thereof.

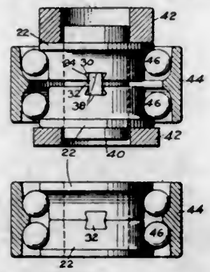
1,783,788. BRUSH. ANDREW H. HATCHETT, Sr., Cleveland, Ohio. Filed May 23, 1929. Serial No. 365,500. 3 Claims. (Cl. 15—160.)



1. A surface brushing attachment for the back of the hand between the finger bases and wrist comprising a flexible pad shaped to cover the back of the hand from the bases of the fingers rearwardly to the wrist with clearance for the thumb, the front end of said pad having depending finger loops to encircle fingers at their bases, and its rear end having a wrist embracing strap element.

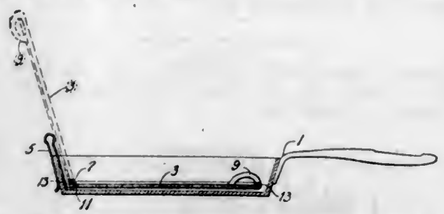
1,783,789. APPARATUS FOR PRODUCING COLOR MUSIC OR OTHER SPECTACULAR LUMINOUS EFFECTS. ALEXANDER BURNETT HECTOR, Greenwich, near Sydney, New South Wales, Australia. Original application filed July 7, 1927, Serial No. 204,086, and in Australia July 15, 1926. Divided and this application filed Aug. 31, 1928. Serial No. 303,306. 3 Claims. (Cl. 84—464.)

1. In improvements in the production of color music and other spectacular luminous effects, a source of light, a series of color screens in front of the light, a condenser and contracting diaphragm between said screens and light, shutters for covering and uncovering the color screens, electromagnetic means for actuating said shutters, means for sustaining any of the shutters in the open position and electrically actuated means for operating the diaphragm.



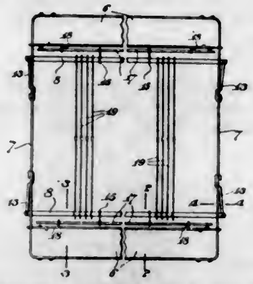
1,783,790. POULTRY FEEDER. ELMORE S. HOYT, Red Wing, Minn., assignor to Red Wing Union Stoneware Company, Red Wing, Minn., a Corporation of Minnesota. Filed Dec. 6, 1928. Serial No. 324,249. 2 Claims. (Cl. 119—77.)

1. In combination, a receptacle of frangible material open at its lower end, a trough of frangible material for receiving the lower end of said receptacle, supports within said trough integral with the bottom and sides thereof, each of said supports being tapered off at both sides thereof to form an inclined plane leading from the bottom of said trough to the top of the support from each end thereof, and supporting arms integral with and extending radially from the lower portion of said receptacle for engaging said inclined planes for elevating said receptacle when the same is rotated in either direction and for supporting the same in elevated position.



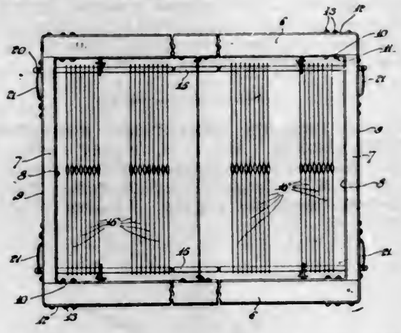
1,783,791. METHOD OF ASSEMBLING ANTIFRICTION BEARINGS. FREDERICK G. HUGHES, Bristol, Conn., assignor to The New Departure Manufacturing Company, Bristol, Conn., a Corporation of Connecticut. Filed Nov. 8, 1928. Serial No. 318,038. 6 Claims. (Cl. 29—84.)

1. The method of uniting abutted race rings of a double row bearing, which consists in cutting mating grooves in the adjacent ends of the rings at one periphery thereof, utilizing a cylindrical surface at said periphery to confine a deformable fastener in the mating grooves when the



rings are separated axially, and then pressing the rings into abutting relation to upset the fastener and cause it to flow into the grooves; substantially as described.

1,783,792. COOKING UTENSIL. WILLIAM O. ISAACSON, Chicago, Ill. Filed Nov. 15, 1928. Serial No. 319,713. 6 Claims. (Cl. 53—7.)

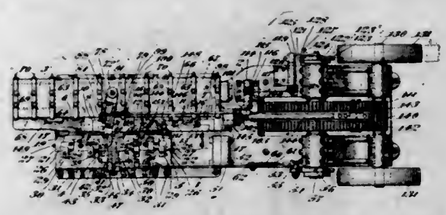


1. The cooking utensil which comprises a frying pan and means therein for holding substances flat against the bottom thereof, said means comprising a hinged glass plate.

1,783,793. LOOM HARNESS. JOHN JACOB KAUFMANN, Elkins Park, Pa., assignor to Steel Heddle Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed June 28, 1928. Serial No. 289,028. 1 Claim. (Cl. 139—92.)

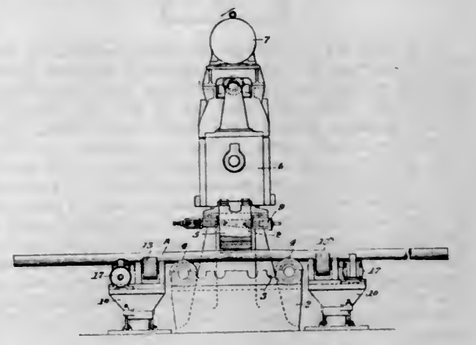
In a loom harness, a harness frame comprising top and bottom bars, side strips connecting said bars at their ends, a plurality of heddle supporting bars arranged at the top and bottom of the frame, said bars having their main or heddle supporting portiona spaced and having their end portions offset from the respective planes of the main portions and thereby brought together and extending side by side through common apertures in the side strips of the frame, the extending ends of the heddle supporting bars having registered apertures, and means for securing the heddle supporting bar comprising spring members carried by the side strips of the frame, said spring members having their ends bent over in hook-like form and simultaneously engaging the registered apertures in the extending ends of the heddle supporting bars.

1,783,794. HEDDLE FRAME. JOHN JACOB KAUFMANN, Elkins Park, Pa., assignor to Steel Heddle Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Nov. 16, 1928. Serial No. 319,777. 2 Claims. (Cl. 139—92.)



1. A heddle frame comprising top and bottom rails and end members; metallic reinforcing strips on the inner and outer faces of said end members, the ends of said reinforcing strips being bent over and secured to the top and bottom rails; heddle supporting bars mounted in said frame extending through slots in the end members and in the reinforcing strips, said heddle supporting bars having their ends projecting beyond the outer reinforcing strips; securing devices each adapted to engage one of said projecting end portions of a heddle supporting bar and comprising a member made of spring wire having one end thereof engaging the end of the heddle supporting bar, and having the other end thereof bent over and extending into the end member; the securing member having an inset portion adjacent the portion which extends into the end member of the frame, the outer reinforcing strip having a slot in which said inset portion is seated, and the securing member having a loop adjacent the portion which extends into the end member, said loop extending outwardly beyond the transverse plane of the adjacent portion of the securing member and beyond the outer face of the outer reinforcing strip.

1,783,795. MOP HEAD. DUNCAN KENNER, New Orleans, La., by court order Mrs. Emma Tujague Kenner sole heir and legatee of Duncan Kenner, deceased. Filed July 31, 1929. Serial No. 382,484. 3 Claims. (Cl. 15—229.)

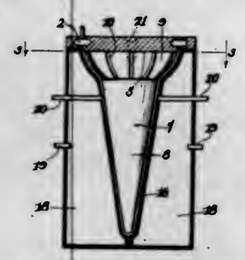


1. A mop head composed of a group of lengths of stranded material, approximately one-half the number of which have the strands twisted in an opposite direction to and toward the other half of said number.

1,783,796. HIGH-SPEED THREAD-ROLLING MACHINE. JAMES A. KINNEY, Lebanon, Pa., assignor to Bethlehem Steel Company. Filed June 28, 1928. Serial No. 289,000. 30 Claims. (Cl. 80—8.)

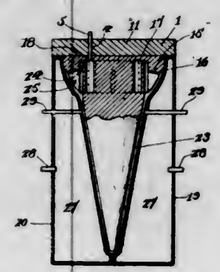
30. In a thread rolling machine, the combination with a pair of stationary dies, a pair of movable dies mounted in a cross-head and coacting with the stationary dies, a chute for receiving blanks having an arc-shaped bifurcated extension, cam actuated means for feeding blanks from the chute to the arc-shaped bifurcated extension, an adjustable starter mounted on a pivoted swinging lever for engaging the headed blanks in the arc-shaped bifurcated extension and adapted to deliver blanks between a pair of coacting dies on each stroke of the reciprocating cross-head, a slide mounted on the swinging lever, a rod having one end secured to a swivel connection mounted on the slide, a rocker arm having an adjustable connection for the opposite end of the rod, a rotatably mounted cam for actuating the swinging lever, means for reciprocating the cross-head and cams simultaneously, and friction means adapted to automatically stop the operation of the machine during the working stroke of the reciprocating cross-head.

1,783,797. MATERIAL-HANDLING DEVICE. CLARENCE J. KLEIN, Bellevue, Pa., assignor to United Engineering & Foundry Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Oct. 24, 1929. Serial No. 402,132. 7 Claims. (Cl. 153—48.)



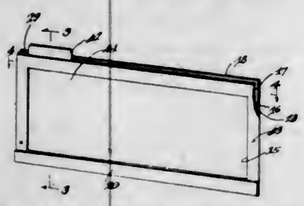
1. In combination with a straightening machine effective for applying a force on the side of an article to be straightened, means for turning the article, said turning means being yieldably mounted.

1,783,798. MOLD FOR FORMING CONES FOR ICE CREAM AND FROZEN CUSTARD. ELTON D. KOHR, York, Pa. Filed Mar. 19, 1930. Serial No. 437,166. 5 Claims. (Cl. 107—66.)



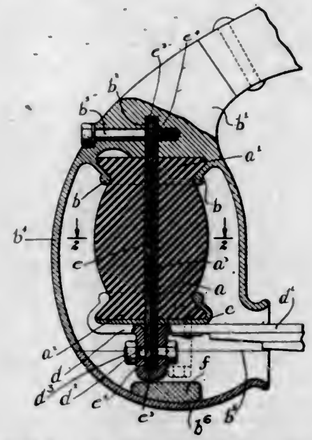
4. In a mold for the purpose set forth, a body portion formed of a pair of oppositely disposed hinged sections having coacting means on the inner faces thereof to provide, when such faces are in abutting relation a tapered pocket having a flaring upper portion, a carrier for seating on said body portion and having a depending enlargement extending into the mouth of the pocket, a core

corresponding in contour to that of the pocket, abutting, registering with and depending from said enlargement for extension into said pocket, said core providing in connection with the wall of the pocket a molding cavity, said



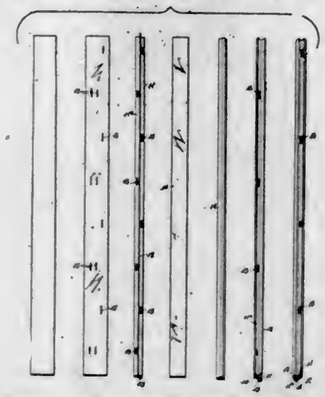
core having means at its upper end coacting with said enlargement to provide the upper end of the molding cavity with upstanding, spaced extensions, and said sections having heat receiving means and means for conducting material to the molding cavity.

1,783,799. MOLD FOR FORMING CONES FOR ICE CREAM AND FROZEN CUSTARD. ELTON D. KOHR, York, Pa. Filed Mar. 20, 1930. Serial No. 437,553. 4 Claims. (Cl. 107—66.)



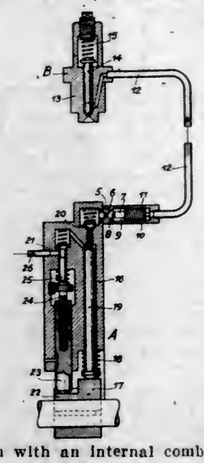
4. A mold for the purpose set forth comprising a body portion formed of a pair of oppositely disposed hinged sections having coacting means on the inner faces thereof to provide, when said faces are in abutting relation a pocket having a tapered lower portion and a flaring upper portion, a hinged carrier seating on said body portion, a core secured to said carrier for positioning in said pocket, said core conforming in contour substantially to the shape of said pocket and coacting with the wall of the latter to provide a molding cavity, said core having means in its upper portion to provide the upper end of the molding cavity with radially disposed extensions and vertically disposed perpendicular extensions of arcuate form, said core and said sections having heat receiving means, and means for conducting the material to be molded to the molding cavity.

1,783,800. HOUSEHOLD BUDGET SYSTEM. JAMES E. KREILING, Chicago, Ill. Filed Mar. 19, 1928. Serial No. 262,606. 2 Claims. (Cl. 129—16.7.)



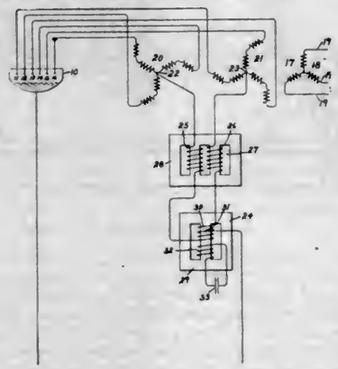
1. A blank for an envelope comprising a front portion having an opening therein, a portion disposed in horizontal alignment with said front portion and connected thereto along one edge, another portion disposed in vertical alignment with said front portion and connected thereto along one edge, said front portion having a flap formed thereon along the edge opposite said edge having said horizontally aligned portion connected thereto, said horizontally aligned portion having a flap formed thereon on the upper edge thereof, and a flap formed on the upper edge of said vertically aligned portion.

1,783,801. CUSHION CONNECTION FOR VEHICLE CONSTRUCTION. AUGUST H. LEIPERT, College Point, N. Y., assignor to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed May 17, 1926. Serial No. 109,479. 3 Claims. (Cl. 267—30.)



1. A shackle connection between the spring and frame of a vehicle comprising an inelastic, flexible fabric strip connected at its ends to the spring and frame, respectively, to prevent, positively, the separation thereof, the strip having a greater width than thickness to prevent sidesway of the vehicle body, seats on the spring and frame, and a block of yielding non-metallic material mounted in the seats to cushion movements of one toward the other.

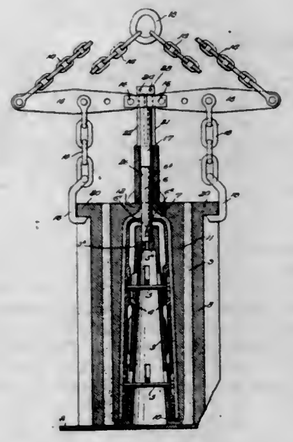
1,783,802. WELDING STRIP FOR GOLF SHAFTS. HERBERT CONRAD LAGERBLADE, Bristol, Conn., assignor to The Horton Manufacturing Company, Bristol, Conn., a Corporation of Connecticut. Filed June 12, 1928. Serial No. 284,840. 6 Claims. (Cl. 113—110.)



1. A connecting member for brazing the abutting edges of a tube formed from a thin sheet steel blank, said connecting member comprising a steel strip having substantially plane portions adapted to lie between said abutting edges and against the inner surface of the tube adjacent said abutting edges, respectively, and a strip of copper attached to said steel strip adapted to fill the interstices between and unite said abutting edges and said steel strip throughout their approximate surfaces when brought to a brazing temperature, said steel strip being interposed between said strip of copper and the inner surface of the tube, and means for facilitating entry of the copper when fused into said interstices.

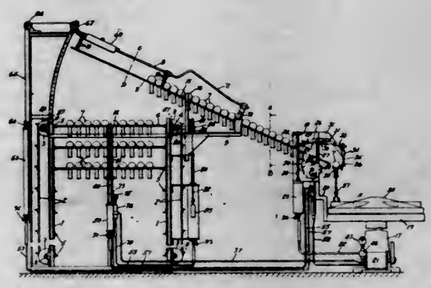
1,783,803. INTERNAL-COMBUSTION ENGINE. FRANZ LANG, Munich-Nymphenburg, Germany, assignor to Robert Bosch Aktiengesellschaft, Stuttgart, Germany. Filed Dec. 24, 1926, Serial No. 156,960, and in Germany Oct. 8, 1926. 1 Claim. (Cl. 123—140.)

In combination with an internal combustion engine, a fuel supply pump, an injection nozzle, a conduit connecting the discharge side of said pump with said nozzle, means for relieving the pressure in said conduit near the end of the pressure stock of said pump, and a non-return valve in said conduit operable to allow fuel to flow in said conduit toward said pump when the pressure in said conduit does not exceed a predetermined pressure, said valve preventing flow of fuel in said conduit when the pressure exceeds said predetermined pressure.



1,783,804. ELECTRIC SYSTEM. THOMAS C. LENNOX, Pittsfield, Mass., assignor to General Electric Company, a Corporation of New York. Filed Mar. 15, 1929. Serial No. 347,399. 8 Claims. (Cl. 175—363.)

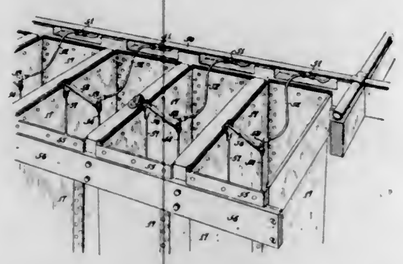
1. The combination of a polyphase transformer, a direct current circuit, a space discharge device interposed between said transformer and said circuit, and an interphase system including a reactor connected between said polyphase transformer and said circuit, and means operable to regulate the reactance drop of said reactor in response to the alternating component of the current of said interphase system.



7. The combination of alternating and direct current circuits, a polyphase transformer and a mercury arc rectifier arranged to translate power between said circuits, and an interphase system including a reactor and a condenser arranged to produce a predetermined and substantially constant voltage over the full range of load on said rectifier.

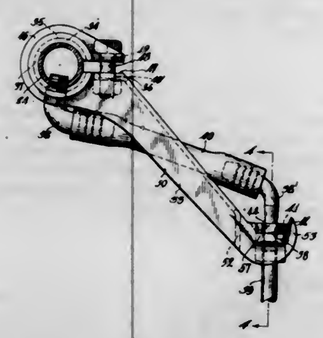
1,783,805. MOLDING APPARATUS. FRANK J. LEUTHNER, Sharpsville, Pa. Filed Aug. 2, 1929. Serial No. 382,941. 8 Claims. (Cl. 22—133.)

1. Molding apparatus, comprising a collapsible core having inner and outer core members, the inner core member having a hole in its top receiving an upstanding pin, and communicating ducts in the top of the inner core member below the hole and in the pin.



1,783,806. BULB FEEDER FOR SEALING-IN MACHINES. WALTHER-WINFRIED LOEBE, Waidmannslust, Berlin, WILLY LEDIG, Berlin, and HEINRICH ASMUSSEN, Charlottenburg, Berlin, Germany, assignors to General Electric Company, a Corporation of New York. Filed Oct. 1, 1928, Serial No. 309,479, and in Germany Nov. 28, 1927. 14 Claims. (Cl. 49—2.)

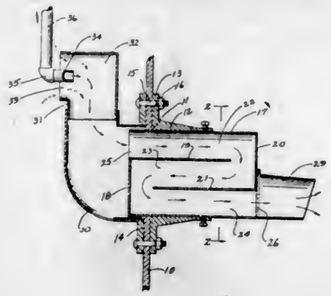
1. In a feeder for bulbs and similar articles, the combination with a stationary inclined bulb delivery chute



and a bulb delivery device at the lower end of said chute for discharging bulbs from said chute one by one, of a tray holder for holding in a predetermined horizontal position a tray with parallel rows of holes, a bulb lifter for holding a row of bulbs loosely and mounted to move in the plane of a row of holes in the tray in said holder from a position adjacent said tray to a feeding position in which it automatically feeds the bulbs in it to the upper end of said bulb delivery chute, and actuating mechanism for moving said bulb lifter vertically and actuating said delivery device in synchronism.

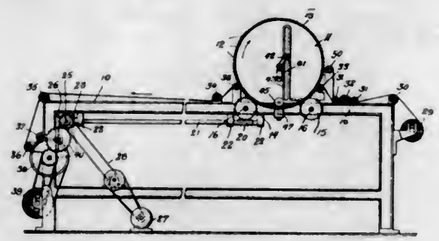
1,783,807. ICE-MAKING SYSTEM AND METHOD OF OBTAINING DRY AIR. JOSEPH A. MARTOCELLO, Philadelphia, Pa. Filed Nov. 14, 1923. Serial No. 674,748. 14 Claims. (Cl. 62—159.)

1. In an ice plant, a bracket having a passage flared at its upper end, a ferrule seated in said flare, an air tube supported by the ferrule, capable of oscillatory movement to swing the ferrule in the flare and a lock collar below the bracket and preventing removal of the tube through the bracket.



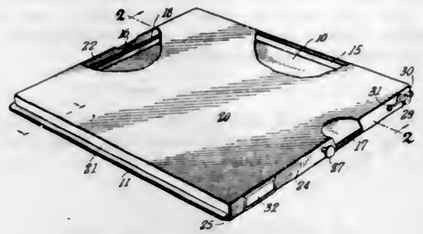
1,783,808. SUPPORT FOR DROP TUBES. JOSEPH A. MARTOCELLO, Philadelphia, Pa. Filed Oct. 1, 1927. Serial No. 223,452. 21 Claims. (Cl. 62—159.)

5. An air lateral, a drop tube, an air connection with the lateral, a nipple terminating the air connection and engaging the tube, and a bracket supporting the tube and straddling the air connection at the lateral to protect the connection by the side walls of the bracket.



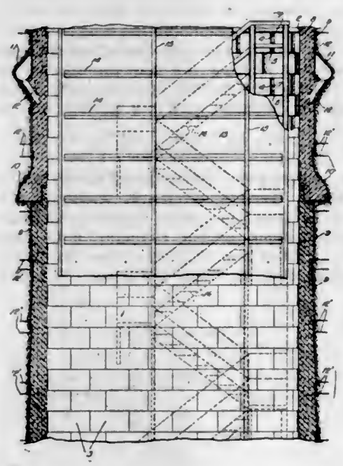
1,783,809. FURNACE ATTACHMENT. MORRIS OWEN, Oak Park, Ill. Filed June 4, 1928. Serial No. 282,734. 1 Claim. (Cl. 110—49.)

In combination with a door of a fire box having an opening therein, a member secured to the inner wall of said door including an annular flanged portion disposed around said opening, said member including a portion protruding substantially right angularly therefrom, said protruding portion being aligned with the opening in said door and providing a sleeve, a cylindrical member disposed in said sleeve portion and extending through said opening in said door, means for securing said cylindrical member in said sleeve, said cylindrical member having partially closed end portions providing oppositely disposed openings in the ends of said member, said end portions having portions integral therewith providing shelves extending inwardly from said end portions and extending longitudinally through said cylindrical member



whereby a tortuous passage is provided through said cylindrical member, a discharge spout arranged over the opening in the rear end portion of said cylindrical member, a ring secured to the outer face of said fire door, means connected to said ring providing a passage communicating with the tortuous passage in said cylindrical member and communicating with said discharge spout through said tortuous passage, an elbow structure retained by said ring portion, a housing mounted on the upper end of said elbow structure, said housing having an opening provided in one wall thereof, and a pipe member extended through said last named opening and projecting upwardly from said housing structure.

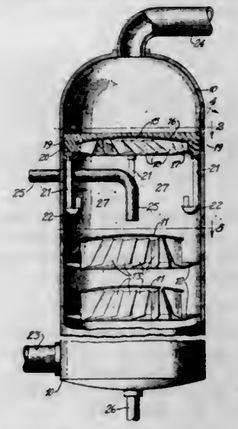
1,783,810. STENCIL PRINTING MACHINE. JOHN H. PETERSEN, West New York, N. J. Filed June 8, 1929. Serial No. 369,412. 2 Claims. (Cl. 101—119.)



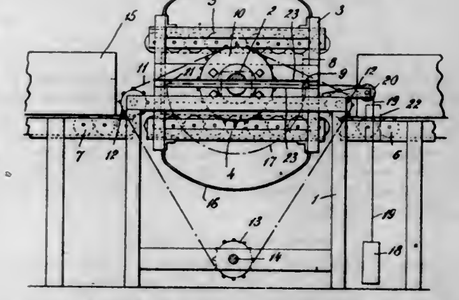
1. In a stencil printing machine, the combination of a frame, a stencil cylinder open at each end, a ring gear on each end of said cylinder, shafts rotatably supported on said frame in spaced parallel relation in substantially the same horizontal plane, a pair of pinions on each shaft in mesh with said gears, means to drive one of said shafts to rotate said cylinder, and rollers on said frame in rolling contact with said gears, to prevent the axial movement of said cylinder.

1,783,811. MAGAZINE FOR PRINTERS' TYPE. GEORGE M. PORTER, New York, N. Y. Filed Aug. 4, 1930. Serial No. 472,838. 11 Claims. (Cl. 276—40.)

1. A type magazine comprising a tray having walls less than type high, a cover having means interengageable with the front and rear ends of said tray, and means to positively lock the cover when so engaged.



1,783,812. MINE-SHAFT CONSTRUCTION. ROBERT V. PROCTOR, Youngstown, Ohio, assignor to The Commercial Shearing and Stamping Company, Youngstown, Ohio, a Corporation of Ohio. Filed Mar. 5, 1929. Serial No. 344,368. 3 Claims. (Cl. 61—41.)

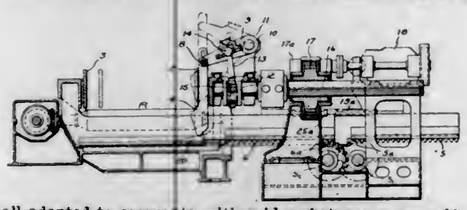


1. A mine shaft construction comprising a plurality of metal liner plates connected to form an inner lining for the shaft, an outer lining of concrete, water rings arranged outside of the concrete lining, and means for draining the water collected by said rings.

1,783,813. COLUMN. CLAUDE B. SCHNEIBLE, Evanston, Ill., assignor to Claude B. Schneible, K. F. Schreier, and Benjamin B. Schneider as trustees under the name of Joseph Schneible Trust. Filed May 16, 1927. Serial No. 191,740. 11 Claims. (Cl. 183—80.)

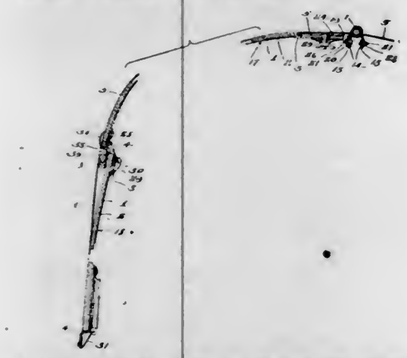
1. A liquid separator for a column of the type described, comprising a baffle ring and a baffle plate, vanes between said ring and plate and inclined to the radial direction, said baffle ring forming a trough adjacent the wall of the column for the purpose of receiving precipitated entrained liquid, and conduit means for withdrawing liquid from said trough.

1,783,814. CARTON HANDLING AND SEALING APPARATUS. ARTHUR C. SCHROEDER, Syracuse, and WALLACE D. KIMBALL, New York, N. Y., assignors to Standard Sealing Equipment Corporation, Long Island City, N. Y., a Corporation of New York. Filed Feb. 21, 1927. Serial No. 169,889. 15 Claims. (Cl. 93—7.)



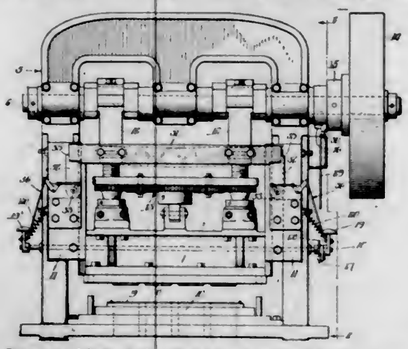
1. Carton handling apparatus of the class described comprising a conveyer having a plurality of cartons thereon, a receiving element for receiving cartons successively discharged from said conveyer, means for arresting the movement of the received carton in said receiving element, means for actuating said receiving element at predetermined timed intervals to invert the carton therein and means for actuating said arresting means to effect discharge of the inverted carton from said element.

1,783,815. MANIPULATOR. JOHN A. SMITMANS, Pittsburgh, Pa., assignor to United Engineering & Foundry Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed May 19, 1927. Serial No. 192,769. 19 Claims. (Cl. 80—48.)



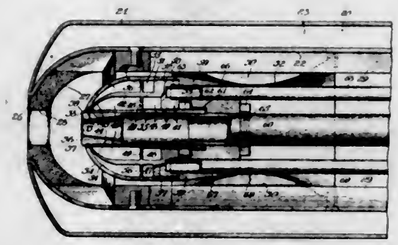
8. The combination with a manipulator having a stationary frame and a movable side guard having a plurality of tilting fingers associated therewith, of operating means for the tilting fingers, said means including a plurality of levers to which the fingers are attached, said levers being mounted on rotatable means controlled by

a common rotating mechanism, the rotating mechanism comprising a lever attached to the rotatable means, said lever having a socket thereon, a pitman terminating in a



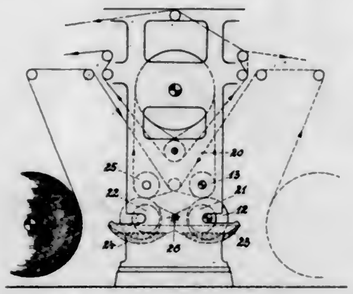
ball adapted to cooperate with said socket, means movable in a substantially circular path for operating the pitman, and connecting means attaching the pitman operating means to the pitman.

1,783,816. LINING FOR AUTOMOBILE HOODS. ROBERT J. STEPHENSON, Auburn, N. Y., assignor to Stephenson Protectahood Corporation, Auburn, N. Y., a Corporation of New York. Filed Apr. 10, 1925. Serial No. 22,185. 7 Claims. (Cl. 180—69.)



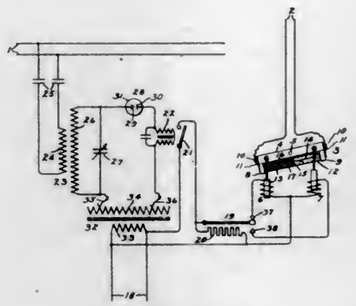
6. An insulating lining for application to motor vehicle hoods, comprising a sheet of heat insulating material and devices fastened to an edge of said sheet cooperative with the hood for detachably securing the sheet in position adjacent the inner surface of the hood, and separate fastening means secured to said sheet for suspending a second sheet of heat insulating material therefrom independently of the hood.

1,783,817. SAFETY ATTACHMENT FOR PUNCH PRESSES. BENJAMIN J. VICTOR, Oak Park, Ill., assignor to Victor Manufacturing & Gasket Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 9, 1929. Serial No. 412,727. 10 Claims. (Cl. 192—131.)



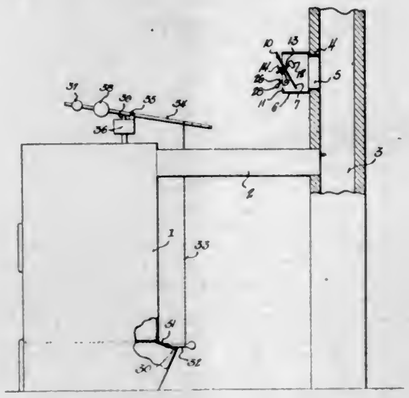
1. In a machine of the character described, the combination of a main frame, a crank shaft and means for operating the same, a ram, rods connecting the ram to the crank shaft for operating the ram, a cross bar rigidly fastened to said connecting rods, a plurality of separate and independent means on the main frame cooperating with the cross bar to lock the ram normally in initial position, and separate and independent means for releasing said locking means from said cross bar to permit operation of the ram, said releasing means being spaced apart and requiring conjoint operation and the use of both hands of the operator to release said locking means.

1,783,818. BURNER STRUCTURE. FRANK J. WERNER, Portage Township, Porter County, Ind. Filed May 31, 1924. Serial No. 717,034. 14 Claims. (Cl. 158—74.)



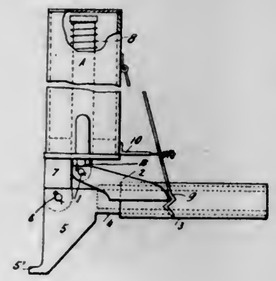
12. In multiple purpose burners, a hollow inner tube, means comprising separate casing walls for forming a restricted passageway parallel to said tube, said casing walls curving directly toward the tube approximately at right angles and having an annular opening between them so as to direct a narrow unobstructed flow across the path of the flow surrounding the tube and immediately adjacent the latter, the tube terminating beyond the annular opening whereby the flow through such opening and the passageway having approximately equal areas in subsequently combined with flow issuing from the inner tube.

1,783,819. ROTARY INTAGLIO-PRINTING MULTI-MACHINE. OTTMAR WILHELM, Augsburg, Germany, assignor to Maschinenfabrik Augsburg-Nuernberg, Aktiengesellschaft, Augsburg, Germany, a Corporation of Germany. Filed Dec. 16, 1927, Serial No. 240,356, and in Germany Dec. 18, 1926. 5 Claims. (Cl. 101—152.)



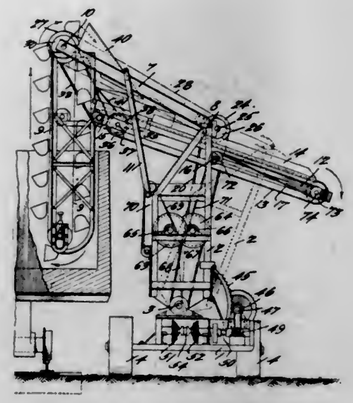
1. In a rotary multi-machine for intaglio printing, the combination of an exchangeable form cylinder with two alternative bearings therefor, said bearings being so arranged that said form cylinder when placed in one of said bearings may be rotated in one direction and when placed in the other bearing, in the other direction, and a scraper disposed intermediate said bearings and adapted to be turned to either side.

1,783,820. REMOTE CONTROL SYSTEM. HUGH E. ALLEN, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Sept. 2, 1925, Serial No. 54,152. Renewed May 2, 1930. 6 Claims. (Cl. 175—375.)



4. In combination, a plurality of electromagnets adapted to control an electric circuit, means for controlling the energization of said electromagnets, said means comprising a control circuit including a discharge device and a relay, a source of potential connected to said control circuit the value of the potential being somewhat lower than that required to break down the discharge device and produce a flow of current in the control circuit, means whereby a high frequency current may be supplied to the control circuit to impress on the control circuit a potential great enough to cause current to flow therethrough from said source and to energize said relay to close a circuit for one of said electromagnets, and means for automatically opening the circuit for said one electromagnet after a predetermined period of time and closing a circuit to another of said electromagnets.

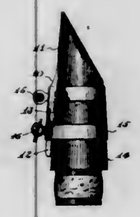
1,783,821. HEATER CONTROL. GALEN D. BARKER, Dowagiac, Mich. Filed June 15, 1929. Serial No. 371,075. 3 Claims. (Cl. 236—9.)



1. A control for heaters comprising a damper casing having its ends open and having one end communicating with the stack for the heater and the other end communicating with the atmosphere, a balanced damper supported on said casing for free movement under the influence of a draft, an adjustable bias for the damper operating to prevent movement thereof until the draft has reached a predetermined value, a direct draft damper and a diaphragm regulator connected to the direct draft damper and positively controlling the opening and closing thereof in response to conditions in the heater.

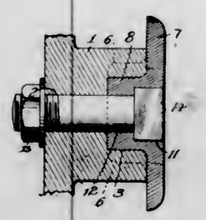
1,783,822. AUTOMOBILE JACK. ALFRED JEAN GUSTAVE BOLARD, Vernon, France, assignor to "Rusbol," Société à Responsabilité Limitée, Clichy, France, a Corporation of France. Filed Jan. 7, 1928, Serial No. 245,091, and in France Dec. 7, 1927. 6 Claims. (Cl. 254—93.)

1. In an automatic jack for automobiles having a chassis and a wheel hub, the combination of fluid operated means fixed to said vehicle, a piston rod associated with said means, a jack foot pivoted to the extremity of said piston rod, means for engaging said hub carried by said first mentioned means and means associated with said piston rod, said jack foot and said hub engaging means for causing said chassis and said hub to be lifted simultaneously when said jack foot engages the ground.



1,783,823. UNLOADING MACHINE. EDWARD L. BRADT, Shreveport, La., assignor to Armbruster, Inc., Shreveport, La., a Corporation of Louisiana. Filed Aug. 12, 1929. Serial No. 385,183. 9 Claims. (Cl. 198—88.)

1. In an unloading machine, a vertically disposed mast structure pivotally supported for tilting movement transversely of its support, a boom element hinged at one end to the mast, a depending endless conveyor suspended from the outer end of the boom, a strut supporting arm for

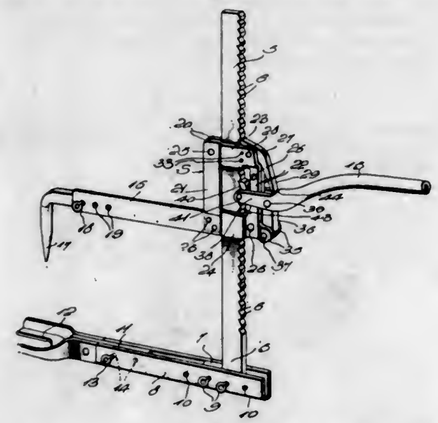


the boom, said arm being connected to the boom intermediate its ends and having a vertically sliding connection with the mast to adjust the elevation of said conveyor, and additional means for adjusting the angular dependent position of the conveyor relative to the vertical mast.

1,783,824. REED FOR MUSICAL INSTRUMENTS. FRED A. BRENNER, Belleville, Ill., assignor to Gretsch & Brenner, Inc., New York, N. Y., a Corporation of New York. Filed Aug. 27, 1929. Serial No. 388,784. 2 Claims. (Cl. 84—383.)

1. A musical reed having a base portion, said base portion having a recess in the inside thereof, and a piece of resilient material secured in said recess, for the purposes specified.

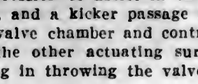
1,783,825. CRANK PIN AND COLLAR. GEORGE BROWN, Oneonta, and ABRAHAM B. APPLER, Albany, N. Y. Filed May 7, 1924. Serial No. 711,734. 2 Claims. (Cl. 74—38.)



2. In combination with a crank pin having a recess in the end thereof of a shape other than circular, of a collar of greater diameter than the pin adapted to be engaged with the end thereof, said collar having an irregularly shaped recess formed in its outer face and a projection formed on its inner face to be received in the recess of the pin and of a shape corresponding therewith to prevent rotation of the collar relative to the pin, and removable means passing longitudinally through the pin and through the collar to prevent longitudinal separation of the collar from the pin, said removable means including an irregularly shaped head adapted to be received in the irregularly shaped recess formed in the outer face of the collar.

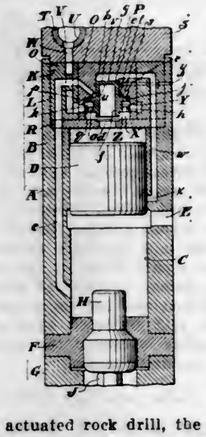
1,783,826. RACK-ROD ASSEMBLY FOR SCALES. ROBERT J. BURKE, Latrobe, Pa., assignor to Lincoln Scale Corporation, Latrobe, Pa., a Corporation of Delaware. Filed Jan. 7, 1929. Serial No. 330,779. 6 Claims. (Cl. 74—27.)

1. A rack rod assembly comprising a bearing block, a bracket supported by said block, a rack rod carried by said bracket, and means for adjusting said bracket laterally of said bearing block.



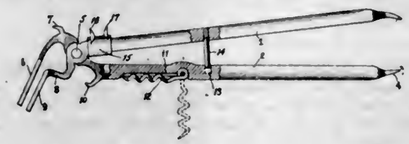
1,783,827. VALVE-SPRING LIFTER. CHARLES W. CARR, Meadow Grove, Nebr. Filed Sept. 27, 1928. Serial No. 308,704. 4 Claims. (Cl. 254—108.)

1. In a device of the class described, a shank having longitudinally spaced teeth, a slide on said shank, a lever mounted on said slide and having a work-performing dog engageable with said teeth, and a holding dog also mounted on said slide and engageable with said teeth, said slide having a portion to strike and release said work-performing dog when the lever is moved to one extreme position, said lever being provided with a portion to then strike and release said holding dog.



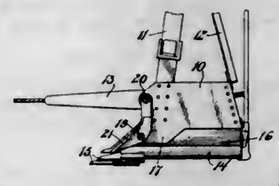
1,783,828. METHOD OF PRODUCING AN ORNAMENTAL SURFACE ON GRANITE. ELROY A. CHASE, Northfield, Vt., assignor to Rock of Ages Corporation, Burlington, Vt., a Corporation of Vermont. Filed Sept. 17, 1928. Serial No. 306,327. 2 Claims. (Cl. 41—39.)

2. The method of producing an ornamental surface on a granite block which consists in providing a smooth surface of a pleasing texture on said block, forming and shaping a design therein, placing a screw over said block of granite and sand-blasting the surface around said design through said screen to reproduce the apertures of said



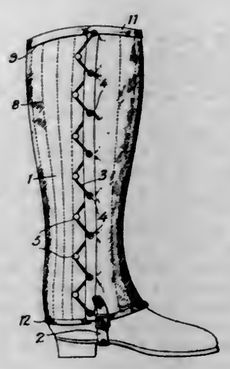
screen in the originally prepared smooth surface of the granite block, and in separately covering said design surface and said surface around the design each with a protective coating while the sand blasting of the other surface is being performed.

1,783,829. VALVE FOR ROCK DRILLS. JOHN C. CURTIS, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Feb. 19, 1930. Serial No. 429,554. 2 Claims. (Cl. 121—19.)



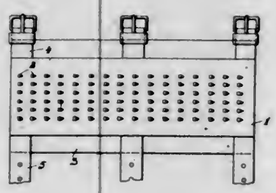
1. In a fluid actuated rock drill, the combination of a cylinder having a piston chamber and a hammer piston in the piston chamber, an exhaust port in the cylinder, a valve chest having a valve chamber, inlet passages leading from the valve chember to the piston chamber, a valve in the valve chamber controlling the inlet passages, a pair of flanges on the valve having apertures therein through which pressure fluid flows to the inlet passages, a supply passage in the valve chest for introducing pressure into the valve chamber between the flanges, pressure areas on the flanges against which the pressure fluid flowing through the apertures acts for throwing the valve, opposed actuating surfaces on the valve, one of said actuating surfaces being intermittently exposed to compression to assist in throwing the valve in one direction, and a kicker passage leading from the cylinder to the valve chamber and controlled by the piston to expose the other actuating surface to pressure fluid for assisting in throwing the valve in the opposite direction.

1,783,830. KITCHEN UTENSIL. ALBERT C. DENMARK and LOUIS O. BRYANT, Austin, Tex. Filed June 1, 1928. Serial No. 282,167. 2 Claims. (Cl. 30—3.)



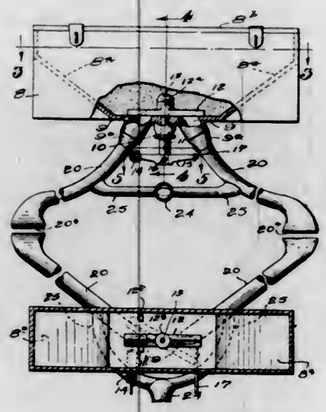
1. A tool comprising a pair of handles, a flattened portion formed on one end of each of the handles, means pivotally connecting said flattened portions in overlapping relation to each other and one of said portions extending into a plane above the handles, a pointed and hook-shaped member formed on the upper edge of said last named flattened portion and extending upwardly and outwardly of the handles, a cutting element slidable on one of the handles to cooperate with the hook-shaped member in forming a can opener, and means to maintain the handles in fixed relation while in operation as a can opener.

1,783,831. EXCAVATOR SCOOP. ROBERT REX DOWNIE, Beaver Falls, Pa., assignor to Keystone Driller Company, Beaver Falls, Pa., a Corporation of Pennsylvania. Filed May 22, 1926. Serial No. 111,002. 30 Claims. (Cl. 214—145.)



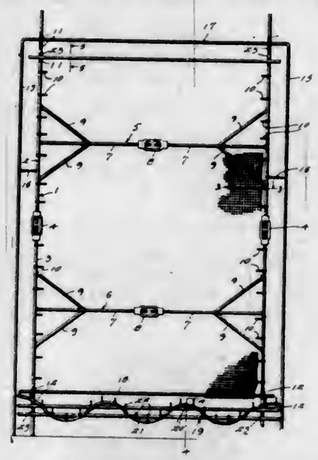
1. The combination with an excavating scoop having side walls and a member spanning the width of the scoop, of a pivot member at each side connecting the spanning member with the side wall, a rake tooth at each side, and means cooperating with the pivot member to rigidly secure the rake tooth to the side, a portion of the rake tooth extending in front of the pivot member and said cooperating means to protect the same from injury during the digging operation.

1,783,832. PUNCTUREPROOF LEGGING. PAUL WESLEY ELLIS, Clearwater, Fla. Filed Nov. 22, 1928, Serial No. 321,104. Renewed Sept. 23, 1930. 3 Claims. (Cl. 36—2.)



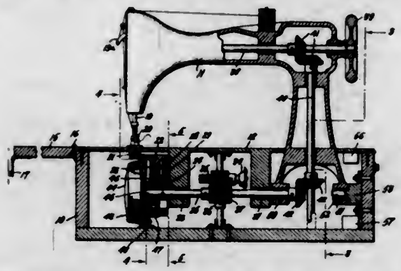
1. A legging for protecting the wearer from punctures comprising an outer covering of non-metallic flexible material, a strip of sheet metal extending vertically along the front of the leg and strips of metal extending vertically along the sides, the rear edges of the side strips overlapping the forward edges of the next strip in its rear.

1,783,833. NONSLIP DEVICE FOR USE WITH SKIS. ALOIS ELSNER, Brunn, Czechoslovakia. Filed Mar. 19, 1930, Serial No. 437,118, and in Czechoslovakia Jan. 23, 1929. 6 Claims. (Cl. 208—184.)



1. A non-slip device for use with skis comprising metal teeth adapted to be fastened to the bottom of said skis, said teeth having a triangular cross section.

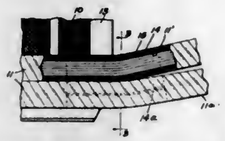
1,783,834. VEHICLE SANDING DEVICE. WILLIAM H. H. EVERETT, Newton Falls, Ohio. Filed Dec. 26, 1929. Serial No. 416,625. 4 Claims. (Cl. 291—19.)



1. A sanding device for automobiles comprising a sand supply container having spaced outlets in its bottom, a valve stem bearing extending from said container bottom at a point between said outlets, a rotatable valve adapted in one position to simultaneously close said outlets, spring means normally tending to urge said valve in a direction to close said outlets, stop means adapted to engage said valve to limit movement thereof under the influence of said spring, a cross-head rigidly secured to said spring, said valve having a stem extending through said bearing and carrying said cross-head beneath said container, the spring being connected to one end of said cross-head, means operable from the driver's seat of the vehicle and connected to the other end of said cross-head for actuating said valve against the tension of said spring, said cross-head being disposed below said outlets, discharge connections communicating with said outlets and arranged at either side of said bearing and cross-head and converging toward one another in the direction of said container above said cross-head, the exhaust manifold of the automobile being arranged immediately below said cross-head and bearing and having connection branches communicating with said discharge connections whereby to communicate heat thereto for transmittal to said container and bearing through said discharge connections, and means for maintaining said valve in contact with the bottom of said container and for holding said stem in assembly with said valve.

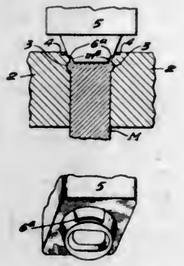
1,783,835. CURTAIN STRETCHER. ELMER B. FENTON and WILBUR C. FENTON, Cedar Rapids, Iowa. Filed Feb. 21, 1929. Serial No. 341,782. 2 Claims. (Cl. 45—24.)

1. A curtain stretching and drying device comprising a frame consisting of a pair of substantially parallel side bars, connecting members between said side bars inwardly of the ends thereof, means whereby said side bars may be lengthened or shortened, means whereby the side bars may be shifted relative to one another, curtain edge engaging members connecting said side bars adjacent their ends, and means forming a part of one of said curtain edge engaging members whereby a scalloped edge of a curtain may be engaged throughout its length for stretching the scalloped portions said scalloped edge engaging means comprising a plurality of spaced transverse bars and a sinuous member mounted thereon.



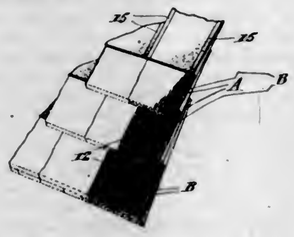
1,783,836. SEWING MACHINE. FRANK E. FINLAYSON, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Aug. 6, 1928. Serial No. 297,617. 16 Claims. (Cl. 112—220.)

1. A sewing machine including a bedplate and an arm, means carried by said arm and said bedplate cooperating to form stitches in the material being sewn, and means for movably supporting said arm on said bedplate for movement about an axis substantially parallel to said arm to provide for moving said arm relative thereto in folding the machine.



1,783,837. HIGH-VOLTAGE APPARATUS. EDWARD H. FREIBURGHOUSE, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Oct. 1, 1927. Serial No. 223,417. 2 Claims. (Cl. 171—206.)

1. In a high voltage apparatus having a slotted core structure, an insulated winding extending through the slots in said core structure and projecting therefrom, and means comprising a shield arranged on the projecting portion of said winding for distributing the dielectric stress around the projecting portion of said winding adjacent said core structure for protecting the insulation of said winding against electrical discharge, said shield comprising a layer of lower resistance material extending from



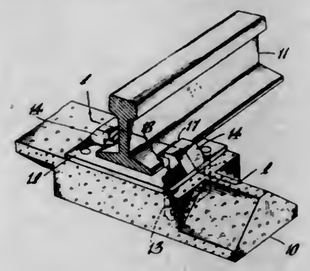
within said slot outwardly beyond said core structure and a layer of high resistance material having a resistance intermediate that of copper and the winding insulation, and entirely covering the layer of low resistance material, said shield extending from within said slot outwardly from said core structure beyond said layer of low resistance material.

1,783,838. METHOD OF PUNCHING MATRICES. HERMAN R. FREUND, Brooklyn, N. Y., assignor to Intertype Corporation, Brooklyn, N. Y., a Corporation of New York. Filed Sept. 18, 1929. Serial No. 393,560. 3 Claims. (Cl. 101—401.2.)

1. The method of punching a character-forming cavity in a matrix which comprises impressing the character-forming cavity in the edge of the matrix and depressing the upstanding wall which separates a side of the cavity from a side of the matrix.

1,783,839. ROOF COVERING. HENRI GAUVIN, Ottawa, Ontario, Canada. Filed Dec. 27, 1929. Serial No. 416,895. 7 Claims. (Cl. 154—51.)

1. As a new article of manufacture, a roof covering comprising an envelope, brush material held within the envelope and projecting outwardly therefrom, and a cementitious material within the envelope about the brush material.

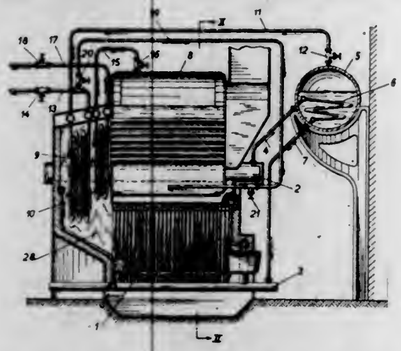


7. As a new article of manufacture, a roof covering comprising an envelope, brush material within the envelope projecting outwardly therefrom and comprising a plurality of individual strands each surrounded with a metal spiral.

1,783,840. NECKTIE HOLDER. LAWRENCE EBERT GOELLER, Circleville, Ohio. Filed Mar. 15, 1930. Serial No. 436,206. 2 Claims. (Cl. 211—89.)

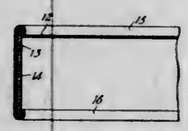
1. A holder for ties and the like comprising a base and holding element, the latter consisting of superposed loops of resilient straps, said loops each having opposite sides secured together the major part of their length leaving openings at each end, said loops secured together centrally in superposed relation to form openings between said adjacent loops on either side of said center.

1,783,841. RAIL TIE PLATE AND FASTENER. GEORGE C. HABICHT, Snyder, N. Y. Filed Mar. 13, 1930. Serial No. 435,433. 3 Claims. (Cl. 238—304.)



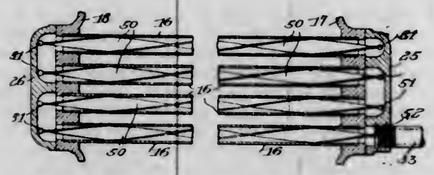
1. A fastening device for railroad rails and the like, comprising a plate adapted for attachment to a support, hook-shaped lugs rising from opposite sides of said plate for receiving the rail between them in spaced relation thereto, the underside of the overhanging portion of each lug being inclined in a direction lengthwise of the rail and the top side of the plate beneath said overhanging hook-portion being similarly inclined, and locking bars disposed in the spaces between the rail and said plate-lugs and each having its top and bottom faces inclined in substantially parallel relation to the opposing inclined sides of the plate and its hook.

1,783,842. MULTIPRESSURE BOILER INSTALLATION. OTTO H. HARTMANN, Kassel-Wilhelmshohe, Germany, assignor to Schmidt'sche Heissdampf-Gesellschaft mit beschrankter Haftung, Kassel-Wilhelmshohe, Germany. Filed June 5, 1928, Serial No. 283,054, and in Germany June 28, 1927. 7 Claims. (Cl. 122—37.)



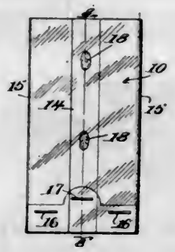
1. Method of initially heating up multipressure boiler installations having superheating devices for superheat-

ing the steam generated in the respective pressure sections of the boiler, which consists in leading steam generated in a high-pressure section of the boiler installation through



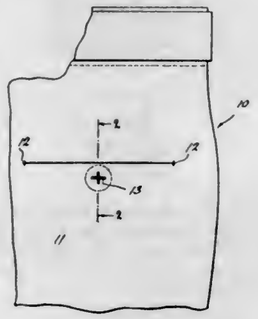
a superheater heated by the same furnace as the boiler itself and thence to the water space of a low-pressure section of the boiler installation.

1,783,843. SNARE DRUM. RALPH H. HIERS and HERBERT A. HIERS, Granville, Mass., assignors to Noble and Cooley Co., Granville, Mass., a Corporation of Massachusetts. Filed Apr. 2, 1929. Serial No. 351,946. 1 Claim. (Cl. 84—411.)



A device of the character described, including a ring having inwardly disposed edge portions, a diaphragm having side portions disposed against the inner face of said ring, snares underlying said diaphragm with their ends at the inner surfaces of the side portions of the diaphragm, means for securing said diaphragm and snares, said means including an annular member secured to said ring by said edge portions and securing said diaphragm and snares between itself and said ring.

1,783,844. HEAT-TRANSFER APPARATUS. JENS N. JACOBSEN, Alameda, Calif., assignor to The Pfaudler Co., Rochester, N. Y., a Corporation of New York. Filed Mar. 13, 1928. Serial No. 261,348. 4 Claims. (Cl. 257—240.)

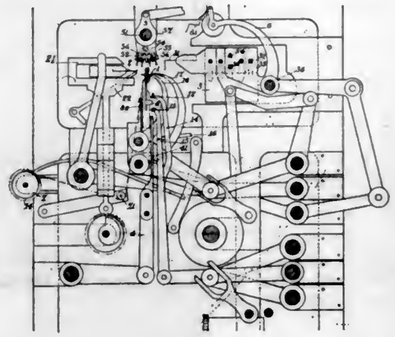


1. In a cooling apparatus, the combination with a container for holding a treating medium, of a plurality of conduits within said container, said conduits providing a passageway for an ice cream mixture, a unidirectional spiral strip rotatably mounted within each of said conduits and in contact with the side walls thereof, and means for preventing longitudinal movement of said strips while allowing rotation thereof, so that passage of said ice cream mixture through said conduits will rotate said spiral strips and scrape the walls of said conduits to prevent accumulation of frozen material thereon.

1,783,845. METHOD OF MAKING BAGS. HERMAN B. LAYMON, Spencer, Ind. Filed Jan. 10, 1930. Serial No. 419,918. 1 Claim. (Cl. 93—35.)

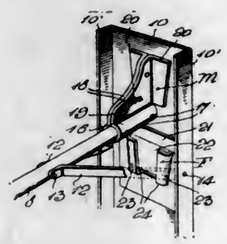
The herein described method of making display bags consisting of placing a strip of relatively stiff material upon a sheet of flexible transparent material, folding said sheet over the ends of the strip with the edges of the sheet overlapped, creasing the sheet to provide a flat tubular body, stitching the material of the body to the strip so that the latter will form an end closure, and gluing the overlapped edges of the sheet.

1,783,846. PICKPOCKETPROOF BUTTON. AZA LEROUX, New York, N. Y. Filed Aug. 20, 1930. Serial No. 476,669. 3 Claims. (Cl. 116—84.)



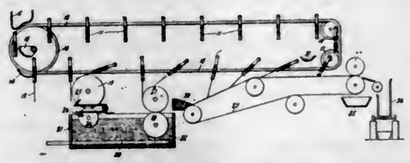
1. The combination with a hole-equipped pocket of a garment, of a device for the purpose described, comprising a base or attaching member provided with means for securing it to the interior of a pocket, supporting pins extending from said member, a bell or sound member secured to said pins and distanced from said base member, a resilient bell actuating member in operative engagement with said bell and comprising a resilient bar or knocker operative within the bell and a pocket hole engaging handle extending beyond the bell, a spring connecting said actuating member with one of said pins and adapted to normally cause the positioning of said actuating member into one plane, while the latter may be swung, by means of said handle, into another plane when desired, said pins serving as limiting devices for the resilient bar or knocker.

1,783,847. FASHIONED WARP KNITTING. PIERRE LÉVY, Nancy, France, assignor to The Société P. & P. Levy dite Etablissements J et S Levy Frères, Meurthe-et-Moselle, France, a French Company. Filed June 22, 1928, Serial No. 287,513, and in Germany June 30, 1927. 9 Claims. (Cl. 66—86.)



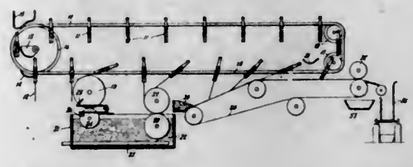
1. Method of producing a fashioned warp knitted fabric consisting, at the moment of transfer, of taking the thread

to be transferred from the needle on which it is found, carrying said thread to the interior of the knitted fabric on an active needle, knitting this thread together with



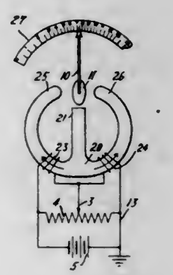
the thread found normally on said latter needle, carrying said transfer thread to the exterior and throwing the first needle out of operation.

1,783,848. HAMMOCK OR GLIDER SUPPORTING FRAME. DUANE M. LILLIBRIDGE, St. Charles, Ill. Filed Mar. 11, 1929. Serial No. 346,188. 4 Claims. (Cl. 5—127.)



1. In a hammock frame, an end frame embodying a vertical channel bar, the side flanges of said channel bar being disposed at the inner side of the frame, a horizontal tie bar to extend between said end frame and a twin thereof, separable connecting means between said tie bar and said channel bar and confined between said inwardly directed flanges of the latter, and diverging links pivoted to said bar at their inner ends and pivoted to said flanges at their outer ends.

1,783,849. METHOD OF FINISHING ROOFING UNITS. CHESTER R. MACDONALD, Rutherford, N. J., assignor, by mesne assignments, to The Patent and Licensing Corporation, Boston, Mass., a Corporation of Massachusetts. Original application filed Mar. 13, 1926, Serial No. 94,377. Divided and this application filed Oct. 24, 1927. Serial No. 228,131. 8 Claims. (Cl. 91—68.)

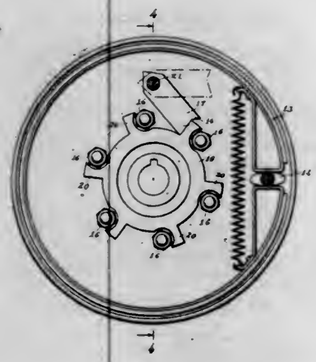


6. The method of treating roofing units which comprises advancing a series of roofing units in succession, presenting a film of liquid coating material to the successive units and causing the units to swingingly engage the film of coating material whereby to transfer the film to the face and edge portions of said units as they are advanced.

1,783,850. APPARATUS FOR FINISHING ROOFING UNITS. CHESTER R. MACDONALD, Rutherford, N. J., assignor, by mesne assignments, to The Patent and Licensing Corporation, Boston, Mass., a Corporation of Massachusetts. Original application filed Mar. 13, 1926, Serial No. 94,377. Divided and this application filed Oct. 24, 1927. Serial No. 228,132. 5 Claims. (Cl. 91—50.)

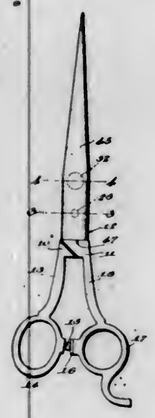
2. Apparatus of the class described, comprising means for suspending roofing units separately and serially with their butt edges down, means for advancing the units thus suspended, a coating roll supported in the path of the units whereby its peripheral surface is engaged by the forward faces of the advancing units, and means for supplying the peripheral surface of the coating roll with a film of coating material.

1,783,851. ELECTRICAL INDICATING INSTRUMENT. WILLIAM C. MCCOY, Akron, Ohio, assignor to Moto Meter Gauge & Equipment Corporation, Long Island City, N. Y., a Corporation of Delaware. Filed July 23, 1923. Serial No. 653,104. 4 Claims. (Cl. 171—95.)



4. An electro-magnetic instrument comprising a normally unmagnetized core of magnetizable material having three distinct leg portions, means for differentially energizing the leg portions of said core to varying degrees, and a magnetically responsive armature pivotally mounted to swing about its geometric axis and actuated by the combined magnetic flux eminating from said leg portions to a multiplicity of stable indicating positions.

1,783,852. VEHICLE BRAKE. JOHN JOSEPH MCGUIRE, Yonkers, N. Y. Filed Dec. 26, 1928. Serial No. 328,528. 5 Claims. (Cl. 188—30.)



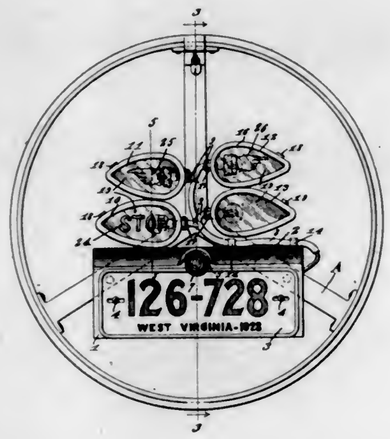
1. A device of the character described for association with a vehicle wheel, including a ratcheting member mounted upon the wheel, a pawl associated therewith, and means for controlling said pawl for operative and inoper-

ative position with respect to said ratcheting member, said ratcheting member including a wheel and projecting

extremities thereon, said projections being engageable with conventional securing means between said wheel and its associated brake drum.

1,783,853. SCISSORS. GEORGE MIRIELLO, Bronx, N. Y. Filed Jan. 29, 1929. Serial No. 335,839. 1 Claim. (Cl. 30—13.)

A pair of scissors comprising a pair of shanks, blades removably connected with the shanks, said blades having flanges embracing the shanks, set screws carried by the shanks and engaging the blades for clamping the flanges to the shanks, a pin secured to one shank and provided with a flange, the other shank having a recess to receive said flange, the last-mentioned flange being engaged at diametrically opposite points by the flanges of the blade which embraces the shank having the recess, plates provided with notches to receive the pin and having the edges thereof frictionally co-acting with the edge of the flanges in a blade.



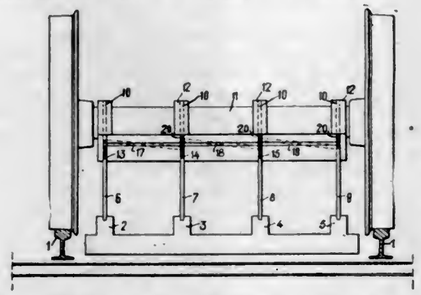
1,783,854. CLAMP LEVER FOR BUCKLES. WILLIAM J. MORSE, Attleboro, Mass. Filed Dec. 28, 1929. Serial No. 417,053. 7 Claims. (Cl. 29—3.)

1. The method of forming clamp levers from L-shaped bar stock having a base and a flange substantially perpendicular thereto, comprising the steps of cutting the bar stock in suitable lengths each having a base portion and a flange portion, shearing the ends of the flange por-

tion to form trunnion sections, shearing the base portion and the trunnion sections to provide a loop section and end trunnions, and punching the loop section to form a loop.

1,783,855. SIGNAL. FRANK P. RADCLIFFE, Fairmont, W. Va. Filed Dec. 21, 1928. Serial No. 327,650. 2 Claims. (Cl. 177—329.)

2. A direction signal for motor vehicles comprising an elongated supporting plate to support a license tag, a hood formed on the upper edge of the plate and having a centrally arranged curved portion, a tubular member having a horizontal portion secured to the upper portion of said hood and extending toward one end of the hood and laterally of the curved portion thereof, said tubular member bent to extend upwardly from the hood to provide a vertical supporting portion and curved slightly back upon said horizontal portion and having its free end spaced a considerable distance from the hood, pairs of oppositely disposed branch members formed on the vertical supporting portion of the tubular member, casings secured to the ends of the branch members, electric lamps in the casings, said casings arranged in oppositely disposed pairs and one pair arranged above the other pair, covers for the casings and having direction characters thereon to be illuminated by the electric lamps, one of the casings of the lower pair on the opposite side of the stem from the horizontal portion of the tubular member secured to the hood, and fasteners securing the casings of each pair together, said centrally arranged curved portion of the hood receiving a tail lamp.

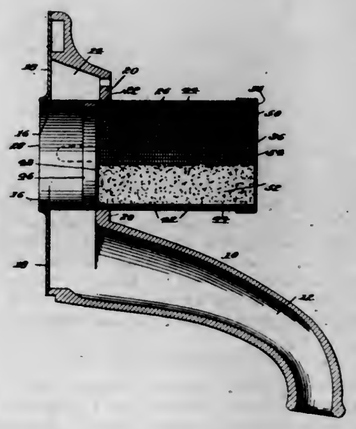


1,783,856. LIFTING DEVICE. GEORGE B. RANDOLPH, San Antonio, Tex. Filed Feb. 25, 1930. Serial No. 431,313. 4 Claims. (Cl. 244—18.)

1. A lifting device comprising, a vertically disposed tank having a restricted outlet at its upper end, a fluid compressor pump or pumps located at the lower end of the tank for compressing a fluid therein and discharging the compressed fluid therefrom, and a pair of oppositely

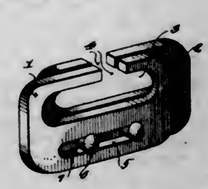
rotating fan elements disposed above the outlet and having their blades directed against the flow of fluid from the outlet.

1,783,857. APPARATUS FOR PREVENTING THE PASSING OF DANGER SIGNALS. FRIEDRICH KARL SCHMIDT, Speldorf, Muelheim-on-the-Ruhr, Germany. Filed Sept. 18, 1929, Serial No. 393,457, and in Germany Dec. 3, 1927. 3 Claims. (Cl. 246—174.)



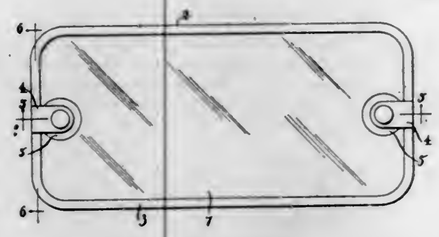
1. Apparatus for preventing the passing of danger signals by the operation by automatic control of a source of power effecting the actuation of a signalling or brake mechanism, the said control being effected by means of stops on the train operated by stops on the track, comprising a series of elastic rigidly mounted vehicle stops upon the train, co-operating track section stops staggered relatively one to the other to engage the vehicle stops in sequence, and locking mechanism provided for each vehicle stop except the first to render the said vehicle stops depending upon the actuation of the preceding stop, the last of said vehicle stops serving to effect the control of the source of power.

1,783,858. VALENCIENNES LACE. ALFONS L. SEIWERTS, Barmen-Langerfeld, Germany, assignor to the Firm A. Rohleder, Barmen, Germany. Filed Sept. 21, 1929, Serial No. 394,262, and in Germany Apr. 12, 1929. 3 Claims. (Cl. 96—24.)



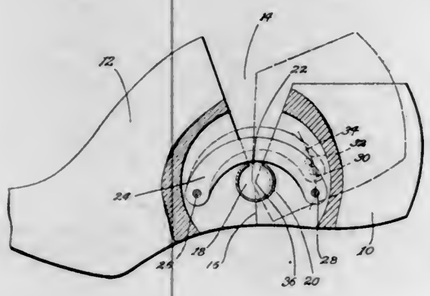
1. Imitation Valenciennes lace produced on a single-thread braiding machine in which the warp threads in the reticulated ground of the lace are intertwined with the bobbin threads to form therewith obliquely extending partial braids, and in which the warp threads in the pattern of the lace are arranged as longitudinally extending stem threads between the bobbin threads which are braided in a simple plait.

1,783,859. DISINFECTING ATTACHMENT FOR VACUUM CLEANERS. BERNARD P. SMITH, Rahway, N. J., assignor to The Regina Corporation, Rahway, N. J. Filed Jan. 19, 1929. Serial No. 333,736. 9 Claims. (Cl. 167—3.)



5. In combination with a vacuum cleaner having a casing provided with an attachment opening and an intake nozzle communicating with suction means, a container adapted to contain disinfectant material and having an intake opening and an end opening for discharge, said discharge end being adapted to be inserted in the said attachment opening, means associated with a wall of the container and the attachment opening for fixing the position of the container when inserted in the attachment opening, and means for substantially closing the line of communication between the intake nozzle and the suction means, said closure means acting to close said line of communication when the container is inserted in the attachment opening.

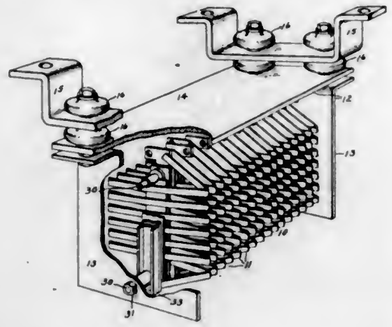
1,783,860. LAP LINK. RICHARD L. STOCKARD, Forrest City, Ark. Filed June 21, 1928. Serial No. 287,285. 2 Claims. (Cl. 59—87.)



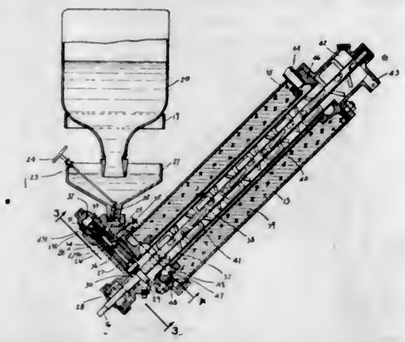
1. As an article of manufacture, a pair of similarly constructed link members, each member being elongated and consisting of parallel sides and ends, one side having an opening, the other side being considerably and uniformly broadened throughout its entire length, thus giving strength to the ends, the broadened side of one link member having a slot therein, and headed pins extending through said slot and being carried by the broadened side of the remaining link member, thus slidably connecting said members together, as and for the purposes set forth.

1,783,861. ANTIFROST DEVICE. EDWARD A. THIEM, Minneapolis, Minn. Filed Oct. 10, 1929. Serial No. 398,651. 3 Claims. (Cl. 20—40.5.)

1. A windshield anti-frost device, consisting of a frame comprising two strips of angular metal with their free ends bent at substantially right angles with the body of the strips, bracket portions separately connected to and supporting adjacent ends of said metal strips to form a frame end, a transparent sheet secured inside the flange of said frame, a sealing strip secured around the edge of the transparent sheet inside the flange of the frame, and vacuum cups supported by said brackets in a position spaced from the ends of the frame and said sealing strip.



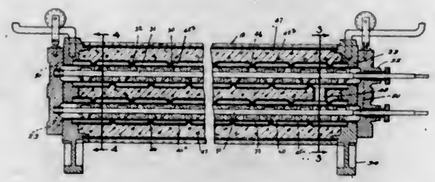
1,783,862. HINGED LAST. GEORGE C. THOMAS, Swampscott, Mass., assignor to Fitz-Empire Double Pivot Last Company, Auburn, Me., a Corporation of Maine. Filed Oct. 25, 1922, Serial No. 596,867. Renewed Oct. 9, 1930. 4 Claims. (Cl. 12—136.)



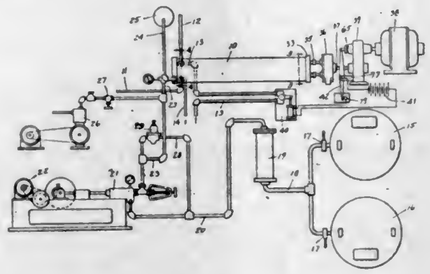
1. A last comprising a forepart, a heel part, a single resilient abutment pin in the joint between the last parts and extending across the last and an inextensible link with its ends pivoted to the last parts and extending over the pin in an arch, the line joining the ends of the link lying below the center of the abutment pin, the said pin being deformable under pressure to effect a resiliently resistant initial collapsing movement.

1,783,863. ELECTRICAL RESISTOR. JOHN F. TRITLE, Erie, Pa., assignor to General Electric Company, a Corporation of New York. Filed June 15, 1928. Serial No. 285,728. 3 Claims. (Cl. 201—74.)

1. A resistor assembly comprising a plurality of resistance units, each unit comprising a flattened helix of metal ribbon wound flatwise, an insulating support disposed within said helix and in contact with a relatively small area of the inner surface of said ribbon, insulated metallic spacers between adjacent units to which terminals of the units are connected, and means for clamping said helixes, supports, and spacers together to form a rigid assembly.

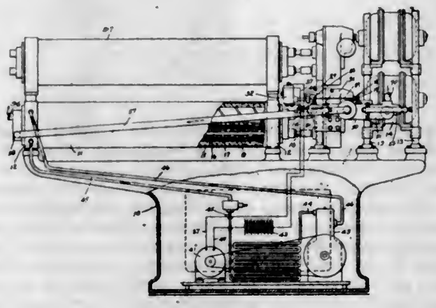


1,783,864. APPARATUS AND PROCESS FOR TREATING MATERIALS. CLARENCE W. VOGT, Louisville, Ky., assignor to Vogt Instant Freezers, Inc., Louisville, Ky., a Corporation of Delaware. Filed Nov. 1, 1928. Serial No. 316,567. 53 Claims. (Cl. 61—114.)



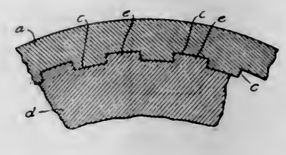
21. The method of refrigerating a material to effect rapid crystallization of at least a portion thereof which includes causing the material to flow in a comparatively thin confined layer over a heat transfer surface, subjecting said surface to the action of a refrigerating medium and rapidly and mechanically agitating the material during such flow.

1,783,865. MACHINE FOR PROCESSING MATERIALS. CLARENCE W. VOGT, Louisville, Ky., assignor to Vogt Instant Freezers, Inc., a Corporation of Delaware. Filed Mar. 17, 1928. Serial No. 262,339. 11 Claims. (Cl. 257—63.)



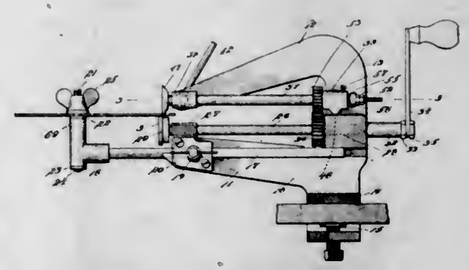
1. A machine for processing materials, comprising a member having a plurality of individual tubular processing chambers positioned therein and extending parallel with each other through which the material is adapted to be continuously passed, means for forcing the material therethrough under pressure, means for controlling the temperature of said individual processing chambers, said chambers communicating with each other in series for causing the material to pass through each of said chambers during the processing thereof, rotatable whipping blades mounted in each of said chambers for whipping and agitating the material as its temperature is varied in passing therethrough, and a single drive for rotating said blades.

1,783,866. PROCESS AND APPARATUS FOR TREATING MATERIALS. CLARENCE W. VOGT, Louisville, Ky., assignor to Vogt Instant Freezers, Inc., Louisville, Ky., a Corporation. Original application filed Mar. 17, 1928, Serial No. 262,339. Divided and this application filed Dec. 31, 1928. Serial No. 329,596. 29 Claims. (Cl. 257—101.)



5. A machine for continuously processing materials, comprising a processing chamber, means for continuously passing material to be processed therethrough, an agitating and processing member rotatably mounted in said chamber, a pipe line for supplying a temperature-changing medium to said chamber, a valve in said pipe line, an electrically operable control for said valve, driving means for said member, and a mechanism connected between said driving means and processing member adapted to be actuated by the torque imparted to said processing member by the resistance of said material for actuating said control, whereby the passage of said medium to the chamber will be varied in accordance with the resistance of the material.

1,783,867. MACHINE FOR PROCESSING MATERIALS. CLARENCE W. VOGT, Louisville, Ky., assignor to Vogt Instant Freezers, Inc., a Corporation of Delaware. Filed June 11, 1928. Serial No. 284,458. 25 Claims. (Cl 62—114.)

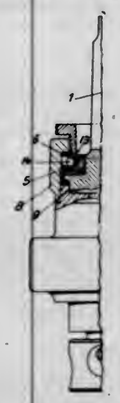


1. A machine for processing materials, including a processing chamber, means for positively forcing the material to be processed therethrough, a by-pass for relieving said means of excess material, a valve in said by-pass, agitating means in said chamber, and means controlled by the resistance to the agitation of the material in the chamber due to its plasticity for controlling said valve.

1,783,868. PAPER MANUFACTURE. MAX WENZEL, MULDENSTEIN, near Bitterfeld, Germany. Filed Oct. 17, 1929, Serial No. 400,268. and in Germany Sept. 6, 1928. 5 Claims. (Cl. 92—47.)

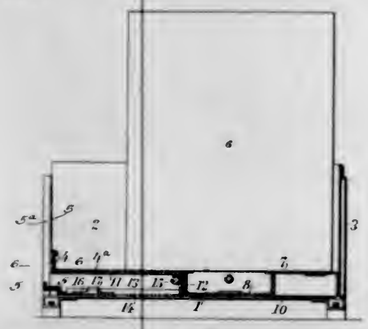
1. The press roller adapted for use in paper manufacture which comprises a roll, projections on the surface of said roll, a bandage covering the surface of said roll, and preformed indentations in said bandage adapted to receive said projections.

1,783,869. GASKET-CUTTING MACHINE. JOHN L. ALLEN, New Bedford, Mass. Filed July 3, 1929. Serial No. 375,735. 3 Claims. (Cl. 164—63.)



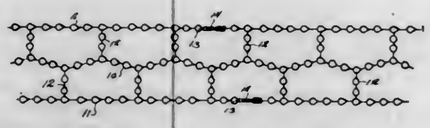
1. In a cutting machine, a U-shaped frame having two legs and a base, a shaft rotatably mounted in fixed bearings and extending along one leg, a cutter element on the end thereof, a second rotatable shaft extending along the other leg, a second cutter element on one end of said second shaft in operative contiguity to said first cutter element, a bearing for the other end of said second shaft pivotally mounted in said frame, a movable bearing for the cutter end of said shaft, an eccentric rotatably mounted at the end of said other leg, means operatively connecting said eccentric to said movable bearing, means for rotating said eccentric to move said bearing and swing said second shaft on its pivotally mounted bearing, whereby said second cutter element is movable with respect to said first cutter element, means for rotating said shafts, and means for adjusting one of said shafts axially.

1,783,870. CHUCK FOR TORSIONAL STRESSES. FRIEDRICH ANTON AUGENTHALER. Berlin, Germany. Filed Oct. 16, 1928, Serial No. 312,883, and in Germany Dec. 1, 1927. 5 Claims. (Cl. 279—1.)



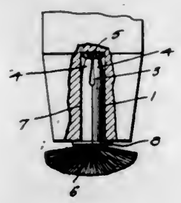
1. A casing, two rotatable parts held in operative relation and in axial alignment by said casing, and frictional means interposed between said rotatable parts, in combination with bearing balls, a ball race arranged in said casing concentric with the axes of said rotatable parts and hav-

ing an annular conical surface engaged by said balls, and an adjusting member having an annular conical surface concentric with said ball race and engaging said balls, the



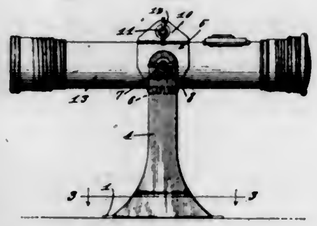
conical faces of said adjusting member and of said ball race extending at different angles with relation to their common axis.

1,783,871. POSTING TRAY. PHILIP BERGMANN, Philadelphia, Pa., assignor to Columbia Steel Equipment Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Oct. 26, 1927. Serial No. 228,849. 3 Claims. (Cl. 129—16.)



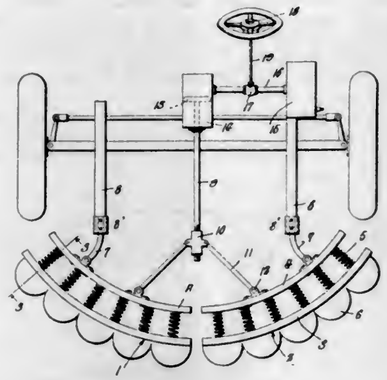
1. In combination with a posting tray having ends, and a bottom so formed as to provide a longitudinal pocket beneath a portion of the posting tray and said ends, a removable side for the posting tray adapted to be transferred from a vertical position to a substantially horizontal position in the said pocket, and means on said removable side adjacent the upper longitudinal extremities thereof, for locking it in its vertical position to said ends.

1,783,872. TIRE CHAIN. JESSE LEE DOSS, Evanston, Wyo., assignor of forty-eight per cent to G. A. De Freece, Midwest, Wyo. Filed July 30, 1929. Serial No. 382,172. 1 Claim. (Cl. 152—14.)



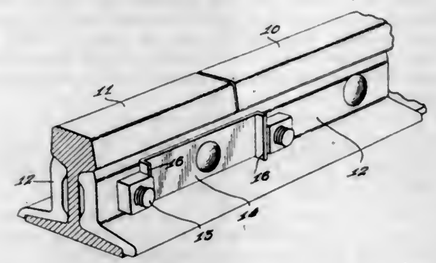
A tire chain comprising an endless tread chain adapted to be loosely positioned on the tread of the tire, a pair of split side chains, a plurality of cross chains secured to said side chains and terminating at said endless chain, said cross chains being disposed in staggered relation to each other, and tensioning means carried by one end of each of said side chains and engageable in selected links in the opposite end of each side chain whereby to tighten the side chains, said cross chains upon tightening of the side chains being adapted to dispose the endless chain in staggered relation across the tread of the tire.

1,783,873. FURNITURE CASTER. THOMAS P. DUNCAN, Jr., Newport News, Va. Filed June 21, 1928. Serial No. 287,218. 1 Claim. (Cl. 45—137.)



A furniture caster comprising a metal cylinder having oppositely disposed longitudinal slits formed in one end thereof, said slitted end of the cylinder being adapted for extension into a bore in the leg of an article of furniture, a flange formed about the other end of the cylinder for engagement against the furniture leg, and a twisted body of fibrous material extending through said cylinder and projecting slightly beyond the slitted end, those portions of the cylinder formed by slitting the same being compressed to grip the body therein, the other end of said fibrous body being frayed and tufted to form a supporting dome, that end of the body adjacent the slits of the cylinder being adapted to be wedged between the adjacent cylinder end and the inner wall of a bore in which the cylinder is positioned.

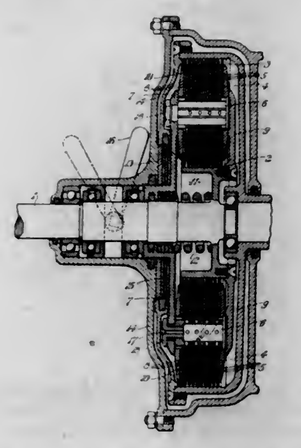
1,783,874. SAFETY HOLDING DEVICE FOR FLASH LIGHTS. HARRY R. DRYDEN, Pittsburgh, Pa. Filed Dec. 4, 1929. Serial No. 411,652. 1 Claim. (Cl. 240—52.)



A holder for flashlights, comprising a metal member provided with a substantially rectangular base, spring sides arising from two of the opposite edges of the base and gradually decreasing in thickness from the juncture of the base to the outer end, a ring clamp comprising two hingedly connected sections having threaded studs extending therefrom and received through openings in the sides of the base and designed to be engaged by wing nuts, the said sides of the base exerting an outward pressure with respect to each other, outwardly projecting ears on the ring clamp sections, a threaded stud carried by one of said ears passing through the other ear and engaged by a wing nut.

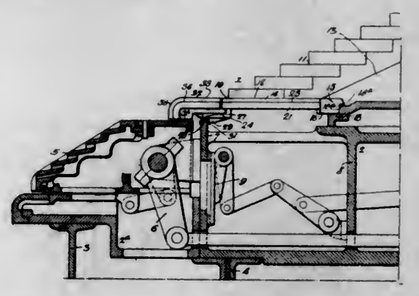
1,783,875. BUMPER. LOUIS FERDINAND, Drifton, Pa. Filed Apr. 21, 1930. Serial No. 446,055. 3 Claims. (Cl. 293—55.)

1. A bumper for a vehicle comprising a pair of sections arranged in a horizontal plane, means for pivotally connecting the outer end of each section to a front part of a vehicle and means connected with the inner ends of the members for moving said members forwardly and outwardly.



1,783,876. RAIL NUT LOCK. JAMES O. GOULD, Summerville, Pa. Filed July 17, 1929. Serial No. 379,001. 3 Claims. (Cl. 238—262.)

1. A nut lock comprising an elongated plate having an eccentrically located bolt receiving opening, a bolt passed through the opening and accommodating a nut, said plate having a slot opening to the opposite end and to one side of the longitudinal center thereof, the wider portion being reversely bent upon the plate to dispose the extremity thereof in abutting engagement with the immediate portion of the nut, and the narrower portion being projected outwardly in alignment with the the plane of the plate and in opposed relation to that of the wider portion.

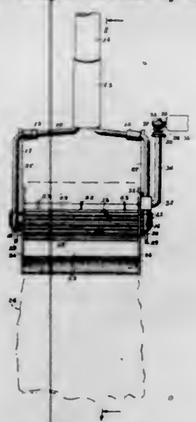


1,783,877. VARIABLE-SPEED AND REVERSING EPICYCLIC GEAR. NICOLAI GRIBOJEDOFF, Teddington, England. Filed Sept. 7, 1929. Serial No. 391,032, and in France Oct. 1, 1928. 2 Claims. (Cl. 74—34.)

1. An epicyclic variable speed and reversing gear comprising a driving shaft, a driving pinion mounted on said shaft and having a plate extending from its periphery, a driven internally toothed crown wheel coaxial with and enclosing said pinion, a planet wheel carrier rotatable on and slidable longitudinally of said shaft, a plurality of planet wheels mounted on said carrier between the latter and said plate and meshing with said pinion and crown wheel, each of said planet wheels comprising a plurality of interleaved friction disks and peripherally toothed discs held against rotation when clamped together between said carrier plate and friction braking means mounted for cooperation with said carrier, the movement

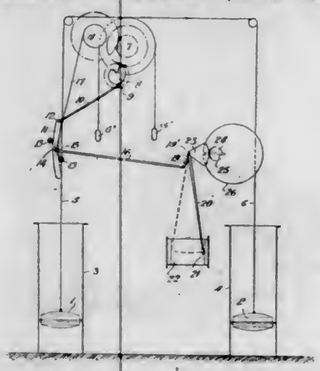
of the carrier longitudinally of said shaft controlling clamping and releasing of said friction disks and engagement and disengagement of the carrier with said friction brake means.

1,783,878. GRATE CONSTRUCTION. CLIFFORD E. HARRISON, Philadelphia, Pa., assignor to American Engineering Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed June 3, 1925. Serial No. 34,626. 1 Claim. (Cl. 110—33.)



A plate extension for stoker grates comprising longitudinally detachable front and rear sections, the front section having a recess and the rear section an opening in alignment with the recess, a locking pin projecting through the opening and into the recess and preventing longitudinal separation of said sections, and vertically interlocking means on said sections located in spaced relation longitudinally of the sections and respectively at opposite sides of said pin.

1,783,879. MOP WRINGER AND HOLDER. DUNCAN KENNER, New Orleans, La., by court order, Mrs. Emma Tujague Kenner sole heir and legatee of Duncan Kenner deceased. Filed May 28, 1929. Serial No. 366,640. 3 Claims. (Cl. 15—119.)



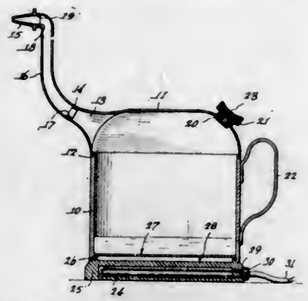
1. A mop wringer and holder comprising the combination of yoke members having a handle, cooperable wringing rollers mounted for rotation on said yoke members respectively, side guard plates, means carried by the yoke members which support said guard plates respectively adjacent the ends of said rollers, the edge of each

guard plate projecting beyond the peripheral surfaces of both rollers, and scrapers carried by said guard plates,

said scrapers extending parallel to and adjacent said rollers to receive therebetween a mop pad to remove foreign matter therefrom during the wringing operation.

1,783,880. APPARATUS FOR MEASURING THE FLOW OF LIQUIDS. WALTER GEORGE KENT, Luton, and EDWARD WILLIAM HOVENDEN, deceased, Luton, England, by Jack Reginald Hovenden, London, England, and Alice Harriet Hovenden, Bedford, England, executors, assignors to Builders Iron Foundry, Providence, R. I. Filed Apr. 12, 1930, Serial No. 443,858, and in Great Britain Nov. 3, 1928. 2 Claims. (Cl. 73—167.)

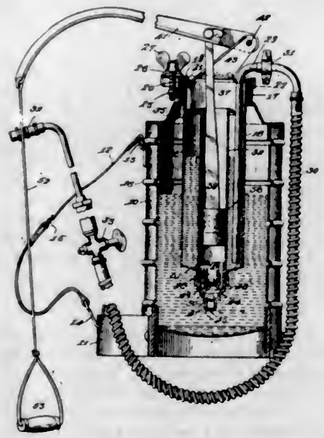
1. In an apparatus for measuring the flow of liquid an open channel, the combination of restrictive means for creating a pressure difference at spaced points along the open channel when there is flow, the apparatus utilizing the formula



$$H_2\sqrt{H_1-H_2}$$

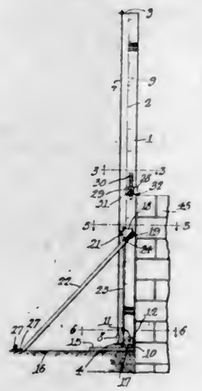
where H_1 and H_2 indicate the different liquid levels created by the aforementioned restrictive means; float chambers in fluid communication with the channel at the points of pressure difference above mentioned; a float in each chamber; a differential device; means operatively connecting said differential device with each float; a square-root cam in operative engagement with the differential device; an actuating arm; means operatively connecting the square-root cam and the actuating arm, whereby the factor

$$\sqrt{H_1-H_2}$$



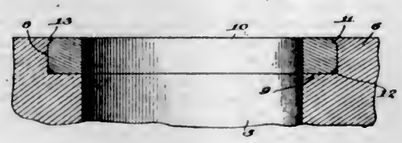
is applied to the actuating arm; means responsive to the liquid level in one of the float chambers and directly connected to the actuating arm, thereby applying the factor H_2 to that arm; recording mechanism, and means controlling said recording mechanism from said actuating arm.

1,783,881. PERMANENT-WAVE BEAUTIFIER. JOHN KOERNER, Brooklyn, N. Y. Filed Nov. 2, 1929. Serial No. 404,347. 3 Claims. (Cl. 219—44.)



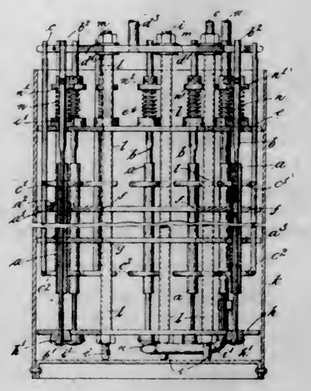
1. A permanent wave beautifier including a hollow receptacle having a handle at one of its sides, an outlet member at the opposite side, the upper portion of said receptacle having a filling opening adjacent to said handle, a screw threaded cap for said filling opening, whereby said handle is graspable by the fingers of one hand of the user while the thumb rests upon said filling opening cap, a nozzle member, an elongated tubular member having its opposite ends screw threadedly engageable with said nozzle member and said outlet member, respectively, a base secured at the lower part of said receptacle, said base including an electric heating element, said base having upstanding portions and said receptacle having downturned portions cooperative with the latter to form a heating chamber below said receptacle and above said heating element, and electrical connections for said heating element.

1,783,882. HAND-PUMP SPRAYER. MAX A. KOHN, Harrisburg, Pa. Filed Sept. 10, 1928. Serial No. 305,054. 1 Claim. (Cl. 299—97.)



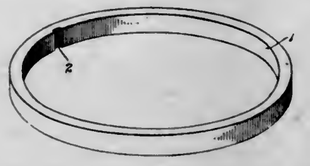
In a spraying apparatus, a main liquid containing tank, a pressure tank located centrally therein, and having a flange at its upper end reposing upon the upper edge of said tank, a cap closing both of said tanks and having a horizontally disposed slot opening at one edge thereof, a horizontal partition arranged within the pressure tank adjacent the top thereof, a cylinder located within the pressure tank, a flange on the upper end of said cylinder and supported by said partition, a supply pipe having its inner end located within the pressure tank adjacent the bottom thereof, said pipe being extended through the top of said tank and received by the slot of said cap, a piston operating within the cylinder, check valve controlled ports providing communication between the main tank and the pump cylinder, and between the pump cylinder and the pressure tank, a piston rod projecting through said cap, and means connected with the piston rod for operating the piston with the apparatus supported on the back of the user.

1,783,883. PLUMBING DEVICE. LEWIS K. LARRISON, Wharton, N. J. Filed Nov. 12, 1927. Serial No. 232,894. 2 Claims. (Cl. 33—85.)



1. In a device of the class described, a substantially vertical post, a plumbing device carried by the post, a foot, means for connecting the lower end of the post pivotally with the foot, a rider adjustable on the post longitudinally thereof, means for holding the rider in adjusted positions longitudinally of the post, braces inclined with respect to the post, means for connecting the upper ends of the braces adjustably with the rider to permit plumbing of the post, and means anchoring the lower ends of the braces.

1,783,884. VALVE-SEAT LINER. CLIFFORD C. LEE, Aberdeen, S. Dak., assignor to K. O. Lee & Son Co., Aberdeen, S. Dak., a Corporation of South Dakota. Filed Sept. 18, 1929. Serial No. 393,504. 4 Claims. (Cl. 251—167.)

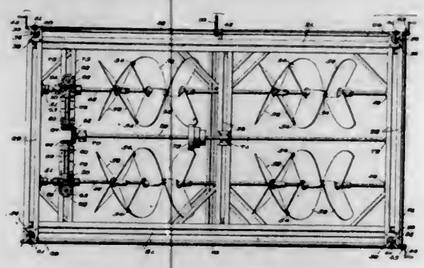


1. A cylinder block construction having a vertical passage opening through the top of the block, said block being provided with a bored recess adjacent the opening in said block, said recess having a vertical cylindrical wall, a liner fitted within said recess and of greater external diameter than the diameter of said recess whereby said liner will be frictionally held within said recess, said liner being provided at its outer edge with an annular bevelled surface, and means on the outer edge of the wall of said recess being adapted to retain said liner in position.

1,783,885. APPARATUS FOR ELECTROLYTICALLY DEPOSITING METAL ON METAL TUBES. FRANCIS GRIMSHAW MARTIN and WILLIAM RAMSEY, Birkenhead, England, assignors to J. Stone & Company Limited, Deptford, England. Filed Sept. 29, 1927, Serial No. 222,829, and in Great Britain Apr. 22, 1927. 14 Claims. (Cl. 204—5.)

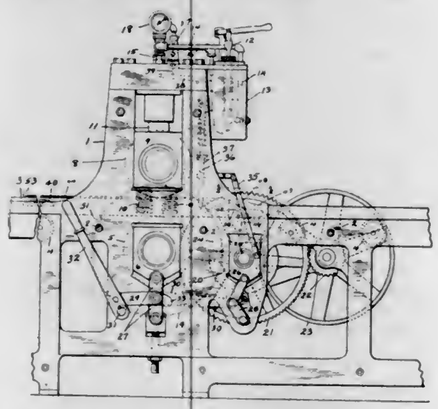
7. In electrolytic apparatus for carrying out processes of the kind referred to, the combination of a tank, a cathode frame comprising end rings and a series of intermediate perforated rings, gripping devices associated with said intermediate rings adapted for frictionally engaging tubes inserted into the perforations of said intermediate rings, flexible anodes arranged between the top and bottom rings and within said tubes, abutments on said anodes, compression springs between an end ring and said abutments, a terminal device connected with said anodes, insulated conductors suspended from said terminal device, anodes supported by said conductors and adapted to surround the ends of the tubes, and an electric terminal for said cathode frame.

1,783,886. PISTON-RING CASTING. THURLOW E. MCFALL, Sparta, Mich. Filed Feb. 17, 1930. Serial No. 429,001. 8 Claims. (Cl. 29—156.62.)



2. A piston ring casting adapted to be split substantially midway between its opposed flat sides to make two ring castings, and a marking means on said ring casting at each side of a central plane located substantially midway between the opposite flat sides of the ring casting, whereby when the ring casting is split into two parts each part thereof will carry a marking indication, for the purposes described.

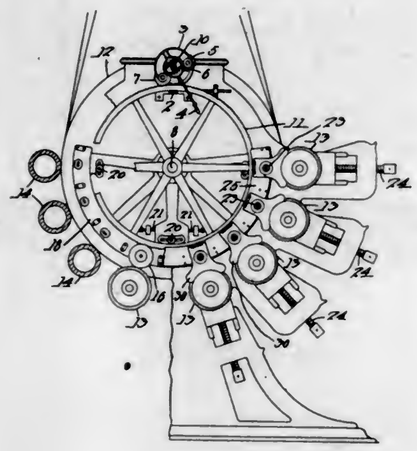
1,783,887. HYDRAULIC POWER DEVICE. WILLIAM R. MORRIS, Fairfield, Idaho, assignor of one-half to Robert Henry Morris and one-half to Raymond Guy Morris, Boise, Idaho. Filed Mar. 7, 1928. Serial No. 259,886. 10 Claims. (Cl. 170—150.)



1. In a device of the class described, an impeller, comprising a shaft, a plurality of vanes arranged in sets,

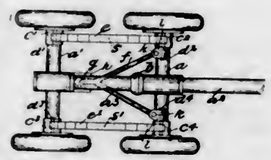
with the vanes of each set disposed in spaced and reversed angular relation one with respect to the other

along said shaft, certain of the vanes of each set having portions of their peripheral edges abutting, and means for securing the abutted edge portions together.



1,783,888. TRANSFER PRESS. FRANK T. SHEEDY, HUGH C. WOOD, and LOUIS TRAUNG, San Francisco, Calif., assignors, by direct and mesne assignments, to The Traung Company, San Francisco, Calif., a Copartnership consisting of Louis Traung, Charles F. Traung, L. H. Jackson, H. W. Johnston, Frank T. Sheedy, and H. T. Gardner. Filed Mar. 10, 1930. Serial No. 434,516. 12 Claims. (Cl. 101—33.)

1. A transfer press comprising a frame, a flat bed reciprocable on said frame, a pressure roll extending across the upper face of said bed, a layer of tough resilient rubber on said roll, means for forcing said roll toward said bed, a supporting roll under said bed and under said pressure roll, means for lowering said supporting roll out of contact with said bed, a reversing roller under said bed and means for elevating the reversing roller to contact said bed, the means for lowering the supporting roll and elevating the roller comprising vertically movable bearings for the roll and roller, toggle levers supported from the frame of the press arranged for moving the bearings up and down, and operating linkage connecting the toggle levers.

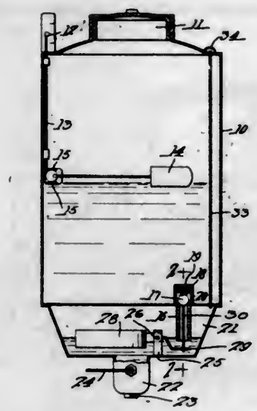


1,783,889. GEARING FOR TEXTILE-PRINTING MACHINES. HERMAN A. SMITH and GEORGE H. THOMSON, Worcester, and STEPHEN B. STAFFORD, Oxford, Mass., assignors to Rice, Barton & Fales, Incorporated, Worcester, Mass., a Corporation of Massachusetts. Filed Oct. 12, 1929. Serial No. 399,266. 9 Claims. (Cl. 101—178.)

1. In a color printing machine, the combination with a main cylinder and a series of color rollers mounted to contact therewith, of an intermediate gear centered on the same axis as the cylinder, means for driving said gear,

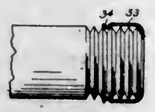
a series of pinions for driving the color rollers from the intermediate gear, all adjustable as a whole circumferentially, and means for preventing their adjustment radially.

1,783,890. SELF-PROPELLED ROAD VEHICLE. ERNEST THOMAS JAMES TAPP, London, England. Filed Jan. 29, 1930, Serial No. 424,401, and in Great Britain Nov. 5, 1928. 2 Claims. (Cl. 180—22.)



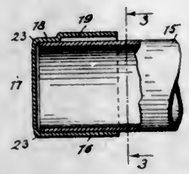
1. In a road vehicle, a pair of rear axles, springs secured to said axles, pins securing said springs to one of said axles and having a portion extended to project from one side of said springs and in parallel relation to said mentioned axle, a rigid triangular member arranged between the axles, means having bearing upon the extended portion of said pins and hingedly connecting the base of said triangular member to said pins, and a longitudinally slidable joint pivotally connecting the apex of said triangular member to the remaining axle, whereby transverse movement of one of said axles is transmitted through the triangular member to the other axle.

1,783,891. FEED TANK. NAPOLEON R. THIBERT, Worcester, Mass. Filed Mar. 4, 1930. Serial No. 433,164. 3 Claims. (Cl. 137—21.)



1. The combination with a storage tank adapted to be hermetically sealed and having a port in the bottom, a valve closing said port, and a pipe extending downwardly from said port, of a distributing tank into which said pipe extends, a float in the distributing tank, and means connected with said float for operating the valve, whereby

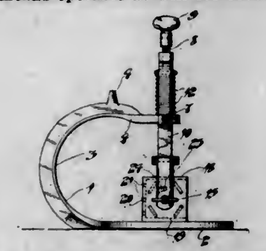
when the float descends the valve will open and when the level of liquid in the distributing tank descends low



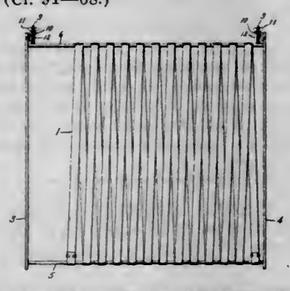
enough to bring the float down to open the valve, the lower end of said pipe will be unsealed and air will be admitted into the storage tank.

1,783,892. THREAD PROTECTOR. HERMAN A. UNKE, Cleveland, Ohio. Filed Apr. 19, 1928. Serial No. 271,187. 5 Claims. (Cl. 137—91.)

1. In combination with a threaded element, a thread protector comprising a metal sleeve having at one end thereof an end wall portion engaging the end of the threaded element, and at its other end said sleeve having a non-circular inturned annular bead engaging the threads of said element at spaced points only.



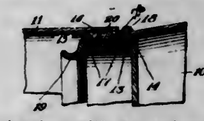
1,783,893. PIPE-END PROTECTOR. HERMAN A. UNKE, Cleveland, Ohio. Filed Nov. 23, 1928. Serial No. 321,319. 5 Claims. (Cl. 137—91.)



1. A pipe end protector comprising a metallic cap having a cylindrical skirt portion adapted to form a drive fit with the end portion of a pipe and having a resilient sleeve extension formed with spaced outwardly bulging lobes and adapted to frictionally engage the wall of said pipe at points intermediate said lobes.

1,783,894. VULCANIZING APPLIANCE. JAMES DOUGLAS VOSS, Oakleigh, near Melbourne, Victoria, Australia. Filed July 12, 1928, Serial No. 292,287, and in Australia Mar. 19, 1928. 7 Claims. (Cl. 18—18.)

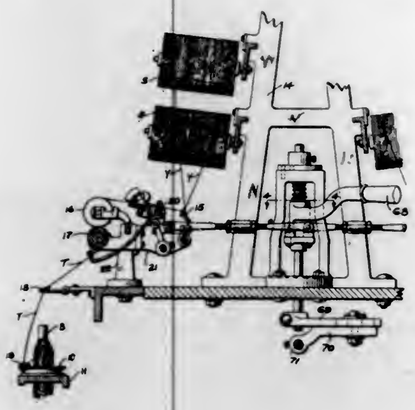
4. In a vulcanizing chamber a heating chamber provided with a plurality of heating surfaces adapted for operation in turn, the combination therewith of a sliding member under spring control adapted to carry the heated surface of the chamber into contact with the article to be vulcanized, means operable at will for reversing the heating surfaces, and a pivoted arm fitted with an adjusting screw adapted to maintain the spring controlled rod and consequently the heating chamber at pressure during the contact of the heating chamber with the article being vulcanized.



1,783,895. METHOD OF RESTORING SHRUNKEN FILMS. JAMES G. E. WRIGHT, Alplaus, N. Y., assignor to General Electric Company, a Corporation of New York. Filed June 28, 1929. Serial No. 374,595. 3 Claims. (Cl. 91—68.)

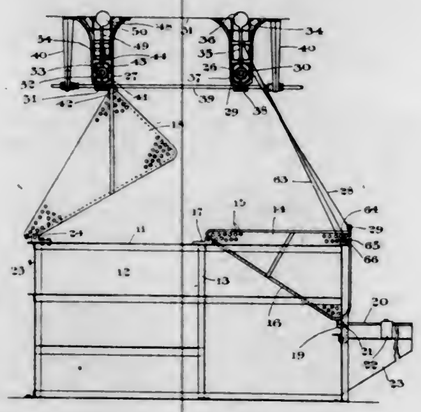
1. The process of restoring a shrunken celluloid photographic film substantially to its original length which comprises softening the emulsion on the film, soaking the film in a camphor solution to elongate it, and drying it while maintained in its elongated condition.

1,783,896. DRIP AND TRIM MOLDING. JOSEPH B. ZIMMERS, Chicago, Ill. Filed Apr. 20, 1925. Serial No. 24,650. 6 Claims. (Cl. 180—69.01.)



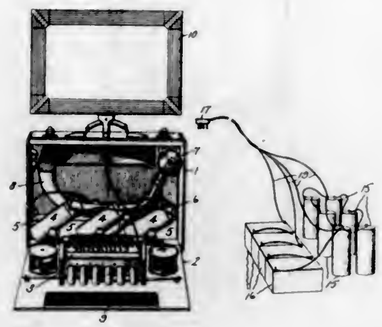
1. The combination with an automobile of a molding consisting of a channel strip with edges forming a restricted entrance opening, means spaced within the channel enclosure for attaching the molding to a body: one of the edges forming a bead, the other edge formed into a depending drip trough; a nonferrous removable insert having flange means for insertion in the channel and adapted to be held therein by the coaction of the said flanges with the inner walls of the channel.

1,783,897. YARN STOP MOTION FOR TWISTING MACHINES. CHARLES AVEYARD, Lowell, Mass., assignor to Whitin Machine Works, Whitinsville, Mass., a Corporation of Massachusetts. Filed Mar. 7, 1929. Serial No. 345,076. 8 Claims. (Cl. 117—33.)



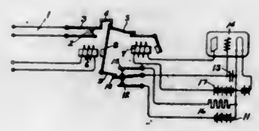
1. In a twisting machine, a member having spaced yarn clamping portions, a clamping bar, said member and bar

being mounted for relative movement toward and away from each other, and one thereof being provided with thread engaging means effective to hold said member and bar in spaced relation during the normal operation of



the machine, and means to move said bar between said spaced portions to clamp the yarn upon thread breakage, said clamping bar being wedge-shaped in cross section and having its lower edge portion of less width than the distance between the clamping portions of said member.

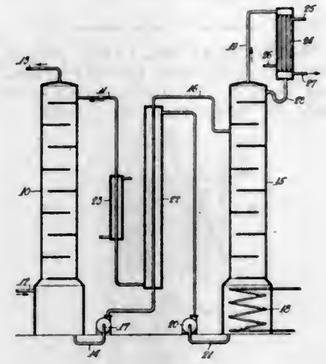
1,783,898. BRINING MACHINE. JAMES J. BARRY, Dartmouth, Nova Scotia, Canada. Filed Oct. 15, 1928. Serial No. 312,689. 8 Claims. (Cl. 99—2.)



1. In a brining machine, a frame, a brining tank formed therein, a weighing scoop attached along one edge to the frame, a weighted balance lever secured to the frame and adapted to support the weighing scoop, a clutch controlled hoisting unit above the weighing scoop, means operated by the movement of the scoop, to control the clutch to raise or release the weighing scoop, a brining scoop in the brining tank adapted to receive material from the weighing scoop and a hoisting unit for the brining scoop.

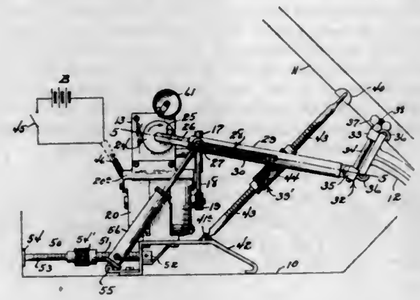
1,783,899. RADIO RECEIVING APPARATUS. FRED C. BARTON, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed July 22, 1925. Serial No. 45,392. 7 Claims. (Cl. 250—14.)

1. The combination, in a radio receiving set, of a receiving apparatus enclosed in a case of such dimensions that batteries for the operation of the set may be located inside of the case, a set of terminal members connected to batteries within the case, movable elements connected to the set and normally in engagement with said terminal members to connect the set with said batteries within the case, and means cooperating with said movable elements to connect batteries outside of the case with said set.



1,783,900. REMOTE-CONTROL SWITCHING SYSTEM. LESTER F. BIRD, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Aug. 5, 1925. Serial No. 48,363. 16 Claims. (Cl. 175—375.)

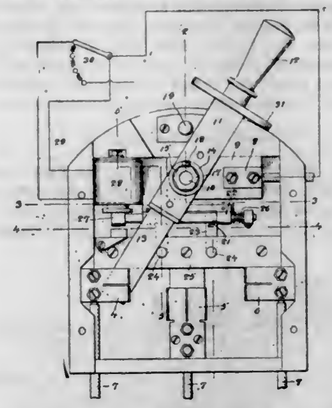
1. The method of controlling the opening and closing of an electric circuit by means of a pair of relays arranged to be energized in response to received energy, which comprises energizing one of the relays to effect closing of the circuit and energizing both of the relays and producing a time interval between the operation thereof to effect opening of the circuit, said time interval being of such duration that said circuit is selectively opened and closed dependent upon the duration of said received energy.



16. In combination, a relay comprising an armature having different circuit controlling positions, and a pair of electromagnets, one of said magnets being arranged to operate said armature to one of said positions and the other magnet being arranged to operate said armature to another position, means for energizing both of said magnets, and means for producing a time delay between operation thereof whereby upon energization of said magnets for a certain interval said armature is operated to one position and upon energization of said magnets for a longer interval said armature is operated to a different position.

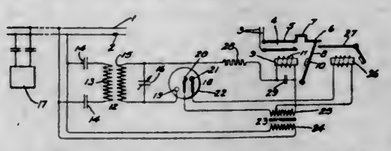
1,783,901. PROCESS FOR SEPARATING ACIDIC GASES. ROBERT ROGER BOTTOMS, Louisville, Ky., assignor to The Girdler Corporation, Louisville, Ky., a Corporation of Delaware. Filed Oct. 7, 1930. Serial No. 486,918. 13 Claims. (Cl. 23—2.)

1. The process of separating an acidic gas from gaseous mixtures, which includes effecting intimate contact of a gaseous mixture with an absorbent agent in liquid form including an amine selected from the group consisting of aliphatic and cycloparaffin amines, and which is free from carboxyl or carbonyl groups, and which has a boiling point not substantially below 100° C.



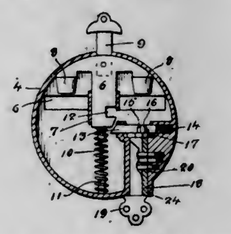
1,783,902. BRAKE ADJUSTER. HENRY BROST, Medford, Wis. Filed Apr. 12, 1929. Serial No. 354,681. 8 Claims. (Cl. 29—84.)

1. In a device of the character described, a stand adapted to be placed in an automobile, a crank arm mounted for rotation upon said stand, a pitman having one end operatively connected to the crank arm and its opposite end adapted for attachment to the foot pedal of the automobile, and means to operate the crank arm to force the pitman in one direction and to permit return movement of the pitman.



1,783,903. ELECTRIC SWITCH. IRA W. BURGESS, Minden, W. Va. Filed Nov. 8, 1929. Serial No. 405,707. 2 Claims. (Cl. 200—15.)

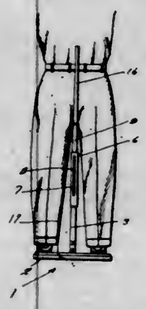
1. An electric switch comprising a casing having a slot in one end thereof, a number of terminals therein, a switch arm pivotally arranged in the casing and having one end extending through the slot therein, a handle on this end, a blade detachably connected with the other end and adapted to engage any of the terminals, a terminal elec-



trically connected with the switch arm and magnetic locking means for locking the switch arm in engagement with any one of the first mentioned terminals.

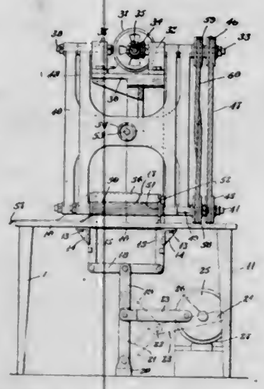
1,783,904. SYSTEM OF DISTRIBUTION. EMMETT F. CARTER and HUGH E. ALLEN, Schenectady, N. Y., assignors to General Electric Company, a Corporation of New York. Filed July 22, 1925. Serial No. 45,393. 11 Claims. (Cl. 175—375.)

7. In combination, an electric circuit, means for controlling the closing of said electric circuit, said means including a control circuit containing a discharge device and a relay, a source of potential connected to said control circuit, the value of the potential being somewhat lower than that required to break down the discharge device and produce a flow of current in the control circuit, means for supplying to the control circuit high frequency current and thereby impressing on the control circuit a potential great enough to cause current to flow therethrough from said source to energize said relay and close said electric circuit, means for maintaining said electric circuit closed, and means for opening said electric circuit, said last mentioned means including an auxiliary relay and thermostatic means for controlling the operation of said auxiliary relay.



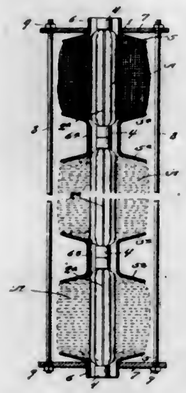
1,783,905. BURGLARPROOF LOCK. DANIEL COPELL, Atlantic City, N. J. Filed Feb. 15, 1929. Serial No. 340,182. 3 Claims. (Cl. 70—17.)

1. A lock of the class described comprising a casing having keeper receiving openings therein, a pair of



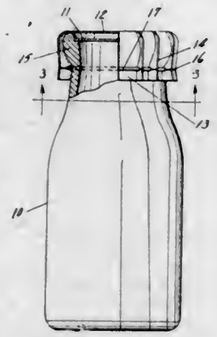
keepers for entering the openings, each keeper having an opening therein, a T-shaped bolt located in the casing and slidably mounted therein and having a depending part on each end of its head part for engaging the openings in the keepers when the bolt is moved to a certain position, spring means for normally holding the bolt in inoperative position within the casing and key operated means for holding the bolt in locking position in the casing.

1,783,906. DEVICE FOR MEASURING THE INSEAMS OF MEN'S TROUSERS AND HEIGHT OF WAISTBANDS. DE WITT DOCKSTADER, Johnston, N. Y. Filed Dec. 17, 1928. Serial No. 326,575. 1 Claim. (Cl. 33—8.)



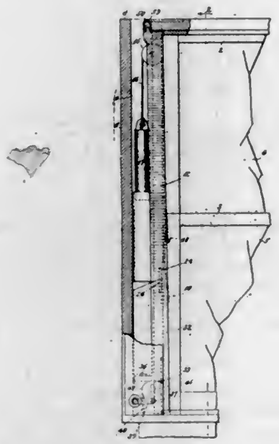
In a measuring device of the class described, a base, a standard extending upwardly therefrom, a guide rod secured at its lower end in the upper end of the standard, a casing encircling the rod and fixedly secured at its lower end on the upper end of the standard, the sides of the casing being formed with opposed longitudinally extending slots, a crotch stick arranged for slidable movement on the rod at the upper end of the casing, guide pins extending laterally from the opposite sides of the crotch stick for cooperation with the respective slots in the casing, and expansible coil springs arranged within the casing and encircling the rod for disposition between the standard and the crotch stick for normally urging the latter outwardly, and a crotch engaging member carried by the upper end of the crotch stick.

1,783,907. SHANKING MACHINE. DANA E. HARDING, Melrose, Mass., assignor to Harding Engineering Company, East Boston, Mass., a Corporation of Massachusetts. Filed Oct. 11, 1928. Serial No. 311,837. 3 Claims. (Cl. 149—20.)



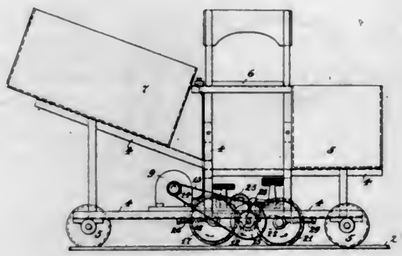
3. In a shanking machine, the combination of a worktable provided with a rectangular perforation, guideways secured to said table at each end of the rectangular opening, a triangular anvil movable through said opening, means on said anvil engaging with said guideways to constrain the anvil to move in a predetermined path, means for imparting a reciprocatory movement to said anvil, and corrugated rolls located above the table and operatively associated with said anvil.

1,783,908. ART OF TREATING YARN. JOHN C. HEBDEN, New York, N. Y., assignor to Dyeing Processes Corporation, New York, N. Y., a Corporation of New York. Filed Mar. 11, 1927. Serial No. 174,597. 6 Claims. (Cl. 8—17.)



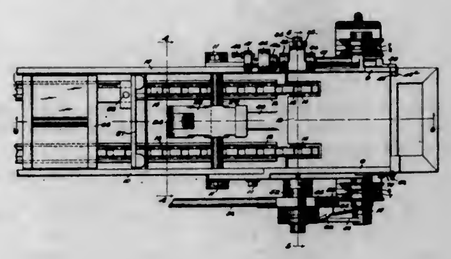
1. The improvement in preparing yarn for treatment with fluids which comprises assembling in axial alinement a plurality of hollow yarn packages in wound form and containing axially hollow, radially pervious, longitudinally fluted holders on which the respective packages are freely movable axially, placing joint-forming heads between the ends of adjacent packages, applying axial compression to the end packages of the series thus formed, causing such compression to be distributed and equalized throughout all the packages by movement of the packages axially on their respective holders, thereby producing uniform density of the yarn in all the packages of the series and forming fluid-tight joints between the ends of the packages and the joint-forming heads, and maintaining such end compression on the series of packages.

1,783,909. BOTTLE CAP. FRANK J. MACDONALD, Eliet, Ohio, assignor of one-half to John R. Gammeter, Akron, Ohio. Filed Dec. 21, 1927. Serial No. 241,561. 5 Claims. (Cl. 215—96.)



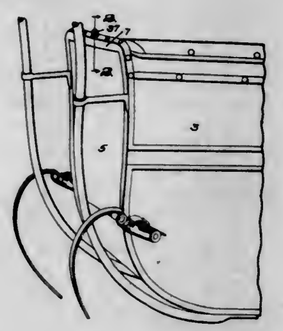
1. A protective cap for milk bottles or the like, comprising a circular head portion, a downwardly turned skirt portion adapted to extend down the neck of the bottle, and a yieldable, elastic band surrounding said skirt portion to hold the latter against the neck of the bottle under yieldable tension, said skirt portion being provided with outstanding reinforcing ribs limiting contraction of the skirt portion.

1,783,910. COLLAPSIBLE WINDOW FRAME. CARL MATTSON, New York, N. Y. Filed Nov. 20, 1929. Serial No. 408,512. 2 Claims. (Cl. 20—12.)



1. A window of the character described, including a pair of swinging parting strips, a sash cord and weight, means for removably connecting said cord with a sash, a hingedly mounted door forming part of said frame, and a lock mechanism for locking said door normally closed, said lock mechanism including a swinging and sliding bolt, said bolt having a portion acting as a lock and a portion acting as a handle, said handle being bifurcated and positioned to receive the end of said sash cord when the same has been removed from said sash, whereby the cord will not accidentally move to a position within the frame.

1,783,911. BOBBIN-SUPPLY TRUCK FOR WINDING MACHINES. JOHN O. MCKEAN, Westfield, Mass., assignor to Foster Machine Company, Westfield, Mass., a Corporation of Massachusetts. Filed Oct. 7, 1929. Serial No. 397,937. 5 Claims. (Cl. 105—33.)

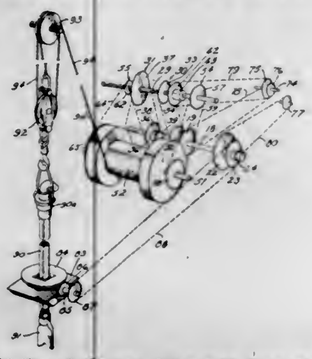


1. A bobbin supply truck arranged to travel back and forth in a fixed path along the side of a winding machine, and a driving mechanism for said truck comprising an electric motor fixedly mounted on the truck and flexibly connected to a fixed point of electric current supply, two driving wheels driven by the motor in opposite directions, spring means for yieldingly holding said wheels out of their driving position and means under the control of the operator for moving either of said wheels into its driving position for moving the truck in the one or the other direction.

1,783,912. CARTON-FEEDING MAGAZINE. EDWARD VAN DER PYL, Wilton, and ROBERT H. STIMPSON, Nashua, N. H., assignors to Automatic Packaging Machinery Company, Nashua, N. H., a Corporation of New Hampshire. Filed July 2, 1928. Serial No. 289,654. 14 Claims. (Cl. 271—62.)

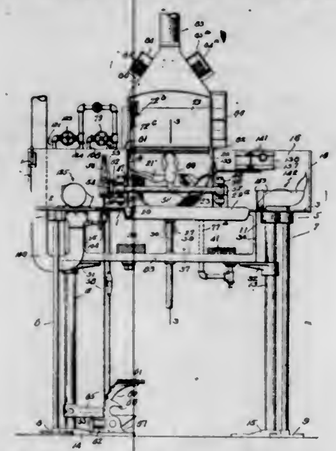
1. In a packaging machine, a reciprocating magazine, carton feeding means actuated thereby, and feed regulating means also actuated thereby.

1,783,913. BABY CARRIAGE. BERTON L. BLANCHARD, Leominster, Mass., assignor to F. A. Whitney Carriage Company, Leominster, Mass., a Corporation of Massachusetts. Filed Apr. 15, 1929. Serial No. 355,058. 4 Claims. (Cl. 280—47.)



1. In a baby carriage body a drop front closing within a frame-like opening, a spring projected bolt received between the faces of said front, a keeper on the opposed edge of the frame, and a releasing device housed between the faces of the frame and having an operating handle exposed at the upper margin of the body and operable to repress the bolt.

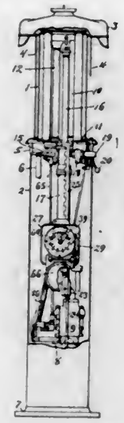
1,783,914. DRAW WORKS FOR USE WITH HILD DRIVES. WILLIAM D. DAVIDSON, Los Angeles, Calif., assignor to Emsco Derrick & Equipment Company, Los Angeles, Calif., a Corporation of California. Filed June 12, 1929. Serial No. 370,405. 10 Claims. (Cl. 255—19.)



1. In a draw-works of the class described, the combination of: a counter-shaft; a drive means for driving said

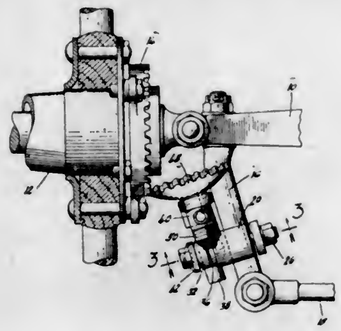
counter-shaft; a line shaft; means whereby said counter-shaft may drive said line shaft; a drum shaft; means

whereby said line shaft may drive said drum shaft; and means on said line shaft whereby said drive means may drive said line shaft.



1,783,915. PROCESS OF AND APPARATUS FOR MOLDING HOLLOW LASTS. WILLIAM J. DE WITT, Auburn, N. Y., assignor to Shoe Form Co., Inc., Auburn, N. Y., a Corporation of New York. Filed Feb. 7, 1927. Serial No. 166,315. 58 Claims. (Cl. 18—19.)

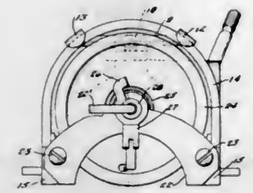
32. Apparatus for use in making hollow shoe forms or lasts from sheet material comprising an inflatable cushion for supporting a blank while being molded, a horizontal rock shaft extending across the front of the cushion, a last supporting jack carried by the shaft, a spring tending to retain the shaft in inoperative position with the last jack remote from the cushion, a crank arm fixed to the shaft, a pedal lever, connection between the pedal lever and said crank arm for rocking the shaft when the pedal is depressed to swing the last supporting jack toward the cushion, and means actuable by the pedal for controlling the admission of steam to the cushion.



1,783,916. LIQUID-DISPENSING APPARATUS. FRANK B. EILERS, Fort Wayne, Ind., assignor to Tokheim Oil Tank and Pump Company, a Corporation of Indiana. Filed Jan. 14, 1929. Serial No. 332,267. 9 Claims. (Cl. 221—100.)

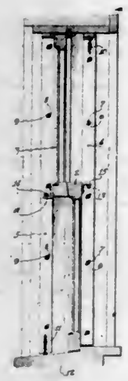
1. In liquid dispensing apparatus, a liquid display vessel; a filling means therefor; a discharge means including a vertically sliding tube and a dispensing valve related therewith through which liquid is dispensed from said vessel; a rack-bar operatively related with said sliding tube, having a series of notches made therein; an apertured lock-bar engageable in said notches selectively to arrest downward movement of said rack-bar; an adjustment including actuating means therefor, operatively related with said rack-bar; a rotatable and longitudinally movable member rotatably actuated by said adjustment and operatively related with said lock-bar with respect to the longitudinal movement of said member; a cam including means for adjustably positioning it, which cam has operative relation with said member respecting longi-

tudinal movement thereof; an indicator operatively related with said member respecting rotary movement thereof; a stop-block having interlocking relation with said rack-bar; a lock-bolt having interlocking relation with said lock-bar; a mechanism operatively related with said stop-block and bolt; a discharge lever operatively related with said dispensing valve and mechanism; and an interlocking mechanism related with the rack-bar and said filling means whereby operation of the rack-bar is prevented during operation of the filling means and vice versa.



1,783,917. SPEEDOMETER-DRIVE CLAMP. EDWIN A. GUSTAFSON, Flint, Mich., assignor to A C Spark Plug Company, Flint, Mich., a Company of Michigan. Filed Mar. 19, 1927. Serial No. 176,756. 6 Claims. (Cl. 74—7.)

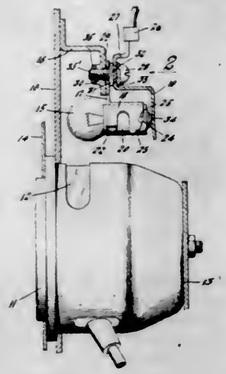
1. A speedometer drive comprising, in combination, a driven pinion, a bearing for the pinion, mounting means for said bearing affording axial and universal adjustment of said bearing, said bearing having a portion rotatably



held in said mounting means on an axis different from the axis of said pinion, and a single clamping means for holding said bearing in adjusted position.

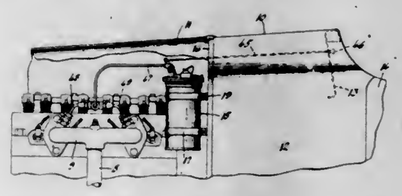
1,783,918. SPEEDOMETER. RALPH O. HELGERY, Flint, Mich., assignor to A C Spark Plug Company, Flint, Mich., a Company of Michigan. Filed Aug. 20, 1928. Serial No. 300,847. 3 Claims. (Cl. 264—13.)

1. In a measuring instrument, a frame, a U-shaped magnet supported adjacent the ends of its legs on said frame and the end faces of said legs engaging said frame, a clamp of substantially Y-shape, two legs of said clamp embracing said magnet between its ends, a third leg abutting said frame, and fastening means engaging a middle part of said clamp and adjustably secured to said frame.



1,783,919. MOVABLE MOLDING FOR CLOSURE MEMBERS. CLARENCE G. JOHNSON, Hartford City, Ind. Filed Apr. 12, 1928. Serial No. 269,477. 5 Claims. (Cl. 20—52.6.)

1. In a window frame, a window comprising a pair of slidable sashes, the combination of movable moldings at opposite sides of the window and at the sides of the frame parallel to the path of the sashes, said moldings being mounted to move towards and away from said sashes, pins carried by the moldings, and brackets carried by said sashes, said brackets being adapted to engage said pins and draw the moldings towards the sashes.



1,783,920. ILLUMINATING DEVICE FOR INSTRUMENT PANELS. DON E. KEENEY, Flint, Mich., assignor to A C Spark Plug Company, Flint, Mich., a Company of Michigan. Filed Mar. 14, 1929. Serial No. 347,029. 9 Claims. (Cl. 240—8.16.)

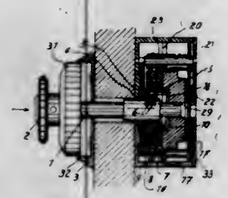
1. In an illumination device for use upon conductive panels carrying instruments: an open-sided socket element provided with resilient plug-retaining fingers near one end thereof and with parallel fingers, having pin-receiving notches therein, near the other end thereof;

substantially rigid conductive means for supporting said socket element from said panel; and resilient conductive means normally retaining said pins in said notches.

1,783,921. CONTAINER FOR REMOVING CARBON. CHARLES F. KETTERING, Dayton, Ohio, assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Jan. 31, 1927. Serial No. 164,838. 28 Claims. (Cl. 123—198.)

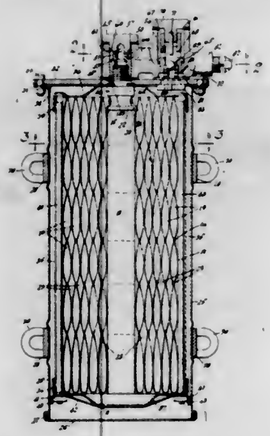
1. In a carbon removing device, a tank, a discharge outlet for said tank, a breather on said tank, and a vent associated with said tank, said breather and vent cooperating to allow atmospheric pressure within said tank.

1,783,922. CONNECTING ROD. ANDERS W. KJELLBERG, Detroit, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Mar. 9, 1928. Serial No. 260,315. 4 Claims. (Cl. 74—17.)



1. A connecting rod having a web and flange portions, and a lubricant conducting bore formed in said rod substantially at the junction of said web and one of said flange portions.

1,783,923. SAFETY LOCK. THEODOR KROMER, Freiburg, in Breisgau, Germany, assignor to Theodor Kromer Gesellschaft mit beschränkter Haftung, Freiburg, in Breisgau, Germany. Filed Feb. 29, 1928, Serial No. 258,073, and in Germany June 3, 1927. 2 Claims. (Cl. 70—53.)

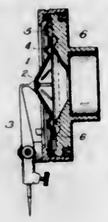


1. In a lock, the combination with a lock bolt and with an operating element for the same, of a rotatable lock

spindle adapted to be axially displaced for engagement with and disengagement from said operating element, a pivoted blocking lever adapted to enter the passage between the spindle and said operating element, a plurality of discs mounted on the spindle, a resilient controlling

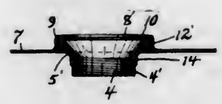
arm on the lever resting on the discs and maintaining the lever normally in blocking position, the discs being provided with peripheral notches into which, when in alignment, the arm can drop so as to release the lever, and means on the spindle whereby the latter can be used for setting the discs in lever-releasing position.

1,783,924. OIL-FILTER MEMBER. CHARLES W. MCKINLEY, Flint, Mich., assignor to A C Spark Plug Company, Flint, Mich., a Company of Michigan. Original application filed Mar. 11, 1926, Serial No. 93,944, and in Great Britain Feb. 21, 1927. Divided and this application filed Nov. 7, 1927. Serial No. 231,673. 2 Claims. (Cl. 210—164.)



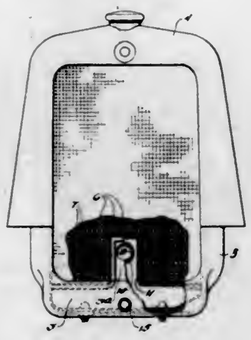
1. In a filtering device the combination with a receptacle having an end closure provided with an aperture of a filter body comprising a bag, a cage having an end head and a fitting to which said bag is connected projecting through said head and providing a passage communicating with the interior of the bag, said fitting being received in said aperture, and means exterior to said closure to secure said fitting thereto, said head being secured by said fitting to said closure.

1,783,925. SOLDERING FLUX. HARRY C. MOUGEY, Detroit, Mich., assignor to General Motors Research Corporation, Detroit, Mich., a Corporation of Delaware. Filed Aug. 19, 1929. Serial No. 387,089. 1 Claim. (Cl. 148—23.)



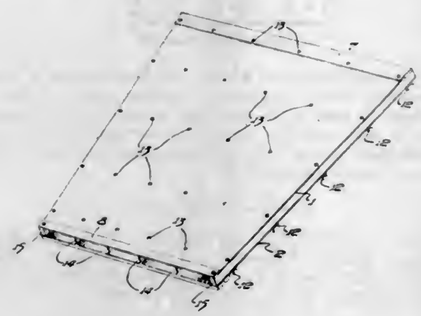
A soldering flux comprising zinc chloride, water and a water-soluble oil solvent of the group consisting of di-, tri- and tetra-ethylene glycol, ethyl and butyl carbitol, the mono-acetates of ethylene, and di-ethylene glycol and of the methyl and ethyl ethers of ethylene glycol, ethyl lactate, ethyl oxybutyrate and di-acetone alcohol.

1,783,926. DIAPHRAGM. MARTIN NYSTROM, Chicago, Ill., assignor, by mesne assignments, to United Research Corporation, Long Island City, N. Y., a Corporation of Delaware. Filed July 2, 1926, Serial No. 120,160. Renewed Oct. 7, 1930. 9 Claims. (Cl. 181—31.)



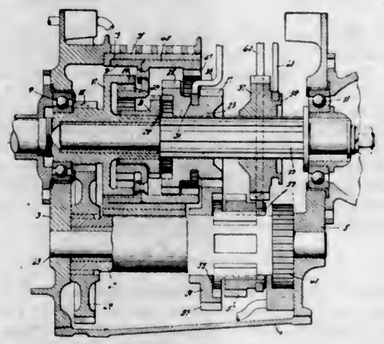
1. A diaphragm comprising an outer flexible metallic member having an opening therein and an inner rigid metallic member closing said opening and welded to said outer member.

1,783,927. BUNG FIXTURE FOR SHEET-METAL CONTAINERS. THEODORE W. RIEKE, Auburn, Ind., assignor to Rieke Metal Products Corporation, a Corporation of Indiana. Filed Oct. 1, 1928. Serial No. 309,651. 4 Claims. (Cl. 29—148.)



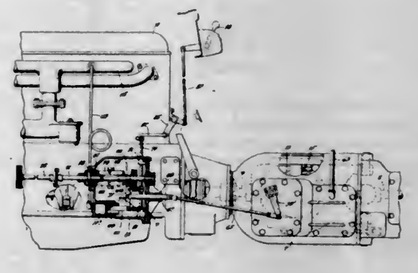
4. The method of applying a bung fixture to the wall of a container, consisting in making a bung opening in said wall and forming an embossment about the opening to provide a gasket seat and a distensible annular wall contingent therewith; forming a bung ring with a frustrum shaped flange at one end thereof; and pocketing said flange in said sheet by applying pressure to said flange and embossment while said flange is inserted in said embossment.

1,783,928. RADIATOR. ÉRIC OLLE SCHJOLIN, Birmingham, Mich., assignor to Yellow Truck & Coach Manufacturing Company, Pontiac, Mich., a Corporation of Maine. Filed Sept. 26, 1927. Serial No. 222,103. 2 Claims. (Cl. 257—125.)



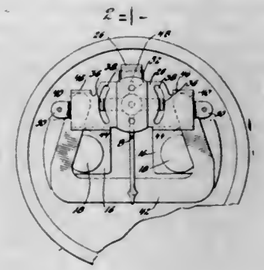
1. In a radiator of the tubular type, spaced inlet and outlet tanks, a series of straight water flow tubes connecting the tanks, a hollow extended portion constituting a part of one tank and projecting at right angles therefrom toward the other tank with its side walls in substantial parallelism with the straight water flow tubes, some of the tubes being longer than others and projecting beside the side walls of the extended portion and therebeyond into communication with the main portion of the tank and the other tubes terminating at the end wall of and communicating with said extended portion, a series of transverse plates through which said tubes extend, those plates beyond the extended portion each being continuous from side to side and receiving all of the tubes and the remaining plates being of shorter length and ending at an adjacent side wall of the extended portion and receiving only longer tubes of the tube series, and a lateral passageway through the extended tank portion for the insertion of a starting crank or the like.

1,783,929. MATRIX MAGAZINE. SAMUEL E. SPERRY, Hollis, N. Y., assignor to Intertype Corporation, Brooklyn, N. Y., a Corporation of New York. Filed Feb. 8, 1930. Serial No. 426,969. 14 Claims. (Cl. 199—44.)



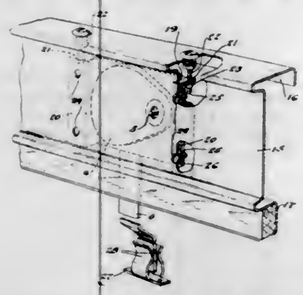
1. A matrix magazine comprising top and bottom plates at at least one of its ends composed of relatively strong metal, and intermediate top and bottom plates composed of a different relatively lighter-weight material and reinforced by the first-mentioned plates.

1,783,930. OVERGEAR TRANSMISSION. CLAUDE H. STERLING, Detroit, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Jan. 15, 1927. Serial No. 161,356. 6 Claims. (Cl. 74—57.)



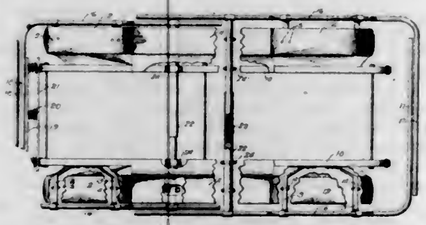
1. In a transmission device, a gear housing, aligned driving and driven shafts, a gear ring in said housing, a bearing for said gear ring within said housing and eccentrically surrounding said shafts, external and internal gears on said ring, gears on each of said shafts to co-operate therewith, said gear ring having a bearing surface engaging said bearing, said bearing surface having portions overlying the external gear and the internal gear of the gear ring.

1,783,931. TRANSMISSION CONTROL. PERRY L. TENNEY and HARRY E. FIDLER, Muncie, Ind., assignors to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed May 31, 1929. Serial No. 367,243. 14 Claims. (Cl. 74—97.)



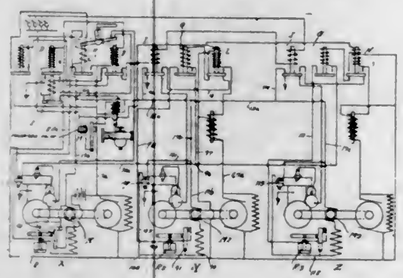
1. In combination with an infinitely variable transmission, an operating mechanism therefor comprising an operable member, transmission actuating means to actuate said variable speed transmission, a fluid pressure valve, a connection between said operable member and said valve and said transmission actuating means whereby said operable member operates through said valve to move said transmission mechanism by fluid pressure and whereby said connection thereafter closes said valve, together with a power cylinder having a piston, said cylinder being in communication with said valve, said connection including a floating lever, one end of said lever operably connected to said valve, the other end of said lever operably connected to said transmission operating means and to the piston of the power cylinder.

1,783,932. AMMETER. JOSEPH ZUBATY, Flint, Mich., assignor to A C Spark Plug Company, Flint, Mich., a Company of Michigan. Filed Feb. 6, 1929. Serial No. 337,904. 9 Claims. (Cl. 171—95.)



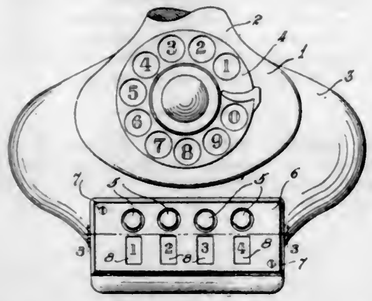
7. In an ammeter, a frame, a bridge on said frame, a magnet mounted on said bridge, an armature rotatably mounted in said frame, a pointer mounted to swing with said armature, and a field piece mounted on said bridge between the poles of the magnet to concentrate the lines of force adjacent the armature.

1,783,933. WINDOW-REGULATOR ADJUSTMENT. CHARLES O. BALL, Birmingham, Mich., assignor to Yellow Truck and Coach Manufacturing Company, Pontiac, Mich., a Corporation of Maine. Filed Apr. 20, 1928. Serial No. 271,545. 12 Claims. (Cl. 296—44.)



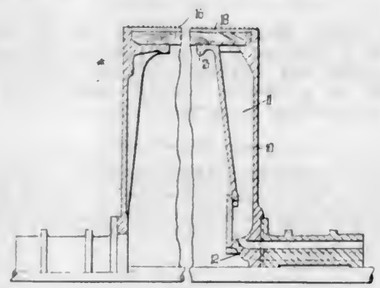
1. In combination, a body panel having a side and top, a window regulator located below the top, adjustable suspension elements hanging said regulator from the top, and adjustable locating means associated with said side, adapted to hold said plate in adjusted position.

1,783,934. PROTECTOR FOR AUTOMOBILES. EDWARD A. BANSCHBACH, Madison, Wis. Filed Apr. 1, 1929. Serial No. 351,761. Renewed Apr. 21, 1930. 29 Claims. (Cl. 293—35.)



1. The combination with a vehicle, of protector bars detached from each other and arranged adjacent the sides of said vehicle, and spaced outwardly therefrom beyond the fenders and resilient means interposed between said bars and said body.

1,783,935. SYSTEM FOR THE GENERATION AND DISTRIBUTION OF ELECTRIC ENERGY. CHARLES L. HOMMEL, Detroit, Mich. Filed Dec. 12, 1925. Serial No. 74,985. 5 Claims. (Cl. 290—30.)

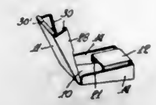


5. In an electric generating system, a series of electric generating units each including an internal combustion engine and a generator driven by the same, a separate starting motor for each unit, each unit of the series being adapted to supply current to a common load circuit, a low voltage battery, a circuit including the load circuit and battery controlled by any demand for current in the load circuit and adapted to start operation of the first unit of the series, means controlled by current demand in the load circuit controlling the starting and stopping of the units of the series, and means for recharging the battery.

1,783,936. AUXILIARY BASE AND SWITCH ATTACHMENT FOR TELEPHONES. CARLOS F. JOHANNING, Dennison, Tex. Filed Oct. 19, 1929. Serial No. 400,761. 6 Claims. (Cl. 177—333.)

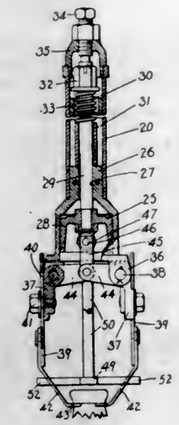
4. The combination of a desk telephone having a base, an auxiliary base comprising a hollow block on which said base is adapted to rest and be fastened, switching means in said block for controlling electrical circuits and identification means for said switching means mounted adjacent thereto on said block.

1,783,937. FILTERING APPARATUS. EDWARD WALTER WOLFE KEENE, Kingston-upon-Hull, England. Filed Mar. 1, 1930. Serial No. 432,424, and in Great Britain Nov. 8, 1928. 3 Claims. (Cl. 210—202.)



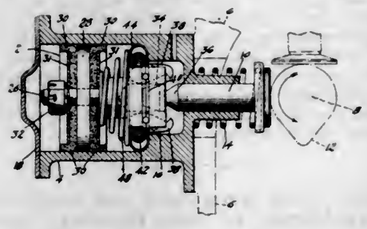
1. A filter apparatus comprising a drum shell having passages therethrough, radial ends for supporting said drum shell, at least one of which ends has a plurality of radial conduits formed therein, a filter cloth covering for said drum shell and a plurality of inverted channel shaped members arranged in pairs between said covering and said shell for dividing the space between said covering and said shell into separate filter compartments, the hollow passages formed by said inverted channel members communicating with said filter compartments and also with the radially disposed conduits in said drum end.

1,783,938. SEAL. FRANK KEIDEL, Elmhurst, N. Y., assignor to The International Seal and Knot Protector Co., New York, N. Y., a Corporation of New York. Filed Nov. 9, 1929. Serial No. 405,894. 9 Claims. (Cl. 292—325.)



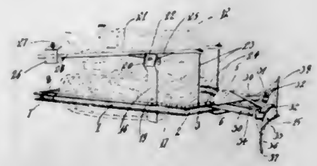
1. A seal including a main section, a section at one end adapted to fold thereinto, and having side walls

spaced from the side and bottom walls of the housing section, and a section at the other end of the housing and adapted to form a closure for the housing, said closure



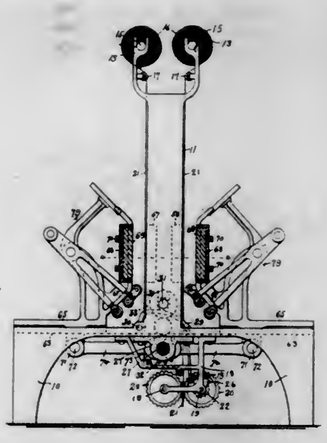
section being engageable with the side edges of the first mentioned end section to lock the closure section in closing position.

1,783,939. APPARATUS FOR HANDLING GLASSWARE. JOHN E. SCHRODER, Hartford, Conn., assignor to Hartford-Empire Company, Hartford, Conn., a Corporation of Delaware. Filed Oct. 13, 1927. Serial No. 225,976. 8 Claims. (Cl. 214—1.)



1. Apparatus for handling glassware comprising an arm mounted for movement between a ware receiving station and a ware delivery station, tongs mechanism carried by said arm, said tongs comprising a pair of gripping members each consisting of a pair of fingers, and means for moving said members toward and away from each other and simultaneously moving the fingers of each pair toward and away from each other.

1,783,940. FUEL PUMP. JOHN T. TRUMBLE, Lansing, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Apr. 5, 1926. Serial No. 99,820. 20 Claims. (Cl. 103—23.)

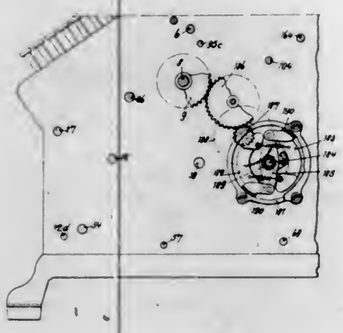


1. In a fluid pumping system, the combination of: a reciprocable and yieldable pumping member; a reciprocatory actuating member; and means therebetween, controlled by the pressure of the pumped fluid, for clutching one of said members to the other for continued and equal intake movement.

1,783,941. BACK FILLER. WALTER R. BUNCH, Los Angeles, Calif. Filed Oct. 4, 1926. Serial No. 130,347. 8 Claims. (Cl. 37—144.)

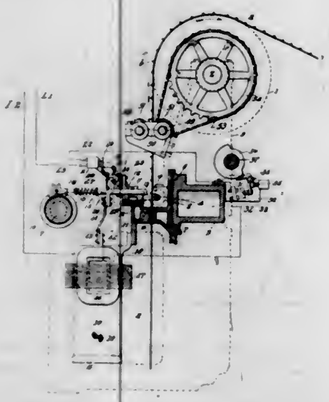
1. In combination with a power device, a frame, means for securing the said frame to the power device, the said frame terminating at a point at the forward end of the power device, a scraper blade, bars pivotally secured on the opposite sides of the said point to the said frame, means for pivotally securing the said bars to the said scraper blade, and a tie-bar connected at its opposite ends with the said scraper blade connecting bars for maintaining the said blade transverse to the angle of travel of the said power device for bulldozing.

1,783,942. PRINTING PRESS. RAPHAEL JACOBUCCI, Cleveland, Ohio. Filed Jan. 22, 1927. Serial No. 162,918. 14 Claims. (Cl. 101—198.)



1. A printing press comprising a supporting frame, platen members supported on said frame in spaced relation, a printing form bearing member coacting with each of said platen members, means for simultaneously and intermittently moving said printing form bearing members toward and away from said platen members, means for intermittently moving a printing sheet over said platen members, a sheet of color imparting material, a drum operative to feed said color imparting material over said printing sheet, a ratchet coacting with said drum, a pawl device engageable with said ratchet, means for intermittently actuating said drum, and a guard element operative to hold said pawl away from said ratchet, and means for adjusting said guard element to control the throw of said drum.

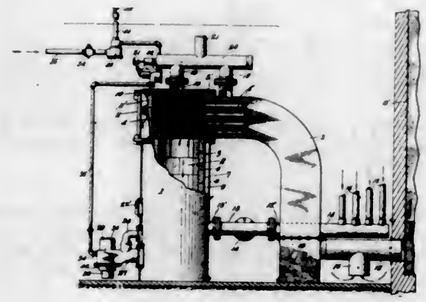
1,783,943. COMBINED DUPLEX ADDING MACHINE AND CASH REGISTER. ERNST KASSNER, Berlin, Germany. Filed Jan. 8, 1927. Serial No. 159,770, and in Germany June 7, 1924. 30 Claims. (Cl. 235—60.)



6. In a machine of the class described, the combination of two sets of totalizers, a common set of drive wheels for actuating said sets of totalizers and disposed substantially

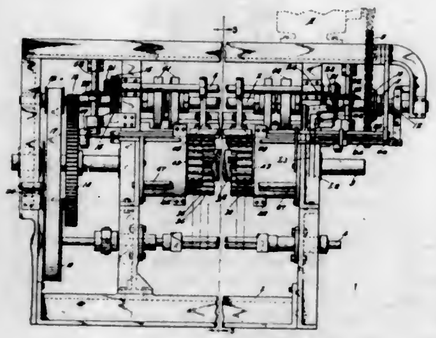
intermediate thereof, key controlled means for actuating said drive wheels, means for transferring a total from one of the sets of the totalizers to the other set, and means

associated with the aforesaid key controlled means for zeroizing the set of totalizers from which the total is transferred.



1,783,944. MACHINE FOR MAKING WELDED REENFORCING FABRICS. WILLIAM H. SOMMER, Peoria, Ill. Filed May 11, 1928. Serial No. 276,951. 8 Claims. (Cl. 140—112.)

1. In a machine for making fabrics for reenforcing, the combination with means for connecting cross wires to a series of longitudinal wires with ends of the cross wires projecting beyond the outside or marginal longitudinal wires, of combined guide and cutter mechanism arranged and operating to guide the wires and to sever the projecting ends of such cross wires flush with the outside or marginal longitudinal wires.

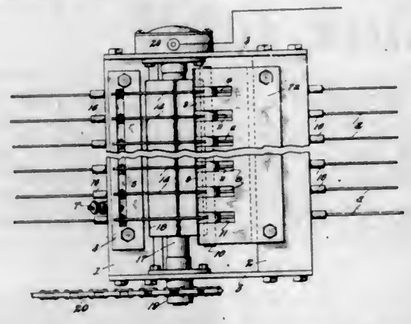


1,783,945. HEATING APPARATUS. WILLIAM H. SOMMER, Peoria, Ill. Original application filed Apr. 10, 1926, Serial No. 101,130. Divided and this application filed June 26, 1928. Serial No. 288,486. 6 Claims. (Cl. 236—9.)

1. In combination with a boiler and a fuel burner, a single fuel supply conduit connected to the burner, means connected to the conduit and responsive to room temperatures to control the fuel entering the burner through

said supply conduit, and means responsive to the boiler temperature and connected to the conduit for independently controlling the fuel entering the burner.

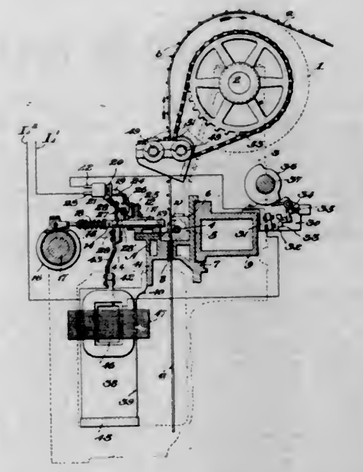
1,783,946. WIRE-FENCE MACHINE. WILLIAM H. SOMMER, Peoria, Ill. Filed Jan. 14, 1929. Serial No. 332,343. 29 Claims. (Cl. 140—4.)



1. In a wire fence machine, in combination, a revoluble drum including spaced circumferentially arranged radial seats opening out of the surface of the drum, the opposite walls of said seats being parallel for the greater part of their depth and then converging toward each other, one such wall having a longitudinally disposed groove, pairs of guide bars in each seat joined at their base in the seats and also exteriorly of the drum and one such bar having a rib fitting said groove, a rack-bar reciprocally carried between each pair of guide bars, and a multiplicity of slotted twister wheels journaled in the joined portions of each pair of guide bars exteriorly of the drum and in meshing relation with a rack-bar.

1,783,947. STOP MECHANISM FOR DETECTING IRREGULARITIES IN WIRE FEEDING. WILLIAM H. SOMMER, Peoria, Ill. Filed June 29, 1929. Serial No. 374,702. 11 Claims. (Cl. 192—125.)

1. A stop mechanism for detecting irregularities in the feeding of fence wire, comprising a movably supported member with which a wire, when moving, is adapted to have an engaging relation and move the member with the wire, a rotatable member adapted to positively engage said



wire engaging member when advanced by the wire and return it to wire actuating position, an electrical circuit including a timer and separable contacts one of which is carried by said wire engaging member and the said contacts engageable to close the circuit when said wire engaging member is in non-operating position by said rotatable

member, clutch shifting means operative on the closing of said circuit and said circuit adapted to be closed when the moving contact between the wire and said wire engaging member has ceased and simultaneously with a predetermined position of said timer and the engagement of said contacts.

1,783,948. METHOD OF MAKING WIRE FABRICS. WILLIAM H. SOMMER, Peoria, Ill. Filed Nov. 4, 1929. Serial No. 404,762. 4 Claims. (Cl. 140—112.)

1. The herein described method of making fabrics for reinforcing, which resides in securing a series of cross wires to a series of longitudinal wires at points spaced inwardly from the ends of the cross wires and with the ends of the cross wires projecting beyond the marginal longitudinal wires, and then as a single step positively

guiding the longitudinal wires and simultaneously by and during such guiding severing the projecting ends of the cross wires to lie flush with the said marginal longitudinal wires.

THE

OFFICIAL GAZETTE

OF THE

United States Patent Office

Vol. 401—No. 2 TUESDAY, DECEMBER 9, 1930 Price—$10 per year

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscription, $10.00 per annum; including annual index, $11.50; single numbers, 25 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

Disclaimers

1,593,400.—*Carl M. Gilt*, Brooklyn, N. Y. FREQUENCY CONVERTER. Patent dated July 20, 1926. Disclaimer filed November 12, 1930, by the assignee, *General Electric Company*.

Hereby enters this disclaimer to claims 1, 2, 3, 4, 5, 7, and 8 of said patent which are in the following words:

"1. In combination, two alternating current systems each of which has its own generating apparatus of substantially fixed frequency, means for tieing said systems together comprising a pair of mechanically connected alternating current dynamo electric machines having their primaries respectively electrically connected to said systems, at least one of said machines being of the asynchronous type, and means for applying an adjustable voltage in the secondary circuit of said asynchronous machine of the same frequency as the frequency of the secondary of said asynchronous machine.

"2. In combination, two alternating current systems each of which has its own generating apparatus of substantially fixed frequency, means for tieing said systems together comprising a pair of mechanically connected alternating current dynamo electric machines having their primaries respectively electrically connected to said systems, one of said machines being synchronous and the other asynchronous, and means for applying an adjustable voltage in the secondary circuit of said asynchronous machine of the same frequency as the frequency of the secondary of said asynchronous machine.

"3. In combination, two alternating current systems each of which has its own generating apparatus of substantially fixed frequency, means for tieing said systems together comprising a pair of mechanically connected alternating current dynamo electric machines having their primaries respectively electrically connected to said systems, at least one of said machines being of the asynchronous type, and means for applying a voltage in the secondary circuit of said asynchronous machine of the same frequency as the frequency of the secondary of said asynchronous machine, and means for varying said voltage to vary the interchange of energy between said systems.

"4. In combination, two alternating current systems each of which has its own generating apparatus of substantially fixed frequency, means for tieing said systems together comprising a pair of mechanically connected alternating current dynamo electric machines having their primaries respectively electrically connected to said systems, at least one of said machines being of the asynchronous type, and means for applying an adjustable voltage in the secondary circuit of said asynchronous machine of the same frequency as the frequency of the secondary of said asynchronous machine, said means comprising a dynamo electric regulator electrically connected to the secondary of said asynchronous machine.

"5. In combination, two alternating current systems each of which has its own generating apparatus of substantially fixed frequency, means for tieing said systems together comprising a pair of mechanically connected alternating current dynamo electric machines having their primaries respectively electrically connected to said systems, at least one of said machines being of the asynchronous type, means for applying a voltage in the secondary circuit of the asynchronous machine of the same frequency as the frequency of the secondary of said asynchronous machine, said means comprising a dynamo electric regulator electrically connected to the secondary of said asynchronous machine, and means for varying said voltage to vary the direction of the interchange of energy between said systems."

"7. In combination with two alternating current distribution systems each of which has its own generating apparatus of substantially fixed frequency, two alternating current dynamo electric machines having their primaries connected to said systems respectively and having their rotors mechanically connected together in such relation that when one machine is running synchronously with the system to which it is connected, the other machine is compelled to run at a non-synchronous speed with respect to the other system, said last mentioned machine being of the wound secondary asynchronous type and auxiliary apparatus associated with said asynchronous machine for applying an adjustable voltage in the secondary circuit of said asynchronous machine having the same frequency as the frequency of the secondary of the asynchronous machine.

"8. A frequency changer set comprising a pair of mechanically connected alternating current dynamo electric machines, one of which is an asynchronous machine of the wound secondary type, an alternating current exciter electrically connected to the secondary winding of said asynchronous machine, an ohmic drop exciter arranged to supply excitation to said first mentioned exciter at a frequency proportional to the slip frequency of said asynchronous machine and means for shifting the brushes on said ohmic drop exciter to vary the direction and magnitude of the load carried by said set."

1,729,068.—*Heinrich Fischer*, Cincinnati, Ohio. PROCESS OF REMOVING SOAP FROM ITS CONTAINER. Patent dated September 24, 1929. Disclaimer filed November 20, 1930, by the patentee.

Disclaims the invention set forth in claims 1–3 of his said patent excepting when in the process claimed the "making of the passage through the soap" is accomplished as set forth in lines 70–73 on page 1 of the said specification of his said patent, wherein "rods are placed in position in the container before it is filled, the liquid soap is poured in on them and after the soap hardens the rods are withdrawn."

Condition of Applications Under Examination at Close of Business November 28, 1930

DECISIONS IN PATENT AND TRADE-MARK CASES

U. S. Court of Customs and Patent Appeals

POSTUM CEREAL COMPANY *v.* ENZO JEL COMPANY

No. 2,348. Decided June 4, 1930

[41 F.(2d) 101]

TRADE-MARKS—SIMILARITY—"ENZO JEL" AND "JELL-O".

The words "Enzo Jel" as used upon jelly powders *Held* not confusingly similar to the term "Jell-O" as applied to the same goods.

APPEAL from the Patent Office. Affirmed.

Mr. Edward S. Rogers, Mr. James L. Morris, and *Mr. Edward Ragan* for Postum Cereal Company.

Messrs. Mason, Fenwick & Lawrence, Mr. Edward T. Fenwick, Mr. Edward G. Fenwick, and *Mr. Charles R. Fenwick* for Enzo Jel Company.

HATFIELD, *J.:*

This is an appeal in a trade-mark opposition proceeding from the decision of the Commissioner of Patents affirming the decision of the Examiner of Interferences dismissing the notice of opposition and holding that appellee was entitled to the registration of its composite trade-mark, the dominant features of which are the words "Enzo Jel", for use on jelly powders.

It appears from the record that the goods of the parties are used for making jellylike desserts; that they possess the same descriptive properties; that appellant and its predecessors have used the registered mark "Jell-O" on jelly powders for many years prior to any use by appellee of its trade-mark; that appellant and its predecessors have expended large sums of money in advertising appellant's registered mark, and have sold enormous quantities of jelly powders in packages on which appeared the trade-mark "Jell-O"; and that the goods of the parties are sold in rather small and somewhat similar packages in grocery and other stores to the consuming public.

The record contains many trade-marks registered by others for use on goods possessing the same descriptive properties as the goods here involved. Among them are the following: Fruit-O-Jel, Advo Jel, Nu-Jell, Easy Jell, etc.

It appears from the record that John F. Enz, appellee's predecessor, had used the mark "Enzo" for evaporated milk and other products; and that, after he sold his so-called milk business, he engaged in the business of manufacturing jelly powders, and on April 9, 1926, adopted and used the mark "Enzo Jel" on pelly powders.

It is contended by appellant that "appellee has appropriated its valuable trade-mark Jell-O and has merely reversed it in Enzo Jel. O Jel is Jell-O backwards"; and that the use by appellee of its trade-mark will be likely to cause confusion in the trade and deceive purchasers. Indeed, it is contended that confusion has already occurred as a result of the use by appellee of its mark.

The decision of the Commissioner of Patents is concluded with the following observations:

There is no similarity between the two marks either as to appearance, sound, or suggestion, except as to the word "Jel" or "Jell" which is descriptive and as such not registerable. It appears from the record that there are many trade names for jelly powders in which the word "Jell" forms a part of the name.

The controlling part of the applicant's mark is the word "Enzo," derived from the applicant's surname Enz, to which is added the suffix O. There is nothing in the opposer's mark which corresponds in any particular to the applicant's surname.

In the case of *The Apex Electrical Manufacturing Company* v. *Landers, Frary & Clark,* 18 C. C. P. A. ——, 38 F. (2d) ——, this court, in an opinion by Graham, P. J., said:

In our opinion, there has been too much refinement of reasoning by both the Patent Office and counsel in some of these cases in the attempted dissection of words used as trade names.

* * * * * *

In considering whether a trade name will be confusing or not, consideration should be given to the whole word.

The quoted language is particularly applicable to the issues, and to the contentions of counsel for appellant, in the case at bar.

We can not accept the views of counsel for appellant that the mark "Enzo Jel" is merely the mark "Jell-O" reversed. On the contrary, the marks are quite different in appearance and sound. They do not suggest that the goods on which they are used have a common origin. Accordingly, in our opinion, their use on goods of the same descriptive properties will not be likely to cause confusion or deceit in the trade.

We are in accord with the conclusion reached by the Commissioner of Patents, and his decision is affirmed.

Affirmed.

U. S. Court of Customs and Patent Appeals

IN RE STERN

No. 2,343. Decided May 28, 1930

[40 F.(2d) 1000]

1. PATENTABILITY—APPEAL—NEW CLAIMS NOT CONSIDERED.

"New claims proposed to be added to an application after final decision by the Board of Appeals, upon motion made therefor, and entry of which is denied by the Board, can not be considered by us upon appeal. The tribunals of the Patent Office never having passed upon the merits of said claims, they can not be considered by us."

2. SAME—SAME—INCLINED ROADWAY.

Claims for an inclined roadway having certain tread sections for preventing slipping *Held* unpatentable over the prior art.

APPEAL from the Patent Office. Affirmed.

Mr. Paul Carpenter, Mr. J. T. Basseches, and *Mr. R. B. Stewart* for Stern.

Mr. T. A. Hostetler and *Mr. Howard S. Miller* for the Commissioner of Patents.

LENROOT, *J.:*

This is an appeal from the decision of the Board of Appeals of the Patent Office affirming that of the

Examiner, rejecting claims 1 to 11, inclusive, of appellant's application. The following claims are illustrative of those in issue:

1. In a roadway, an inclined surface provided with a plurality of spaced tread sections disposed in a plane angularly opposite to that of the roadway.

4. In a roadway, a series of ramps in spaced relation, and a series of tread surfaces oppositely inclined with respect to said ramps and serving to connect them to form a substantially continuous inclined plane.

6. An inclined roadway, including a series of spaced tread surfaces substantially parallel with the plane of the roadway, and a plurality of tread surfaces connecting said first mentioned tread surfaces and disposed in planes oppositely angularly related thereto.

9. In an inclined roadway, a plurality of tread areas spaced apart and connected by intermediate tread areas having their surfaces contiguous with the upper edge of one of the first named surfaces, said intermediate tread area being inclined in a direction opposite to the first mentioned tread area to form a drain.

The references cited are: Rovedino (British), 3,184 of 1890; Kay (British), 17,794 of 1899.

After said decision was rendered by the Board of Appeals, appellant filed a request for reconsideration and asked permission to cancel all of his claims and to substitute therefor two additional claims, reading as follows:

12. In an inclined roadway or walk having its tread surface formed of two sets of plane surfaces inclined to each other and to the general plane of the roadway, so as to intersect each other in lines transverse to the line of the roadway and provide a series of alternate long and short tread surfaces with the longer tread surfaces sloping toward the lower end of the roadway, whereby a safe and efficient anti-slipping traction surface is provided.

13. In an inclined roadway or walk formed of blocks each having its tread surface formed of two sets of plane surfaces inclined to each other and to the general plane of the roadway, so as to intersect each other in lines transverse to the line of the roadway and provide a series of alternate long and short tread surfaces with the longer tread surfaces sloping toward the lower end of the roadway, whereby a safe and efficient anti-slipping traction surface is provided.

These requests were denied and such denial is assigned as error in the reasons of appeal filed by defendant.

Considering first this assignment of error, new claims proposed to be added to an application after final decision by the Board of Appeals, upon motion made therefor, and entry of which is denied by the Board, can not be considered by us upon appeal. The tribunals of the Patent Office never having passed upon the merits of said claims, they can not be considered by us. *Application of Parker*, 53 App. D. C. 209.

In the case of *In re Appelburg*, 17 C. C. P. A. —, 37 F.(2d) 620, 394 O. G. 7, this court said:

> We know of no applicable law or rule of practice to justify the allowance in this court of the amendment of a claim which would substantially change the character of the same from what it was before the Board of Appeals.

We may add that rule 68 of the Patent Office expressly provides that "After decision on appeal, amendments can only be made as provided in rule 140 or to carry into effect a recommendation under rule 139." Appellant's application to amend did not come within either of said rules 139 or 140.

We think appellant concedes the correctness of the rule above stated, but asks this court to exercise a discretion and suggest to the Patent Office the allowance of said claims. While such a course may sometimes be proper, where the court reverses a case upon grounds other than refusal to consider amendments proposed after final decision of the Board of Appeals, we do not think it proper for us to make any suggestions to the Patent Office regarding the allowance of claims not considered by it in cases where we affirm its decisions.

This brings us to the question of the patentability of claims 1 to 11, inclusive.

The Board of Appeals in its decision describes appellant's alleged invention as follows:

> The alleged invention is an inclined roadway or walk having its tread surface formed of two sets of plane surfaces inclined to each other and to the general plane of the roadway so as to intersect each other in lines transverse to the line of the roadway thereby forming a tread surface having elevations and depressions extending across the roadway. As shown in the drawings the surfaces which slope towards the lower end of the roadway are longer than the other or intersecting surfaces. This gives a series of alternate long and short tread surfaces with the longer tread surfaces below the short surfaces. This construction affords elevations which are sufficient to engage the heel of a shoe and hinder the slipping tendency without causing the catching and holding the heel of the shoe so as to cause the pedestrian to trip and fall.

Immediately following the above quotation, the decision states: "The claims are broad and do not refer to the relative lengths of the tread surfaces."

As stated, the two references relied upon by the Patent Office are British patents to Kay and Rovedino. The Board rejected the claims upon three separate grounds, as follows:

1. That they read directly upon Kay.

2. That merely to incline Kay's cross steps to a lesser degree, as shown by the blocks of Rovedino, would not involve invention.

3. That to provide a ramp with a surface such as shown by Rovedino does not involve invention.

The object sought to be obtained by applicant and in the references are, we think, the same, viz.: to secure a foothold by persons or animals to prevent slipping. Appellant's application relates broadly to pavements and more particularly to a ramp or inclined plane, that of Kay to an inclined plane or a level surface, and that of Rovedino presumably to a level surface, although his specification is silent upon that subject, except as his drawings indicate a level surface.

Appellant describes the purpose of his invention as affording in a ramp or inclined roadway "an inclined tread surface which includes tread portions affording substantially level tread surfaces which assure a safe footing for pedestrians"; a further purpose is described as providing drainage at all times.

Kay describes the purpose of his invention as follows:

> My invention has for its object the provision of a safe walking surface for sloping roads or foot ways, subways, passages, floors, and the like, the invention being specially applicable to inclined or sloping footways or subways.

Rovedino describes his invention as a—

> Wood paving block combined with concrete or other substance the object and intention thereof being to lay such paving and of such form so as to afford a *secure foothold for horses* and *prevent the frequent occurrence of slipping* caused by the present wood or other paving now in use. (Italics ours.)

As stated by the Board of Appeals, the claims in issue are very broad, and we think they are fully anticipated by the patent to Rovedino. He describes a pavement composed of bricks or blocks, having the upper surface serrated, several forms being shown in his drawings in longitudinal and transverse sections. An inspection of the figures in said drawings show the surface to be made up of series of oppositely inclined surfaces merging into each other, more especially when continuously serrated blocks, as shown in Figure 4 of his drawings, are used.

Appellant contends that the tribunals of the Patent Office misconstrued Rovedino's drawings in that they have construed the crests of the serrated blocks there shown as comparable to the flattened tread surfaces shown in appellant's specification. We think the serrated surfaces shown by Rovedino are comparable to the "tread surfaces" found in appellant's claims, for they are all tread surfaces, including the serrated edges thereof.

It is true that Rovedino shows, in addition to his serrated blocks, ends of the same cut and sloped toward the outer ends, but Figure 4 of his drawing shows a construction without this feature, which construction he calls "continuous serrated".

It is obvious that when Rovedino's blocks are laid transverse to the roadway, a drain will result as described in appellant's claims, and we think it it clear that Rovedino shows placing his blocks with the serrated edges or surfaces transverse to the going way of the road.

We think appellant's claims read directly upon the Rovedino patent, unless there be invention in applying the method therein disclosed to a ramp or inclined roadway. We are clear that there is no invention in so applying it. In the first place, there is nothing in Rovedino's application from which it could be inferred that he had only in mind a level roadway. His invention relates to paving blocks, and his object was to afford a secure foothold for horses and prevent the frequent occurrence of slipping. We must assume that he had in mind paved roadways, "up hill and down dale", as well as upon the level. Certainly his pavement upon a hill would present exactly the same general contour as appellant's ramp or inclined roadway. But even if the Rovedino patent should be construed to be limited to a level roadway, we agree with the Board of Appeals that to apply his construction to a ramp would not involve invention.

There is only one of the claims in issue that, under our construction of the Rovedino reference, does not read directly upon it, and that is claim No. 11, reading as follows:

> 11. In an inclined roadway, a plurality of tread surfaces spaced apart and of substantially uniform area, said surfaces being connected by intermediate tread surfaces of lesser area whose edges are contiguous with the upper edge of each of the adjacent surfaces, and said intermediate tread surfaces being inclined oppositely to the plane of the roadway.

It will be noted that this claim provides for a plurality of tread surfaces of one substantially uniform area and other tread surfaces of lesser area. This difference in area of different surfaces is not found in Rovedino, but we think that the claim is not *patentably* distinguished from Rovedino's disclosure.

While the Patent Office tribunals seem to have relied principally upon the Kay patent as anticipating appellant's claims, in view of the conclusion we have reached it is unnecessary to consider it.

We express no opinion as to whether appellant's specification discloses an invention. We can consider only the claims before us, and the disclosure of his specification in connection therewith. The claims are so broad as clearly to read upon the Rovedino patent, and we cannot read into them limitations which would avoid such reference, even if appellant's specification would support patentable claims had they been made. *McCarty* v. *Lehigh Valley Railroad Co.*, 160 U. S. 110, 78 O. G. 1707.

The decision of the Board of Appeals of the Patent Office is affirmed.

Affirmed.

U. S. Court of Customs and Patent Appeals

BALTIMORE PAINT & COLOR WORKS *v.* BENNETT GLASS & PAINT COMPANY

No. 2,388. Decided June 4, 1930

[40 F.(2d) 1009]

TRADE-MARKS—SIMILARITY—MARKS FOR PAINTS INCLUDING THE TERM INSURANCE.

A trade-mark for paints consisting of the notation "Surface Insurance Policy Products" *Held* confusingly similar to a composite trade-mark for the same goods including the name Bennett's and the words "Property Life Insurance" since the word "Insurance" is the dominant feature of each mark.

APPEAL from the Patent Office. Affirmed.

Mr. George P. Kimmell and *Mr. Samuel Bogorad* for Baltimore Paint & Color Works.

Mr. Harry C. Robb and *Mr. John F. Robb* for Bennett Glass & Paint Company.

LENROOT, *J.*:

This is an appeal from a decision of the Commissioner of Patents sustaining a petition for cancellation of appellant's registered mark and directing the cancellation thereof. The decision appealed from affirmed a like decision of the Examiner of Trade-Mark Interferences.

Appellant obtained its registration on May 31, 1927, the mark consisting of the notation "Surface Insurance Policy Products," used on paste-form and ready-mixed paints and varnishes, the word "Products" being disclaimed apart from the mark as shown. Appellee claims prior adoption and use of the mark consisting of the words "Property Life Insurance" upon the identical class of goods, and sets forth ownership of registration No. 179,849, issued February 19, 1924, and No. 206,312, issued November 24, 1925. The earlier registration discloses a composite mark consisting of the word "Bennett's" in large letters, and underneath to the left, enclosed in a circle, the words "Property Life Insurance"; to the right is a circle enclosing the profiles of a woman and a Roman soldier.

The later registration of appellee is for the words "Property Life Insurance" alone.

Appellee took testimony, but appellant did not. The testimony submitted on behalf of appellee establishes adoption and use of its said composite

mark since a date long prior to the earliest alleged date of adoption and use by appellant of its mark.

We think appellee's testimony establishes that it has made no use of the mark "Property Life Insurance", apart from the composite mark registered by it as aforesaid. In view of the conclusion we have reached, it is unnecessary to consider whether appellee has a right to rely upon the last mark registered by it to sustain its opposition.

Inasmuch as the marks of both parties are used upon the identical class of goods, the question before us is whether the marks so nearly resemble each other as to be likely to cause confusion or mistake in the mind of the public or to deceive purchasers.

Both the Commissioner and the Examiner of Trade-Mark Interferences state that the question is not free from difficulty, but resolved the doubt in favor of appellee, the earlier user of the mark containing the word "Insurance".

We agree that whether the marks are confusingly similar is not free from doubt. The important question is whether the word "Insurance" is the dominating feature of appellant's mark and of the composite mark of appellee. Counsel for appellant argues that the word "Insurance" is not the salient feature of the marks either of appellant or appellee, but that the word "Surface" is the salient feature of appellant's mark and the word "Bennett's" is the salient feature of the mark of appellee.

That the word "Insurance" is the dominating feature of appellant's mark we have no doubt. The word "Surface" is clearly descriptive; standing alone, it could not be appropriated as a trade-mark, and it is not the word of appellant's mark that purchasers would be likely to retain in their minds. On the other hand, the word "Insurance", not being descriptive but merely broadly suggestive of protection to the surface of material to which the paint is applied, would likely be remembered by purchasers as indicating origin of the goods upon which the mark is used.

As to whether the word "Insurance" in the composite mark of appellee is the dominant feature of the mark, we are not so clear; but we think it not unreasonable to assume that, for the same reasons as we have suggested with regard to the same word in appellant's mark, purchasers would be more likely to remember the word "Insurance" in said composite mark than any other part thereof. This conclusion is supported by the testimony introduced by appellee, in which it is shown that in its extensive advertising it emphasized the expression "Property Life Insurance", thereby seeking to fasten those words upon the public mind in purchasing its products.

Appellant contends that there is no confusion likely by the use of the two marks because the goods of the parties are not sold in the same territory, and cites the cases of *Hanover Star Milling Co.* v. *Metcalf*, 240 U. S. 403, 224 O. G. 1407, and *United Drug Company* v. *Theodore Rectanus Company*, 248 U. S. 90, 264 O. G. 356, in support of that contention. It is unnecessary for us to determine whether territorial limitations of markets can be considered in a proceeding of this character under the Trade-Mark Act, for the reason that appellant's contention of noncompeting markets is not established by the testimony. While it may be fairly inferred from appellee's testimony that its market was almost wholly confined to the intermountain States, and that its products do not reach eastern markets to any substantial extent, there is no evidence that appellant's products bearing its trademark are not sold in the same territory where the goods of appellee are sold. The testimony is that the volume of appellee's business amounts to about $300,000 annually. There is no testimony as to the volume of appellant's business. We have no right to conclude, in the absence of testimony, that appellant's business is limited to any particular part of the United States. Furthermore, appellant in its answer to the petition for cancellation did not allege any territorial limitation of the sales of its products upon which its mark is used.

While, as already stated, the question of whether the two marks so nearly resemble each other as to be likely to cause confusion or mistake in the mind of the public or to deceive purchasers is not free from doubt, we agree with the Commissioner that the doubt is of such a character that, in accordance with the well-established rule in such cases, it should be resolved against appellant, the later registrant and later user of the word "Insurance" as part of a trade-mark applied to paints. *Salant & Salant, Inc.* v. *Feldman & Weinman*, 58 App. D. C., 11, 24 F. (2d) 276, 371 O. G. 259; *Goodrich Drug Company* v. *Cassada Manufacturing Company*, 46 App. D. C., 146; 237 O. G. 918.

The decision of the Commissioner of Patents is affirmed.

Affirmed.

Patent Suits

[Notices under sec. 4921, R. S., as amended Feb. 18, 1922]

961,165, J. F. Rowley, Artificial-limb suspender and back check, D. C., E. D. Mich., S. Div., Doc. 1864, *The J. F. Rowley Co.* v. *F. R. Ritter* (*Detroit Artificial Limb Works*). Dismissed for want of prosecution Oct. 10, 1930.

1,033,988, H. L. Coburn, Reenforced-concrete dam, D. C., E. D. Mich., S. Div., Doc. 1638, *Ambursen Construction Co., Inc.*, v. *City of Highland Park, Mich.* Dismissed for want of prosecution Oct. 7, 1930. Doc. 1639, *Ambursen Construction Co., Inc.*, v. *Consumers Power Co.* Decree as above Oct. 8, 1930.

1,058,210, Welch and Welch, Method of finishing castings, D. C., E. D. Mich., S. Div., Doc. 2062, *American Plug Co. et al.* v. *The Brewer Titchener Corp.* Dismissed by consent Oct. 1, 1930.

1,058,285, L. A. Young, Upholstery spring construction; 1,428,701, O. A. Michelis, Wire loop; 1,439,891, J. T. Holtfoth, Spring cushion structure, D. C., E. D. Mich., S. Div., Doc. 1818, *L. A. Young Industries, Inc.*, v. *Premier Cushion Spring Co.* Dismissed by consent Oct. 2, 1930.

1,090,370, Re. 18,932, 1,105,053, Wylde and Schenck, Door-controlling device, C. C. A., 3d Cir., Doc. 4251, *Elevator Supplies Co.* v. *Graham & Norton Co.* Decree affirmed Oct. 6, 1930.

1,093,009, 1,147,973, J. C. Ramsey, jr., Lamp support; 1,144,956, H. Aiken, Lamp socket; 1,497,896, Edgecumbe and Cowderoy, Spotlight bracket, D. C., E. D. Mich., S. Div., Doc. 1735, *Unity Mfg. Co.* v. *Bachem Sales Co.* Dismissed by consent Oct. 8, 1930.

1,104,589 (*a*) Ward and Taylor, Gear-grinding machine; 1,155,532, F. A. Ward, Machine for grinding splined shafts; 1,271,495, same, Method of grinding splined shafts and other interrupted cylindrical bodies; 1,273,016, same, Splined shaft, filed Oct. 9, 1930, D. C., E. D. Mich., S. Div., Doc. 4484, *Gear Grinding Machine Co.* v. *Hudson Motor Car Co.* Doc. 2392, *Gear Grinding Machine Co.* v. *The Studebaker Corp.* Dismissed by consent Oct. 18, 1930.

1,104,589 (*b*), Ward and Taylor, Gear-grinding machine, D. C., E. D. Mich., S. Div., Doc. 2391, *Gear Grinding Machine Co.* v. *Bevel Gear Grinding Co.* Dismissed for want of prosecution Oct. 10, 1930.

1,105,053. (See 1,090,370.)

1,111,658. (See Des. 60,740 (*a*) and (*c*).)

1,118,547, W. C. Griffin, Fruit-drying machine; 1,122,018, C. C. McIntosh, same; 1,466,798, H. M. Miller, Apparatus for and method of peeling vegetables or fruits; 1,468,873, W. D. Bost et al., Apparatus for peeling fruits or vegetables, filed Oct. 2, 1930, D. C., W. D. Wash., N. Div., Doc. 772, *Stebler-Parker Co.* v. *C. M. Bryant Fruit Machines Co.*

1,122,018. (See 1,118,547.)

1,125,476, G. Claude, System of illuminating by luminescent tubes, filed Oct. 6, 1930, D. C., S. D. Calif. (Los Angeles), Doc. E S–48–J, *Claude Neon Electrical Products, Inc., et al.* v. *Metlow Corp., Ltd., et al.*

1,134,749. (See Des. 60,740 (*a*) and (*c*).)

1,134,820, A. B. Chance, Land anchor; 1,620,896, J. R. Kearney, same, D. C., E. D. Mo. (St. Louis), Doc. 8224, *A. B. Chance* v. *W. N. Matthews Corp.* Patent No. 1,134,820 and claims 2, 3, and 4 of Patent No. 1,620,896 held valid and infringed, October 6, 1930.

1,144,956. (See 1,093,009.)

1,146,182, S. Lipsius, Raised printing process and product, filed Oct. 8, 1930, D. C., S. D. N. Y., Doc. E 56/28, *S. Lipsius et al.* v. *Wood, Nathan & Virkus Co., Inc.*

1,147,973. (See 1,093,009.)

1,155,532. (See 1,104,589 (*a*).)

1,172,322, P. Torchio, Protective device for electric cable joints, D. C., N. D. Ohio, E. Div., Doc. 1772, *Metropolitan Device Corp.* v. *Cleveland Electric Illuminating Co.* Claims 3 and 4 held valid and infringed Sept. 12, 1930.

1,174,403, F. K. Fassett, Door-operating mechanism; 1,565,143, H. J. Fear, Elevator-door control; 1,587,007, C. Norton et al., Door-operating mechanism for elevators, C. C. A., 3d Cir., Doc. 4250, *Elevator Supplies Co.* v. *Graham & Norton Co.* Decree affirmed Oct. 3, 1930.

1,225,051, H. M. Peters, Portable electric lamp, appeal filed Oct. 7, 1930, C. C. A., 2d Cir., Doc. 11126, *Faries Mfg. Co.* v. *S. W. Farber Mfg. Co.*

1,271,495. (See 1,104,589 (*a*).)

1,273,016. (See 1,104,589 (*a*).)

1,274,032, J. D. Gibbs, Railway passes, filed Oct. 9, 1930, D. C., E. D. Mo. (St. Louis), Doc. 9184, *Gibbs-Inman Co.* v. *G. D. Barnard Stationery Co.*

1,283,646, C. A. Brawn, Rock-drill bit, D. C., S. D. Calif. (Los Angeles), Doc. E P–67–J, *E. M. Smith et al.* v. *A. A. Weber* (*Spartan Steel Co.*). Dismissed without prejudice Sept. 18, 1930.

1,301,331, R. S. Smith, Electrodes for arc welding; 1,754,063, R. Stresau, Coated metallic arc weld rods and method of making, filed Oct. 6, 1930, D. C., N. D. Ohio, E. Div., Doc. 3515, *A. O. Smith Corp.* v. *The Lincoln Electric Co.*

1,340,423, F. Smith, Parachute; 1,403,983, same, Parachute pack; 1,462,456, same, Parachute pack and harness, etc.; 1,554,192, G. M. Ball, Parachute pack; 1,560,366, same, Parachute harness, appeal filed Aug. 12, 1930, C. C. A., 3d Cir., Doc. 4478, *Irving Air Chute Co., Inc., et al.* v. *Russell Parachute Co.*

1,358,483, A. Wachsman, Stop mechanism for knitting machines, filed Oct. 4, 1930, D. C., S. D. N. Y., Doc. E 55/393, *A. Wachsman* v. *F. Philip.*

1,372,680, C. E. Frost, Brush, filed Oct. 10, 1930, D. C., N. D. Ohio, E. Div., Doc. 3531, *The Osborn Mfg. Co.* v. *The Specialty Mfg. Co.*

1,379,008, A. B. Frenier, Temperature-producing mechanism and controlling means therefor, D. C., E. D. Mich., S. Div., Doc. 1930, *American Nokol Co.* v. *Silent Automatic Corp.* Dismissed for want of prosecution Oct. 10, 1930.

1,399,750, Dalton and Meulle, Reel oven, D. C., S. D. Calif. (Los Angeles), Doc. Q–51–J, *J. Dalton et al.* (*Dalton Oven Co.*) v. *W. F. Drew et al.* (*Industrial Inventions Mfg. Co.*). Dismissed without prejudice Sept. 18, 1930.

Adjudicated Patents

(C. C. A. N. J.) Van Keuren patent, No. 1,826,121, for lamp manufacture, *Held* invalid. *General Electric Co.* v. *Eisler*, 43 F.(2d) 319.

(C. C. A. N. J.) Mitchell and White patent, No. 1,453,594, for sealing-in machine, claims 1, 3, 5, 8, and 14 *Held* invalid. *Id.*

(C. C. A. N. J.) Mitchell and White patent, No. 1,453,595, for manufacture of incandescent electric lamps and similar articles, claim 7 *Held* invalid. *Id.*

(C. C. A. N. J.) Marshall patent, No. 1,475,192, for sealing-in machine, claims 2 and 6 *Held* invalid. *Id.*

(C. C. A. N. J.) Vreeland and Dyer patent, No. 1,593,735, for art of recording sounds, *Held* invalid. *Victor Talking Machine Co.* v. *Vreeland*, 43 F.(2d) 343.

(C. C. A. Okla.) Carter and Best patent, No. 1,609,158, for oil-well plug, *Held* invalid. *Eagle Picher Lead Co.* v. *Robinson Packer Co.*, 43 F.(2d) 284.

TRADE-MARKS

OFFICIAL GAZETTE, DECEMBER 9, 1930

[VOL. 401. No. 2]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 1 of said act, a fee of ten dollars must accompany each notice of opposition.

CLASS 1

Raw or Partly-Prepared Materials

Ser. No. 282,923. J. W. & A. P. HOWARD COMPANY, Corry, Pa. Filed Apr. 24, 1929.

The words "Special Sole Leather" are disclaimed apart from the mark as shown in the drawing.
For Sole Leather.
Claims use since 1918.

Ser. No. 305,429. THE WHITNEY-ECKSTEIN SEED CO., Buffalo, N. Y. Filed Sept. 6, 1930.

PHOENIX

For Clover Seeds, Grass Seeds, and Seed Grains and Mixtures Thereof.
Claims use since July 1, 1930.

Ser. No. 305,478. CLINCHFIELD COAL CORPORATION, Dante, Va. Filed Sept. 9, 1930.

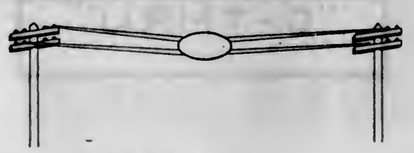
Applicant disclaims the words "Red Ash Coal" apart from the mark as shown.
For Coal.
Claims use since June 22, 1930.

Ser. No. 306,639. BLISS COAL COMPANY, Saginaw, Mich. Filed Oct. 11, 1930.

RED-FLASH

For Coal.
Claims use since January, 1930.

CLASS 2



Receptacles

Ser. No. 290,958. BENNO Y. JACOBSON, New York, N. Y. Filed Oct. 11, 1929.

The horizontal lining on the drawing is for shading only.
For Drinking Flask Made of Base Metal and Rubber.

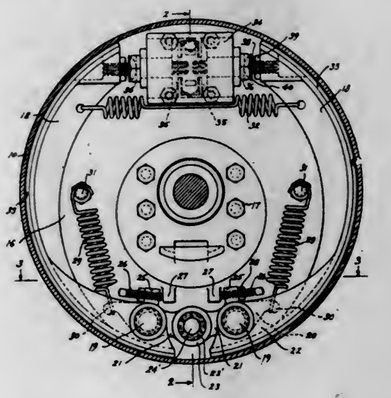
REISSUES

DECEMBER 9, 1930

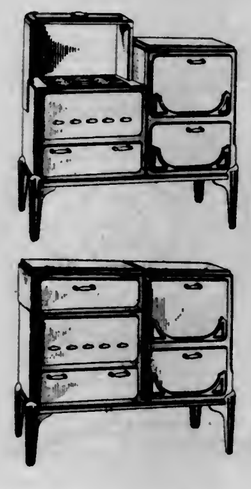
17,897. ELECTRIC SWITCH. CARL BRAMMING, Chicago, Ill., assignor to Delta Electric Company, Marion, Ind., a Corporation. Filed Oct. 20, 1930. Serial No. 490,041. Original No. 1,740,535, dated Dec. 24, 1929, Serial No. 258,271, filed Mar. 1, 1928. 8 Claims. (Cl. 200—16.)



1. A switch of the character described, comprising a housing, a plurality of contact members mounted thereon, spring contactors adapted to engage and make contact therewith, a carriage for supporting said spring contactors, said carriage having an opening therein, a support upon which said carriage is adapted to slide having a recess therein and a ball bearing adapted to ride within the opening of said carriage in position to register with the recess in said support for resiliently holding said carriage in predetermined position under the spring tension of said spring contactors.

17,898. PROCESS FOR THE TREATMENT OF HYDROCARBONS. SAMUEL C. CARNEY, San Francisco, Calif., assignor to Shell Petroleum Corporation, a Corporation of Virginia. Filed Oct. 18, 1930. Serial No. 490,559. Original No. 1,768,827, dated July 1, 1930, Serial No. 45,661, filed July 23, 1925. 9 Claims. (Cl. 260—169.)

1. That process for treatment of hydrocarbons having substantially the characteristic of natural gas, which consists in splitting the hydrocarbon mixture into a liquid component and a vaporous component by rectification; then condensing a part of said vaporous component to form a secondary liquid component; then expanding said secondary liquid component to effect a cooling action; and subjecting the vaporous component while under pressure to the cooling action of the expansion of said secondary liquid component to condense said last named vaporous component.

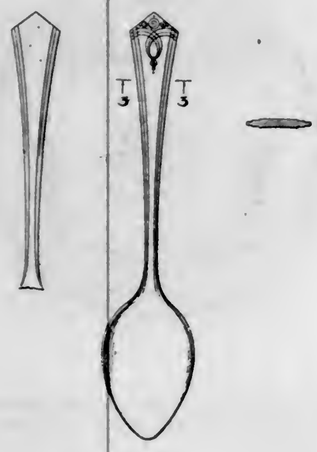


17,899. VEHICLE BRAKE MECHANISM. NIELS A. CHRISTENSEN, Cleveland, Ohio. Filed Oct. 1, 1930. Serial No. 485,786. Original application filed June 12, 1926, Serial No. 115,604. Renewed May 12, 1928. Original No. 1,718,526, dated June 25, 1929. 4 Claims. (Cl. 188—78.)

1. In brake mechanism of the class described, the combination with a rotatable brake drum, of a brake support, a pin on said support, anchor pin links pivotally mounted on said pin, a pair of brake shoes engageable with the drum, each shoe being connected near one end to one of said links, adjustable means associated with the link-supported end of each shoe to limit its swinging movement to release position, means acting on the free ends of said

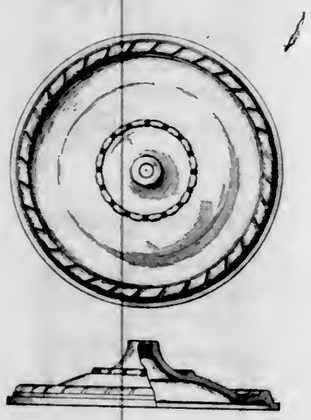
shoes to simultaneously move them into braking engagement with said drum, and means to release said shoes from said drum.

17,900. RANGE OR SIMILAR ARTICLE. ARTHUR STOCKSTROM, St. Louis, Mo., assignor to American Stove Company, St. Louis, Mo., a Corporation of New Jersey. Filed June 9, 1930. Serial No. 36,002. Term of patent 14 years. Original No. 79,110, dated July 30, 1929, Serial No. 30,780, filed Apr. 3, 1929, for 14 years.



The ornamental design for a range or similar article as shown.

DESIGNS

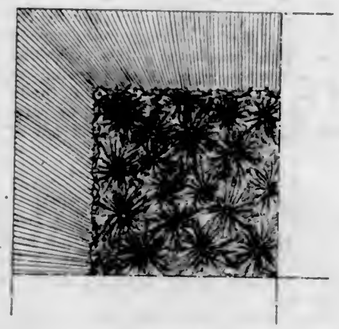


DECEMBER 9, 1930

82,719. SPOON OR SIMILAR ARTICLE. GROSVENOR N. ALLEN, MARY G. PARKER, and ELMER H. KREPS, Oneida, N. Y., assignors to Oneida Community, Limited, Oneida, N. Y., a Corporation of New York. Filed Oct. 16, 1930. Serial No. 37,278. Term of patent 14 years.

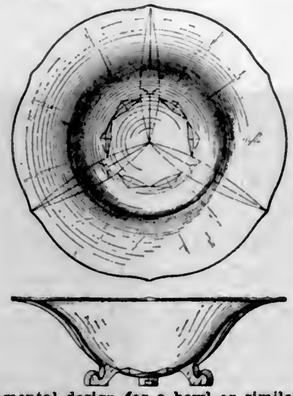
The ornamental design for a spoon or similar article as shown and described.

82,720. BASE FOR BIRD-CAGE STANDS OR SIMILAR ARTICLES. SAMUEL BABITZKY, Chicago, Ill. Filed June 23, 1930. Serial No. 36,134. Term of patent 3½ years.



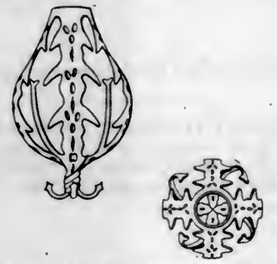
The ornamental design for a base for bird cage stands or similar articles, as shown.

82,721. LACE. BEN A. BALL, Pawtucket, R. I., assignor to American Textile Company, Inc., Pawtucket, R. I., a Corporation of Rhode Island. Filed July 24, 1930. Serial No. 36,452. Term of patent 7 years.



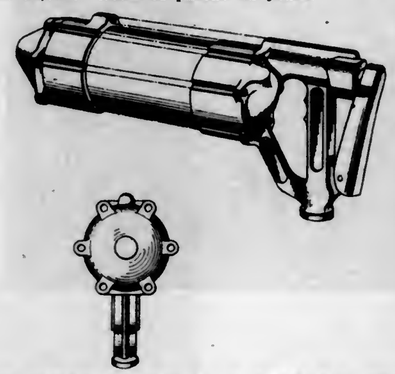
The ornamental design for lace, substantially as shown and described.

82,722. PAPER NAPKIN OR THE LIKE. RICHARD W. BEACH, Indianapolis, Ind., assignor to Beach & Arthur, Inc., Indianapolis, Ind., a Corporation of Indiana. Filed Nov. 11, 1929. Serial No. 33,406. Term of patent 3½ years.



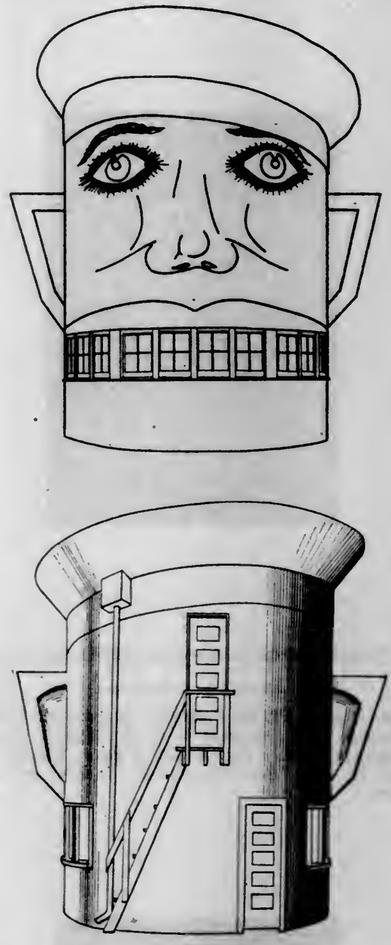
The ornamental design for paper napkin or the like, as shown and described.

82,723. BOWL OR SIMILAR ARTICLE. CHARLES C. BEAM, Pittsburgh, Pa., assignor to United States Glass Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Aug. 6, 1930. Serial No. 36,578. Term of patent 14 years.



The ornamental design for a bowl or similar article, as shown and described.

82,724. ELECTRIC-LIGHT-BULB JACKET OR SIMILAR ARTICLE. HERMAN E. BLEIER, Chicago, Ill. Filed Dec. 27, 1929. Serial No. 33,946. Term of patent 14 years.



The ornamental design for an electric light bulb jacket or similar article as shown.

82,725. GREASE-GUN CASING. CLYDE G. BUTLER, Cincinnati, Ohio, assignor to The Cincinnati Ball Crank Company, Cincinnati, Ohio, a Corporation of Ohio. Continuation of application Serial No. 33,835, filed Dec. 18, 1929. This application filed Aug. 18, 1930. Serial No. 36,701. Term of patent 14 years.

The ornamental design for a grease gun casing as shown.

82,726. BUILDING. FRED D. CLARK, Kansas City, Mo. Filed July 28, 1930. Serial No. 36,503. Term of patent 14 years.

The ornamental design for a building, as shown.

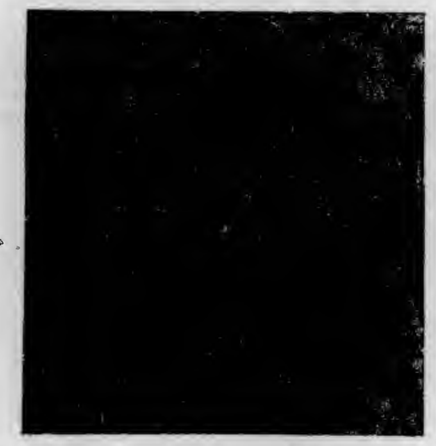
82,727. BUCKLE. DWIGHT W. COULTAS, Cranston, R. I. Filed Sept. 11, 1930. Serial No. 36,930. Term of patent 3½ years.

The ornamental design for a buckle, substantially as shown.

82,728. DECORATIVE FABRIC. ANDREW L. COURTER, Paterson, N. J., assignor to C. K. Eagle & Co., Inc., New York, N. Y., a Corporation of Pennsylvania. Filed June 23, 1930. Serial No. 36,142. Term of patent 3½ years.

The ornamental design for a decorative fabric as shown.

82,729. DECORATIVE FABRIC. ANDREW L. COURTER, Paterson, N. J., assignor to C. K. Eagle & Co., Inc., New York, N. Y., a Corporation of Pennsylvania. Filed June 23, 1930. Serial No. 36,143. Term of patent 3½ years.



The ornamental design for a decorative fabric as shown.

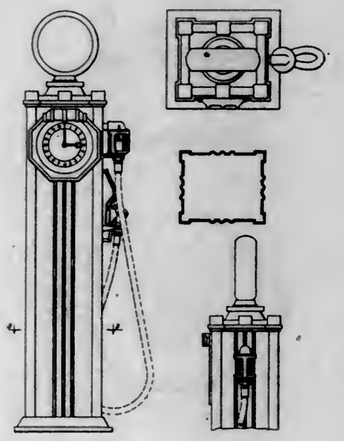
82,730. DECORATIVE FABRIC. ANDREW L. COURTER, Paterson, N. J., assignor to C. K. Eagle & Co., Inc., New York, N. Y., a Corporation of Pennsylvania. Filed June 23, 1930. Serial No. 36,144. Term of patent 3½ years.

The ornamental design for a decorative fabric as shown.

82,731. DECORATIVE FABRIC. ANDREW L. COURTER, Paterson, N. J., assignor to C. K. Eagle & Co., Inc., New York, N. Y., a Corporation of Pennsylvania. Filed June 23, 1930. Serial No. 36,145. Term of patent 3½ years.

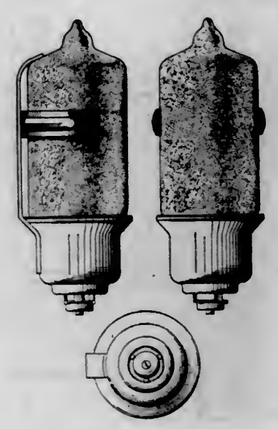
The ornamental design for a decorative fabric as shown.

82,732. DECORATIVE FABRIC. ANDREW L. COURTER, Paterson, N. J., assignor to C. K. Eagle & Co., Inc., New York, N. Y., a Corporation of Pennsylvania. Filed June 23, 1930. Serial No. 36,146. Term of patent 3½ years.



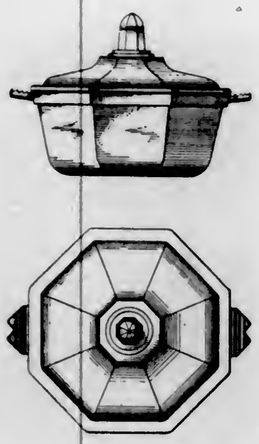
The ornamental design for a decorative fabric as shown.

82,733. CAR FOR AMUSEMENT DEVICES. HENRY F. CUSHNER, Brooklyn, N. Y. Filed Sept. 23, 1930. Serial No. 37,058. Term of patent 14 years.



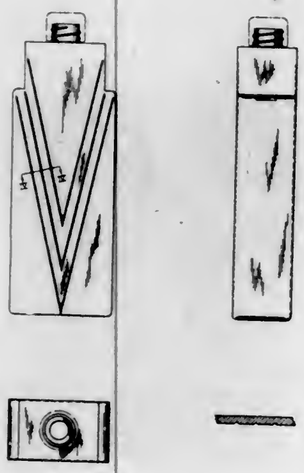
The ornamental design for a car for amusement devices, as shown and described.

82,734. LIQUID-DISPENSING PUMP. EARL E. EICKMEYER, Dayton, Ohio, assignor to The Dayton Pump & Manufacturing Company, Dayton, Ohio, a Corporation of Ohio. Filed June 23, 1930. Serial No. 36,131. Term of patent 3½ years.



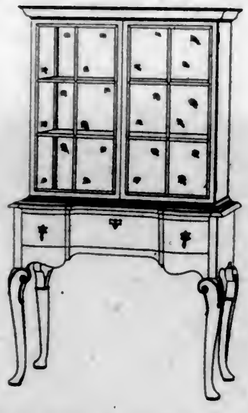
The ornamental design for a liquid dispensing pump as shown.

82,735. FIRE-EXTINGUISHER UNIT. POWELL EVANS and MALCOLM P. STONEY, Philadelphia, Pa. Filed July 9, 1930. Serial No. 36,305. Term of patent 14 years.



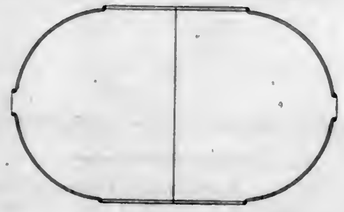
The ornamental design for a fire extinguisher unit substantially as shown.

82,736. CASSEROLE OR SIMILAR ARTICLE. SIMON W. FARBER, Brooklyn, N. Y., assignor to S. W. Farber, Inc., Brooklyn, N. Y., a Corporation of New York. Filed Sept. 25, 1930. Serial No. 37,070. Term of patent 14 years.

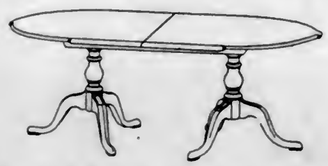


The ornamental design for a casserole or similar article, as shown.

82,737. BOTTLE. RALPH C. FAULKNER, Brooklyn, N. Y., assignor to E. R. Squibb & Sons, New York, N. Y., a Corporation of New York. Filed Oct. 3, 1930. Serial No. 37,120. Term of patent 14 years.

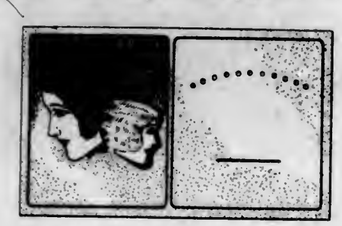


The ornamental design for a bottle substantially as shown.



82,738. CABINET. WILLIAM A. FRENCH, Minneapolis, Minn. Filed Oct. 20, 1930. Serial No. 37,321. Term of patent 3½ years.

The ornamental design for a cabinet, as shown.



82,739. TABLE. WILLIAM A. FRENCH, Minneapolis, Minn. Filed Oct. 20, 1930. Serial No. 37,322. Term of patent 3½ years.

The ornamental design for a table, as shown.

82,740. DISPLAY CARD OR SIMILAR ARTICLE. SOLOMON H. GOLDBERG, Chicago, Ill., assignor to The Hump Hairpin Manufacturing Co., Chicago, Ill., a Corporation of West Virginia. Filed May 2, 1930. Serial No. 35,480. Term of patent 14 years.

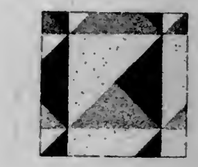
The ornamental design for a display card or similar article, as shown and described.

CARNEGIE LIBRARY OF ATLANTA

82,741. FRINGE. ISRAEL GRABELSKY, New York, N. Y., assignor to Universal Fringe Works, Inc., a Corporation of New York. Filed Sept. 4, 1930. Serial No. 36,865. Term of patent 7 years.

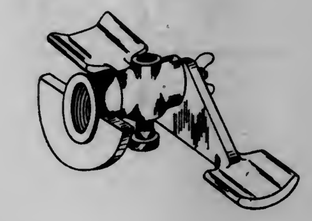
The ornamental design for a fringe, as shown.

82,742. GAS HEATER. WILLIAM A. GRISWOLD, Nashville, Tenn. Filed Sept. 4, 1930. Serial No. 36,857. Term of patent 3½ years.



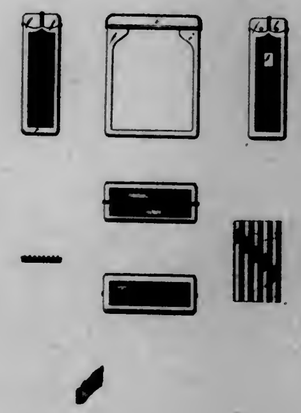
The ornamental design for a gas heater as shown.

82,743. KNITTED GARMENT. MIRIAM GROSS, Milwaukee, Wis., assignor to Miriam Gross Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Oct. 1, 1930. Serial No. 37,104. Term of patent 7 years.



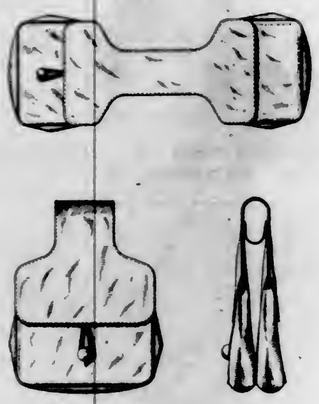
The ornamental design for a knitted garment as shown and described.

82,744. TEXTILE FABRIC. VIRGINIA HAMILL, New York, N. Y., assignor to W. S. Libbey Company, a Corporation of Maine. Filed Nov. 4, 1929. Serial No. 33,328. Term of patent 3½ years.



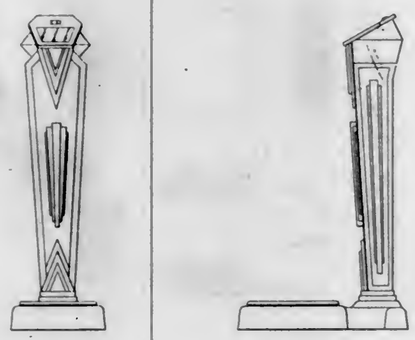
The ornamental design for a textile fabric or the like, as shown and described.

82,745. LAWN-SPRINKLER NOZZLE. PAUL E. HEAL, Marion, Ind. Filed Nov. 21, 1929. Serial No. 33,516. Term of patent 3½ years.



The ornamental design for a lawn sprinkler nozzle as shown.

82,746. CIGARETTE-PACKAGE HOLDER. WILLIAM C. HIRING, Newark, N. J., assignor to J. E. Mergott Company, Newark, N. J., a Corporation of Delaware. Filed Nov. 8, 1929. Serial No. 33,372. Term of patent 14 years.

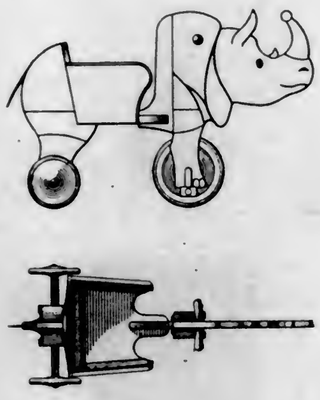


The ornamental design for a cigarette package holder, as shown.

82,747. LADY'S HAND BAG. NELLIE B. HUSSEY, Peking, China. Filed June 27, 1930. Serial No. 36,199. Term of patent 14 years.

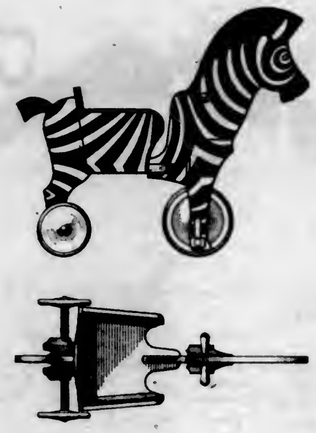
The ornamental design for a lady's hand bag, substantially as shown.

82,748. SCALE. HARRY E. KNUPP, Detroit, Mich., assignor to Caille Motor Company, Detroit, Mich., a Corporation of Michigan. Filed Oct. 21, 1930. Serial No. 37,333. Term of patent 7 years.



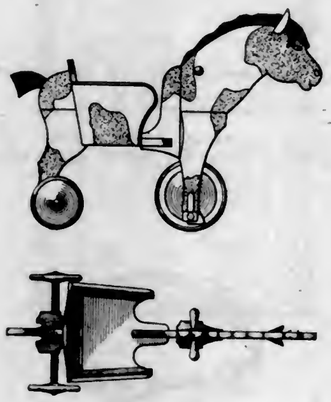
The ornamental design for a scale substantially as shown.

82,749. TABLE LIGHTER. CECIL H. LAWRENCE, Attleboro, Mass., assignor to Evans Case Company, a Corporation of Massachusetts. Filed Sept. 17, 1930. Serial No. 37,004. Term of patent 7 years.



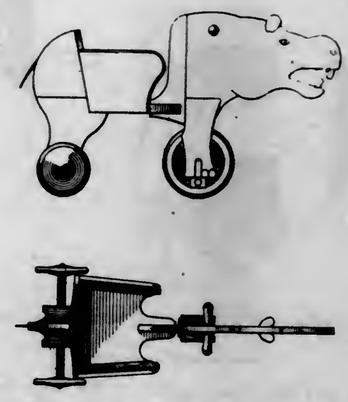
The ornamental design for a table lighter substantially as shown and described.

82,750. CHILD'S VEHICLE. WILLIAM B. MILES, Downers Grove, Ill. Filed Aug. 13, 1930. Serial No. 36,656. Term of patent 3½ years.



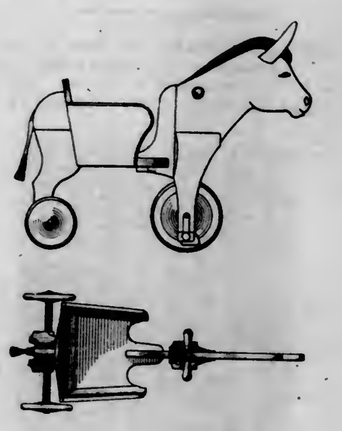
The ornamental design for a child's vehicle as shown.

82,751. CHILD'S VEHICLE. WILLIAM B. MILES, Downers Grove, Ill. Filed Aug. 13, 1930. Serial No. 36,657. Term of patent 3½ years.



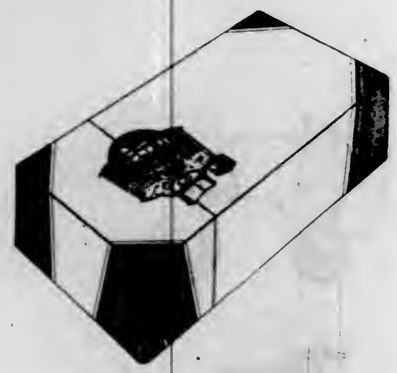
The ornamental design for a child's vehicle, as shown.

82,752. CHILD'S VEHICLE. WILLIAM B. MILES, Downers Grove, Ill. Filed Aug. 13, 1930. Serial No. 36,658. Term of patent 3½ years.



The ornamental design for a child's vehicle, as shown.

82,753. CHILD'S VEHICLE. WILLIAM B. MILES, Downers Grove, Ill. Filed Aug. 13, 1930. Serial No. 36,659. Term of patent 3½ years.



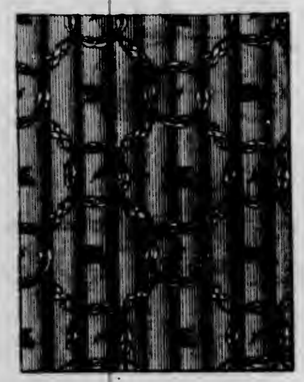
The ornamental design for a child's vehicle, as shown.

82,754. CHILD'S VEHICLE. WILLIAM B. MILES, Downers Grove, Ill. Filed Aug. 13, 1930. Serial No. 36,660. Term of patent 3½ years.

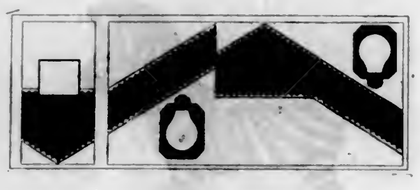
The ornamental design for a child's vehicle, as shown.

82,755. CARTON. PAUL R. MILLER, New York, N. Y., assignor to Theo. J. Lapres, Inc., Atlantic City, N. J. Filed Sept. 6, 1930. Serial No. 36,887. Term of patent 7 years.

The ornamental design for a carton, as shown and described.



82,756. BADGE. WILLIAM J. OTTS, San Francisco, Calif. Filed Sept. 5, 1930. Serial No. 36,867. Term of patent 3½ years.



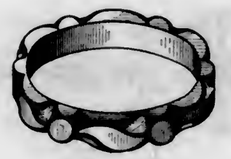
The ornamental design for a shoe ornament as shown.

82,757. TEXTILE FABRIC. CHARLES F. PEARCE, Jr., Chicago, Ill., assignor to Burton-Dixie Corporation, Chicago, Ill., a Corporation of Illinois. Filed Aug. 7, 1930. Serial No. 36,587. Term of patent 14 years.

The ornamental design for textile fabric, as shown and described.

82,758. WRAPPER FOR A BOX OR CARTON. HERBERT E. PLISHKER, Flushing, N. Y., assignor to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed Mar. 1, 1930. Serial No. 34,710. Term of patent 3½ years.

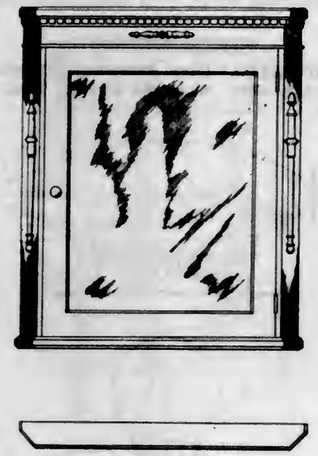
The ornamental design for a wrapper for a box or carton as shown.



82,759. SHOE ORNAMENT. ORLANDO RICHARD RECCHIA, Cranston, R. I., assignor to C. G. King & Co., Inc., Providence, R. I. Filed Aug. 7, 1930. Serial No. 36,583. Term of patent 3½ years.

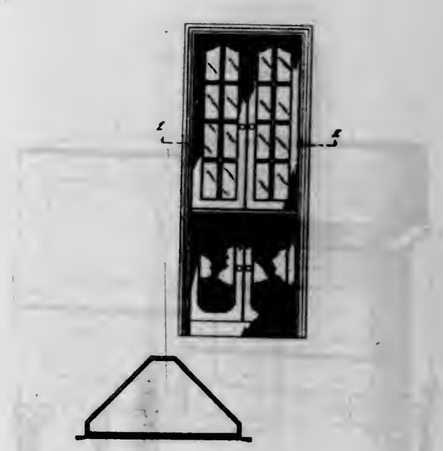
The ornamental design for a shoe ornament as shown.

82,760. RING. ABRAHAM SAGER, Chicago, Ill. Filed Jan. 16, 1930. Serial No. 34,150. Term of patent 7 years.



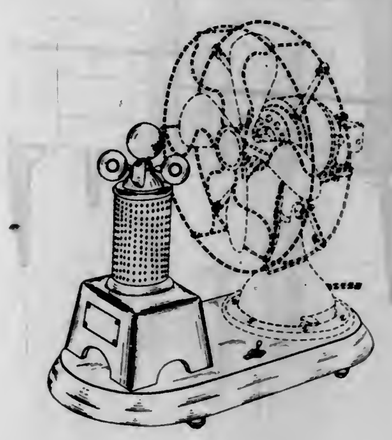
The ornamental design for a ring as shown.

82,761. SHOE. ROGER A. SELBY, Portsmouth, Ohio, assignor to The Selby Shoe Company, Portsmouth, Ohio, a Corporation of Ohio. Filed July 24, 1929. Serial No. 32,193. Term of patent 3½ years.



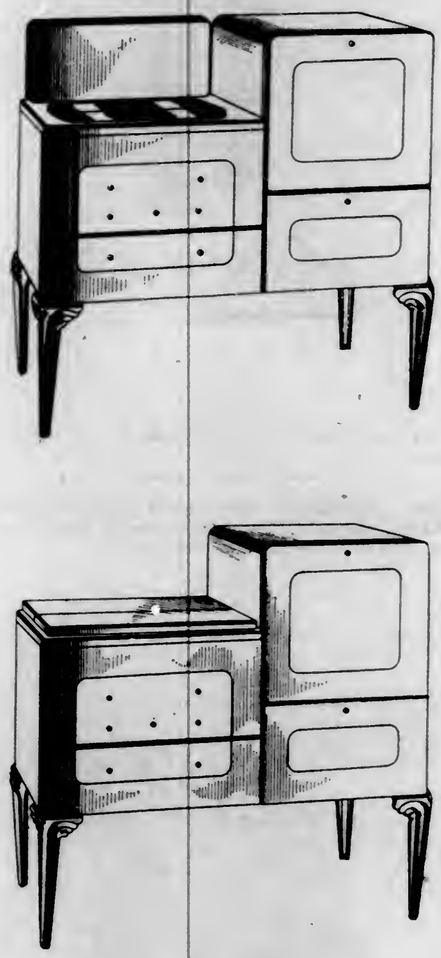
The ornamental design for a shoe, as shown and described.

82,762. MEDICINE CABINET. GEORGE A. SIMONS and GEORGE FREEBERG, Minneapolis, Minn., assignors to Simons Millwork, Inc., Minneapolis, Minn., a Corporation of Minnesota. Filed May 20, 1929. Serial No. 31,816. Term of patent 14 years.



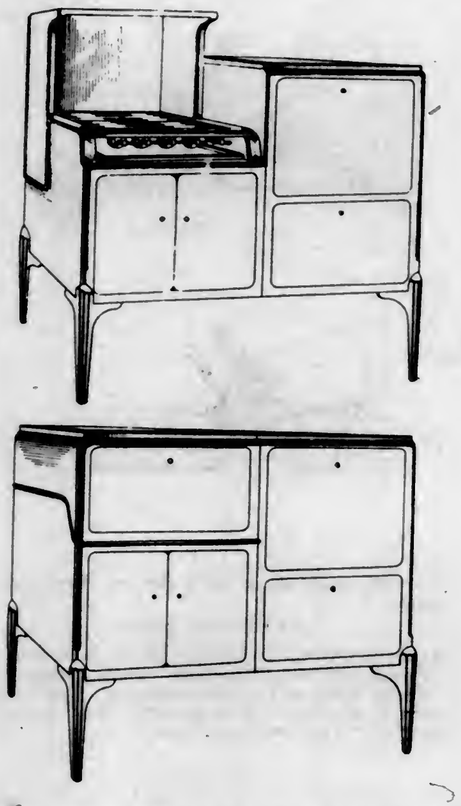
The ornamental design for a medicine cabinet as shown.

82,763. CORNER CHINA CLOSET. GEORGE A. SIMONS and GEORGE FREEBERG, Minneapolis, Minn., assignors to Simons Millwork, Inc., Minneapolis, Minn., a Corporation of Minnesota. Filed June 10, 1929. Serial No. 31,625. Term of patent 14 years.



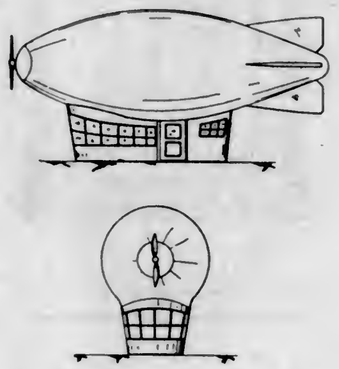
The ornamental design for a corner china closet as shown.

82,764. OZONIZING APPARATUS. WELLINGTON J. SMITH, Cleveland, Ohio. Filed Apr. 3, 1930. Serial No. 35,145. Term of patent 3½ years.



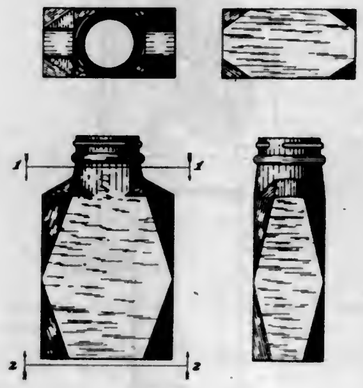
The ornamental design for ozonizing apparatus substantially as shown.

82,765. RANGE. ARTHUR STOCKSTROM, St. Louis, Mo., assignor to American Stove Company, St. Louis, Mo., a Corporation of New Jersey. Filed Sept. 26, 1929. Serial No. 32,880. Term of patent 14 years.



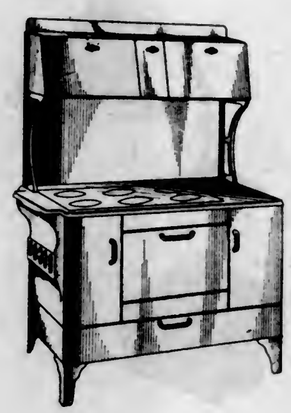
The ornamental design for a range, as shown and described.

82,766. RANGE. ARTHUR STOCKSTROM and ALMER H. BRODBECK, St. Louis, Mo., assignors to American Stove Company, St. Louis, Mo., a Corporation of New Jersey. Filed Aug. 22, 1929. Serial No. 32,515. Term of patent 14 years.



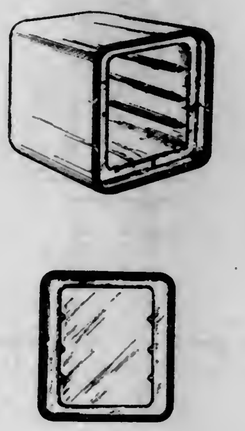
The ornamental design for a range, as shown and described.

82,767. BUILDING. DAVID STROMBERG, Cleveland, Ohio. Filed Oct. 9, 1930. Serial No. 37,200. Term of patent 14 years.



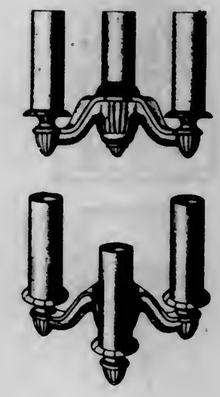
An ornamental design for a building, substantially as shown in the drawing.

82,768. BOTTLE OR SIMILAR CONTAINER. WALTER D. TEAGUE, Forest Hills, N. Y., assignor to Turner Glass Corporation, Terre Haute, Ind., a Corporation of Indiana. Filed Sept. 8, 1930. Serial No. 36,905. Term of patent 3½ years.



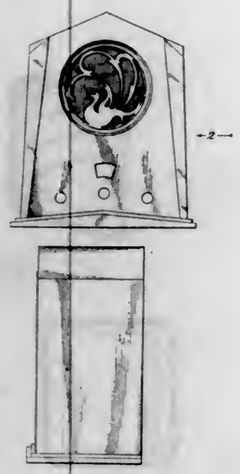
The ornamental design for a bottle or similar container as shown.

82,769. COAL RANGE. JACOB TELLER, Chicago, Ill., assignor to Teller Corporation, Chicago, Ill., a Corporation of Tennessee. Filed Apr. 11, 1930. Serial No. 35,224. Term of patent 7 years.



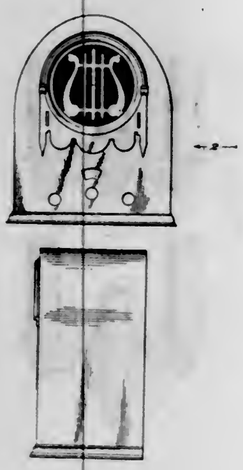
The ornamental design for a coal range, as shown.

82,770. REFRIGERATOR COOLING UNIT. MATSON C. TERRY, Mansfield, Ohio, assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 20, 1930. Serial No. 34,980. Term of patent 14 years.



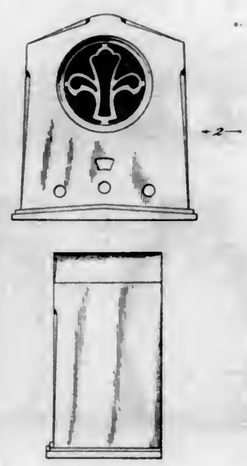
The ornamental design for a refrigerator cooling unit substantially as shown.

82,771. LAMP STAND BRACKET. ALBERT A. WITZ, Chicago, Ill. Filed Apr. 17, 1930. Serial No. 35,280. Term of patent 3½ years.



The ornamental design for a lamp stand bracket, as shown.

82,772. RADIOCABINET. ELMER W. ZWIEBEL, Los Angeles, Calif. Filed Oct. 8, 1930. Serial No. 37,179. Term of patent 3½ years.



The ornamental design for a radio cabinet as shown.

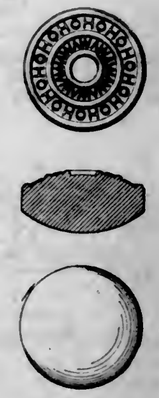
82,773. RADIOCABINET. ELMER W. ZWIEBEL, Los Angeles, Calif. Filed Oct. 8, 1930. Serial No. 37,180. Term of patent 3½ years.

The ornamental design for a radio cabinet as shown.

82,774. RADIOCABINET. ELMER W. ZWIEBEL, Los Angeles, Calif. Filed Oct. 8, 1930. Serial No. 37,181. Term of patent 3½ years.

The ornamental design for a radio cabinet as shown.

82,775. TABLE THERAPEUTIC LAMP. FRITZ A. ANDERSON, Milton, Wis., assignor to The Burdick Corporation, Milton, Wis., a Corporation of Delaware. Filed Aug. 26, 1929. Serial No. 32,543. Term of patent 7 years.

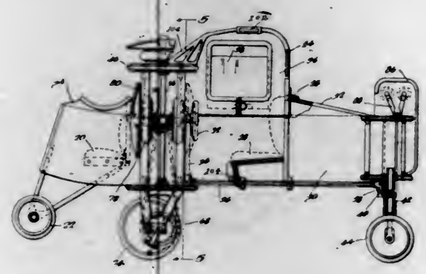


The ornamental design for a table therapeutic lamp, as shown.

82,776. FLOOR-TYPE THERAPEUTIC LAMP. FRITZ A. ANDERSON, Milton, Wis., assignor to The Burdick Corporation, Milton, Wis., a Corporation of Delaware. Filed Aug. 26, 1929. Serial No. 32,544. Term of patent 7 years.

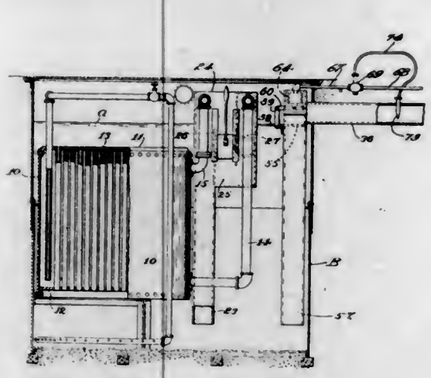
The ornamental design for a floor type therapeutic lamp as shown.

82,777. CAKE OF SOAP. CHARLES A. CRARY, Wyoming, Ohio. Filed June 18, 1930. Serial No. 36,095. Term of patent 14 years.



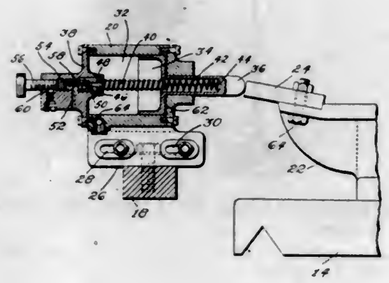
The ornamental design for a cake of soap, as shown.

PATENTS



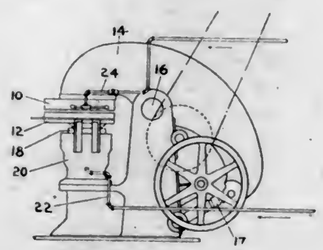
GRANTED DECEMBER 9, 1930

1,783,949. AIRCRAFT TOY BOMBER. FREDERICK A. BERG, Chicago, Ill. Filed Dec. 13, 1926. Serial No. 154,567. 5 Claims. (Cl. 208—42.)



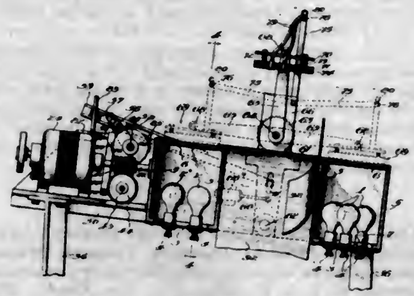
1. An aircraft toy vehicle, comprising a body and means for seating a plurality of persons therein, and propeller means for said vehicle adapted to be operated by one of said persons, and a concealed seat for a passenger in the vehicle, said seat positioned beneath an opening in the fuselage for a removable gun mounting.

1,783,950. CATCH BASIN FOR SOIL-WATER-HEAT RECLAIMERS. FRED S. BOLTZ, Mansfield, Mass. Filed June 14, 1928. Serial No. 285,455. 4 Claims. (Cl. 257—5.)



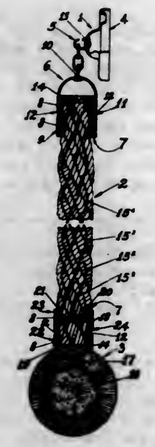
2. In combination with a catch basin, means for admitting water into said basin at inlet ports of different elevation, and temperature controlled means responsive to the temperature of the water being admitted whereby when the water is above a predetermined temperature the water will be admitted to the basin at the higher point and whereby when the temperature is below the predetermined degree the water will be discharged into the basin at the lower point in combination with a heat reclaimer positioned within said basin, said heat reclaimer having a chamber, an inlet to and an outlet therefrom for water to be heated, and means for preventing the soil water from mingling with the clean water.

1,783,951. PATTERN-COPYING MACHINE. ERNEST F. BONSER, Leicester, England, assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Sept. 23, 1929, Serial No. 394,701, and in Great Britain Oct. 9, 1928. 11 Claims. (Cl. 142—15.)



1. In a copying lathe, a main frame, a swing frame arranged to carry a model and a block, a model wheel carriage and a cutter carriage arranged to traverse along the main frame beside the swing frame, and shock absorbing means comprising co-operating parts respectively mounted on the swing frame and on one of the carriages.

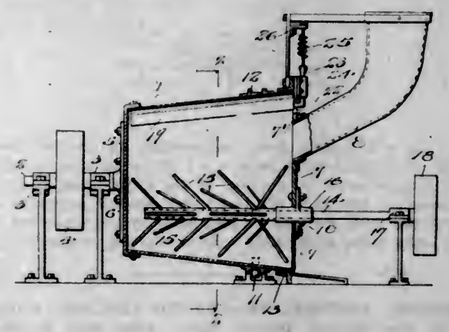
1,783,952. PLATING SKINS. AUGUST C. BRILL, Oberursel, near Frankfort-on-the-Main, Germany, assignor to The Turner Tanning Machinery Company, Portland, Me., a Corporation of Maine. Filed June 8, 1926, Serial No. 114,491, and in Germany Aug. 1, 1925. 22 Claims. (Cl. 149—23.)



22. That improvement in methods of plating skins which comprises placing a skin over a flat surface which merges into a conical surface, arranging the skin so that the conical surface points in a direction toward the center of the skin, tensioning a portion of the skin by causing it to conform to the conical surface, and subjecting the flat and the tensioned portions of the skin to pressure and to heat on one surface thereof while the tensioned portion is retained in the conical form, whereby wrinkles, folds or tucks are effaced and the skin is set in a smooth sheet.

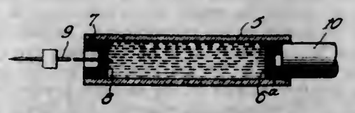
1,783,953. PICTURE-PRINTING MACHINE. STEPHEN L. BRIGGS, Chicago, Ill. Filed Dec. 1, 1926. Serial No. 151,885. 13 Claims. (Cl. 95—73.)

1. A machine for printing pictures from films comprising in combination separate independently controlled light exposure elements consisting of a picture printing zone and a border printing zone, a pressure pad, means cooperatively associated with the pressure pad for transferring picture paper from one printing zone to the other printing zone, and positive automatic means for actuating said pressure pad to successively cooperate without interruption with both of said zones when said positive automatic means is actuated.



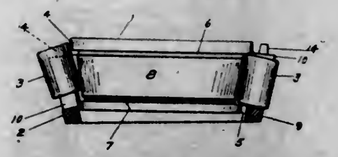
1,783,954. AUTOMOBILE HANDGRIP. REUBEN BRODER, New York, N. Y. Filed July 11, 1929. Serial No. 377,464. 10 Claims. (Cl. 105—354.)

1. A body portion or cord assembly for a vehicle hand grip, comprising a plurality of twisted cords having a spring wire within each cord and the said plurality of cords and wires twisted together in a rope-like assembly each spring wire formed of the same convolutions as its respective cord and forming a coil spring to maintain the shape of the respective convolutions and to impart resiliency to said hand grip.



2. A body portion or cord assembly for a vehicle hand grip, comprising a plurality of twisted cords, some of the cords having reenforcing spring wires therein, and the wires twisted together with the cords to form coil springs in the cord assembly for imparting resiliency to said assembly.

1,783,955. COATING MACHINE. MARTIN T. CHAMBERLAIN, Joliet, Ill. Filed Nov. 30, 1928. Serial No. 322,774. 8 Claims. (Cl. 83—73.)

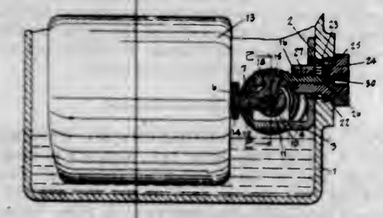


1. The combination in a coating machine of the non-pugging type with a rotary drum having a feed inlet and a discharge outlet for non-flowing, non-plastic fibrous material and a binder, of means within the drum for bringing into intimate relation the fibrous material and binder, whereby the former is coated by the latter.

1,783,956. MEDICAMENT-DISPENSING CARTRIDGE. HARVEY S. COOK, Valparaiso, Ind., assignor to Cook Laboratories, Inc., a Corporation of Delaware. Original application filed July 1, 1921, Serial No. 481,997. Divided and this application filed Dec. 20, 1926. Serial No. 155,838. 3 Claims. (Cl. 128—218.)

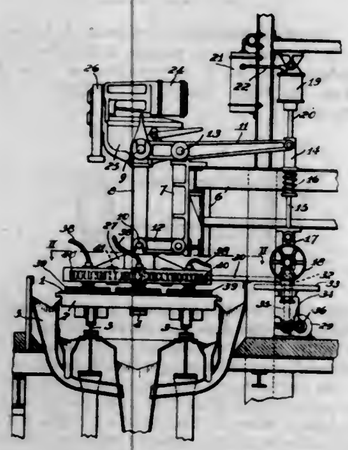
1. A cartridge for hypodermic syringes comprising a sealed liquid container embodying a rigid tube of substantially uniform bore and stoppers in opposite ends of the tube, said stoppers comprising substantially cup-shaped thick walled plugs of resilient material arranged with their cavities facing outwardly, said plugs adapted one to be pierced by a canula and the other to be forced through the tube to expel its contents through such canula.

1,783,957. ROLLER BEARING. GEORGE A. DARBY, East Orange, N. J., assignor to Orange Roller Bearing Company, Orange, N. J., a Corporation of New Jersey. Filed Aug. 12, 1927. Serial No. 212,391. 5 Claims. (Cl. 308—218.)



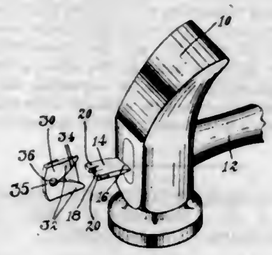
1. A conical cage for the rollers of a tapered roller bearing comprising annular ends and connecting spaced bridges providing roller pockets, each pair of adjacent bridges having opposed curved bearing surface portions extending from the periphery of the cage inwardly almost but not quite to the roller pitch line and closely conforming to and providing seats for the rollers for which the cage is adapted, and also having opposed flare surface portions respectively extending inwardly from and in planes substantially tangential to the said curved surface portions at their innermost points.

1,783,958. ARCH OR TRUSS SHOE. LOUIS DAVIDSON, New York, N. Y. Filed Dec. 10, 1926. Serial No. 153,891. 7 Claims. (Cl. 189—36.)



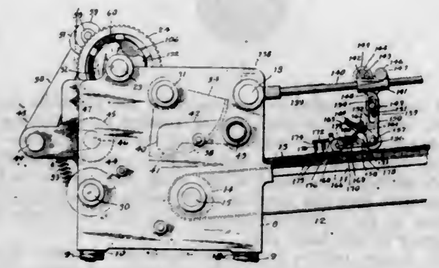
3. In a long span arch construction, an arch or truss shoe of substantially cross (+) shape in plan section, the aligned arms of one bar of the cross being adapted to connect the ends of steel rolled section segments to form the arch, and the aligned arms of the other bar of the cross being adapted to support roof-supporting beams.

1,783,959. CONTROL MEMBER FOR LIQUIDS. PHILIP W. DES ROCHES, Detroit, Mich. Filed Sept. 9, 1927. Serial No. 218,397. 6 Claims. (Cl. 137—104.)



1. In a liquid control device, a container having a port for admitting the liquid to the container, a member pivotally supported in the container and tending to move by gravity in one direction a spiral spring for counterbalancing a portion of the weight of the member and surrounding the pivotal axis of the member, a valve member connected to the member and adapted to be moved thereby to close and open the port.

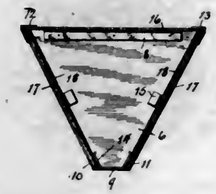
1,783,960. SURFACING MACHINE. JOHN H. FOX and WILLIAM OWEN, Pittsburgh, Pa., assignors to Pittsburgh Plate Glass Company, a Corporation of Pennsylvania. Filed Oct. 24, 1929. Serial No. 402,084. 4 Claims. (Cl. 51—55.)



1. In combination in a surfacing machine, a work table mounted for right line movement, a framework alongside the table, a surfacing unit comprising a vertical drive shaft above the table, a vertical sleeve in which the shaft is journalled, means carried by the framework for supporting the sleeve for vertical movement and counterbalancing it, a motor and driving connections therefrom to the shaft mounted upon the upper end of the sleeve, a gear casing swivelled upon the lower end of the sleeve, a plurality of work spindles extending vertically through the casing, a surfacing disc carried by each spindle, and driving means between the lower end of the drive shaft and the spindles, a motor at the side of the table, and connections between the motor and casing to carry the surfacing discs back and forth transversely of the line of movement of the table.

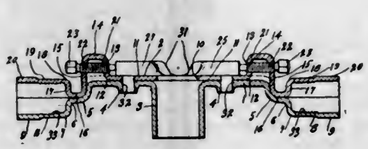
1,783,961. TOOL-SECURING DEVICE. EDWARD L. HURD, Milton, and CHARLES BRADFORD TIBBETTS, Walpole, Mass., assignors to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Feb. 10, 1923. Serial No. 618,409. 2 Claims. (Cl. 306—33.)

2. A device for securing a tool head on a handle comprising a ridden wedge, and a rider wedge having legs of substantial width connected by a narrow neck portion and extending at right angles to the ridden wedge, the wedges co-operating to exert a quartering action on the handle throughout their entire lengths, the ridden wedge being provided with means operable when the rider wedge is driven into the handle to spread apart the legs of the rider wedge thus locking both wedges in the handle.



1,783,962. SHEET FEEDER. HARRY EHLIG, Pearl River, N. Y., assignor, by mesne assignments, to Dexter Folder Company, New York, N. Y., a Corporation of New York. Filed May 29, 1923. Serial No. 642,189. 60 Claims. (Cl. 271—28.)

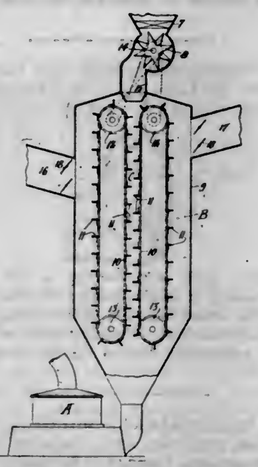
1. In a sheet-feeder, a suction feed-member having suction applied thereto at its lowermost portion and oscillat-



able forwardly in a vertical plane over the superposed sheets for separating and advancing same and means including a part actuated by the leading edge of the advanced sheet for arresting the forward movement of said member.

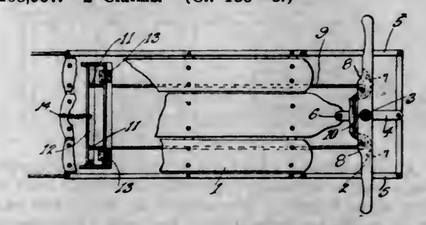
1,783,963. ILLUMINATED SIGN. BENJAMIN EMIS, New York, N. Y., assignor of one-half to Irving L. Schonbrun, Brooklyn, N. Y. Filed Jan. 12, 1928. Serial No. 246,360. 1 Claim. (Cl. 40—130.)

A sign comprising a substantially triangular casing and having reflective panes in two of its sides, means for rigidly mounting said panes at an angle of substantially 45 degrees to each other, said panes having an opaque reflective coating on their inner surfaces, and having portions of said coating removed so as to form signs whereby light reflected from each reflective surface passes through only the translucent portions of the other pane, and a light transmitting pane between and above said panes for admitting exterior light to said panes.



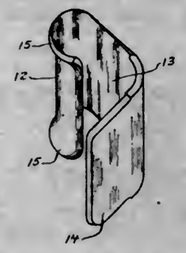
1,783,964. STAMPED DIESTOCK. RALPH E. HYDE, Cleveland, Ohio, assignor to The Oster Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Feb. 18, 1928. Serial No. 255,286. 5 Claims. (Cl. 10—123.)

1. A die-stock comprising a plate formed with a plane portion having a central aperture therethrough, and a depressed flange at each end of said portion, a second plate secured to said first plate and formed with an aperture registering with said first-mentioned aperture, means on said second plate forming guideways, stop means on said second plate at the outer end of each of said guideways, and means on said second plate co-operating with each of the flanges on said first plate for effecting rigid assembly of said plates.



1,783,965. COAL DRIER. GEORGE P. JACKSON, Flushing, N. Y., assignor to International Combustion Engineering Corporation, a Corporation of Delaware. Filed Nov. 5, 1925. Serial No. 66,926. 1 Claim. (Cl. 34—34.)

A coal drier comprising a casing having a coal inlet at the top and an outlet at the bottom, and two endless substantially vertically disposed conveyors spaced apart to provide a channel therebetween for the coal to be dried extending substantially from the inlet to the outlet, said conveyors being so operated that the adjacent flights



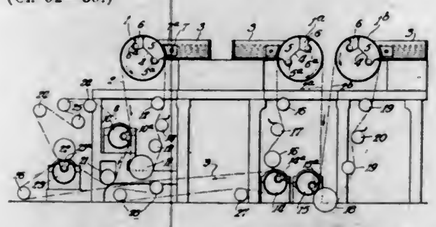
thereof move in a direction from the inlet to the outlet and means for passing a heating medium through the casing and laterally through the descending fuel.

1,783,966. BRAKE FOR SLEDS. ERNEST KALLENBACH, Philadelphia, Pa. Filed Apr. 10, 1928. Serial No. 268,957. 2 Claims. (Cl. 188—8.)

1. The combination with a sled having a steering bar, of a dragging brake member suspended from the top of the sled between the runners at the rear thereof, means to retain the brake member normally inclined rearwardly and downwardly, said steering bar having chambered out parts, pulleys mounted in the chambered out parts, a rope engaging over the pulleys and having a loop including a handle rearwardly of the pulleys, said loop having its opposite portions connected to the brake member, whereby upon grasping the handle the rope may be pulled and the brake member applied.

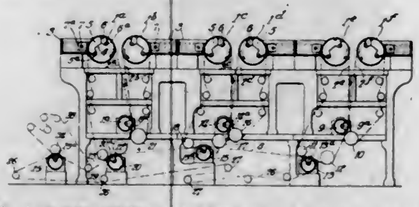
1,783,967. GUY CLIP. JAMES R. KEARNEY, St. Louis, Mo. Filed Sept. 9, 1927. Serial No. 218,482. 10 Claims. (Cl. 24—115.)

1. A flexible cable clip having a side opening, and adapted to engage a double cable; said clip having a sub-



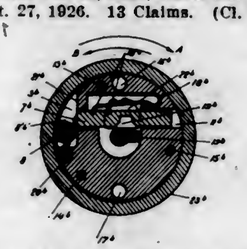
stantially semi-circular portion and a substantially rectilinear portion adapted to be bent into adjacence with the semi-circular portion to close the clip about the doubled cable.

1,783,968. FASTENING MEANS FOR CABLES. JAMES R. KEARNEY, St. Louis, Mo. Filed Feb. 7, 1929. Serial No. 338,249. 11 Claims. (Cl. 24—115.)



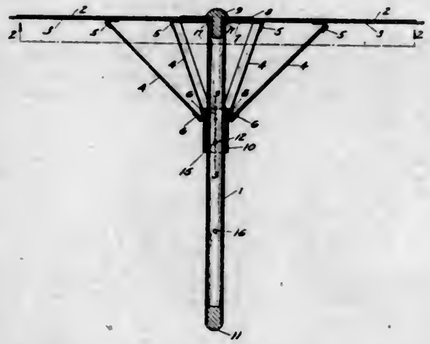
1. A flexible cable clip having a side opening, and adapted to engage a double cable; the clip having a preshaped portion offset from the side opening and normally conforming, substantially, with the shape of one cable, and an internal projection formed on the shaped portion of said clip.

1,783,969. PAPER-MAKING MACHINE. WILLIAM H. MILLSPAUGH, Sandusky, Ohio, assignor to The Paper & Textile Machinery Company, Sandusky, Ohio, a Corporation of Ohio. Original application filed July 20, 1926, Serial No. 123,757. Divided and this application filed Jan. 21, 1929. Serial No. 333,835. 11 Claims. (Cl. 92—39.)



1. A paper-making machine comprising, in combination, an organization including a plurality of suction rolls and endless wires traveling therearound on which wet paper plies or sheets are formed over the rolls by vacuum-induced formation and by which said plies are brought together on one of said wires; a press felt and means for transferring the united plies or sheets thereto; another sheet-making organization including a suction roll and wire traveling therearound on which a wet sheet is formed over said roll by vacuum-induced formation; another press felt and means for transferring the sheet from said last mentioned wire thereto; and a press comprising coacting rolls through which the sheet-carrying runs of said felts pass.

1,783,970. PAPER-MAKING MACHINE. WILLIAM H. MILLSPAUGH, Sandusky, Ohio, assignor to The Paper & Textile Machinery Company, Sandusky, Ohio, a Corporation of Ohio. Original application filed July 20, 1926, Serial No. 123,757. Divided and this application filed Jan. 21, 1929. Serial No. 333,836. 10 Claims. (Cl. 92—39.)

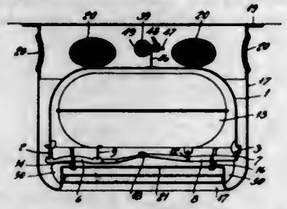


1. A paper-making machine comprising a plurality of pairs of suction rolls and endless wires traveling thereround, each pair of said wires arranged for bringing their respective sheets together on one of the wires of such pair, and an endless carrier and means associated with said carrier and with each of the wires carrying the pairs of sheets by which the said pairs of sheets are transferred one upon another on said carrier.

1,783,971. LOCK. LOUIS EUGENE MIQUET, Neuilly, France. Filed Oct. 25, 1927, Serial No. 228,571, and in France Oct. 27, 1926. 13 Claims. (Cl. 70—40.)

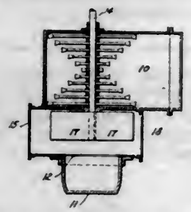
1. A locking device of the type described comprising, in combination, a cylinder, a notch formed in the periphery of said cylinder, one end of said notch bein; shallower than the other, a roller mounted in said notch, a ring surrounding said cylinder covering said notch, means normally moving said roller to the shallow end of said notch and key-controlled means for confining said roller to the deeper end of said notch for the purpose disclosed.

1,783,972. UMBRELLA. CASSIE R. MOSES, Davenport, Iowa. Filed Apr. 11, 1929. Serial No. 354,247. 9 Claims. (Cl. 135—20.)



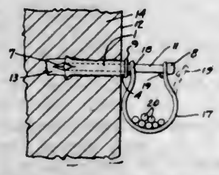
3. In an umbrella, a hollow handle, a cover, a re-enforcing strip centrally attached to the cover having sectors at the center thereof turned downwardly and secured in the upper end of the handle by a closely-fitting plug.

1,783,973. PROJECTION SCREEN. DAVID F. NEWMAN, Freeport, N. Y., assignor to Trans-Lux Daylight Picture Screen Corporation, New York, N. Y., a Corporation of Delaware. Filed July 21, 1926. Serial No. 123,843. 17 Claims. (Cl. 88—24.)



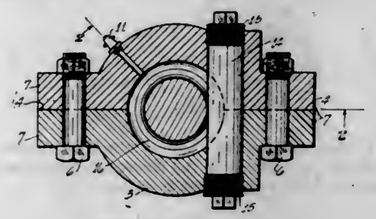
1. A projection screen comprising a base having a coating formed from latex having a diffuser therein.

1,783,974. ALARM APPARATUS FOR THE PREVENTION OF GAS POISONING. ANDERS HILMER OLSSON and PER DANIEL PETERSON, Lidkoping, Sweden. Filed June 20, 1928, Serial No. 286,950, and in Sweden June 11, 1927. 4 Claims. (Cl. 200—52.)



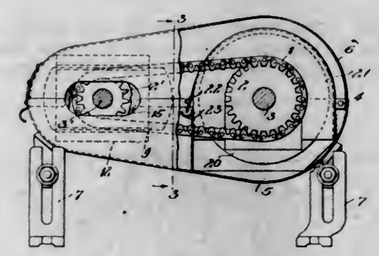
1. In alarm apparatus for the prevention of gas poisoning or gas explosions on the escapement of poisonous or combustible gases into dwelling rooms or other localities, the combination of a float, a gas bell, an electrical switching device, and mechanical means for transmitting the combined action of said float and said gas bell to said switching device, so that upon an alteration of the state of equilibrium under the influence of a gas having a density other than the gaseous medium normally surrounding the float and the gas bell the said switching device will close an electric circuit containing a signal bell.

1,783,975. PULVERIZING PROCESS AND APPARATUS. WALTER B. PEDELTY, Mason City, Iowa. Filed Feb. 27, 1929. Serial No. 343,078. 10 Claims. (Cl. 83—11.)



1. The process of pulverizing and feeding fuel consisting in generating a zone of multiple eddies and cross currents having a general path of revolution about a common axis, feeding fragments of solid fuel into said zone along said common axis whereby the fragments are driven against each other to crush the same by impacts and grinding contacts of such intensity as to reduce the fuel fragments to a dust, and delivering such dust, entrained in a portion of the eddying air, out of the space occupied by the eddies.

1,783,976. COMBINED BOLT ANCHOR AND SUPPORT. HENRY W. PLEISTER, Westfield, N. J., assignor to Henry B. Newhall Corporation, Garwood, N. J., a Corporation of New Jersey. Filed Feb. 7, 1928. Serial No. 252,529. 2 Claims. (Cl. 248—36.)



1. A bridle ring fastening comprising the combination of an expansible shield, an expanding member to expand the shield, said member being provided with a stop or collar between its ends to insure that a portion of the expanding member will project from the shield, and a bridle ring provided with hooks adapted to hook on the projecting portion of the expanding member.

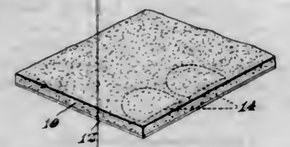
1,783,977. AXLE STRUCTURE. EDWIN W. PELSTER, St. Louis, Mo. Filed Jan. 19, 1929. Serial No. 333,539. 3 Claims. (Cl. 295—39.)

1. An axle structure comprising a pair of axle members in longitudinal alignment and arranged to rotate independently of one another about a common axis, a sleeve positioned over the adjacent end portions of said axle members, each of said axle members having an annular groove therein, and removable bearing members carried by said sleeve and arranged so that one of said bearing members extends in each of said grooves whereby said axle members will be prevented from moving longitudinally of said sleeve, said bearing members being free to rotate within said grooves.

1,783,978. LUBRICATING SYSTEM FOR CHAIN DRIVES. DAVID B. PERRY, Ithaca, N. Y., assignor to Morse Chain Company, Ithaca, N. Y., a Corporation of New York. Filed Mar. 16, 1929. Serial No. 347,553. 3 Claims. (Cl. 184—15.)

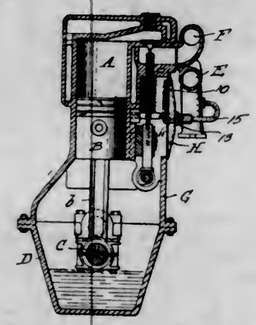
3. In a lubricating mechanism for chain drives, the combination of a chain case having an upper and lower portion and including an oil reservoir, the upper portion of the case being removable, a collector member mounted in the lower portion of the case so as not to be disturbed by removal of the upper portion shafts extending into said case, oil guards on said shafts where they pass thru said case, sprockets mounted on said shafts, a chain running on said sprockets, a disk member mounted to rotate with one of said sprockets and dip into the oil reservoir below said sprocket, said disk member being located within the collector member so as to discharge oil centrifugally thereto, a projection from which the oil running down the under side of the collector member may drip, and a conductor adapted to receive oil from said projection and discharge it between the sprockets so as to fall upon the lower strand of the chain.

1,783,979. GARMENT BAG. ADOLPH POTDEVIN, Garden City, N. Y., assignor to Potdevin Machine Company, Brooklyn, N. Y., a Corporation of New York. Filed May 11, 1929. Serial No. 362,272. 2 Claims. (Cl. 206—7.)



1. A flat tubular body whereof one open end is adapted to be folded in opposite directions from points adjacent

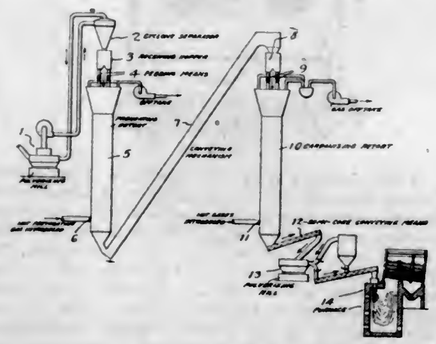
the center of the bag, to provide diagonal shoulder portions having an apex opening therebetween, one wall of said open end having an integral centrally-disposed rela-



tively narrow reinforcing tongue which is folded upon said wall and is included in the diagonal corner creases of the shoulder folds at the apex opening.

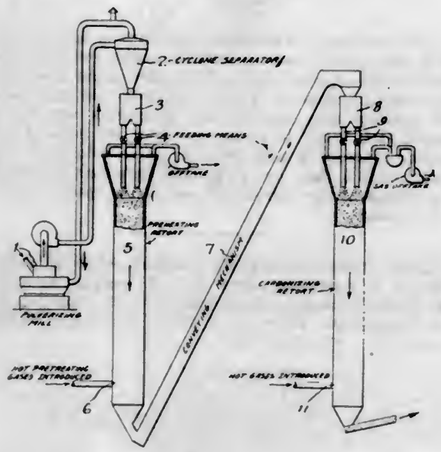
1,783,980. CUSHION TREAD FOR FOOTWEAR. CLIFFORD ROBERTS, Winchester, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Nov. 14, 1925. Serial No. 69,192. 4 Claims. (Cl. 36—35.)

1. A step product consisting of a composite sheet of soft metal and rubber vulcanized together, the metal having in its outer face a series of regularly arranged, heel shaped depressions of a depth at least equal to the thickness of the metal.



1,783,981. LUBRICATING METHOD AND APPARATUS. RALPH R. ROBERTS, Lockport, N. Y. Filed Mar. 30, 1929. Serial No. 351,261. 10 Claims. (Cl. 123—196.)

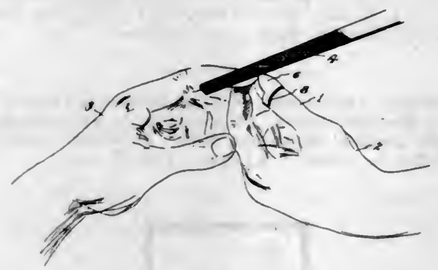
1. The combination with an internal combustion engine having an intake manifold and a lubricating chamber, of a part arranged in said chamber and subjected to the splash of lubricant, and a conduit connecting said intake manifold with said part in said chamber for drawing lubricant from said part into said intake manifold.



1,783,982. PROCESSING OF COAL AND PRODUCT THEREOF. WALTER RUNGE, East Orange, N. J., and EDWIN A. PACKARD, Yonkers, N. Y., assignors, by mesne assignments, to International Coal Carbonization Company, a Corporation of Delaware. Filed June 12, 1925. Serial No. 36,590. 5 Claims. (Cl. 202—17.)

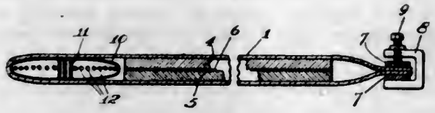
1. The method of preparing coal for use in a pulverized fuel burning furnace comprising pulverizing coal, subjecting the pulverized coal to a preliminary heat treatment in an oxidizing atmosphere under conditions to drive off only a small percentage of the hydrocarbon volatile content but under conditions such that the treated coal particles lose the sharp edges and are by the preliminary heat treatment transformed from solids having sharp edges to solids having relatively smooth and rounded outer surfaces and by said preliminary heat treatment are also slightly increased in size, thereafter subjecting the treated pulverized coal to carbonization by suspending it in a

gaseous medium substantially chemically inert with respect to the coal and in a carbonizing zone wherein the heat is sufficient to effect a low temperature carbonization and thereby driving off a substantial portion of the hydrocarbon volatile content of the coal and under conditions to produce semi-coke comprising in the main particles in the form of hollow spheroids, withdrawing the semi-coke and then crushing it.



1,783,983. POWDERED COKE PRODUCT. WALTER RUNGE, East Orange, N. J., assignor, by mesne assignments, to International Coal Carbonization Company, a Corporation of Delaware. Filed June 12, 1925. Serial No. 36,598. 6 Claims. (Cl. 202—35.)

1. A powdered coke product obtained by pulverizing coal to convert it into finely divided form, by subjecting the pulverized coal to the preheating action of hot gases having temperatures of approximately 650 degrees F. whereby the surface of the coal particles are rounded off, the volatile content slightly reduced and the density slightly lessened, and by subjecting coal thus preheated and after it has been separated from its pretreating gases to low temperature carbonization in suspension in a gaseous carbonizing medium to produce a semi-coke having a

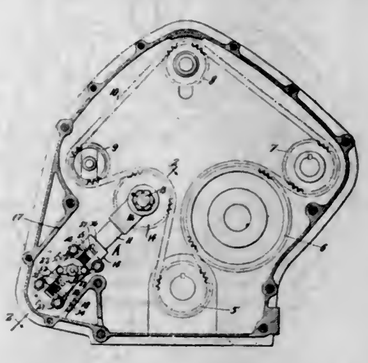


hydrocarbon volatile content of approximately 8% to 12% and in which most of the particles have been converted into substantially hollow spheroids with shell-like defining structures, the size of which spheroids is such that practically all will pass through a 10 mesh screen.

1,783,984. MANICURIST'S THUMB GUARD. MINNIE V. SHANE, San Antonio, Tex., assignor of one-half to Charles H. Winterborne, San Antonio, Tex. Filed July 17, 1929. Serial No. 379,007. 2 Claims. (Cl. 132—73.)

2. A manicurist's thumb guard comprising a plate curved transversely and having its outer end portion bent downwardly to form an abutment, and arms extending from opposite sides of said plate and bent to form an expansible band adapted to fit about a thumb and retain the plate thereon in shielding relation to the nail with the abutment engaging the end of the thumb.

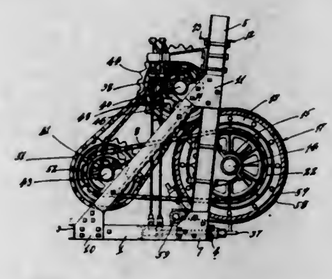
1,783,985. APPARATUS FOR MAKING COMPOSITE GLASS. JAMES H. SHERTS, Brackenridge, Pa., assignor to Duplate Corporation, a Corporation of Delaware. Filed Jan. 22, 1929. Serial No. 334,205. 4 Claims. (Cl. 49—14.)



1. In combination in apparatus for making composite glass, a rubber bag for carrying the sheets to be joined, means for sealing the bag, and an air chamber lying entirely inside the bag, said chamber having an opening into the bag to permit a flow of air to its interior, and being relatively rigid to prevent collapse when the bag is exposed to pressure in a pressure tank.

1,783,986. PROCESS OF TREATING LEAD-BEARING MATERIAL. ALEXANDER STEWART, Roselle, N. J., assignor to C. L. Constant Company, Hoboken, N. J., a Corporation of New Jersey. Filed Mar. 22, 1927. Serial No. 177,463. 12 Claims. (Cl. 23—127.)

12. In the refining of antimonic lead sulfate in a weak sulfuric acid solution, the method of preventing hydrolysis of the antimony by maintaining the solution at a sufficiently high concentration of SO_4 ions by the addition of a soluble sulfate of an alkali metal thereto.

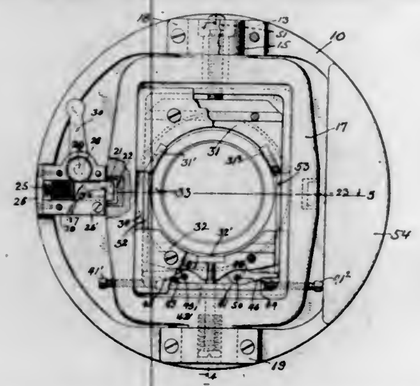


1,783,987. CHAIN-ADJUSTING DEVICE. FRED C. THOMPSON, Detroit, Mich., assignor to Morse Chain Company, Ithaca, N. Y., a Corporation of New York. Filed Feb. 19, 1929. Serial No. 341,123. 4 Claims. (Cl. 64—5.)

1. A tension adjuster for endless chains including yieldable means normally operating on the chain in a direction to take up slack therein, means for preventing movement of the adjuster to positions of loose adjustment, a lost motion connection between the first means and the second means adapted to set the second means when the

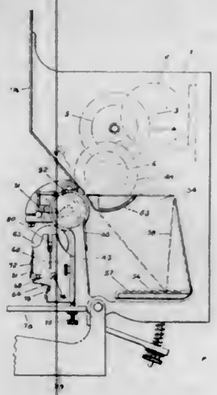
first means moves in a direction to take up slack and to permit a limited amount of movement of the first means in a direction which would tend to make slack before the second means becomes effective to prevent movement in such direction.

1,783,988. TWO-POST, TWO-SPEED, THREE-SHAFT PORTABLE DRAWWORKS. EDWARD TIMBS, Los Angeles, and LEWIS E. ZERBE, Moneta, Calif., assignors to The National Supply Company of Delaware, New York, N. Y., a Corporation of Delaware. Filed Oct. 24, 1927. Serial No. 228,158. 4 Claims. (Cl. 254—187.)



1. In a rotary drawworks, the combination of a frame structure including a pair of spaced base frame members, substantially upright posts secured to the base frame members, a pair of inclined brace frame members secured at their ends to the posts and the base frame member, a drum shaft, means for rotatably supporting the drum shaft on the posts, a line shaft, means for rotatably supporting the line shaft on the brace frame members on a vertical line removed laterally from a line joining the posts, a jack shaft, means for rotatably supporting the jack shaft on the brace frame members below the line shaft, means for driving the line shaft, means for driving the jack shaft from the line shaft, and means for driving the drum shaft from the jack shaft.

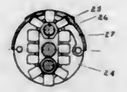
1,783,989. REVERSIBLE CHUCK FOR LATHES. CHARLES P. WETMORE, Milwaukee, Wis., assignor to A. O. Smith Corporation, Milwaukee, Wis., a Corporation of New York. Filed Dec. 29, 1924. Serial No. 758,610. 11 Claims. (Cl. 279—5.)



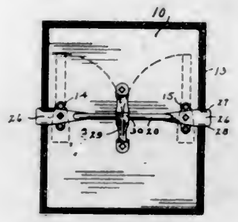
1. In a reversible chuck, a head for connection to the spindle of a lathe, a reversible chucking member provided

with journals which are mounted radially with respect to the said head, means for locking the chucking member in either operative position, chucking jaws one actuated from

the other carried by the said member, and means in part located in a journal of the said member for actuating the jaws simultaneously.



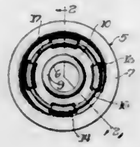
1,783,990. CHECK-INDORSING MACHINE. LAWRENCE J. ZAHN, Long Island City, N. Y., assignor to International Postal Supply Company, Brooklyn, N. Y. Filed July 13, 1928. Serial No. 292,386. 10 Claims. (Cl. 101—236.)



1. For a check indorsing machine including the following instrumentalities; a drive roller and means for operating the same, a clutch roller having a part normally in engagement with the drive roller, a die structure, a clutch mechanism between the clutch roller and the die structure, a trip mechanism for controlling the movement of the die structure, means for guiding checks between the drive roller and the die and check stacking means below the die structure comprising; a compartment having associated with its vertical wall farthest from the die, a serrated portion for catching the edge of the check, thereby causing the check edge last to leave the die, to drop toward the bottom of the compartment.

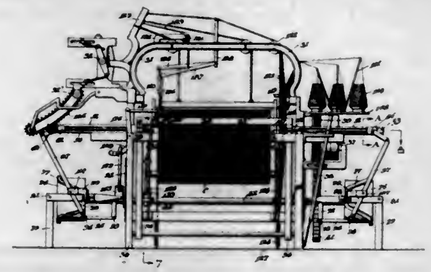
1,783,991. PRINTING-DIE STRUCTURE. LAWRENCE J. ZAHN, Long Island City, N. Y., assignor to International Postal Supply Company, Brooklyn, N. Y. Filed July 13, 1928. Serial No. 292,387. 7 Claims. (Cl. 101—91.)

1. A die structure particularly adapted for use in a check endorsing machine including; a die having a plurality of a series of adjustable indicia blocks and a die plate having an aperture therein to fit around and expose the selected indicia, blocks of each series, means for locking each series of indicia in its selected position comprising pawls to drop between two blocks of a series, said pawls being held in place by the die plate.



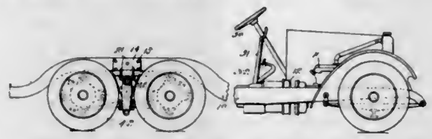
1,783,992. SILO DOOR. EMIL F. ZUBER and FREDERICK A. DOWLING, Peoria, Ill., assignors to The Michigan Silo Company, Kalamazoo, Mich. Filed Mar. 11, 1929. Serial No. 345,917. 8 Claims. (Cl. 20—1.4.)

1. In a silo, a door, a pair of levers pivoted between their arms spaced apart one from the other on the door and rockably secured thereto, and means separate from the levers permitting said levers to be rocked both normally and parallel to the door.



1,783,993. PULLEY. GEDOR W. ALDEEN, Rockford, Ill. Filed Apr. 19, 1928. Serial No. 271,390. 13 Claims. (Cl. 64—17.)

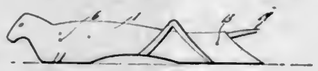
1. A sheet metal pulley comprising a pair of duplicate sections each formed to provide a central web portion and an outer flange projecting laterally from the outer side of said web, said web having a plurality of annularly arranged spaced apertures and a plurality of annularly spaced loops intermediate said apertures and projecting laterally from said web in the opposite direction from said flange, said loops in each section being arranged to project through the apertures in the opposite section to provide a continuous annular passage centered laterally of said web, and an annular locking member extending through said passage to secure said sections together.



1,783,994. NEEDLE LOOM. FRANCIS E. ASHTON, Chester, Pa., assignor to Aberfoyle Manufacturing Company, Chester, Pa., a Corporation of Pennsylvania. Filed Dec. 24, 1927. Serial No. 242,342. 34 Claims. (Cl. 139—124.)

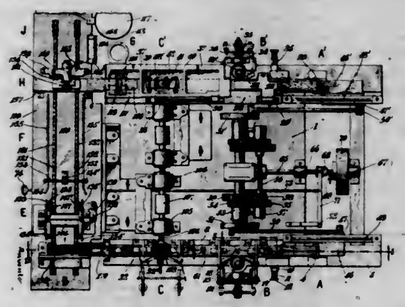
1. In a loom, means for providing a warp shed, a forked carrier to engage and carry a looped weft thread into said shed, a needle to receive and carry said weft thread through said shed, a knife to automatically cut one strand

of said looped weft thread to release same from said needle, and means to stop said loom when said weft thread is omitted.



1,783,995. MOTOR VEHICLE. CHARLES BERG, New York, N. Y. Filed Dec. 19, 1925. Serial No. 76,365. 5 Claims. (Cl. 180—22.)

1. In a motor vehicle, the combination of a pair of drive wheels mounted in tandem and having electric power units mounted on each of said wheels and carried thereby, a vehicle frame having brackets extending therefrom, an extension on each of said brackets and pivot plates on said extension, a pair of spring members mounted on said plates to independently oscillate in a common plane, the opposite ends of each pair of spring members engaging a power unit to flexibly suspend the same to oscillate about a common point on said bracket, said power units mounted at the end of springs and supported at one side independently of electric power units at the other side of the vehicle frame.

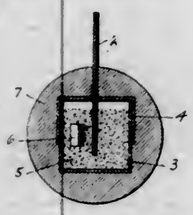


4. A spring suspension including a supporting frame, a spring member pivoted thereon for movement in a vertical plane, dual axles pivotally connected at the free ends of said spring and free for transverse movement toward and from each other incident to expansion of said spring, and a supplemental spring pivoted in the vertical plane of the pivot of the first mentioned spring and having its outer ends pivotally connected to said axles at a point below the pivotal connection of the first mentioned spring.

1,783,996. TOY GRASSHOPPER. ROBERT A. BLAKE, Brooklyn, N. Y. Filed Mar. 19, 1930. Serial No. 436,961. 1 Claim. (Cl. 46—40.)

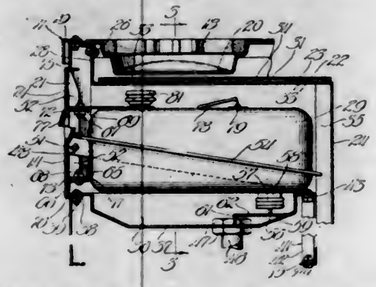
In a device of the kind described, a hollow shell formed to simulate a grasshopper, the said shell being open at its under side and at the tail end, and having laterally aligned holes through its forward and gear portions, a cross pin having its ends inserted through said forward holes and thereby supported in position, a jump arm disposed within the shell and connected at its forward end to the said cross pin, the rear end of the jump arm being slotted longitudinally, a spring coiled around the cross pin with one end braced up against the back of the shell and the other end bent around the end of the jump arm and so adapted to force the free end of the jump arm outwardly of the shell, a cross pin having its ends journaled in the said rearward laterally aligned holes, a latch joined to the said cross pin and having an end turned to extend through the said slot at the rear end of the jump arm and adapted to engage the rear margin of the slot, to hold the jump arm within the shell under the tension of the said spring, the other end of the said latch being extended outwardly through the open tail end of the shell to form a trigger, and a spring coiled around the said rear cross pin and having an end braced up against the back of the shell, the other end of the spring being coiled around the latch, whereby the said latch is normally thrown rearwardly to engage the margin of the slot of the jump arm.

1,783,997. APPARATUS FOR THE MANUFACTURE OF PENCILS. WILLIAM H. BURDEN, Weehawken, and ROBERT E. FRIEDLEIN, Mountain View, N. J., assignors to American Lead Pencil Company, New York, N. Y., a Corporation of New York. Filed Nov. 13, 1928. Serial No. 319,088. 16 Claims. (Cl. 144—28.)



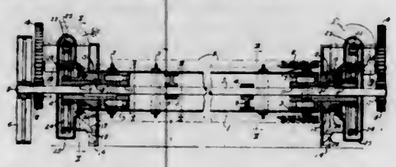
1. In a machine of the character described the combination of, means for feeding a first pencil block having a groove therein, means operable in synchronism with said block feed and in a direction of movement transverse said groove for delivering a lead into said groove while said block is moving, means for moving a second block having a groove therein and for applying adhesive on the grooved face thereof, and means for relatively moving said blocks into adhesive registering engagement, to thereby form a pencil blank.

1,783,998. PHOTOGRAPHIC REPRODUCTION OBJECTIVE WITH TWO DIAPHRAGMS AND ITS APPLICATION AS IN PRINTING POSITIVES FOR BLACK AND WHITE CINEMATOGRAPHY, COLOR CINEMATOGRAPHY, OR CINEMATOGRAPHY IN RELIEF. HENRI CHRÉTIEN, St.-Cloud, France, assignor to Societe Anonyme Francaise dite: Societe Technique d'Optique et de Photographie (S. T. O. P.), St.-Ouen, France. Filed Jan. 9, 1928, Serial No. 245,557, and in France Mar. 9, 1927. 10 Claims. (Cl. 88—24.)



10. An apparatus for photographically reproducing cinematographic films including two separate and distinct objectives located side by side and having diaphragms, and optically intermediate convergent optical means adapted to form the image of the diaphragms and a pair of reels on the same identical drive shaft and disposed in front of the objectives, said rule carrying the film to be reproduced and the sensitized film respectively.

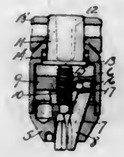
1,783,999. SALUTE AND METHOD OF MAKING SAME. ALBERTO CIMOROSI, Elkton, Md. Filed Jan. 18, 1929. Serial No. 333,297. 2 Claims. (Cl. 102—22.)



2. A salute consisting of a closed container carrying a charge of explosive material and a charge of coloring matter within the explosive charge, and provided with a fuse.

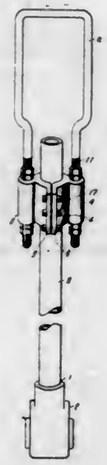
1,784,000. OIL HEATING STOVE. WILLIAM L. COOPER, Kankakee, Ill., assignor to Florence Stove Company, Boston, Mass., a Corporation. Filed Nov. 18, 1929. Serial No. 407,922. 15 Claims. (Cl. 126—44.)

1. A fluid fuel stove comprising a burner portion having a plurality of burners therein, a fluid container pocket provided in said burner portion and insulated therefrom, tracks arranged at opposite sides of said pocket, and a fuel tank slidably supported by said tracks in said pocket.



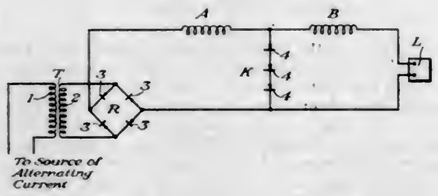
1,784,001. MECHANICAL STOKER. WILLIAM M. DUNCAN, Alton, Ill. Filed Sept. 17, 1926. Serial No. 136,053. 7 Claims. (Cl. 110—40.)

1. In a mechanical stoker, a chain grate, and a driving device comprising a rotatable tube supporting a portion of said grate, main bearings supporting said tube, a rotatable shaft extending through said tube, said tube being provided with bearings in which said shaft is supported, and means whereby power is simultaneously transmitted from said shaft to each end of said tube, said means including gearing near each end of the tube.



1,784,002. CHUCK. ALBERT E. ENGLUND, West Hartford, Conn., assignor to The Jacobs Manufacturing Company, Hartford, Conn., a Corporation of Connecticut. Filed Sept. 8, 1926. Serial No. 134,175. 3 Claims. (Cl. 279—60.)

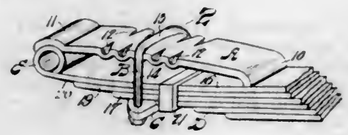
1. A chuck comprising a body having openings therein, a support, a sleeve for housing jaw actuating mechanism detachably connected to and rotatable with the body but independently of said support, chuck jaws mounted in said openings and operatively connected with said sleeve to be rotated therewith and moved axially during such



rotation, and a holder immovably secured to said support to rotate with the chuck when the latter is in operation and acting as a means for retaining the support against rotation when said sleeve is rotated.

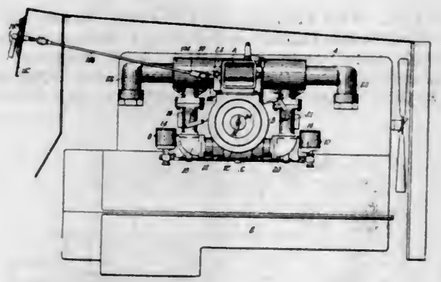
1,784,003. WALKING-BEAM STIRRUP. HARRY H. FRANKS, Tulsa, Okla., assignor of three-fourths to Tidal Oil Company, Tulsa, Okla., a Corporation of Oklahoma. Filed Dec. 9, 1929. Serial No. 412,796. 5 Claims. (Cl. 74—47.)

1. A pitman connector including in combination with a pitman rod, a bracket on the rod, and a stirrup adjustably mounted on the bracket.



1,784,004. ELECTRICAL FILTERING APPARATUS. PAUL H. GEIGER, Wilkinsburg, and LARS O. GRONDAHL, Pittsburgh, Pa., assignors to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Oct. 7, 1925. Serial No. 61,013. 3 Claims. (Cl. 171—97.)

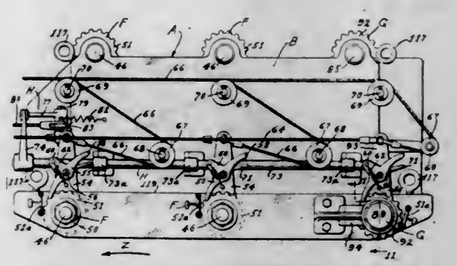
1. A filter for use with a source of pulsating current and a load, comprising a plurality of elements connected



in series across the source in parallel with the load, each such element exhibiting a considerable variation in resistance in response to a comparatively small change in the electromotive force applied thereto over a limited range of such electromotive force, and the number of such elements being such that the electromotive force across each such element is within said limited range.

1,784,005. SHOCK ABSORBER. PETER GRABLER, Rocky River, Ohio, assignor to Grabler Stabilizer Co., Cleveland, Ohio. Filed July 23, 1927. Serial No. 207,913. 26 Claims. (Cl. 267—48.)

1. A shock absorber of the character described comprising a body member having an upwardly offset portion at one end, the under surface of which is concaved to fit over and rest upon the top portion of the eye of a leaf spring so that the strains are directly applied to said eye, the other end of said body member being provided with a toe positioned to engage the top surface of said spring so that when said body member is in position on said spring it is maintained in spaced relation with respect to said spring, and means for retaining said body member in position.

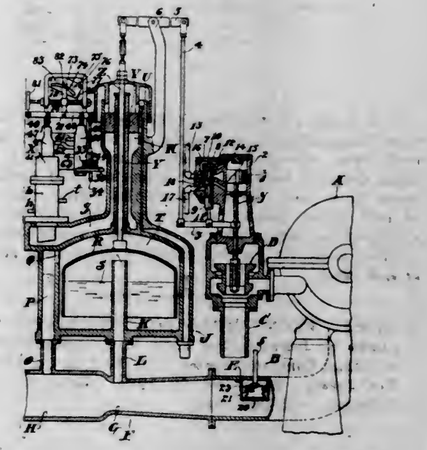


1,784,006. AIR CONTROL FOR INTERNAL-COMBUSTION ENGINES. ELBERT J. HALL, Berkeley, Calif., assignor to American Car and Foundry Motors Company, New York, N. Y., a Corporation of Delaware. Filed Feb. 15, 1929. Serial No. 340,090. 15 Claims. (Cl. 123—122.)

1. In a motor vehicle, an internal combustion engine, a hood therefor having an opening, a scoop secured to the hood at the opening, and means for admitting air to be mixed with the engine motive fuel comprising a valve casing, a conduit for directing heated air to the casing, a second conduit extending to the scoop for directing air at atmospheric temperature to the casing, a valve in the casing for controlling the passage of air through the conduits to control the temperature of the air admitted thereto, an air delivery conduit for directing air to be mixed with the motive fuel, and filtering means interposed between the valve casing and air delivery conduit.

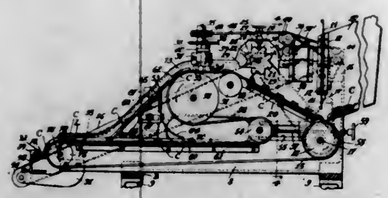
1,784,007. CAPPING-DEVICE VALVE FOR WELLS. JOHN W. HALL, Santa Ana, Calif. Filed Jan. 2, 1929. Serial No. 329,899. 20 Claims. (Cl. 166—15.)

1. A valve of the character disclosed including a body comprising separable body portions, said body being provided with an opening, a closure member for such opening, operating means for said closure member, and assembling



devices connecting the body portions, in combination with a guiding member associated with one of the body portions and adapted to coact with another of the body portions.

1,784,008. ADHESIVE COMPOSITION. WILLY O. HERRMANN and WOLFRAM HAEHNEL, Munich, Germany, assignors to Consortium fur Elektrochemische Industrie, Munich, Germany. Filed May 9, 1927, Serial No. 190,130, and in Germany May 11, 1926. 4 Claims. (Cl. 87—17.)



1. An adhesive composition containing alcohol-soluble polymerized vinyl acetate, and a softening agent therefor.

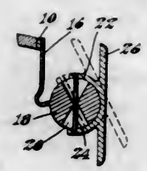
1,784,009. CONSTANT-VOLUME REGULATOR. LESLIE R. HUFF, Phillipsburg, N. J., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Jan. 30, 1930. Serial No. 424,708. 10 Claims. (Cl. 230—5.)

1. A constant volume regulator for motor driven turbo blowers, comprising an air intake conduit, means for controlling the delivery of power to the motor and being actuated by the air flowing through the conduit and by pressure fluid acting counter to the force of the air, pressure control means for controlling the supply of pressure fluid to the first said means, means responsive to the temperature of the air flowing through the conduit, and means actuated by the temperature responsive means for controlling the said pressure control means to vary the speed of the motor in accordance with the variations in the temperature of the air flowing through the conduit, thus assuring a constant discharge volume of the blower.

1,784,010. APPARATUS FOR FEEDING CLOSURE CAPS. JOHN A. JOHNSON, Woodhaven, N. Y. Filed Feb. 9, 1929. Serial No. 338,686. 13 Claims. (Cl. 198—33.)

1. In closure cap feeding apparatus, an endless conveyor to transfer caps from a source of supply, cap separating and guiding means interposed in the line of travel of the conveyor comprising a pair of spaced wheels superposed to the conveyor and rotatable simultaneously in the plane of and in a direction toward each other and opposite to the direction of travel of the conveyor, and a pair of chutes extending from said means, each chute to deliver differently positioned caps to a further advanced portion of the conveyor in a predetermined position.

1,784,011. DEVICE FOR CARRYING HEAVY BODIES ON AND RELEASING THEM FROM AIRCRAFT. ALBERT EDWARD JONES, Westminster, London, England, assignor to Vickers-Armstrongs Limited, Westminster, England, a British Company. Filed July 22, 1930, Serial No. 469,874, and in Great Britain Dec. 4, 1928. 6 Claims. (Cl. 244—1.)

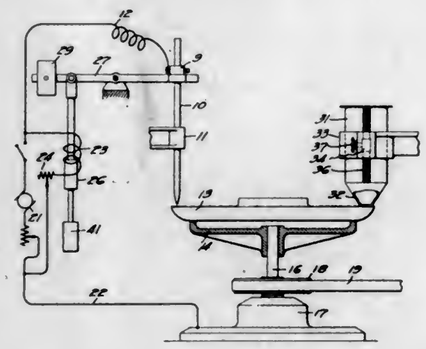


1. A device for carrying heavy bodies on, and releasing them from, aircraft, comprising in combination two pivoted claws, upward extensions of said claws, a rocking block disposed between said extensions and arranged to move in a plane transverse to the plane of movement of said claws, means for moving said block to release the claws and means whereby said block retains said claws in their engaging position during a substantial movement of said block.

1,784,012. FRONT HEAD FOR PNEUMATIC TOOLS. JAMES H. JOWETT, New York, N. Y., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Dec. 12, 1929. Serial No. 413,517. 7 Claims. (Cl. 262—13.)

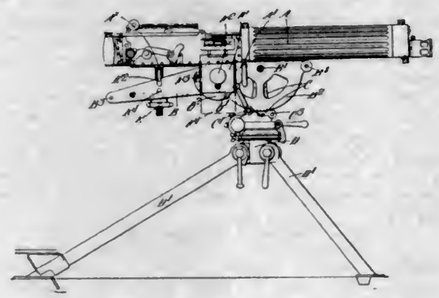
1. A pneumatic tool comprising a casing, a working implement guided thereby, a hammer piston to actuate the working implement, and converging surfaces on the casing forming a cleaver portion adapted to enter the work for breaking portions thereof free from the mass.

1,784,013. GUARD FOR SPECTACLES AND EYEGLASSES. JOHN B. KERN, Montclair, N. J. Filed Aug. 14, 1929. Serial No. 385,805. 5 Claims. (Cl. 88—55.)



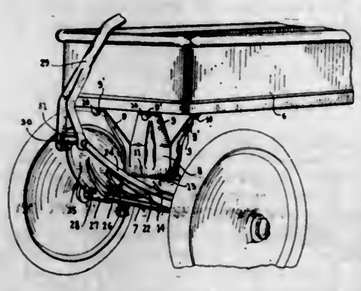
1. In a spectacle or eyeglass, a frame and a guard having a ball and socket connection therewith including a ball attached to the frame having opposed radial slots, and a socket secured to the guard and having a pin extending internally and diametrically through the ball and movable both rotatably and angularly in said slots.

1,784,014. PROCESS OF PREPARING ARTIFICIAL TEXTILE PRODUCTS WITH REDUCED LUSTER. THEODOOR KOCH, Arnhem, Netherlands, assignor to Algemeene Kunstzijde Unie Naamlooze Vennootschap, Arnhem, Netherlands. Filed Oct. 3, 1927, Serial No. 223,833, and in the Netherlands Apr. 7, 1927. 4 Claims. (Cl. 106—40.)



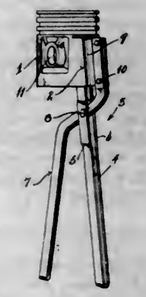
1. In a process of preparing a solution of viscose containing chlorobenzene for spinning into artificial silk threads with a reduced luster and of a size below 6 denier, the step of emulsifying the solution to such an extent as to form particles of chlorobenzene of a diameter which is a function of the denier number of the threads which are to be spun, which diameter varies according to the formula :—$D^2=c(a^2+a)$, in which D is the denier number, a the largest allowable diameter of the particles in microns, and c a constant, which for normal viscose is about two-thirds.

1,784,015. ARC-WELDING APPARATUS. FULTON LANE, Palos Verdes Estates, and HARRY J. MORGAN, Walnut Park, Calif., assignors to P. L. & M. Company, Los Angeles, Calif., a Corporation of California. Filed Apr. 3, 1929. Serial No. 352,125. 2 Claims. (Cl. 219—8.)



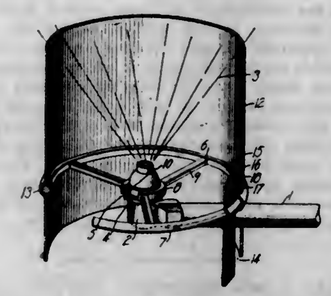
1. In a welding apparatus for fusing material to the face of a body, an arc electrode from which an arc can be struck to the face of the body, means for effecting automatic adjustment of the electrode to preserve a substantially constant arc length, means for causing the arc to progress along a predetermined path on the body, and means for applying a layer of granular fusible material to the face of the body along said path in advance of the arc.

1,784,016. MOUNTING FOR AUTOMATIC GUNS. CARL ALFRED LARSSON, Westminster, London, England, assignor to Vickers-Armstrongs Limited, London, England, a British Company. Filed Feb. 15, 1929, Serial No. 340,046, and in Great Britain Mar. 22, 1928. 8 Claims. (Cl. 89—40.)



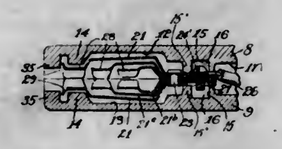
1. An automatic gun mounting comprising in combination a cradle or elevating arm on which the gun is mounted, said cradle or elevating arm having two side members rigidly connected together at a suitable distance apart and being provided at its rear with means to receive a trunnion pin passing through the usual trunnion lug on the mechanism casing of the gun so that by adjusting the said cradle or elevating arm upon the crosshead of the mounting until it approaches the vertical and retaining it in this position the mounting is converted from the ground firing condition into the anti-aircraft firing condition, a pivoted elevating gear disposed between said side members this elevating gear when the mounting is to be converted from the ground firing condition into the anti-aircraft firing condition being disconnected from the mechanism casing of the gun and swung about its pivots into a housed position between said side members, and means for holding said elevating gear in the housed position.

1,784,017. STEERING MECHANISM FOR COASTER WAGONS. FRED. LEICHT, Sheboygan, Wis., assignor to The Globe Company, Sheboygan, Wis., a Corporation of Wisconsin. Filed May 3, 1929. Serial No. 360,219. 3 Claims. (Cl. 280—114.)



1. In a steering mechanism, an upper cup shaped bolster member having its lower surface formed as a turn table surface and having integral upwardly projecting box engaging arms, a lower bolster member having an outwardly projecting integral hound portion, laterally depending, integral, axle embracing and clamping portions and an upper turn table surface engaging the turn table surface of the upper bolster member, a bridge member non-rotatably positioned within said cup shaped bolster member, and a pivot bolt extending through the bridge member and through the adjacent turn table surfaces of both bolster members.

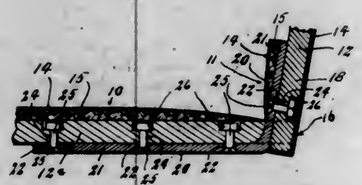
1,784,018. PISTON EXPANDER. WILLIAM R. MCNABB, WILLIAM D. FARLEY, and FERRELD J. STARCHER, Long Beach, Calif. Filed Mar. 12, 1927. Serial No. 174,762. 1 Claim. (Cl. 81—5.1.)



A piston expander adapted to expand pistons having a slot formed therein, said expander comprising a pair of spaced arms formed from a single strip of metal, a second arm formed of a single strip of metal bent upon itself, said last named arm being pivoted between the first named spaced arms, a wedge plate adapted to be secured to said last named arm, and bolts extending through said last named arm and wedge plate whereby the plate is secured in position.

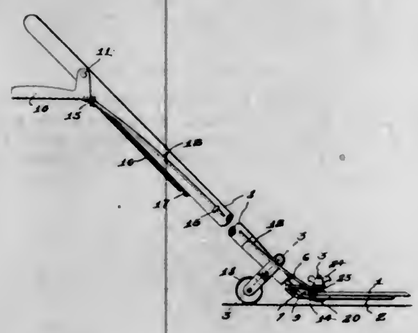
1,784,019. SPRAY-COOLING DEVICE. LEON T. MART, Kansas City, Mo. Filed Aug. 30, 1928. Serial No. 302,969. 4 Claims. (Cl. 261—115.)

1. In combination with a spray nozzle and an air delivery tube having an internal peripheral groove, a bracket for supporting the tube from the nozzle comprising a collar for receiving the nozzle, a hoop for engaging in said groove of the tube and radial arms connecting the collar with the hoop.



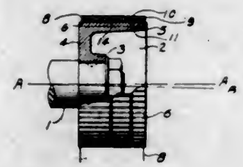
1,784,020. ELECTRICAL CONNECTER. BENJAMIN P. MCKINLEY, Bridgeport, Conn., assignor to The Bryant Electric Company, a Corporation of Connecticut. Filed Feb. 7, 1927. Serial No. 166,385. 9 Claims. (Cl. 173—332.)

1. In a contact terminal for electric connecters, a plurality of pairs of plates of different lengths and one pair



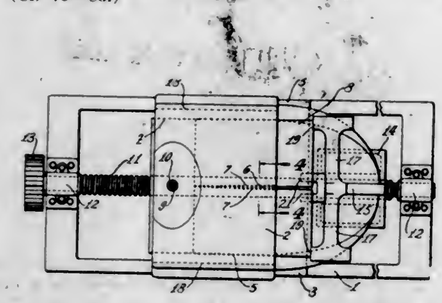
of plates nested within the other, both ends of each of the plates of each pair of plates being offset laterally in a direction toward each other and the extremities extended in the plane of the plates, the extended extremities of the offset portions at one end being flat and arranged to lie in contiguous relation and secured together in electrical connection one with the other at said extremities, the remaining portion of the plates being spaced laterally from each other and adapted to have yielding spreading movement without said portions of the plates making contact one with the other, the extended extremities of the free offset ends being arranged in longitudinal spaced alinement and constituting the contact making portion of the plates adapted to engage and make electrical connection with successive points of a pin terminal inserted between the pairs of plates.

1,784,021. STOOL SEAT. LAWRENCE M. MICHELSON and JOHN L. HAYNES, St. Louis, Mo. Filed Apr. 17, 1929. Serial No. 355,838. 2 Claims. (Cl. 155—178.)



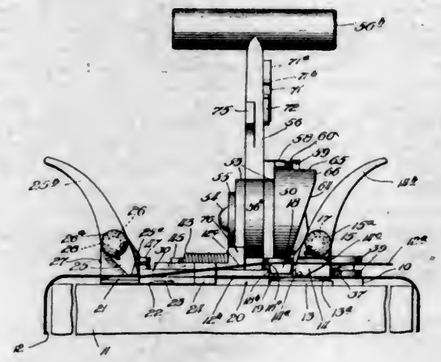
1. In a counter stool construction of the class described, the combination of a seat section having its rear corners notched, a back section having its lower end curved upwardly, thereby forming at each vertical edge a depending leg portion which fits into the respective corner notch, angle irons for securing said legs in position, the horizontal portion of each angle iron being disposed against the underside of the seat section and the upper portion being arranged against the front side of said back section, each of said angle irons being provided with countersunk apertures, and fastening means seated in said apertures and engaging the respective sections for securing said angle iron in position.

1,784,022. LAWN-TRIMMING DEVICE. GEORGE F. MINIKHIEM, Syracuse, N. Y. Filed Dec. 19, 1928. Serial No. 327,108. 1 Claim. (Cl. 56—241.)



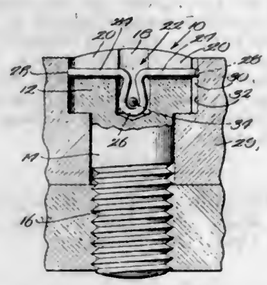
A device of the character described comprising a stationary blade having a movable blade pivotally connected to the lower side thereof, a handle portion on said stationary blade extending at an inclination from the rear end thereof and provided with a pinch handle at its upper end, an arm extending at an angle from the rear end of the movable blade, a rod connecting the pinch handle and said arm for moving said blade to its closed position, a coiled spring connected to the upper end of said rod and to the lower end of said handle for moving said blade to its open position, a roller having a supporting member encircling and adjustable along the lower end of said handle, means for pivotally connecting said blades together comprising a bolt having a head arranged to coact with the lower side of the movable blade, a circular portion extending into a circular passage in said movable blade, a squared portion on said bolt coacting with a squared passage in the stationary blade, a wing nut threading on the upper end of said bolt and a spring interposed between the upper side of said stationary blade and said wing nut.

1,784,023. DRIVE CHAIN. FRANK L. MORSE, Ithaca, N. Y. Filed May 8, 1930. Serial No. 450,655. 5 Claims. (Cl. 74—31.)



1. In power transmission chain drives comprising toothed sprocket wheels and multiplate chains retained thereon laterally by guide links, the method of controlling the installation of said chains which consists in locating the guide links non-symmetrically with respect to the center line of the chain.

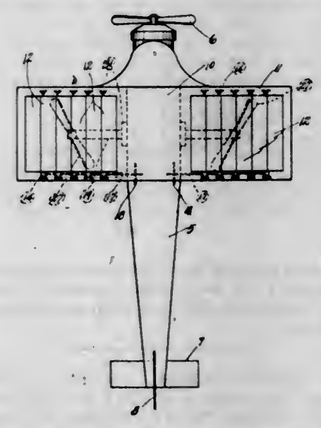
1,784,024. MACHINE FOR WELDING. JAMES S. NEWELL, St. Louis, Mo., assignor to National Lead Company, St. Louis, Mo., a Corporation of New Jersey. Filed June 24, 1922. Serial No. 570,680. 6 Claims. (Cl. 78—83.)



6. A machine for butt-welding sheets, comprising, a welding tool, a sheet support, means for passing the sheet along said support in order to transfer the point of operation of the tool along the sheet edges, and a heat-conducting finger making thermal contact with the end of the sheet.

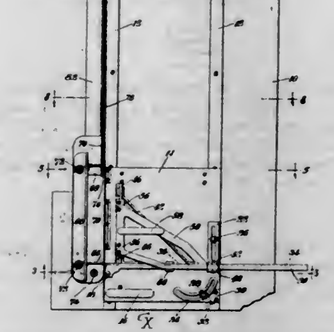
1,784,025. STRAP-STRETCHING DEVICE. RALPH H. NORTON, Chicago, Ill., assignor to Acme Steel Company, Chicago, Ill., a Corporation of Illinois. Filed May 10, 1928. Serial No. 276,519. 21 Claims. (Cl. 140—93.)

1. The combination in a strap stretching device of a pair of gripping devices adapted to engage opposite end portions of a strap, actuating means for effecting relative movement of said gripping devices, and a cam adapted to effect a plurality of similar operations of said actuating means upon each rotation thereof.



1,784,026. SELF-LOCKING SCREW. CARL G. OLSON, Chicago, Ill., assignor to Shakeproof Lock Washer Company, Chicago, Ill., a Corporation of Delaware. Filed May 17, 1929. Serial No. 363,730. 3 Claims. (Cl. 151—32.)

1. In a screw assembly of the class described, a screw section having a transverse recess and a central recess extending longitudinally of the screw and enclosed thereby, a resilient locking element including a central U-shaped section which extends within said enclosed central recess, and a locking finger extending laterally from said U-shaped section and positioned in said transverse recess, the outer extremity of said locking finger terminating adjacent the screw periphery and adapted to yieldingly bear against the surface of the work with which the screw may be associated.

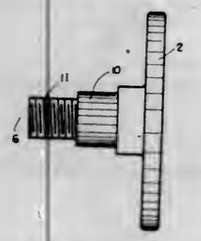


1,784,027. AIRCRAFT CONSTRUCTION. WARREN M. PIGGOTT, Bay City, Mich., assignor to Hattie A. Piggott, Bay City, Mich. Filed Nov. 9, 1929. Serial No. 405,928. 2 Claims. (Cl. 244—15.)

1. An aircraft provided with a wing structure including a frame, a solid center section, the end sections comprising a plurality of shutter members revolubly and adjustably mounted therein, the edges of each panel being angled to nest on and fit the angled edge of the adjacent panel, so that a smooth wing surface is presented when the shutters are in closed position, propellers below

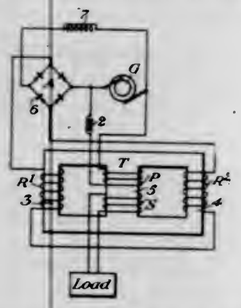
said shutters and shiftable to either a vertical or horizontal position and slidable stops on the center section for holding said shutter members in horizontal position.

1,784,028. WEDGE-CUTTING MACHINE. EUGENE R. POLLARD, Miami, Ariz. Filed Sept. 13, 1929. Serial No. 392,461. 3 Claims. (Cl. 143—52.)



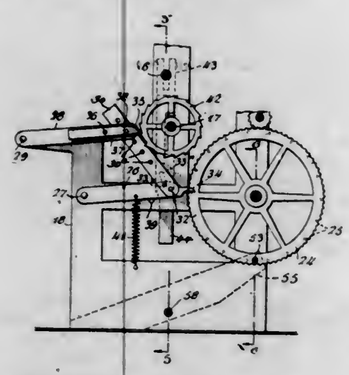
1. A machine for cutting a plurality of wedges in a substantially prismatic block, comprising a rotary saw, a member pivotally mounted on one side thereof and carrying an adjustable gauge adapted to be set to determine the thickness of the butt ends of the wedges, a carriage on the opposite side of and movable toward and from the saw, a swingable arm supported on the carriage, work supporting means slidable along said arm in a direction transverse to the line of movement of the carriage, and adjustable stops on the carriage adapted to limit the swinging movement of said arm.

1,784,029. ADJUSTABLE SUPPORT FOR RAILWAY-CAR SIDE DOORS. VINTON E. SISSON, Chicago, Ill., assignor to Railway Metal Products Company, Chicago, Ill., a Corporation of Delaware. Filed Jan. 30, 1930. Serial No. 424,517. 1 Claim. (Cl. 16—105.)



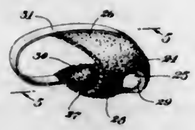
An adjustable supporting device for a railway car side door comprising a support element, a member element

having a roller mounted thereon, one of said elements having a plurality of pairs of apertures therein substantially circumferentially arranged around a point, the apertures



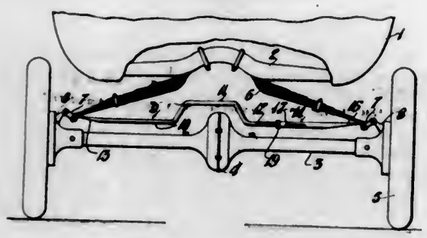
of each of said pairs of apertures being equi-distant apart, the axis of said roller being located eccentric to said point, and means passing through said apertures to hold the elements together.

1,784,030. TRANSFORMER. ANDREW J. SORENSEN, Pittsburgh, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Aug. 30, 1928. Serial No. 303,039. 3 Claims. (Cl. 171—119.)



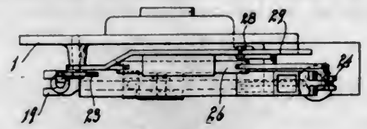
1. In combination, a transformer, a primary circuit for said transformer including a source of alternating current and a secondary circuit including a load, a regulating winding on said transformer, and a circuit for said regulating winding including said source of alternating current and a copper oxide rectifier.

1,784,031. TIMING APPARATUS. EDWIN SPENGEMAN, New York, N. Y. Filed Sept. 13, 1928. Serial No. 305,637. 2 Claims. (Cl. 161—15.)



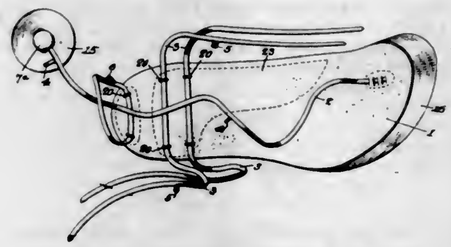
2. A timing apparatus comprising a casing provided with a sight opening, a rotatable dial arranged to make one complete revolution across said opening in a predetermined time period, and divided on its one face into a plurality of sectors containing appropriate inscriptions, a driven master gear provided with an aperture, a plurality of pins carried by said master gear and projecting from a face thereof at spaced intervals, a ratchet wheel connected with said dial, a linkage system arranged to be intermittently operated by said pins, a pawl yieldingly mounted on said linkage system and co-operating with said ratchet wheel to intermittently rotate said dial to bring the sectors thereof successively into view through said opening, means controlled by said linkage system for locking said dial against rotation and for releasing it, and means co-operating with the aperture of said master gear for controlling the stopping and starting of said gear.

1,784,032. BUNION APPLIANCE. MAXIMILIAN STERN, New York,, N. Y. Filed Jan. 16, 1929. Serial No. 332,995. 1 Claim. (Cl. 128—81.)



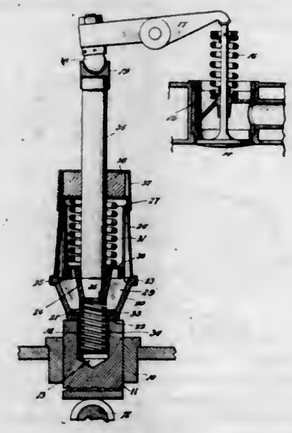
A bunion appliance comprising a unitary body of soft, yieldable, spongy rubber, said body being substantially U-shaped and having an opening adapted to receive the great toe, the portion of said body adjacent one side of said opening constituting a protective sheath for enclosing the mesial side of the head of the first metatarsal-phalangeal joint, the portion of said body adjacent the other side of said opening being of sufficient thickness when compressed to constitute a wedge adapted to occupy the space between the great toe and the adjacent toe, the arms of the U defining top and bottom portions adapted to overlie and underlie, respectively, the upper and lower surfaces of the foot, said bottom portion being thickened to form a support for the metatarsal arch and a band of yieldable material attached to said body and adapted to encircle all the bones of the metatarsal arch behind the heads thereof to reestablish said arch.

1,784,033. AUTOMOBILE TOOL. GEORGE E. SWANBY, Burlington, Wash. Filed July 12, 1928. Serial No. 292,279. 1 Claim. (Cl. 29—87.1.)



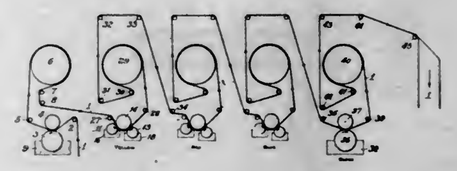
In a device of the kind described, a rigid member having a spring engaging end and a threaded end, the same also having a U-shaped offset, an extensible member having a spring engaging end and a bore for engaging the threaded end of the other member and with an elongated slot through the wall of the bore, the threaded end of the said rigid member having a pin adapted to engage the said slot and a nut upon the said threaded end for longitudinally adjusting the extensible member relative to the said rigid member.

1,784,034. CLAMPING MACHINE FOR SNAP FASTENERS. PAUL R. VITTE, Long Beach, Calif. Filed Oct. 19, 1929. Serial No. 400,817. 9 Claims. (Cl. 153—1.)



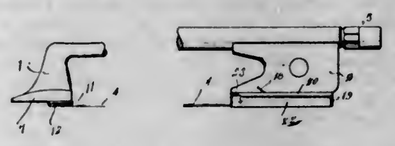
1. A snap fastener clamping machine comprising a frame, a feeding block, means to feed said fasteners into the block, means slidably mounted in the block whereby a fastener is engaged and moved adjacent the forward end of said block, plunger means engaging said fastener, means to operate said plunger means, and means engageable with the fastener whereby said fastener is crimped on to the material and means to actuate said last named means.

1,784,035. FOOTWEAR. FELIX F. VON WILMOWSKY, New York, N. Y. Filed May 15, 1928. Serial No. 277,853. 8 Claims. (Cl. 36—1.)



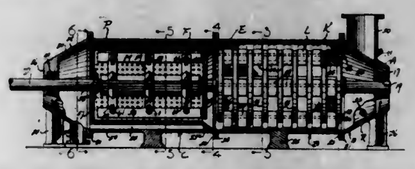
1. In a footwear, the combination of a sole, a toe strap which is attached to the fore part of the sole and which passes between the toes and is looped approximately horizontally around the ankle when the footwear has been put on the foot; and a means by which the toe strap is kept locked tightly around the ankle after the footwear has been put on the foot.

1,784,036. VALVE-ACTUATING MECHANISM. CALVIN C. WILLIAMS, Philadelphia, Pa. Filed Sept. 6, 1928. Serial No. 304,369. 3 Claims. (Cl. 123—90.)



1. An automatic take-up device including nested conical clutch members comprising rigid inner and outer members and a coacting intermediate member movable axially between the inner and outer members, the intermediate member including a plurality of clutch elements having flat contact with the inclined faces of the inner and outer members and shiftable for spacing said inner and outer members, yieldable means tending to axially shift said intermediate member in one direction, and yieldable means tending to axially shift the inner member in the opposite direction.

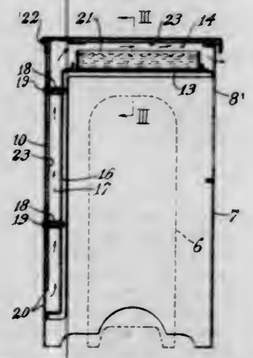
1,784,037. PRINTING PRESS. OTTO R. WOLF, River Forest, Ill., assignor to The Tribune Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 5, 1925. Serial No. 73,487. 32 Claims. (Cl. 101—152.)



2. A printing unit, comprising a plurality of printing sections each having a cylinder, a color fountain, means for rotatably supporting the cylinder and carried by the fountain, and means for adjusting the position of each section, said printing section being relatively narrow with respect to the width of the web and being each adapted to print an impression upon a particular part of the web independently of the printing of the remainder of said web.

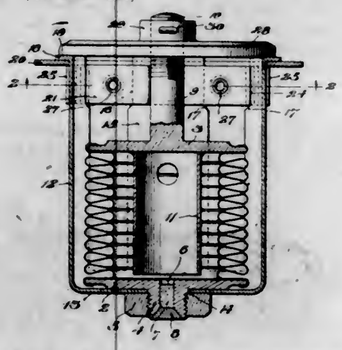
1,784,038. VIOLIN BOW. CHARLES C. AUGUSTINE, North Liberty, Iowa. Filed Jan. 16, 1929. Serial No. 332,940. 5 Claims. (Cl. 84—282.)

1. In a bow for stringed musical instruments, a tip having a socket in its under side, strands of hair having their ends engaged in said socket, a clip securing the ends of said strands and fitting in the socket, and a shoe having upwardly converging flanges along its edges whereby it may be engaged with and held on the tip and extending over said socket to retain the clip and the ends of the strands therein, said shoe being provided with a slot through which the strands of hair pass.



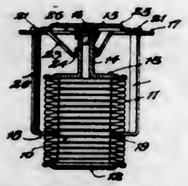
1,784,039. WOOD-PULP PRODUCTION AND REFINING. LINUS A. BRAUN, Minneapolis, Minn. Filed Feb. 5, 1929. Serial No. 337,684. 7 Claims. (Cl. 92—20.)

1. In a pulp reducing machine the combination of a container of substantially cylindrical formation having an inner pulp shearing and cutting surface, hammer means



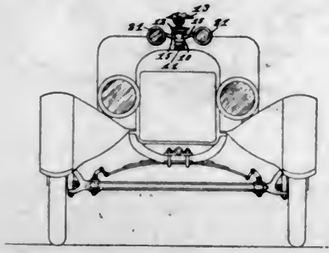
operating in spaced relation with said cutting surface for urging pulp and fibrous material in a shearing relation against the cutting surface, means to feed raw material or pulp into said container, means to supply a liquid in a longitudinally flowing relation to said container for carrying the pulp thereaiong, a screening container into which the pulp flows from the first mentioned container, and means operating in the screen container for centrifugally urging the pulp through the perforations of the screen container.

1,784,040. RADIATOR CABINET. JOSEPH H. BRYAN, Birmingham, Ala., assignor of two-thirds to Walter L. Simpson, Birmingham, Ala. Filed Apr. 25, 1929. Serial No. 358,132. 2 Claims. (Cl. 237—138.)



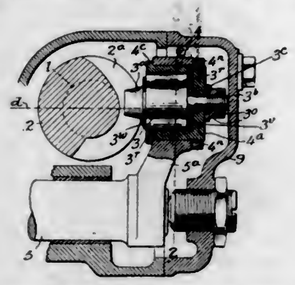
2. In a radiator cabinet embodying end walls, a rear wall, a grilled front wall and a cover, a vertical partition secured in spaced relation to the rear wall to form a vertical passage and being joined to the rear wall at the bottom to close it to the interior of the cabinet, said rear wall being provided with holes for the admission of cold air to the bottom of the vertical passage, a horizontal partition secured in spaced relation to the cover to form a horizontal passage merging with the vertical passage and opening through the grilled front wall, a water pan mounted on the horizontal position, and means for insulating the inner side of said rear wall and cover throughout the passages.

1,784,041. THERMOSTATICALLY-CONTROLLED VALVE MECHANISM. WILLIAM W. CARSON, Jr., Knoxville, Tenn., assignor, by mesne assignments, to The Fulton Sylphon Company, Knoxville, Tenn., a Corporation of Delaware. Filed Oct. 30, 1926. Serial No. 145,344. 20 Claims. (Cl. 236—34.)



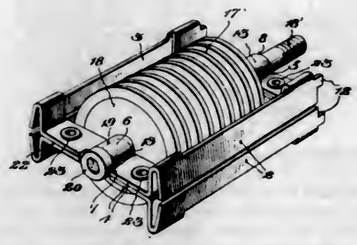
1. In a device of the character described, in combination with a thermostat and a valve member operatively connected thereto, a cage for said thermostat provided at its open end with an outwardly directed flange constituting a valve seat for said valve member.

1,784,042. THERMOSTAT SUPPORT. WILLIAM W. CARSON, Jr., Knoxville, Tenn., assignor to The Fulton Sylphon Company, Knoxville, Tenn., a Corporation of Delaware. Filed Oct. 6, 1927. Serial No. 224,482. 10 Claims. (Cl. 297—8.)



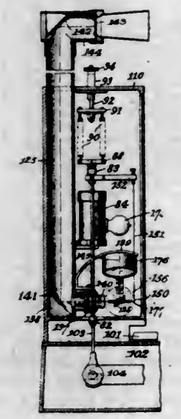
1. In a thermostatically-operated device, in combination with a thermostat having a corrugated tubular wall, a support for said thermostat including a plurality of elements each having an arcuate portion and one or more arms extending at an angle thereto, said arcuate portions forming an annular support embracing said thermostat within a recess formed by the corrugations thereof and said arms extending axially of said thermostat closely adjacent the tubular wall thereof.

1,784,043. RADIATOR CAP AND MOVABLE HEADLIGHT. SAM CENTOFANTI and ANNIBALE MARCHETTI, Youngstown, Ohio. Filed Apr. 20, 1929. Serial No. 356,780. 3 Claims. (Cl. 240—61.)



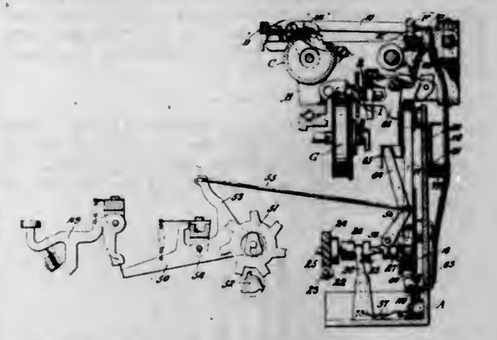
1. A movable headlight construction comprising laterally disposed arms having communication with the interior thereof, lamps for the arms having swivel connection therewith, a shaft establishing connection between the mountings for the lamps, segments carried by said mountings, bars having tooth portions upon the ends thereof adapted for engagement with the segments, an operating rod, and gear members carried upon the shaft and operating rod to provide a common control means whereby the lamps may be collectively and simultaneously tilted and laterally shifted respectively.

1,784,044. STEERING-GEAR. FRANKLIN F. CHANDLER, La Fayette, Ind., assignor to Ross Gear & Tool Company, La Fayette, Ind., a Corporation of Indiana. Filed Oct. 2, 1929. Serial No. 396,833. 9 Claims. (Cl. 74—79.)



1. In a steering gear, a cam and a rocker arm having an opening opposite the cam; a bushing mounted in said opening having a closed end wall; a pin rotatably mounted in said bushing and having a head engaging said cam groove and a shank projecting out of the bushing and means engaging the shank to confine the pin in the bushing; said pin being rotatable but not axially movable in the bushing.

1,784,045. THERMOSTAT SUPPORT. THOMAS R. CLARK, Knox County, Tenn., assignor to The Fulton Sylphon Company, Knoxville, Tenn., a Corporation of Delaware. Filed Oct. 30, 1926. Serial No. 145,342. 10 Claims. (Cl. 297—8.)

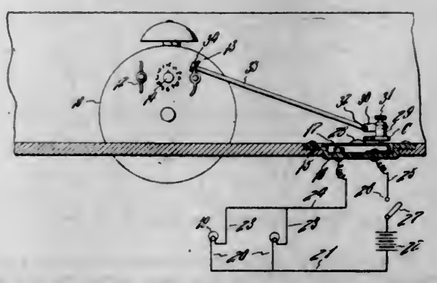


1. A thermostat support composed of sections formed of sheet metal and each including longitudinally extending side members connected by cross pieces provided with a bend extending in the direction of said side members at the junction of said cross pieces and side members whereby said side members constitute stiffening flanges.

1,784,046. METROSCOPIC FORCE-MEASURING INSTRUMENT. ROBERT CRAIG, Dayton, Ohio, assignor to International Business Machines Corporation, a Corporation of New York. Original application filed June 4, 1920, Serial No. 386,453. Divided and this application filed Oct. 14, 1922. Serial No. 594,535. 29 Claims. (Cl. 265—37.)

1. A weighing and price-computing scale comprising in combination, a chart having a set of weight indications and a plurality of sets of price indications, manually operable means for selectively controlling the visibility of said sets of price indications, and means including a weight-controlled optical device for distinctively disclosing a portion of said set of weight indications and a portion of any selected set of said price indications.

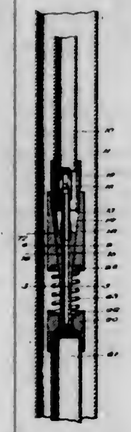
1,784,047. TYPEWRITING MACHINE. GUSTAVE O. DEGENER, Brooklyn, N. Y., assignor to Royal Typewriter Company, Inc., New York, N. Y. Filed Sept. 18, 1928. Serial No. 306,755. 13 Claims. (Cl. 197—65.)



1. In a typewriting machine, the combination with a carriage, of means for effecting carriage travel in one direction including an escapement mechanism embodying a normally engaged pinion and a rack, means for supporting the rack for movements into and out of engagement with the pinion, and a power operated mechanism for first disengaging the rack from the pinion and then effecting the carriage travel in the opposite direction.

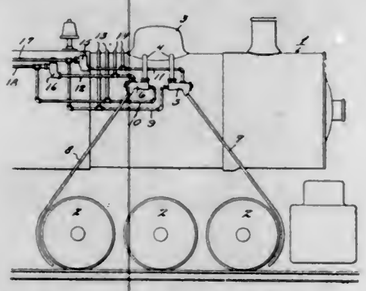
1,784,048. LAMP SHADE. INGVAR E. DE SHERBININ, New York, N. Y. Filed Sept. 12, 1928. Serial No. 305,568. 7 Claims. (Cl. 240—108.)

1. A lamp shade of frusto-conoidal form made from a single blank having a top provided with a hole through which a supporting member is adapted to extend, pleated sides with overlapping portions and a curled lower edge into which are rolled the lower extremities of the pleated sides, whereby said shade is stiffened laterally by said rolled edge reinforced by said pleated portions and said shade is stiffened longitudinally by said pleats held in locked position by said rolled edge.



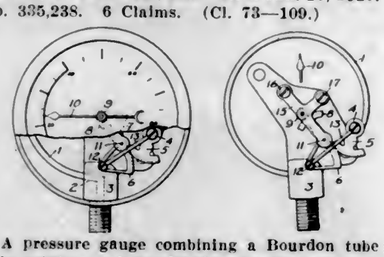
1,784,049. MUSICAL ALARM. HENRY FAHRENHOLTZ, Dayton, Ky., assignor of one-third to Joseph Fahrenholtz and one-third to Elzie Winters, Dayton, Ky. Filed Apr. 11, 1924. Serial No. 705,887. 1 Claim. (Cl. 161—23.)

Means for starting the operation of a talking machine including a turntable for supporting a record and further including a brake lever adapted normally to hold the turntable against rotation, comprising a chronometrically



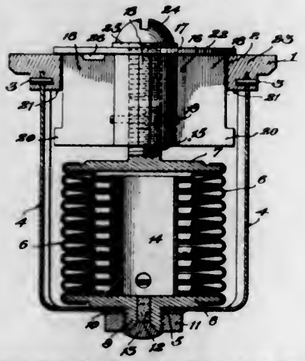
released rotary element carrying a forked member, a member mounted on the brake lever near the free end thereof and provided with an ear, a rod pivotally connected with said ear and having its free end terminating in a head, said head being engageable within said forked member whereby upon rotation of said rotary element said forked member will operate to pull said rod and swing said lever into released position to permit rotation of the record carrying turntable.

1,784,050. DUMP AND SEAL-TUBING VALVE. HOWARD F. FORTINBERRY, Fort Worth, Tex., assignor to Gulf Production Company, Houston, Tex., a Corporation of Texas. Filed Aug. 30, 1929. Serial No. 389,512. 9 Claims. (Cl. 103—220.)



1. In a device of the character described, the combination of a working barrel, a valve seat carried by said barrel, a coupling spaced below said barrel, said coupling and barrel being movable toward and from each other and a valve attached to said coupling and operatively associated with said valve seat, foreign material within said barrel being free to escape at a point between the coupling and valve seat member when said valve is unseated by movement of the barrel and coupling toward each other.

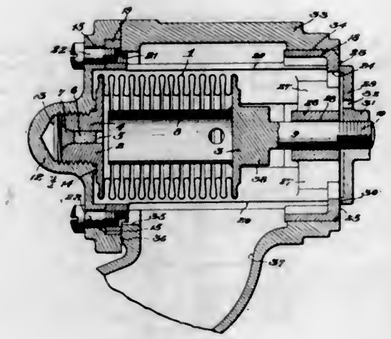
1,784,051. LOCOMOTIVE SANDING DEVICE. VIRGIL L. FRANTZ and OREN O. LEMON, Roanoke, Va., assignors to said Frantz. Filed Feb. 13, 1929. Serial No. 339,715. 12 Claims. (Cl. 291—12.)



1. In a locomotive sanding mechanism including a sand dome, sand traps receiving sand from the dome and having delivery pipes connected therewith, each sand trap having a cleaning pipe leading thereinto and having a sand discharge pipe leading thereinto, a compressed air supply pipe, and an automatic valve interposed between each cleaning pipe and supply pipe beyond the point of connection of the discharge pipe with the supply pipe, said automatic valve being normally open and being adapted to close under the influence of air pressure whereby an initial blast of predetermined duration will be permitted to flow through the cleaning pipe.

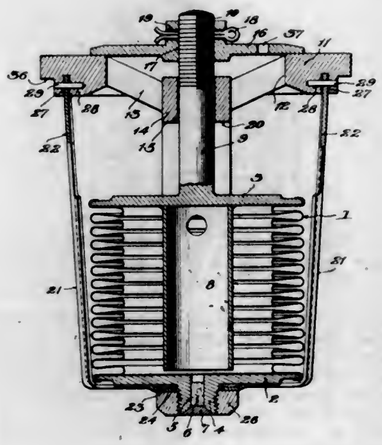
1,784,052. VAPOR-PRESSURE GAUGE. PHILO M. GELATT, Miami Beach, Fla. Filed Jan. 26, 1929. Serial No. 335,238. 6 Claims. (Cl. 73—109.)

4. A pressure gauge combining a Bourdon tube; a rotatable pointer; a lever fulcrumed intermediate its ends, one end of said lever having a gear connection with said pointer for rotating the latter and the other end of said lever having an arcuate portion; a member pivotally mounted upon the free end of said Bourdon tube and having an arcuate portion in rolling engagement with the arcuate portion of said lever; and means to maintain said arcuate portions in rolling contact during deflection of said Bourdon tube.



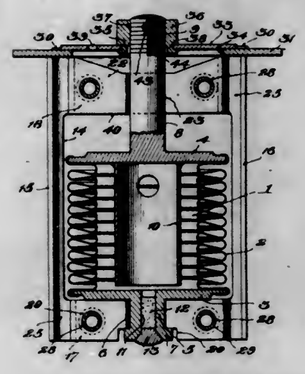
1,784,053. VALVE MECHANISM. JEAN V. GIESLER, Knoxville, Tenn., assignor, by mesne assignments, to The Fulton Syphon Company, Knoxville, Tenn., a Corporation of Delaware. Filed Aug. 14, 1926. Serial No. 129,182. 7 Claims. (Cl. 236—34.)

1. In a thermostatically controlled valve unit, in combination with a member providing a valve port, an expansible and contractible thermostatic element, a valve member having a greater area than said valve port and connected to said thermostatic element, said valve member being adapted to seat on said first named member and close said port, and means connected to and disposed between said valve member and thermostatic element and having laterally projecting elements which cooperate with the periphery of said port to limit the opening movement of said valve member.



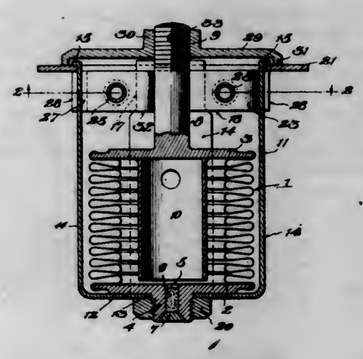
1,784,054. THERMOSTATICALLY-CONTROLLED VALVE MECHANISM. JEAN V. GIESLER, Knoxville, Tenn., assignor, by mesne assignments, to The Fulton Syphon Company, Knoxville, Tenn., a Corporation of Delaware. Filed Oct. 30, 1926. Serial No. 145,340. 9 Claims. (Cl. 236—34.)

1. In a device of the character described, in combination with a fitting having a pair of alined apertures therein, a thermostat, a valve stem and a valve disk operatively connected thereto, and a cage for said thermostat composed of a head portion adapted to be inserted through one of said apertures and to fit within the other of said



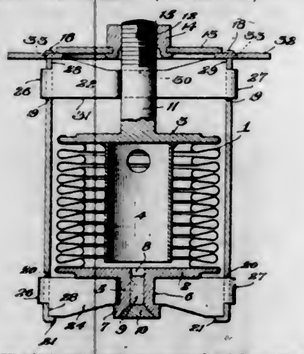
apertures and a base portion connected to said head portion by longitudinally extending ribs, said head portion having an integral valve stem guide and an inwardly directed flange constituting a valve seat for said valve disk.

1,784,055. THERMOSTATICALLY-CONTROLLED VALVE MECHANISM. JEAN V. GIESLER, Knoxville, Tenn., assignor, by mesne assignments, to The Fulton Syphon Company, Knoxville, Tenn., a Corporation of Delaware. Filed Oct. 30, 1926. Serial No. 145,341. 5 Claims. (Cl. 236—34.)



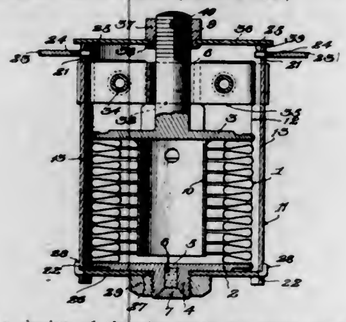
1. In a device of the character described, in combination with a thermostat including movable and stationary end walls, valve mechanism operatively related thereto and including a valve disk and a valve seat, said valve seat being provided with one or more slots, a support for said thermostat secured to said stationary end wall and having its ends secured in said slots.

1,784,056. THERMOSTATICALLY-CONTROLLED VALVE MECHANISM. JEAN V. GIESLER, WILLIAM W. CARSON, JR., and THOMAS R. CLARK, Knoxville, Tenn., assignors, by mesne assignments, to The Fulton Syphon Company, Knoxville, Tenn., a Corporation of Delaware. Filed Oct. 30, 1926. Serial No. 145,343. 23 Claims. (Cl. 236—34.)



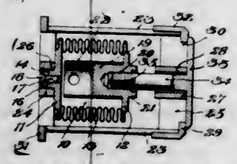
1. In a thermostatically-operated valve mechanism of the character described, a valve member composed of a sheet metal disk provided with an interiorly threaded hub secured to said disk.

1,784,057. THERMOSTATICALLY-CONTROLLED VALVE MECHANISM. JEAN V. GIESLER, Knoxville, Tenn., assignor, by mesne assignments, to The Fulton Syphon Company, Knoxville, Tenn., a Corporation of Delaware. Filed Oct. 30, 1926. Serial No. 145,345. 18 Claims. (Cl. 236—34.)



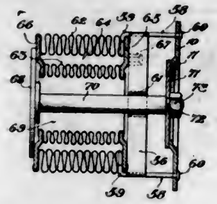
1. In a device of the character described, in combination with a thermostat and a valve member operatively connected thereto, a thermostat support having a plurality of axially extending arms, and a ring notched to receive and retain said arms.

1,784,058. THERMOSTAT SUPPORT. JEAN V. GIESLER, Knoxville, Tenn., assignor, by mesne assignments, to The Fulton Sylphon Company, Knoxville, Tenn., a Corporation of Delaware. Filed Oct. 30, 1926. Serial No. 145,347. 19 Claims. (Cl 297—8.)



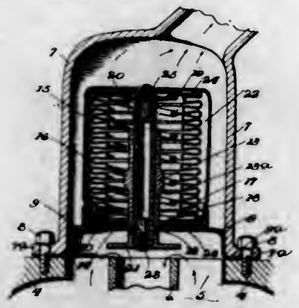
1. A thermostat support composed of longitudinally extending lateral members and a plurality of transverse members connecting said lateral members and each composed of sections secured together by their connection to said lateral members.

1,784,059. THERMOSTAT SUPPORT. JEAN V. GIESLER, Knoxville, Tenn., assignor, by mesne assignments, to The Fulton Sylphon Company, Knoxville, Tenn., a Corporation of Delaware. Filed Oct. 30, 1926. Serial No. 145,348. 23 Claims. (Cl. 236—34.)



1. In a device of the character described, in combination with a thermostat, a combined cage and support for said thermostat including a lateral member formed of sheet metal and provided with alternating ribs and apertures to form fluid-admitting openings, said lateral member being also provided with tab receiving apertures and a base member to which said thermostat is attached provided with tabs secured in said apertures and retaining said lateral member in shape.

1,784,060. THERMOSTATICALLY - CONTROLLED VALVE UNIT. JEAN V. GIESLER, Knoxville, Tenn., assignor, by mesne assignments, to The Fulton Sylphon Company, Knoxville, Tenn., a Corporation of Delaware. Filed Jan. 28, 1927. Serial No. 164,358. 9 Claims. (Cl. 236—34.)

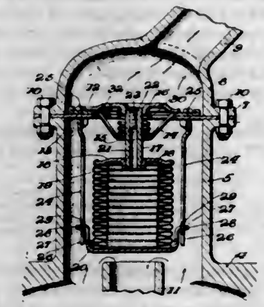


1. In a thermostatically operated valve unit, in combination with a thermostat, a thermostat support forming a complete integral generally rectangular frame with which the thermostat may be assembled by lateral movement through the opening thereof, and means whereby the thermostat may be fixedly attached to one of the sides of the complete frame, the opposite side of said frame being provided with a valve seat and with guiding means for the expansive and contractive movements of the thermostat.

1,784,061. THERMOSTATICALLY - CONTROLLED VALVE MECHANISM. JEAN V. GIESLER, Knoxville, Tenn., assignor to The Fulton Sylphon Company, Knoxville, Tenn., a Corporation of Delaware. Filed May 26, 1927. Serial No. 194,445. 18 Claims. (Cl. 236—34.)

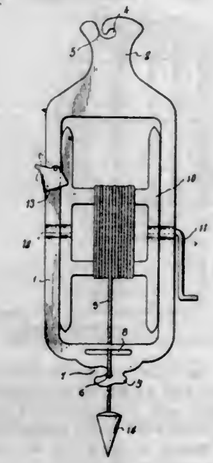
1. In a thermostatically-operated valve mechanism for controlling the circulation of cooling medium through the cooling system of an internal combustion engine, the combination of a valve seat ring, a thermostat having movable and stationary end walls, the movable end wall being on the opposite side of the stationary end wall from said valve seat ring and moving away from said ring on expansion of said thermostat, and a valve member disposed between said stationary end wall and said valve seat ring and operatively connected to said thermostat.

1,784,062. TEMPERATURE REGULATOR. JEAN V. GIESLER, Knoxville, Tenn., assignor to The Fulton Sylphon Company, Knoxville, Tenn., a Corporation of Delaware. Filed July 28, 1927. Serial No. 209,103. 21 Claims. (Cl. 236—34.)



1. In a thermostatically operated valve mechanism for controlling the flow of cooling medium in the cooling system of an internal combustion engine, a plurality of valves, a thermostat controlled by the temperature of the cooling medium and operatively connected to said valves, and means yieldingly opposing expansion of said thermostat in one direction, until said thermostat has first expanded in the opposite direction.

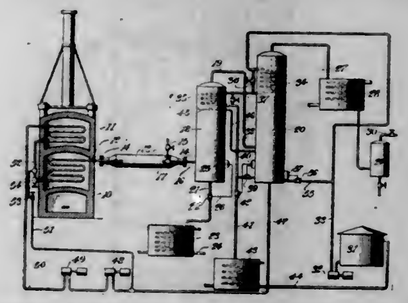
1,784,063. TEMPERATURE REGULATOR. JEAN V. GIESLER, Knoxville, Tenn., assignor to The Fulton Sylphon Company, Knoxville, Tenn., a Corporation of Delaware. Filed Apr. 19, 1928. Serial No. 271,283. 12 Claims. (Cl. 236—34.)



1. In combination, a thermo-sensitive element having a flexible tubular external wall and a valve at each end,

means whereby expansion of the element opens one valve and closes the other, a support for said element permitting

it to expand successively in opposite directions and a spring for biasing one of the valves away from its seat, whereby the valve are operated in sequence.

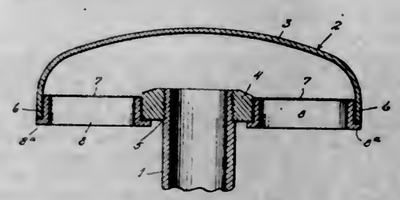


1,784,064. CHALK-LINE REEL. GEORGE M. GRISWOLD, Denver, Colo. Filed July 31, 1928. Serial No. 296,442. 2 Claims. (Cl. 242—77.)

1. A line holder comprising an oblong flat frame, having flat terminal extensions, in which are formed eyes and passages leading outwardly from the eyes, an end bar of the frame having a transverse slot formed therein, a flat reel fitted within the frame, a pin and a crank pivotally connecting the reel to the frame, and a catch mounted upon the frame and comprising side elements engageable with opposite faces of the reel and frame and a cross piece forming a stop and finger piece.

1,784,065. METHOD OF CRACKING HYDROCARBONS. GEORGE C. HARGROVE, Westfield, and WALTER B. MONTGOMERY, Elizabeth, N. J., assignors, by mesne assignments, to Gasoline Products Company, Inc., Wilmington, Del., a Corporation of Delaware. Filed Dec. 20, 1927. Serial No. 241,295. 6 Claims. (Cl. 196—47.)

3. A process of converting hydrocarbons which comprises continuously forcing a stream of heavy hydrocarbons under pressure through a cracking apparatus, supplying heat to said cracking apparatus to raise the oil therein to a cracking temperature, shutting off the supply of said heavy hydrocarbons when sufficient carbon has deposited in said apparatus to render it desirable to remove the same, displacing the heavy hydrocarbons in the

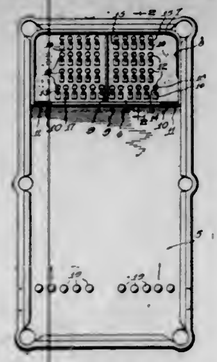


cracking apparatus by a relatively light hydrocarbon distillate, and then shutting off the supply of heat to said cracking apparatus, and reducing the pressure on the hydrocarbons contained therein.

1,784,066. PROCESS FOR PRODUCING HYDROXIDES OF ALKALI METALS. ERNST HEINZE, Wiesdorf, near Cologne-on-the-Rhine, Germany, assignor to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Filed Mar. 26, 1926, Serial No. 97,777, and in Germany Apr. 1, 1925. 2 Claims. (Cl. 23—184.)

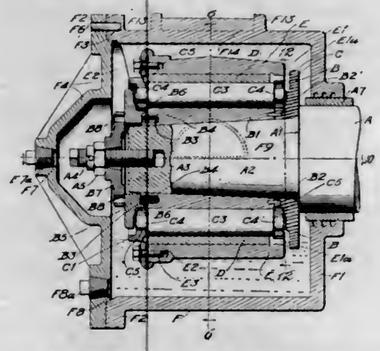
1. The process which comprises agitating an amalgam of an alkali-forming metal in the presence of water by means of a stirrer composed of carbon material.

1,784,067. TANK VENT DEVICE. JAMES B. HOLTSON, Baltimore, Md., assignor to The Huffman Manufacturing Company, Dayton, Ohio, a Corporation of Ohio. Filed Mar. 3, 1927. Serial No. 172,428. 1 Claim. (Cl. 220—44.)



A tank vent device comprising a single integral hollow body with a convexly curved top and a plane flat bottom, the bottom being formed with a central opening adapted to receive a pipe and being further formed with other openings located near the ends, sleeve members telescopically engaged within the second named openings, and wire screen covering said second named openings and frictionally held in place by said sleeve members.

1,784,068. GAME APPARATUS. ELMER E. JOHNSON, Joplin, Mo. Filed Jan. 9, 1929. Serial No. 331,214. 1 Claim. (Cl. 273—123.)

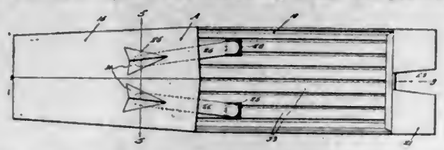


In game apparatus, a table top having a ball receiving pocket therein, a base element secured to said top near the forward side of said pocket, and a card supporting element pivotally connected to said base element adjacent the upper extremity of said pocket and arranged whereby said card supporting element normally rests upon and is parallel with the upper surface of said top, said

card supporting element having a longitudinally curved extension projecting into and covering a portion of said

pocket, said extension being engageable by a ball to move said card supporting element into an upright position and to retain the latter element in upright position.

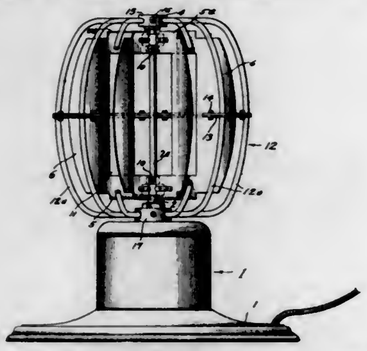
1,784,069. RAILWAY-CAR JOURNAL BOX. FRANK MAXANT, Ayer, Mass. Filed June 17, 1927. Serial No. 199,524. 4 Claims. (Cl. 308—180.)



1. In a structure of the kind described, the combination with an axle, of a sleeve fitted around the axle and having threaded sockets in its outer end, a cap having holes in alignment with said sockets, a bolt extending loosely through said cap and seated in the end of the axle and screw threaded on the part extending through the cap, and a nut adapted to be threaded on said bolt on either side of said cap, and said sockets and the holes in the cap being adapted to receive bolts extending through said holes and threaded in said sockets.

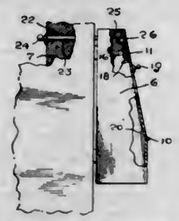
1,784,070. SOFT RUBBERLIKE COMPOSITION. EFFIE H. MOSS, Chillicothe, Ohio. Filed Jan. 10, 1927. Serial No. 160,312. 1 Claim. (Cl. 106—39.)

A rubber-like composition comprising linseed oil, lime, water, isinglass, soap solution, tincture of benzoin, grease, and mercury, in about the proportions of linseed oil two teaspoons; lime one teaspoon; water one and one-half ounces; isinglass one teaspoon; soap solution one teaspoon; tincture of benzoin five drops; grease one-quarter teaspoon, and mercury one drop.



1,784,071. BOAT. FRANK M. NORMAN, Galena, Ill. Filed Feb. 8, 1929. Serial No. 338,447. 1 Claim. (Cl. 114—66.5.)

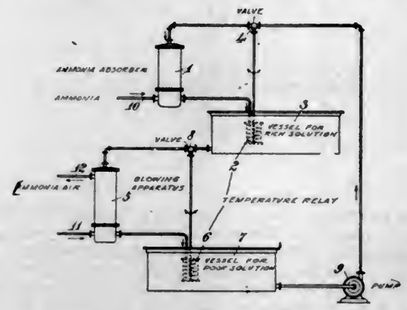
A boat comprising a hull including a longitudinally disposed wedge-shaped bow having a flat downwardly inclined bottom wall, a main flat bottom wall stepped above and merging with the inclined bottom wall of the bow at a point forwardly of the transverse median of the hull, said main bottom wall terminating at its rear end in an upstanding stern wall, a pair of pontoons carried by the stern wall stepped above the main bottom wall and disposed in spaced relation to each other on the opposite sides of the axis of the hull to form a pocket for an outboard motor, fins depending from the pontoons,



longitudinally extending spaced strips carried by the main bottom wall and co-extensive therewith to form an air channel in conjunction with the main bottom wall, conductors extending through the hull having their inner terminals in said channel, a transversely curved rearwardly inclined top deck over a portion of the hull merging at its forward end with the bow, canopies secured to the top deck and rising therefrom, the outer ends of the conductors terminating in said canopies.

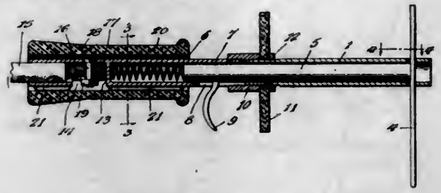
1,784,072. ELECTRIC FAN. MARSHALL F. OLIVER, Charlottesville, Va. Filed Feb. 27, 1930. Serial No. 431,856. 8 Claims. (Cl. 230—259.)

1. A desk fan including a fan element comprising a lower hub member, and an upper hub arranged in spaced vertical relationship and a plurality of blades attached to said hub members, each blade comprising two radial impellers having means to draw the air axially into the center of the fan and an impelled parallel to the axis connecting the two horizontal impellers, said last named impeller having means to expel said air radially from said fan.



1,784,073. SAFETY MILK-BOTTLE CONTAINER. RALPH WELSFORD PARKER, Falmouth, Nova Scotia, Canada. Filed Apr. 3, 1928. Serial No. 267,041. 1 Claim. (Cl. 232—41.)

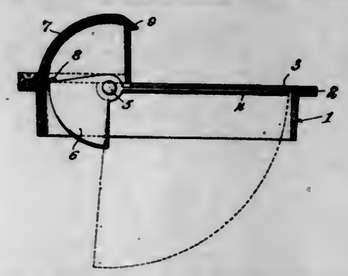
A device of the character described comprising a container adapted to be attached to the wall of a house and



having a front door hinged thereto at its bottom edge, a spring for swinging said door outwardly, a keeper attached to the inside of said door at its upper edge, a bracket attached to the inside of the front wall of the container above said keeper, a bolt slidably mounted in said bracket adapted to engage said keeper, a coil spring mounted on said bolt for keeping the bolt in engagement with said keeper, a pulley mounted above said bracket, an actuating bar slidably mounted through apertures in the wall of the house and back of the container, and a cable connecting the inner end of said bar with said bolt, said cable extending over said pulley.

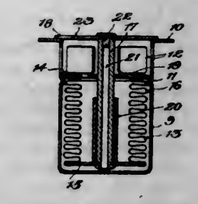
1,784,074. APPARATUS FOR THE PRODUCTION OF AMMONIA-AIR MIXTURES. HARRY PAULING, Berlin, Germany. Filed Dec. 29, 1927, Serial No. 243,370, and in Germany Oct. 15, 1926. 1 Claim. (Cl. 23—252.)

A system for producing a uniform ammonia-air mixture comprising a liquid circulating system; an ammonia absorber in said system; means for forcing an air current into the ammonia solution; and control members for automatically controlling the circulation of the liquid and operated by means of variations in the specific gravity of the solution.



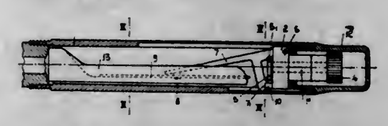
1,784,075. ELECTRODE HOLDER. JAMES H. QUISENBERRY, Louisville, Ky., assignor of one-half to Robert S. Johnson, Louisville, Ky. Filed Nov. 6, 1929. Serial No. 405,203. 2 Claims. (Cl. 219—8.)

1. An electrode holder comprising alined tubes, seats in the forward tube adjacent the front end of the same for receiving a welding rod, means for coupling the tubes, the rear tube having a longitudinal slot at its front end, a plunger slidably fitted in the tubes and adapted to engage a welding rod to hold the same in the same in the seats in the forward tube, a handle projecting from the plunger through the slot in the rear tube, and an expansion spring housed in the rear tube at the rear of the plunger and bearing upon the plunger.



1,784,076. APPARATUS FOR AUTOMATIC OPENING AND CLOSING OF SEWER INLETS. ORLANDO ROÇAS, Rio de Janeiro, Brazil. Filed Aug. 14, 1929, Serial No. 385,734, and in Brazil Aug. 23, 1928. 2 Claims. (Cl. 182—6.)

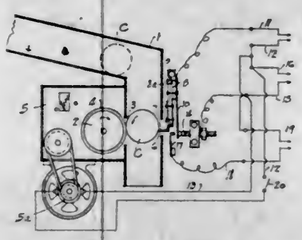
1. In an apparatus of the character described, a casing open at its top and including walls, formed along the upper edge with an outwardly extending flange and having a portion of one edge provided with an inwardly extending flange; a covered portion having a vertical front wall and a curved rear wall terminating at its bottom edge with an outwardly extending flange adapted to rest upon the corresponding flange of said wall and forming



therewith a closed safety chamber, said chamber having its upper and forward edge formed with a deflecting lip; a closure consisting of a flat lid and a counterpoise; and trunnions for said closure and bearings in the casing wall to support said trunnions for swinging movement of said lid inwardly by the weight of inflowing material.

1,784,077. THERMOSTATICALLY-CONTROLLED VALVE MECHANISM. WILLIAM F. SEARLE, Jr., Knoxville, Tenn., assignor to The Fulton Syphon Company, Knoxville, Tenn., a Corporation of Delaware. Filed Aug. 1, 1927. Serial No. 209,981. 10 Claims. (Cl. 236—34.)

1. In a thermostatically controlled valve mechanism for controlling the circulation of cooling medium through the cooling system of an internal combustion engine, the combination of a thermostat comprising an outer cup-shaped wall and an inner flexible tubular wall having one end secured to and forming with said outer wall a chamber for a thermosensitive fluid, valve seat means carried by said cup-shaped wall adjacent the open end thereof, a valve stem secured to the movable end of said flexible wall, and a valve on said stem on the opposite side of said seat from said thermostat, the stationary end of said flexible wall being intermediate said valve and the movable end of said flexible wall.

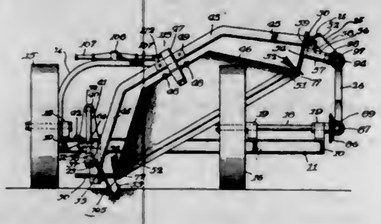


1,784,078. DEVICE FOR AUTOMATICALLY FILLING FOUNTAIN PENS. ARMANDO SIMONI, Bologna, Italy. Filed May 26, 1930, Serial No. 455,834, and in Italy May 20, 1929. 5 Claims. (Cl. 120—46.)

1. A fountain pen operating mechanism comprising a barrel, a collapsible sac disposed in said barrel, said mechanism comprising a plug in the barrel, a rotatable shaft in said plug, a presser bar lever pivoted to the plug and

overlying the sac, a presser bar carried by said lever and engaging the sac, an L-shaped arm carried by the lever thereby forming an eccentric receiving recess, an eccentric carried by the shaft within the recess, said eccentric forming means when rotated for oscillating the presser bar lever.

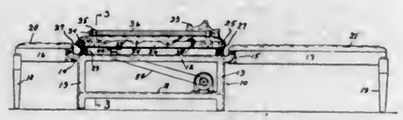
1,784,079. COIN-CONTROLLED SWITCH. LELAND D. SLUSSER, Ottawa, Ohio, assignor to Slusser Holding, Inc., Ottawa, Ohio, a Corporation of Ohio. Filed May 27, 1929. Serial No. 366,134. 4 Claims. (Cl. 194—9.)



1. In a device of the class described, a rotatable member having a continuously circular periphery, a movable circuit-closing member in opposed relation to said rotatable member, and means for delivering a coin between said members, thereby to move said circuit-closing member to operative position, said rotatable member imparting a rolling action to the coin to cause same to travel past said circuit-closing member, said movable circuit closing member holding the coin against rotation at its point of contact therewith.

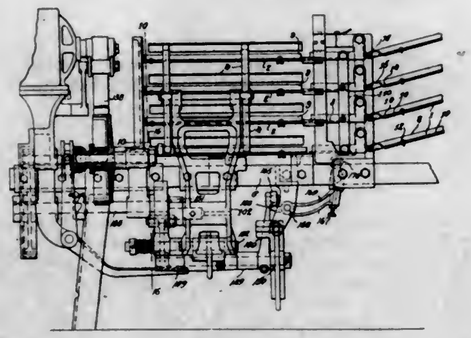
1,784,080. METHOD OF MANUFACTURING ELECTRICALLY-WELDED VESSELS. RICHARD STRESAU, Wauwatosa, Wis., assignor to A. O. Smith Corporation, Milwaukee, Wis., a Corporation of New York. Filed Apr. 18, 1929. Serial No. 356,073. 1 Claim. (Cl. 148—1.)

The method of manufacturing electrically welded thick walled pressure vessels which comprises annealing the metal plates from which the vessel is to be made, rolling said plates into rings during said annealing operation while the metal thereof is in a heated softened condition, electrically welding the longitudinal meeting edges of each ring plate, heating said welded rings to an annealing temperature reforming the same to true the circular dimensions thereof, electrically welding said rings end to end to form an integral tubular structure, closing the end of said structure, and finally heating said closed structure to a temperature sufficient to substantially relieve the stresses set up therein during the forming and welding operation but insufficient to cause deformation of the structure.



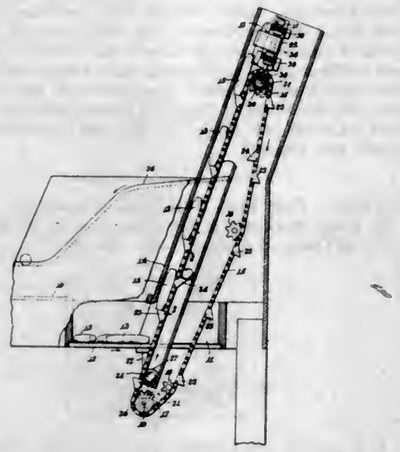
1,784,081. HARVESTING MACHINE. WILLIAM E. URSCHEL, Valparaiso, Ind. Filed Dec. 18, 1926. Serial No. 155,720. 12 Claims. (Cl. 55—108.)

1. The combination with a wheeled frame, of a U-shaped support adjustably associated with said frame, a circular member rotatively associated with said support, and an endless belt carried by said U-shaped support to contact with said circular member which moves in unison therewith, said circular member and belt constituting soil embedded article pulling means.



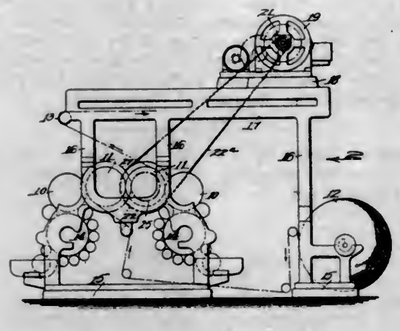
5. The combination with a wheeled frame, of a truncated cone having at its edge a second and narrow truncated section of more nearly cylindrical configuration than the major portion of said cone, and flexible means coacting with the periphery of said second section to elevate soil embedded articles along a circular path to effect the removal thereof from the soil.

1,784,082. EXERCISING DEVICE. ADOLPHUS M. WEBB, Charlotte, N. C., assignor of one-fourth to W. G. Jarrell Machine Company, Charlotte, N. C. Filed Apr. 23, 1928. Serial No. 272,129. 6 Claims. (Cl. 128—33.)



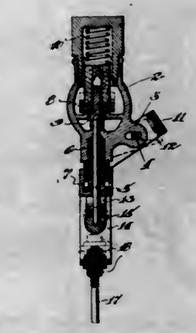
1. An exercising device comprising a framework having resiliently supported thereon a superstructure, a resilient body supporting member carried by the superstructure, a cover for said resilient member, means for fastening the cover to the superstructure, head and foot extensions adapted to be removably secured to the framework, means on the lower side of the superstructure for imparting vibratory motion to the superstructure, and means on the framework for operating said vibrating means.

1,784,083. CASE-FILLING MACHINE. CHARLES H. WILD, Baltimore, Md., assignor to Burt Machine Company, Incorporated, Baltimore, Md., a Corporation of Maryland. Filed Nov. 8, 1927. Serial No. 231,903. 20 Claims. (Cl. 226—15.)



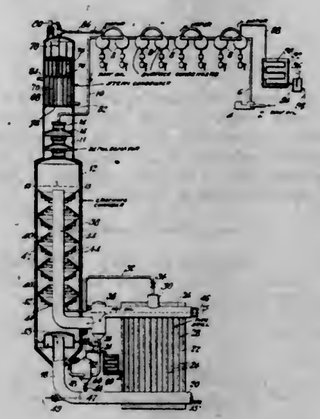
1. In a machine for filling cartons with cans, load forming shelves, a plurality of ways arranged side by side to feed cans to the load forming shelves in a plurality of layers, means for moving the load from the shelves into the cartons and means for preventing the passage of cans to the shelves from the ways feeding a portion of the layers while the cans are being fed into the load forming shelves from the remainder of the ways, whereby the number of layers in the load is varied at predetermined intervals.

1,784,084. PIN MAGAZINE FOR BOWLING ALLEYS. RAYMOND A. WILLIAMS, Arlington, Mass. Filed Apr. 13, 1929. Serial No. 354,949. 16 Claims. (Cl. 273—43.)



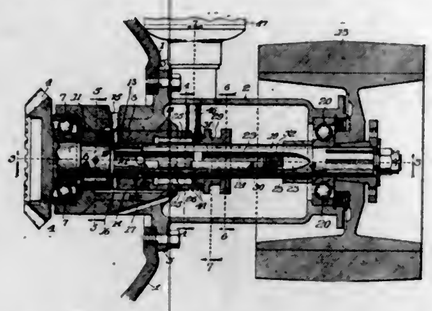
1. In a bowling alley, a pin magazine; an endless pin-supporting belt adapted to move endwise therethrough provided with laterally extending separated projections; a pin conduit beneath and communicating with one end of said magazine; means within said conduit for moving pins upwardly and delivering them to said magazine and means for pushing a pin delivered from said conduit to said magazine, between a pair of said projections, toward the opposite end of the magazine.

1,784,085. MOTOR DRIVE FOR PRINTING PRESSES. HENRY A. WISE WOOD, New York, N. Y., assignor to Wood Newspaper Machinery Corporation, New York, N. Y., a Corporation of Virginia. Filed Jan. 16, 1926, Serial No. 81,761. Renewed Oct. 26, 1929. 5 Claims. (Cl. 101—220.)



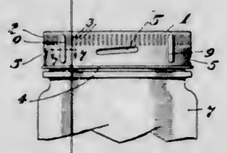
1. In a printing press, the combination of a frame, printing couples supported thereby, said frame extending above the level of the printing couples, an electric motor located on the extension of the frame at a point above the level of the printing couples, and having its shaft parallel with the axles of the printing couples, a sprocket wheel rotated by the motor shaft, a chain connected with said sprocket wheel and means for driving one member of the printing couples directly by said chain.

1,784,086. VALVE-STEM GUIDE. WILLIAM LANING ACKLEY, Dallas, Tex., assignor of fifty-one per cent to Dallas Tailor's Supply Company Incorporated, Dallas, Tex. Filed June 16, 1928. Serial No. 285,926. 7 Claims. (Cl. 251—134.)



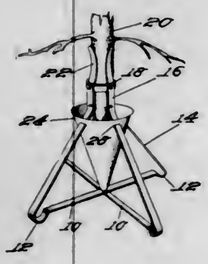
5. A valve stem guide including in combination with a valve, a guide member embracing the end of said stem, a brace member rigid with respect to said guide member and having means for the reception of a valve push rod; said guide and brace members adapted to be moved upward by said push rod to actuate said stem, and means connected to said body for positively holding said members against lateral displacement during said movement to guide said stem.

1,784,087. PROCESS AND APPARATUS FOR THE TREATMENT OF OIL. DAVID G. BRANDT, Westfield, N. J., assignor to Doherty Research Company, New York, N. Y., a Corporation of Delaware. Filed Jan. 31, 1922, Serial No. 532,954. Renewed July 11, 1928. 20 Claims. (Cl. 196—59.)



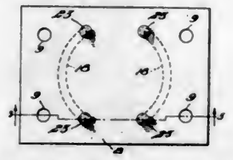
5. The process of producing low boiling point hydrocarbons from high boiling point hydrocarbon oils, which comprises maintaining a body of oil in a cracking zone, passing oil from said zone through a heating zone at a relatively high velocity whereby a portion of said oil is vaporized, passing the unvaporized oil at a relatively low velocity from said heating zone directly into the body of oil in said cracking zone, independently passing the vapors from said heating zone and percolating them through the oil body in said cracking zone.

1,784,088. POWER TAKE-OFF UNIT FOR TRACTORS. LEON JAY CAMPBELL, Buchanan, Mich., assignor, by mesne assignments, to The Studebaker Corporation, South Bend, Ind., a Corporation of New Jersey. Filed Oct. 4, 1926. Serial No. 139,250. 3 Claims. (Cl. 74—7.)



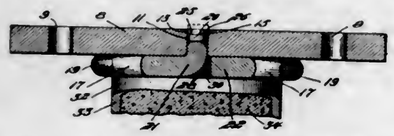
1. The combination with a power driven tractor having a clutch and an operating lever therefor, of a power take-off unit having an outer casing attached to the tractor, driving and driven shafts journaled in the casing, clutch means within the casing for said shafts, a shift lever for said clutch means and extending out of the casing across the tractor lever, and latch means associated with both levers for locking the same together on moving the shift lever into its clutch-release position.

1,784,089. SCREW CAP. HAROLD J. CARR, New York, N. Y., assignor to Anchor Cap & Closure Corporation, Long Island City, N. Y., a Corporation of New York. Filed Mar. 18, 1927. Serial No. 176,308. 7 Claims. (Cl. 215—43.)



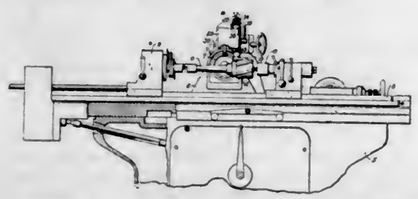
1. As an article of manufacture, a closure cap comprising thread engaging lugs spirally disposed in the skirt thereof, outwardly extending projections intermediate said lugs adapted to be flattened to increase the circumferential size of the cap, thereby to facilitate removal of said cap from a container.

1,784,090. CHRISTMAS-TREE SUPPORT. VICTOR DAHL, Spokane, Wash. Filed May 21, 1926. Serial No. 110,677. 1 Claim. (Cl. 248—38.)



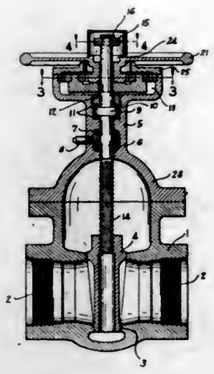
A Christmas-tree support, including in combination, a pair of crossed unitary base and brace elements each element comprising a horizontal portion, and two upwardly extending inwardly inclined portions bent at equal angles to the horizontal portion, of an annular ring locking the upper portions of the brace elements together, a plurality of upwardly extending inwardly concave resilient gripping members mounted on the ring, and curved floor contacting portions formed in said base and brace elements, and means for maintaining the lower end of the tree trunk in position directly beneath the center of action of said resilient gripping elements, said means comprising a combination conical water container and tree butt support, the upper ends of the brace elements passing through slots adjacent the upper rim of said combination container and support.

1,784,091. CAP FOR BUILDING COLUMNS. GEORGE H. DEAN, Norwood, R. I. Filed June 29, 1929. Serial No. 374,885. 2 Claims. (Cl. 189—42.)



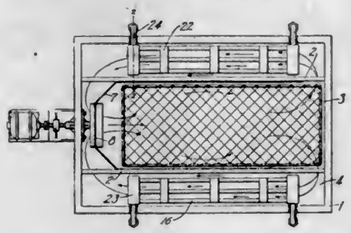
1. A column cap comprising a crown plate adapted to rest upon a column and provided with a plurality of annularly disposed openings and with annular recesses in the upper ends of the openings, and retaining members including horizontally disposed segments abutting against the bottom of the plate adapted to engage the column, posts upon the ends of the plates registering in the openings, and heads upon the posts seated in the recesses.

1,784,092. CAP FOR BUILDING COLUMNS. GEORGE H. DEAN, Norwood, R. I. Filed Oct. 11, 1929. Serial No. 398,845. 1 Claim. (Cl. 189—42.)



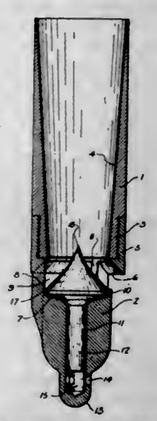
A column cap comprising a crown plate adapted to rest upon a column and provided with a plurality of openings, retaining members including horizontal segments annularly disposed upon the bottom of the plate with their ends spaced from each other, posts upon corresponding ends of the segments fixed in the openings, and welds in the spaces between the ends of the segments.

1,784,093. SETTING GAUGE. GERARD A. DE VLIEG, Rockford, Ill. Filed Nov. 17, 1926. Serial No. 148,971. 6 Claims. (Cl. 33—170.)



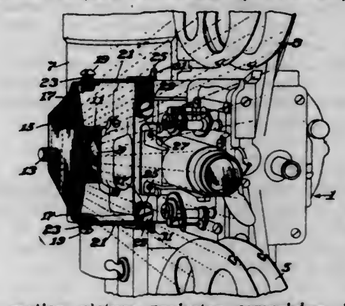
6. A setting gauge having, in combination, a support, a member adjustably mounted in said support, a setting finger adjustably mounted in said member, said finger having a setting point, and spring actuated means for yieldingly holding the said finger selectively in different predetermined positions of adjustment.

1,784,094. VALVE-OPERATING MEANS. HAROLD W. FLETCHER, Houston, Tex., assignor to Hughes Tool Company, Houston, Tex., a Corporation of Texas. Filed Apr. 6, 1928. Serial No. 267,891. 10 Claims. (Cl. 251—54.)



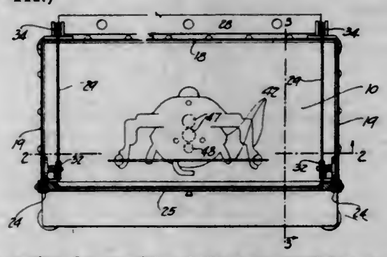
1. In a device of the character described, the combination of a rotatable stem, a housing for said stem, and means to rotate said stem at different speeds, said rotating means including a handle slidable and rotatable on said stem, means operative when said handle is in one position, to engage said handle nonrotatably with said stem, a spider fixed to said stem, a speed reduction gearing associated with said spider, and means on said handle adapted, when in a different position, to engage said spider through said speed reduction gearing for the purpose described.

1,784,095. QUENCHING TANK. HAROLD W. FLETCHER, Houston, Tex., assignor to Hughes Tool Company, Houston, Tex., a Corporation of Texas. Filed May 15, 1928. Serial No. 277,818. 4 Claims. (Cl. 257—85.)



1. A quenching device including a container, having a central chamber therein, a basket in said chamber, cooling compartments one at each side of said chamber, cells in said compartments through which a cooling liquid may be circulated, and means to cause a circulation of the liquid in said chamber in continuous currents through said compartments and back into said chamber.

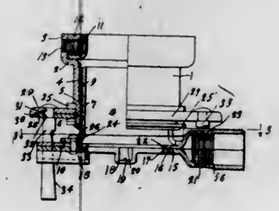
1,784,096. FLUID-OPERATED SWAB. HAROLD W. FLETCHER, Houston, Tex., assignor to Hughes Tool Company, Houston, Tex., a Corporation of Texas. Filed July 23, 1929. Serial No. 380,349. 5 Claims. (Cl. 103—52.)



1. A swab construction including a cylindrical body, a head of smaller diameter than said body, said head including a ring having a valve seat on its lower side, a valve below said seat, a stem on said valve, and means to deflect the flow of fluid away from said stem and said valve.

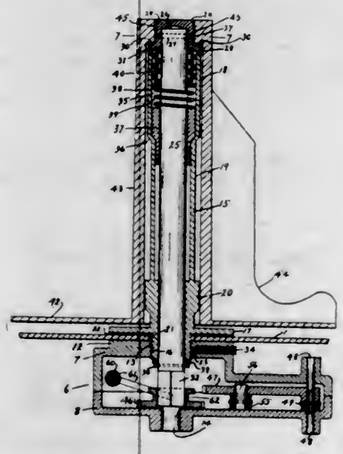
1,784,097. MOTION-PICTURE PROJECTOR. ARTHUR C. HAYDEN, Brockton, Mass. Filed June 11, 1928. Serial No. 284,291. 8 Claims. (Cl. 88—24.)

1. A motion picture projector comprising, in combination, an electric lamp, a condenser lens, a slide for the lens, and a reflector connected to the slide for deflecting light emerging from the lamp and through the condenser lens when the slide and reflector are pulled outwardly partially to expose the lens externally of the projector.



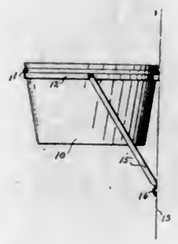
1,784,098. CASING FOR PRECISION BALANCES. WILFRID HEUSSER, Salt Lake City, Utah. Filed Apr. 10, 1928. Serial No. 269,011. 7 Claims. (Cl. 312—141.)

1. A casing for precision balances comprising a metal base having a back flange and side flanges, a superstruc-



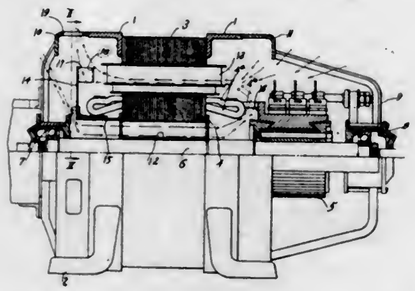
ture having a sheet metal back wall and opposing side walls integral with said back wall, said side walls respectively, lying wholly in the planes of said side flanges, door guides on the inside of the respective sides, door guides composed of metal channels having the backs thereof lying substantially in the respective planes, reinforcing members on the outside of the respective side walls and opposite the respective metal channels, means for fastening the respective metal channels, side walls and reinforcing members to one another, said reinforcing members extending alongside the respective base side flanges, and fastening members extending through the respective base side flanges, side walls and reinforcing members.

1,784,099. DIESTOCK. RALPH E. HYDE, Cleveland, Ohio, assignor to The Oster Mfg. Company, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 12, 1928. Serial No. 261,014. 4 Claims. (Cl. 10—120.5.)



2. In a device of the class described, a tubular element, a second tubular element threadedly telescoped in said first tubular element and projecting therefrom, a flange on the projecting end of said second tubular element, a composite element secured to said flange and comprising a plate and a second plate, means on said second plate forming a guideway for a die, and means on said first plate cooperating with means on said second plate to form a substantially cylindrical socket projecting from the periphery of said composite member.

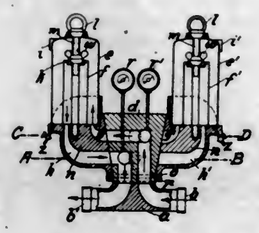
1,784,100. LIQUID SEAL. CHARLES THOMAS KEMP and NORMAN EDWARD RYCKMAN, Hamilton, Ontario, Canada, assignors to The Coffield Washer Company of Canada Limited, Hamilton, Ontario, Canada. Filed May 3, 1926. Serial No. 106,489. 1 Claim. (Cl. 286—7.)



In a liquid seal of the character described, the combination with an upwardly extending sleeve and a shaft journalled therein, of a spiral gland packing wrapped around the shaft interiorly of the sleeve, a head secured to the upper end of the shaft and having its lower face resting upon the top of the sleeve in contact with the upper end of the spiral packing, a gland member surrounding the shaft underneath the packing and held against downward movement by the sleeve, and a spiral spring surrounding the shaft interposed between the gland member and the lower face of the packing.

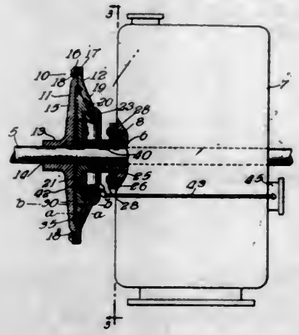
1,784,101. SANITARY POULTRY NEST. FREDERICK LAGE, Gladbrook, Iowa. Filed Jan. 3, 1928. Serial No. 244,102. 2 Claims. (Cl. 119—45.)

1. In a device of the class described, a receiving ring having a straight portion in its length designed to make contact with a supporting surface, arms secured at one of their ends to said ring and designed to have their other ends secured to a supporting surface, a container open at its top capable of being placed in said ring, and a peripheral bead formed on said container for preventing the same from passing completely through said ring.



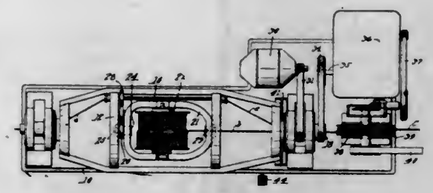
1,784,102. DYNAMO-ELECTRIC MACHINE. JAMES F. LINCOLN, East Cleveland, and ERWIN E. DREESE, Euclid, Ohio, assignors to The Lincoln Electric Company, Cleveland, Ohio, a Corporation of Ohio. Filed July 20, 1927. Serial No. 207,072. 4 Claims. (Cl. 171—252.)

1. In apparatus of the character described, a frame; a stationary member having windings, in said frame; a rotatable member having windings, within said stationary member; air-passways axially arranged in both said members; an air inlet at the relatively cooler end of the machine to provide air to the passways of the rotatable member; means at the other end thereof for drawing the air through such passways; an air inlet for the stationary member passways above said means; means at the other end of the stationary member air-passways for drawing air therethrough; and an outlet beyond said last-named means.



CARNEGIE LIBRARY OF ATLANTA

1,784,103. EXCHANGEABLE FILTER, MORE PARTICULARLY FOR ARTIFICIAL-SILK-SPINNING MACHINES. WALDEMAR ZUR LÖWEN, Barmen-Rittershausen, Germany, assignor, by mesne assignments, to American Bemberg Corporation, a Corporation of Delaware. Filed Nov. 27, 1925, Serial No. 71,663, and in Germany Jan. 15, 1925. 6 Claims. (Cl. 210—168.)

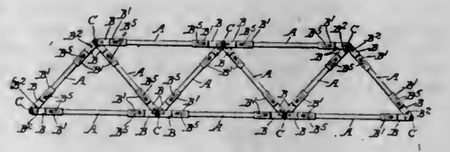


1. An exchangeable filter for machines for the spinning of artificial silk comprising a plurality of individual filters, a rotatable member on which said filters are carried, a fixed base on which said rotatable member is mounted, said fixed base having a part in the form of a cock plug with a double branched inlet and a triply branched outlet, said rotatable member being provided with inlets and outlets arranged diametrically opposite to one another and capable of being connected to the inlets and outlets of said fixed member, said individual filters having individual outlets arranged to be opened for the discharge of backwardly flowing liquid during the cleaning of the filter.

1,784,104. LEAK-PREVENTING SEAL. MECKLEY MASTERSON and ORVILLE MARKEL, Chicago, Ill. Filed Feb. 23, 1926. Serial No. 90,000. 1 Claim. (Cl. 286—9.)

In combination, a housing having a recess, a horizontal rotatable shaft extending therefrom, a sleeve surrounding the shaft, said sleeve having a radial flange attached to the housing and a hub extending into said recess, a disc projecting radially from the sleeve, and a casing mounted upon said shaft and peripherally surrounding said disc, said casing being adapted to hold a liquid seal and permit disposal of same in an annular ring about the interior of said casing and about the periphery of the disc upon rotation of the shaft, together with means for automatically returning leakage from the housing into the radial space back to the housing.

1,784,105. WIRE-STRANDING MACHINE. MICHEL NIGRO, Worcester, and WILLIAM H. BLOUNT, West Brookfield, Mass., assignors to Sleeper & Hartley, Inc., Worcester, Mass., a Corporation of Massachusetts. Filed Apr. 7, 1927. Serial No. 181,864. 5 Claims. (Cl. 117—18.)

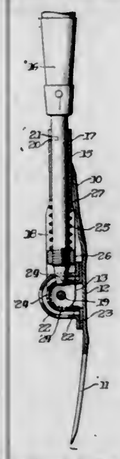


1. In a wire cable machine, the combination with a rotary flier and a non-rotatable frame carried thereby at the center thereof, a spool of wire supported by said frame, and means for guiding the wire from said spool centrally through the end of the flier, of a guide for another wire carried by the flier at a distance from the axis thereof beyond said spool, means for preventing the guide from rotating on its own axis as it revolves with the flier, and means for guiding the wires from the spool and guide to a point substantially in line with the axis of the flier without twisting either wire, said flier constituting means for then twisting them together.

1,784,106. COATING ZINC AND CADMIUM. ALADAR PACZ, East Cleveland, Ohio. Filed May 28, 1927. Serial No. 195,140. 5 Claims. (Cl. 148—6.)

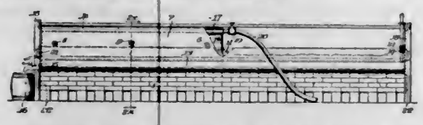
5. A non-alkaline dipping solution for zinc and cadmium articles containing a soluble molybdate and a second soluble salt, such second salt being one which is not alkaline and does not precipitate molybdenum.

1,784,107. DEMOUNTABLE STRUCTURE. LESLIE M. PARKER, Evanston, Ill. Filed July 5, 1928. Serial No. 290,489. 7 Claims. (Cl. 189—34.)



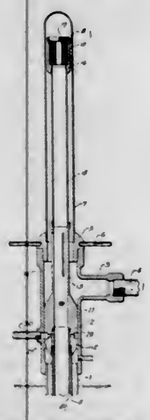
1. In combination a composite building member formed of a longitudinal member having notches adjacent its ends and a pair of union members provided with hollow portions adapted to receive an end of said longitudinal member, said union member having an engaging element adapted, in one relative rotational position to be fitted into one of said notches.

1,784,108. GARDEN TOOL. ALFRED PEARSON, Rockford, Ill., assignor of one-half to Frank A. Freed, Rockford, Ill. Filed July 18, 1928. Serial No. 293,754. 5 Claims. (Cl. 306—13.)



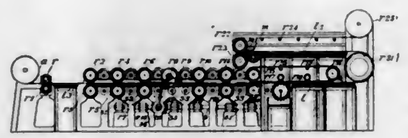
1. An implement comprising, in combination, a tool having spaced ears intermediate its ends and substantially parallel to its axis, a handle, a sleeve reciprocable on said handle, one end of said sleeve being split to form a yoke, a pin pivotally securing said yoke to said ears, a shoulder on said sleeve, a nut on said handle, a compression spring

on said handle between said yoke and nut to urge said handle toward said tool, two spaced concentric straps on said implement axially coincident with said ears, said



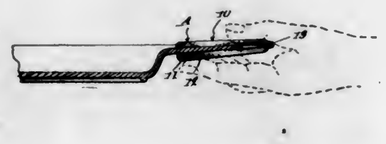
straps having radially alined holes to receive the end of said handle to lock said tool in angular relation to said handle.

1,784,109. CHEMICAL FURNACE. FREDERICK L. PRESTON, Mobile, Ala. Filed July 7, 1928. Serial No. 291,108. 7 Claims. (Cl. 263—37.)



1. A furnace of substantially the character described, comprising two hearth units arranged end to end, a common heating chamber extending beneath both of said hearth units, and a hood adapted to form, with a unit, a heating chamber; said hood being shiftable endwise of the furnace to bring it into coacting relation with either unit of the hearth.

1,784,110. BUFFER FOR WELL SWABS. NORMAN H. RICKER, Houston, Tex., assignor to Hughes Tool Company, Houston, Tex., a Corporation of Texas. Filed Aug. 24, 1929. Serial No. 388,189. 7 Claims. (Cl. 103—52.)

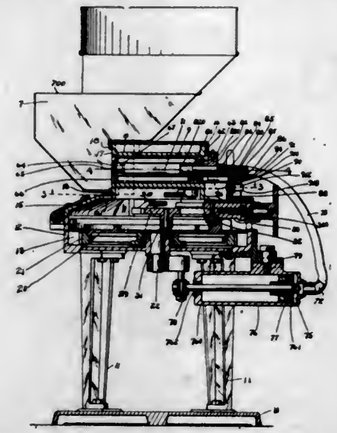


1. In a pneumatic swab structure, an eduction tube, a plunger therein, a downwardly opening valve in said plunger, a nipple at the upper end of said eduction tube, there being lateral liquid discharge openings adjacent the lower end of said nipple, means to allow the introduction of pressure fluid below said plunger, and means in said nipple to be engaged by said plunger and absorb the force of its upward movement.

1,784,111. METHOD OF AND MACHINE FOR MANUFACTURING MATCHES AND MATCH TAPE. JOHN RINNE, Rutledge, Pa. Filed Mar. 11, 1925. Serial No. 14,722. 32 Claims. (Cl. 144—51.)

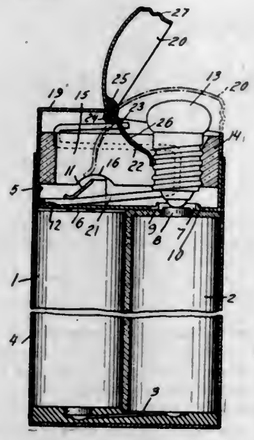
1. In the machine for manufacturing match tape, in combination, means for heating the sheet of material; means for impregnating the sheet across the whole width; means for punching crosswise rows of rectangular holes in the blank sheet for providing room for match heads; means for cutting slots for partial separation of the splints; means for compressing the tips of the splints and forming lengthwise corrugations on the same; means for bending the loose splint ends for dipping; means for dipping the match tips in the chemicals; means for drying the heads; means for straightening back the bent ends; means for pressing them back in the match sheet; means for cutting the match sheet in tapes; means for separating the tapes; means for cutting all tapes crosswise simultaneously; means for fastening the tape ends on reels; means for reeling the match tapes on final reels to be put in containers.

1,784,112. PLATE HOLDER. MAX G. ROSANO, Chicago, Ill. Filed Nov. 6, 1929. Serial No. 405,189. 3 Claims. (Cl. 294—28.)



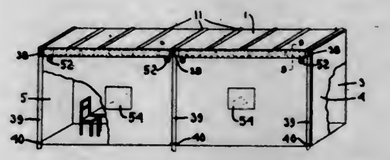
1. A hot plate carrier and holder comprising a pair of companion pivotally connected sections, spring means normally urging the sections to an open position, a clasp for holding the sections against swinging movement, and gripping pads carried by the inner faces of said sections.

1,784,113. PROCESS AND APPARATUS FOR DIVIDING PLASTICS. SIGMUND SCHIFF, Cincinnati, Ohio, assignor to The J. H. Day Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Mar. 21, 1923, Serial No. 626,552. Renewed Jan. 9, 1930. 25 Claims. (Cl. 107—15.)



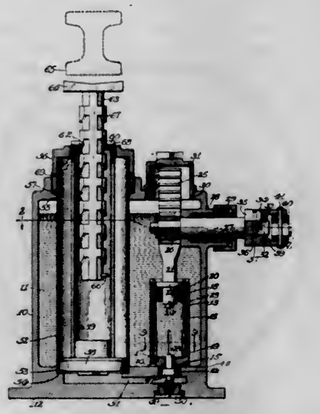
1. In a device of the class described the combination of a hopper, a cylinder, a plunger within the cylinder, means for effecting relative movement of the hopper and the cylinder whereby to move the plunger into and from registration with the hopper, means to actuate the plunger

for creating a chamber in the cylinder for receiving a plastic from the hopper and for moving the plunger toward



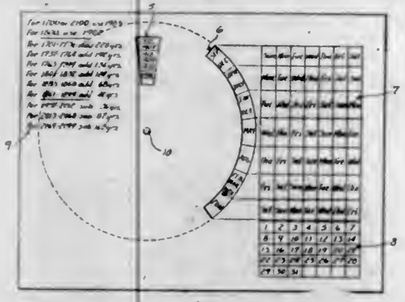
the hopper while the chamber is in communication with the hopper whereby to move a portion only of the plastic from the chamber into the hopper.

1,784,114. BATTERY HAND LAMP. WALTER B. SCHULTE, Madison, Wis., assignor to Burgess Battery Company, Madison, Wis., a Corporation of Wisconsin. Filed June 19, 1928. Serial No. 286,501. 11 Claims. (Cl. 240—10.5.)



1. A battery hand lamp comprising a carton, a dry cell battery arranged therein, said carton extending above the top of said battery, a cup arranged in the upper part of said carton, said cup being electrically connected to one pole of said battery and having an opening for exposing the other pole and being insulated from said second pole, a holder fitting into said cup, said holder comprising an insulating member, a cap fitting over said insulating member, a looped spring wire squeezed between said insulating member and said cap, said insulating member having a longitudinal slot and a recess at the end opposite said opening in said cup, an incandescent bulb removably mounted in one end of said longitudinal slot and arranged to make contact with said exposed pole, and a cover hinged to said cap, said cover having notched cams and an extension at its hinged end, said spring wire being adapted to maintain said holder firmly in position within said cup, to press firmly upon the bottom of said metallic cup and to have its free ends cooperate with said notched cams to maintain electrical connection between said hinged cover and said cup and to exert spring pressure upon said cams, to cause said cover to assume the open and closed positions with a snap, said extensions being provided with a channel and being adapted to make and break contact with said bulb when said cover is in the open and closed positions respectively.

1,784,115. COMBINED AUTOMOBILE COVER AND TENT. HARRY SEBELL, Boston, Mass. Filed May 10, 1929. Serial No. 361,953. 9 Claims. (Cl. 135—1.)



1. A combined automobile cover and tent comprising a top section which is non-foldable longitudinally, side sections secured to the top section and adapted to depend therefrom, and means associated with the side sections adjacent the line of attachment thereof to the top section to retain the top section rigid in a longitudinal direction.

1,784,116. HYDRAULIC JACK. JOSEPH P. SHEVLIN, Chicago, Ill., assignor, by mesne assignments, to George Frederick A. Mayle, London, England. Filed Mar. 12, 1928. Serial No. 260,949. 6 Claims. (Cl. 138—9.)
